Q094 (General Comment): Except for the Supreme Court, criminal cases are generally counted by offence rather than case due to the various ICT systems used. This is due to data collection/ ICT systems that are in use by the Court Service.
Akin to question 91, the number of pending criminal law cases cannot be provided within the frame of question 94, provided that it is not recorded in caseload data.
We cannot provide data per case. Where there is more than one penalty imposed in respect of an offence, for example a fine, imprisonment and disqualification, a separate order would be made in respect of each penalty. However, if a case is dismissed or struck out, only one order is made. Our system records by outcome and as there may be more than one outcome in any one offence, it may appear that the figures for resolved cases are higher than those for incoming.
Misdemeanour and/or minor criminal cases include all cases triable summarily (e.g. common assault, public order offences, burglary or theft in other that aggravated circumstances).

Q094 (2022): The COVID pandemic had an effect on the courts' ability to deal with incoming business in 2020 especially, which explains the discrepancies with number of resolved cases in 2022. Regarding severe criminal cases both the Circuit Criminal Courts and Central Criminal Courts showed an increase in resolved cases (offences) in 2022. Resolved cases are cases where orders are made. There may be more than one order made in some cases which is why the figure for resolved cases is higher than that for incoming cases.

Q094 (2021): Severe criminal cases are taken to mean indictable offences that are dealt with in the Circuit and High Court. Misdemeanour is taken to mean minor offences and indictable offences dealt with summarily in the District Court. The number of incoming cases will never equal the number of resolved cases. It is worth noting that the number of resolved cases in 2021 was a significant increase in the resolved cases from 2020. It is also worth noting that not all offences are proceeded with by the prosecutor, particularly minor offences.
Criminal cases are generally counted by offence rather than case due to the various ICT systems used

Q094 (2020): Misdemeanour and minor criminal cases are cases heard in the District Court. There were fewer such cases incoming and resolved because of Covid-19.
Q094 (2018): From 2016 extra judicial resources were applied by Senior Judiciary to the Courts dealing with some of the most serious criminal matters, which explains the increase of the number of resolved severe cases.

Q094 (2016): With regard to the number of resolved severe criminal cases, there is no particular reason explaining the observed discrepancy between 2014 and 2016, except for the fact that in 2014 figures were exceptionally high.

Q094 (2014): The previous data in respect of severe criminal cases were presented by reference to the defendant rather than to the offence(s) charged, whereas the data for 2014 reflects offence(s) charged, to align with the unit of measurement for minor criminal cases.
Q097 (General Comment): Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Q097 (2024): Administrative cases are included as Civil (and commercial) litigious.

Q097 (2023): 3. Administrative law cases- We have given the response as NA as we do not have a separate category for Administrative Law cases. They are included in the figure for Civil (and Commercial) litigious cases.
Q097 (2020): Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.
The Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate its work. Procedures were introduced to ensure that justice was administered in public. Judgments were delivered electronically. Waiting times for a hearing were improved, to a certain extent, by a net reduction in the numbers of new cases coming into the list from other jurisdictions. By year end, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

Q097 (2017): The number of resolved civil and commercial litigious cases reflects a significant reduction in disposal of second instance appeals by comparison with that returned in the previous reporting cycle.
Q097 (2016): As concerns the number of resolved "Civil and commercial litigious cases", 2016 data reflects a significant increase in disposal of second instance appeals over that in the previous reporting cycle. Accordingly, the total of resolved cases is affected.
Q098 (General Comment): Except for the Supreme Court, criminal cases are generally counted by offence rather than case due to the various ICT systems used. This is due to data collection/ ICT systems that are in use by the Court Service.

Q098 (2023): It is difficult to identify the precise reasons for an increase in incoming criminal cases in the appellate courts in 2023 due to the wide range of factors that may have been at play. For incoming criminal cases, these may include, but are not limited to, an increase in business in the first instance courts, the resumption of regular court activity following the Covid-19 pandemic, the appointment of 24 additional judges throughout 2023, additional Gardai resources, a potential increase in decisions to prosecute by the DPP, and the growing population of the state.

Q098 (2022): In 2020, the year in which the covid pandemic had its greatest effect on court business, the number of criminal appeals particularly in minor criminal cases was much lower than usual.

Q098 (2020): Reduced misdemeanour/minor cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie. Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.
The Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate its work. Procedures were introduced to ensure that justice was administered in public. Judgments were delivered electronically. Waiting times for a hearing were improved, to a certain extent, by a net reduction in the numbers of new cases coming into the list from other jurisdictions. By year end, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.
Offences are counted here rather than number of cases. There were 260 appeals in respect of 1,405 offences lodged in the Court of Appeal (Criminal) in 2020. The Court disposed of 367 appeals in respect of 1,719 offences.

Q098 (2018): With regard to the category "resolved cases", the figures reflect a continuing increase in disposal of second instance appeals disposed of over that in the previous reporting cycle (2016 data) due to the establishment of the Court of Appeal.
Q098 (2016): Data on resolved cases reflect a significant increase in disposal of second instance appeals due to the establishment of the Court of Appeal. Concerning the number of incoming severe criminal cases, 2016 data reflects the receipt by the Court of Appeal of a substantial number of pending appeals following its establishment.

Q098 (2014): The increase of 161% between 2012 and 2014 in the number of incoming cases and the increase of 101% in the number of resolved cases are due to a change in the unit of measurement for criminal cases from a defendant related unit to an offence related unit.
Q099 (General Comment): Administrative law cases are included in the number of Civil (and commercial) litigious cases.
For pending cases, the Court Service record resolved cases as cases where an order is made. As there may be more than one order made in respect any case this can cause difficulty in accurately calculating figures for pending cases.

Q099 (2024): The increase in resolved cases in 2024 reflects a return to typical levels following the temporary reduction in 2023, which was impacted by the Supreme Court's involvement in reference to the Court by the President of Ireland of the Judicial Appointments Commission Bill 2023 under Article 26 of the Irish Constitution.
Civil and commercial litigious cases: Statistics for civil proceedings are recorded by cases received and cases resolved throughout the year. While some cases are formally discontinued either by order of the court or by formal notification (for example by filing a notice of discontinuance to the court, the majority of civil cases are settled between the parties, with or without court approval or are not pursued further by the plaintiff without notification by the plaintiff to the court. Most cases do not proceed to trial. It is therefore not possible to provide accurate figures for pending cases in most instances. While in previous cycles we provided the figure for pending civil and criminal cases in the Supreme Court this is no longer provided to ensure consistency with the other court jurisdictions.
The new case management system (UCMS) became operational in 2023 in the Central Office of the High Court. UCMS is being extended to all court offices and over the coming years the Courts Service will work to consolidate data processing and reporting for all case types in each jurisdiction.

Q099 (2023): Other cases in this instance are the appointments of Commissioners for Oaths and Notaries Public

Q099 (2022): There was an increase in 2022 over 2020.

Q099 (2020): Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Both the Supreme Court and Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate their continued work. Procedures were introduced to ensure that justice was administered in public. Both jurisdictions delivered their judgments electronically. Waiting times for a hearing in both Courts were improved, to a certain extent, by a net reduction in the numbers of new cases coming into their lists from other jurisdictions. By year end in both Courts, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

Q099 (2019): There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into next year.
Q099 (2018): There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into 2019.

Q099 (2017): Since the establishment of the Court of Appeal in 2014, the number of pending cases at third instance has fallen. However, the number of incoming cases at third instance has slightly increased between 2016 (164) and 2017 (190).

Q099 (2016): The reduced number of incoming and resolved cases reflects the consequences of the establishment of the new Court of Appeal which came into operation in October 2014.

Q099 (2015): The reduction in the number of incoming cases to the Supreme Court substantially reflects the change in the jurisdiction of the Supreme Court from that of a second instance appeal court to an appeal court which is primarily third instance in nature

Q099 (2014): 2014: Variation: The significant increase in the number of resolved civil (and commercial) litigious cases between 2012 and 2014 reflects a significant exercise undertaken by the Supreme Court in reviewing its caseload in preparation for the establishment in 2014 of the new Court of Appeal (which has assumed the previous second instance jurisdiction of the Supreme Court), which resulted in the striking out or withdrawal of a significant number of appeals then pending before the Supreme Court.

Q100 (General Comment): For pending cases, the Court Service record resolved cases as cases where an order is made. As there may be more than one order made in respect any case this can cause difficulty in accurately calculating figures for pending cases.

Q100 (2024): We are not in a position to explain the reasons behind such increase, given the wide range of factors that may have been at play. For incoming criminal cases, these may include, but are not limited to, an increase in business in the first instance courts, additional Gardai resources, a potential increase in decisions to prosecute by the DPP, and the growing population of the state

While in previous cycles we provided the figure for pending civil and criminal cases in the Supreme Court this is no longer provided to ensure consistency with the other court jurisdictions.

In criminal matters, cases are counted by offence, not by case/defendant. Resolved cases are recorded as cases where an order is made. As there may be more than one penalty imposed in respect of an offence and a separate order made in respect of each penalty, the figures for resolved cases can appear to be higher than those for incoming cases and can cause challenges in calculating pending case figures.

While in previous cycles we provided the figure for pending civil and criminal cases in the Supreme Court this is no longer provided to ensure consistency with the other court jurisdictions. The new case management system (UCMS) became operational in 2023 in the Central Office of the High Court. UCMS is being extended to all court offices and over the coming years the Courts Service will work to consolidate data processing and reporting for all case types in each jurisdiction.

Q100 (2022): The number of cases pending in the Supreme Court has decreased between 2020 and 2022.

Q100 (2020): Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.

Both the Supreme Court and Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate their continued work. Procedures were introduced to ensure that justice was administered in public. Both jurisdictions delivered their judgments electronically. Waiting times for a hearing in both Courts were improved, to a certain extent, by a net reduction in the numbers of new cases coming into their lists from other jurisdictions. By year end in both Courts, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

Q100 (2018): The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

Q100 (2016): The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

Italy

Q091 (General Comment): A different methodology of classification of civil cases is used since 2012. The result is an improved classification and a better split between litigious and non-litigious cases. For 2010, 2012 and 2013, the category of civil and commercial non-litigious cases has an identical content, namely: separation and divorce by mutual consent, interdiction and incapacitation, protective measures for underage, guardianship and trusteeship etc. Since 2014, it subsumes uncontested payment orders, uncontested divorces, technical appraisals, judicial interdiction and incapacitation, hereditament, etc. In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html
The main goal is a general reduction of the disposition time by 40% in the civil sector by June 2026 (all three instances together). More specifically, the targets for reducing the civil backlog in the First Instance Courts are: - Intermediate disposal target to be achieved by 31.12.2024: 95% reduction of civil cases registered (filed) until 31/12/2016 and still pending as of 31/12/2019 (baseline); - Final disposal target to be achieved by 30.06.2026: 90% reduction of civil proceedings registered (filed) from 01/01/2017 to 31/12/2022 and still pending as of 31/12/2022 (baseline).

Q091 (2022): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html

Q091 (2020): In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT). The number of pending older than 2 years is not available because figures include the activity of both tribunals and justice of peace offices and for the latter this information is not available.

Q091 (2019): Number of "pending cases older than 2 years" is not available because it refers to first instance causes which also include the activity of Justice of peace offices, for which this information is no available.
Q091 (2018): Administrative cases. – It should be noted that fast-track simplified proceedings are available for dispute resolution in important areas of administrative law, such as public procurement (“rito appalti”). In 2018, the disposition time for such disputes was 237 days in the first instance and 274 days before the Consiglio di Stato (CDS). Furthermore, requests of interim measures are frequent in administrative law cases (about one third of the cases in first instance and half of the cases before the CDS). They provide fast legal protection of the claimant’s rights, often anticipating the final judgment on the merits.

Q091 (2015): Figures at Q.91 (points 1 and 2) have been extracted from a new IT system called “Civil Data warehouse”. This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases.

As far as figures at Q.91 (point 3), please consider that Administrative Justice doesn’t fall under the umbrella of the Ministry of Justice as it is administered by the Council of State (Consiglio di Stato). However, figures at Q.91 (point 3) were not provided by the Council of State, they were rather taken from a public document available online at https://www.giustizia-amministrativa.it/cdsintra/cdsintra/Notiziasingola/index.html?p=NSIGA_3826149
Since the administrative cases (Q.91 point 3) refers to a different administration, it wouldn’t be reasonable to compare these numbers against the number of judges provided at Q.46.

Civil and commercial non-litigious cases include: Uncontested payment orders, uncontested divorces, technical appraisals, judicial interdiction and incapacitation, hereditament, etc.

Q091 (2014): In 2014, figures for the category “administrative law cases” have been submitted for the first time. The administrative justice doesn’t fall under the umbrella of the Ministry of Justice as it is a completely different administration.

Q092 (General Comment): Non-litigious cases include -amongst others- divorce and separation by mutual consent, change of divorce/separation conditions, judicial interdiction and incapacitation, hereditament, some family-related procedures, etc. Under this category also fall the following: order for payment procedures, proceedings for validation of eviction, precautionary proceedings and proprietary measures.
Q093 (2014): In the ambit of the 2014 exercise, the category “other” encompasses the number of enforcement cases.

Q094 (General Comment): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogeing/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html The main goal is a general reduction of the disposition time by 25% in the criminal sector by June 2026 (all three instances together).

Q094 (2022): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html

Q094 (2021): In Italy there is no formal definition of minor criminal cases. For the purposes of this exercise, are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices.
Q094 (2018): The reduction in the number of resolved first instance criminal cases, and consequently the increase in the Disposition Time, between 2018 and 2016 comes from the decriminalization measures introduced in 2016 that led to a sharp increase in the number of case dismissals in that year. Indeed, the data for 2017 are:
Incoming: 1.311.900
Resolved: 1.293.054
Pending: 1.282.406
Disposition time: 362 days
These figures show a positive trend of the DT between 2014 and 2017, maintained in 2018.

Q097 (General Comment): · Non-litigious enforcement cases are not in the competence of the Courts of Appeal.
· With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97. In the framework of the National Recovery and Resilience Plan (PNRR) Italy has udertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html The main goal is a general reduction of the disposition time by 40% in the civil sector by June 2026 (all three instances together). More specifically, the targets for reducing the civil backlog in the First Instance Courts are: - Intermediate disposal target to be achieved by 31.12.2024: 95% reduction of civil cases registered (filed) until 31/12/2016 and still pending as of 31/12/2019 (baseline); - Final disposal target to be achieved by 30.06.2026: 90% reduction of civil proceedings registered (filed) from 01/01/2017 to 31/12/2022 and still pending as of 31/12/2022 (baseline). The targets for reducing the civil backlog in the Courts of Appeal are: - Intermediate disposal target to be achieved by 31.12.2024: 95% reduction of civil cases registered (filed) until 31/12/2017 and still pending as of 31/12/2019 (baseline); - Final disposal target to be achieved by 30.06.2026: 90% reduction of civil proceedings registered (filed) from 01/01/2018 to 31/12/2022 and still pending as of 31/12/2022 (baseline). A monitoring system is in place and a detailed dashboard is available at https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx

Q097 (2024): The reduction is due to legislative reforms affecting this category.

Q097 (2022): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has udertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html
The main goal is a general reduction of the disposition time by 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together) .
More specifically a reduction of the civil backlog by 65% in first instance courts and 55% in appeal courts by the end of 2024; by 90% in first instance courts and appeal courts by June 2026. As far as the civil cases, such targets relate exclusively to litigious cases.
A monitoring system is in place and a detailed dashboard is available at
https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx

Q097 (2021): There are no "other cases"
Figures in 2020 were hugely affected by the pandemic
Q097 (2020): In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT).

Q097 (2018): -

Q097 (2017): The number of pending “civil and commercial non-litigious cases”, older than 2 years, decreased between 2016 and 2017. Generally speaking, pending cases older than 2 year have priority. However, in this specific case, the important reduction (in %) is mainly due to the fact that the numbers are small.

Q097 (2016): As regards the variations concerning the category "general civil (and commercial) non litigious cases", it should be noted that the Ministry of Justice has recently implemented a data warehouse system that can collect a huge number of data and events pertaining to millions of civil cases. The new DWGC (Data Warehouse for Civil Justice) is now fully operational and it represents a major improvement in terms of statistics and quality. Since 2015, data pertaining to Q.97 is extracted from the above Datawarehouse and it is to be considered more accurate than the figures provided in the past.
It should be noted that in 2014 for many cases it was not possible to distinguish between litigious and non-litigious cases because they were coming together in a bundle. With the data warehouse it is possible to tell whether any given procedure has either litigious or non-litigious nature. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

Q097 (2015): The appeal of administrative case is dealt by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body that ensures the legality of public administration in Italy. The council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law.

Figures referring to the activity of the Council of State (second instance of administrative justice) have been submited to Q.99 rather than Q.97.

Figures on Q.97 (points 1 and 2) have been extracted from a new IT system called “Civil Data warehouse”. This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases.
All cases dealt by the Supreme Court of Cassation has always a litigious nature.

Q098 (General Comment): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has udertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogeing/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html The main goal in the criminal sector is a general reduction of the disposition time by 25% by June 2026 (all three instances together). A monitoring system is in place and a detailed dashboard is available at
https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx

Q098 (2023): In Italy there is no formal definition of “minor criminal cases”. For the purposes of this exercise are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices which have been appealed (to Tribunal).

Q098 (2022): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has udertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at
https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html
The main goal is a general reduction of the disposition time by 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together) .
More specifically a reduction of the civil backlog by 65% in first instance courts and 55% in appeal courts by the end of 2024; by 90% in first instance courts and appeal courts by June 2026. As far as the civil cases, such targets relate exclusively to litigious cases.
A monitoring system is in place and a detailed dashboard is available at
https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx

Q098 (2021): Figures in 2020 were hugely affected by the pandemic

Q098 (2018): -

Q098 (2016): With regard to second instance criminal cases, in 2014-2015 a new case management system was introduced. This has negatively affected the statistics for those two years. Statistics for 2016 are definitely more robust and consistent. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

Q099 (General Comment): · With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97. · In Italy, non-litigious enforcement cases are not heard by the highest instance court. The latter only hears litigious enforcement cases.

Q099 (2024): "Other cases" refers to residual cases dealt by the Supreme Court, such as cases regarding the competence or jurisdiction of the courts and correction of material errors.

Q099 (2023): In 2023, a reduction in the backlog of administrative cases has been achieved, as required by the targets of the Recovery Fund.
Q099 (2022): Within the framework of the National Plan for Recovery and Resilience (PNRR), Italy has taken a number of measures to reduce both disposition times and backlogs. The main objective is an overall reduction of 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together). More information on the reform is available at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html.
A monitoring system is also in place and a detailed dashboard is available at https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx.

Q099 (2021): "Other cases" represent residual cases, such as those concerning the competence or jurisdiction of the courts, or those concerning the correction of the so-called material errors committed by the Supreme Court.

Q099 (2019): Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.
Q099 (2018): The increase of the incoming civil litigious cases is ascribed to proceedings related to immigration matters. There is no specific explanation for the increase of resolved administrative cases. Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

Q099 (2017): The category "other cases" at Q.99 (Supreme Court) represents residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. The 25% variation (in terms of number of resolved cases) has no particular explanation. Please also note that this category do not exist at first and second instance.

Q099 (2016): "Other cases" represent residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. In respect of this category, the numbers are small and the observed variations should be put into perspective.
Q099 (2014): · In the frame of the 2014 exercise, it has been indicated that figures subsumed within the category "other" represent really residual cases (such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc.).
· As to the increases observed in respect of the "total of other than criminal law cases" with regard to all the items (pending, incoming, resolved cases), it is noteworthy that in 2014 for the first time "administrative law cases" dealt with by the Council of State were considered. If looking only to "civil (and commercial) litigious cases", the differences are not that big. In general terms the Supreme Court of Cassation resolves fewer cases than incoming cases.

Q100 (General Comment): "Minor criminal cases" represent cases against justice of peace's decisions and cases against first and second instance judges' decisions, regarding minor offences that are punished with fines. "Other cases" may relate to procedures pending in first or second istances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" may also relate to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detenction) of the imprisonment), or to the correction of material errors on Highest Court's sentences.

Q100 (2024): "Other cases" may relate to procedures pending in first or second istances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances). "Other cases" may also relate to decisions regarding the execution of imposed punishments (for example regarding the end or a change -home detenction- of the imprisonment), or the correction of material errors on Highest Court's sentences.

Q100 (2022): Within the framework of the National Plan for Recovery and Resilience (PNRR), Italy has taken a number of measures to reduce both disposition times and backlogs. The main objective is an overall reduction of 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together). More information on the reform is available at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html.
A monitoring system is also in place and a detailed dashboard is available at https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx.

Q100 (2021): * Most discrepancies between 2021 and 2021 data are due to the fact that in 2020 the activity of the courts was hugely affected by the pandemic.
**Moreover, small number often lead to large percentage variations.

Q100 (2020): 2."minor criminal cases" represent cases against justice of peace's decisions and cases against first and second instance judges' decisions, regarding minor offences that are punished with fines. 3. "Other cases" Can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detention) of the imprisonment), or can be related to the correction of material errors on Highest Court's sentences.

Q100 (2018): Following the introduction of the new item "other" at Q100, the Supreme Court has revised and ameliorated their classification of cases. The misdemeanour category now includes not only the proceedings coming from the justice of peace offices but also all those minor offences which are punished with fines. "Other cases" (point 3) can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detection) of the imprisonment), or related to the correction of material errors on Highest Court's sentences.

Q100 (2016): In respect of minor criminal cases, the numbers are small and the observed variations should be put into perspective.

Latvia

Q091 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible. In 2022 the increase in the balance of pending cases is related to changes in data collection, more specifically, from 2023 it is possible to determine the number of unfinished cases in non-litigious land registry cases.
In the spring of 2023, the Court Administration made improvements to the statistical data recording system, which prevented the collection of incomplete data related to the reorganization of the courts in previous periods. For these reasons, previously published data may differ and not be comparable.
Within the Court Information System, submissions received in the previous year but registered the next year are considered as incoming cases for the new year. "Non-litigious business registry cases" are not defined in the Civil Code and are not within the competence of courts in the first instance. "Non-litigious land registry cases" is one of the cases which are one of the functions of district (city) courts in accordance with the Land Register Law. Examination of the Land Register matters shall be under the jurisdiction of district (city) courts.
The category "civil and commercial non-litigious cases" encompasses: applications for securing claim prior to initiation of the matter in a court; applications for securing of evidence prior to initiation of the matter in a court; applications for execution of obligations through the court; undisputed compulsory execution of obligations; execution of obligations in accordance with warning procedures; voluntary sale of immovable property at auction through the court; submitting the subject-matter of an obligation for safekeeping in the court; applications for Commercial Court adjudication execution procedures; applications for arbitrary court decision compulsory execution; applications for property protection if there is no inheritance case; applications concerning execution of court adjudications.

Q091 (2024): The inconsistency in the number of cases can be observed both with the merging of cases, and with the separation of individual cases from the overall judicial procedure.
Incoming cases of General civil (and commercial) non-litigious cases, e.g. uncontested payment orders, request for a change of name, non-litigious enforcement cases etc. - In 2024, a significant +31.67% increase was observed in the number cases of uncontested enforcement of obligations and cases of enforcement of Obligations according to warning procedures and cases of voluntary sale of immovable property at auction through the court. This trend was likely influenced by amendments to the Civil Procedure Law adopted on 5 October 2023, which entered into force on 2 November. These amendments enhanced procedural efficiency, clarified the application process, and expanded the scope of the procedure. As a result, the warning procedure became more attractive to creditors, particularly financial institutions and utility service providers. In addition to legal changes, the increase was also driven by economic factors—such as payment delays and inflationary pressures on household budgets—as well as the availability of digital tools that simplified the submission and processing of applications.
Pending cases on 31 Dec. of General civil (and commercial) non-litigious cases, e.g. uncontested payment orders, request for a change of name, non-litigious enforcement cases etc. (if possible without administrative law cases, see category 3; without registry cases and other cases, see categories 2.2 and 2.3) - In 2024, there was a significant increase in the number of pending cases, particularly in the category of "debt enforcement under the warning procedure", where the number of unresolved cases rose by more than 60%. This increase is primarily attributed to two key factors: sharp rise in the number of initiated cases – In 2024, a substantial increase in the volume of cases was observed in this category and decrease in the number of judges specializing in this type of case. This has led to a backlog of cases and a slower pace of proceedings.
Pending cases on 31 Dec. Total - Due to the substantial increase in applications under the warning procedure, which falls under non-litigious civil matters, the courts of first instance experienced a backlog that significantly contributed to the rise in the total volume of pending cases across all civil case categories.
Pending cases older than 2 years from the date the case came to the first instance court - Data indicates that the most significant growth occurred in administrative cases, where the number rose from 10 to 36 cases. A second notable increase in long-pending cases was observed in the group of litigious civil cases. Within this group, the highest number of unresolved cases older than two years was recorded in: insolvency proceedings – 552 cases and claims for debt recovery and damages – 361 cases.

Q091 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. The timely consideration of cases as one of its priorities, also following the guidelines for the consideration of cases approved by the Council of Justice. This has affected the changes in the number of resolved cases and, accordingly, the number of pending cases and pending cases older than 2 years.
The inconsistency in the number of cases can be observed both with the merging of first instance courts both in 2022 and 2023, with the merging of cases, and with the separation of individual cases from the overall judicial procedure.
Every year from 2019, significant increase in the number of received non-litigious civil cases has been observed. Mainly, it is due to the amendments to the Civil procedure law, which entered into forced in the end of 2021, which made it easier to submit applications for enforcement of obligations according to warning procedures, these changes contributed to the increase in the number of non-litigious cases received. Civil Procedure Law determines that the judge shall, within seven days take a decision.
The pending cases in the end of the 2022 were high, therefore also the pending cases on 01.01.2023. are higher, but during the year the ratio between received and resolved cases are balanced, because of the short case review period, which contributes that the number of received and completed cases is similar.

Q091 (2022): In 2022 the increase in the balance of pending cases is related to changes in data collection, more specifically, from 2023 it is possible to determine the number of unfinished cases in non-litigious land registry cases.
The number of pending cases on Jan. and on 31.Dec. is higher than 2020 year due high number of pending non-litigious cases. Every year from 2019, significant increase in the number of non-litigious civil cases has been observed. Compared to the 2020, the number of incoming cases and resolved cases increased significantly. The increase of incoming cases and resolved cases of non-litigious civil cases affected increase of pending cases. In the end of 2021, amendments to the Civil Procedure Law entered into force, which made it easier to submit applications for enforcement of obligations according to warning procedures, these changes contributed to the increase in the number of non-litigious cases received. Civil Procedure Law determines that the judge shall, within seven days take a decision The short case review period contributes to that the number of received and completed cases is similar.
The number of pending cases (pending for more then 2 years) has decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending civil and administrative cases.

Q091 (2021): The number of pending cases on January differs from pending cases on December, 2020 registered data due the living Court information system database. The number of pending cases on Jan. is higher than previous year due high number of pending non-litigious cases. See comments from previous campaigns. Every year from 2019, a significant increase in the number of non-litigious civil cases has been observed. Compared to the previous period, the number of cases increases by 25%. According to the Civil Procedure Law, judge should examine application within seven days. The consideration time determined by the law also affects the amount of resolved cases, and accordingly indicates a direct connection with the amount of incoming cases.
Administrative cases: At the end of 2021, the number of cases received, (which were directed against the Covid-19 restrictive measure - mandatory vaccination), increased significantly, and it was not possible to resolve these cases until the end of the year
The number of pending cases (pending for more then 2 years) has decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending civil and administrative cases.

Q091 (2020): The number of resolved and incoming cases of general civil (commercial) non litigious cases are higher because there was significant increase on applications for the undisputed enforcements. Usually, cases on the undisputed enforcement are submitted electronically and solved in written procedure. The increment of such cases are probably closely connected with activities of creditors` intensity.
We cannot find the main reason why pending cases older than 2 years are resolved more than in previous years. Representatives of courts point out the effect of Covid19 restrictions because many old cases were re-classified from oral to written procedure if it was possible and if parties of case agreed to that.

Q091 (2019): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved. The reform of the judiciary could also have affected the backlog of cases pending for more than 2 years, as it is undoubtedly that when transferring a backlog from one court to another, another judge needs extra time to go into the case file. However, the methodology for processing statistical data must also be taken into account, i.e. the functionality of the database, that the period of suspension of proceedings is taken into account during the proceedings and other external economic factors could have affected the number of long-standing civil cases. Taking into account also the peculiarities of litigation in our country, for example, that commercial cases are not separated from civil cases and that one civil case may contain several claims which are considered in one procedure, this generally means that the case takes longer to process.

Q091 (2018): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved.

Q091 (2017): Data updated after court reorganisation in 2018.

Q091 (2016): Data updated after court reorganisation in 2018.

Q091 (2014): Variations concerning administrative law cases over the period 2012-2014 are due to a change in the legislation. Namely, from July2012, appealed administrative decisions of institutions are handed to District courts.

Q094 (General Comment): Severe criminal cases include all criminal cases according to the Criminal law - it includes all cases where a harmful offense (act or failure to act) committed deliberately (intentionally) or through negligence, provided for the Criminal Law, and for the commission of which criminal punishment is set out shall be considered a criminal offense. Misdemeanor and / or minor criminal cases includes all administrative infringement cases according to the Law on Administrative liability about administrative offence of a person for which administrative liability is provided for in a law or binding regulations of local governments.
Other criminal cases include execution of a sentence, cases on penal order of the prosecutor, cases on determination of compulsory measures of a medical nature.

Q094 (2024): Other criminal cases include execution of a sentence, cases on penal order of the prosecutor, cases on determination of compulsory measures of a medical nature. The inconsistency in the number of cases can be observed both with the merging of cases, and with the separation of individual cases from the overall judicial procedure.
Pending cases on 1 Jan. ref. year, In 2024, noticeable reduction in the backlog of other criminal cases was observed at the beginning of the year, with a discrepancy ratio of -32.80%, indicating a significant drop in pending cases compared to the previous period. This decrease is largely attributed to a decline in the number of cases involving prosecutor's penal orders.
Incoming cases. In 2024, compared to 2023, there was a significant increase in the number of criminal cases, particularly in categories involving severe offences. The most notable growth was observed in the following groups: criminal offences in road traffic safety: +128.25%, criminal offences against family and minors: +67.16%, criminal offences against the judiciary: +45.87%, criminal offences against public safety and order: +27.35%, criminal offences against property: +17.97%. This trend reflects a growing burden on the judicial system, especially in areas related to public safety, vulnerable groups, and traffic-related violations.
Resolved cases. In 2024, first instance courts saw an increase in the number of resolved criminal cases, with 5,766 cases adjudicated across key categories such as offences against property, traffic safety, and public order. This rise is directly linked to the high volume of incoming cases (6,548), particularly in severe criminal matters. Pending cases. The increase in the number of criminal cases received in 2024 had a direct impact on the volume of pending cases.
By the end of the year, the number of unresolved cases had grown. It should be noted that over the past two years, there has been a consistent rise in criminal case volume, which has had a negative effect on the clearance rate (CR%) across all first instance courts.

Q094 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. The increase in the number of pending cases (older than 2 years) could be related that in the courts the court hearings in -person were restored, lifting the restrictions of Covid, when cases were mostly adjudicated in written procedure. The inconsistency in the number of cases can be observed both with the merging of first instance courts both in 2022 and 2023, with the merging of cases, and with the separation of individual cases from the overall judicial procedure.

Q094 (2022): The decrease in the number of resolved cases is related to the drop in the number of cases received in the courts of first instance.
Decrease of pending cases on 1 Jan is related to the decrease of misdemeanour and / or minor criminal cases. In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming and resolved of misdemeanour and / or minor criminal cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming misdemeanour and / or minor criminal cases.
In 2022 the increase in the number of pending cases at the end of the year is related to changes in data collection systems` audit, more specifically, for misdemeanour and / or minor criminal cases. Severe criminal cases, which are assessed according to the Latvian Criminal Law and Criminal Procedure Law, are decreasing each year. The tendency of the decrease in the number of criminal cases has been observed for a longer period of time. The reduction of severe criminal cases can be explained by changes in legislation. (In the summer of 2020, amendments to the Criminal Procedure Law entered into force, which stipulated that the case for minor violations of the criminal law is not referred for initiation of criminal proceedings (Section 373 An investigator with a consent of a prosecutor or a prosecutor may refuse to initiate criminal proceedings, if a misdemeanor has been committed), which affected the the total number of criminal law cases received in court. A decrease in the number of criminal cases received has been observed since 2019.
The number of pending cases (pending for more then 2 years) has significantly decreased. The decrease in cases is due to the lifting of restrictions, which were related to limiting the spread of Covid-19. The reduction of pending cases also is related to the court reform, increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases. Starting from 2022, data on "other criminal cases" are also collected and inserted in the table.

Q094 (2021): Pending cases: The number of pending cases in January differs from pending cases in December 2020 registered data due the living Court information system database
Severe criminal cases include all criminal cases according to the Criminal law - it includes all cases where a harmful offense (act or failure to act) committed deliberately (intentionally) or through negligence, provided for the Criminal Law, and for the commission of which criminal punishment is set out shall be considered a criminal offense. Misdemeanor and / or minor criminal cases includes all administrative infringement cases according to the Law on Administrative liability about administrative offence of a person for which administrative liability is provided for in a law or binding regulations of local governments.
Criminal cases, which are assessed according to the Latvian Criminal Law and Criminal Procedure Law, are decreasing. The reduction from 2020 was influenced by changes in legislation. However, the tendency of the decrease in the number of criminal cases has been observed for a longer period of time, and it cannot be explained by the activities of the courts, but by assumptions about the general development trends of society.
In the summer of 2020, amendments to the Criminal Procedure Law entered into force, which stipulated that the case for minor violations of the criminal law is not referred for initiation of criminal proceedings (Section 373 An investigator with a consent of a prosecutor or a prosecutor may refuse to initiate criminal proceedings, if a misdemeanor has been committed), which affected the the total number of criminal law cases received in court. A decrease in the number of criminal cases received has been observed since 2020.
In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases. The number of pending cases (pending for more then 2 years) has significantly decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases. In 2021, courts of first instance resolved more criminal cases than in previous periods, which is related to the court's ability to adapt to resolve cases in the restrictive conditions of the Covid-19.
Data of 2020 for minor criminal cases are revised for incoming and resolved cases: 5 755 incoming cases and 6 631 resolved cases.

Q094 (2020): Data on resolved severe criminal cases is decreased because of Covid-19 restrictions. We have already pointed out the limitations of court work: written procedure, prohibition of face-to-face meetings, cancellation of court hearings etc.

Q094 (2018): There may be some change in data due to court system reform.

Q094 (2016): Severe criminal cases - All sections of The Criminal Law
Misdemeanor and / or minor criminal cases - All sections of Latvian Administrative Violations Code
Q094 (2014): According to 2014 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment.

Q097 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible.
In accordance with the provisions related to data gathering, all information must be recorded in the Court Information System within 3 days. However, the Court Information System functionality for the statistical reports provides in the System recorded figures at the end of the year. Consequently, submissions received in the previous year but registered the next year are considered as incoming cases for the new year.
Justice statistics do not distinguish between “non-litigious enforcement cases” because such type of cases are not defined in the Civil Code. Accordingly, the reply in their respect is NAP. The “non-litigious land registry cases” are dealt with by the regional courts in second instance and they are within the competence of the first and second (appeal) instance.

Q097 (2024): Pending cases older than 2 years from the date the case came to the second instance court. The increase in the number of pending cases in administrative proceedings (older than 2 years) contributed to the overall growth in this group of cases. It should be noted that the rise in the number of pending administrative cases older than two years cannot be attributed to the court's capacity, but rather to the nature and complexity of these types of cases.

Q097 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. The timely consideration of cases as one of its priorities, also following the guidelines for the consideration of cases approved by the Council of Justice. This has affected the changes in the number of resolved cases and, accordingly, the number of pending cases and pending cases older than 2 years.
The inconsistency in the number of cases can be observed both with the merging of cases and with the separation of individual cases from the overall judicial process.

Q097 (2022): Data on incoming, resolved non-litigious civil cases in appeal court decreased in 2022, but the changes cannot be explained.
It should be mentionned that the statistical system has been improved which affected the 2022 data. Moreover, 2020 and 2021 data have been updated according to the same methodology of presentation of data as for 2022 data. The number of pending cases (pending for more then 2 years) has significantly decreased. The decrease in cases is due to the lifting of restrictions, which were related to limiting the spread of Covid-19. The reduction of pending cases (pending more than 2 years) is related to a interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

Q097 (2021): Comparing to the previous period, the number of pending civil cases on 1 Jan is lower due the restriction measures of the Covid-19 spreading in 2019 and 2020. However indicator of pending administrative law cases on the beginning of year is lower than previous period due the high CR in 2020.
The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending cases.

Q097 (2020): Data on civil (commercial) litigious cases (number of resolved and incoming cases) is lower due to the Covid19 pandemic. On March 14 2020 there was the state of emergency that affected the work of courts. In order to mitigate potential risks of virus, oral proceedings that did not involve serious violations of rights were cancelled. This restriction directly affected the number of resolved cases. Also, there were restrictions on appearance of persons in the court, that affected the number of new claims or request - incoming cases. The first state of emergency lasted till June 2020. The second state of emergency started in November 2020.
Number on civil (commercial) non - litigious cases include the data like in the first instance. Mainly there are cases on undisputed enforcement. Usually, non-litigious cases are resolved in written (not oral) process, and during State of emergency oral processes were not allowed, but there were no restriction on written process. According to this the number of non-litigious cases are higher.
Number on incoming administrative cases are lower. It is connected with restrictions of state emergency situation when representatives from institutions could not check, revise, visit companies (individuals) in the face-to-face meetings.

Q097 (2019): Decrease of pending administrative cases us due to many result cases in previous period
The number of Non-litigious civil cases is very low, that's why percentage isn't good qualifier

Q097 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

Q097 (2017): As regards the decrease from 2016 in administrative law cases pending on 1 Jan, it can be explained as there were much more resolved cases than incoming in previous cycle. As regards the decrease in the total of other than criminal pending cases, it can be explained as there was a change of pending civil law cases in second instance. This might be an issue due to reclassifying the starting moment of a court case. Also, much more resolved cases than incoming cases has decreased the amount of unresolved cases on 31 Dec.

Q097 (2016): The increase in pending civil cases is due to fewer resolved cases in 2015. Decrease in pending Administrative cases is due to more resolved cases in 2015.

Q097 (2014): In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

Q098 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible.

Q098 (2024): Other criminal cases include enforcement proceedings that are subject to appellate review.
Over the period from 2022 to 2024, second-instance courts in Latvia have encountered increasing challenges in the adjudication of criminal cases. A notable rise in the backlog of cases has been observed both at the beginning and at the end of the reporting period. Furthermore, there has been a growing number of cases that remain unresolved for more than two years, indicating systemic delays in the judicial process.
The most critical situation is evident in the Riga Regional Court — the largest regional court in Latvia — where the difficulties are particularly pronounced. These challenges are primarily attributed to a reduction in the number of judges and a significant increase in the volume of cases referred from first-instance courts.

Q098 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. Decrease of incoming cases of misdemeanour and / or minor criminal cases is mainly due to the changes in the legal acts, in the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming and resolved of misdemeanour and / or minor criminal cases significantly.
Severe Criminal cases and other criminal cases: the increase in the number of pending cases could be related that in the courts the court hearings in -person were restored, lifting the restrictions of Covid, when cases were mostly adjudicated in written procedure. The inconsistency in the number of cases can be observed both with the merging of cases and with the separation of individual cases from the overall judicial process.

Q098 (2022): Decrease of incoming and resolved cases is mainly related to the impact of decrease of misdemeanour and / or minor criminal cases. In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming and resolved of misdemeanour and / or minor criminal cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. As the number of cases in the courts of first instance decreases, the number of cases in the regional courts also decreases. This is the main reason for decrease of incoming and resolved misdemeanour and / or minor criminal cases. Of course, there is also a decrease in the number of serious criminal cases, which is related to the overall decrease in criminal cases in the courts of first instance.
The number of pending cases on 31.Dec. has increased due to a limited capacity of the largest appeal court (Rigas apgabaltiesa (The Riga Regional court)): the number of judges in the Board of criminal cases has decreased and some serious criminal cases were completed. The Riga Regional Court is the largest appeal court in Latvia. This court has the largest amount of work and the workload of the judge compared to other appeal courts.
The number of pending cases (pending for more then 2 years) has significantly decreased. The decrease in cases is explained:
- due to the lifting of restrictions, which were related to limiting the spread of Covid-19;
- due to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

Q098 (2021): In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly in the first instance courts. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases in the first instance courts and in appeal courts as well.
The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

Q098 (2020): In 2020 there was changes in Administrative Procedure Law, that might affect the amount of resolved cases. Furthermore, number of misdemeanour and / or minor cases are higher in the appeal courts because in last years the Constitutional court has declared several norms on administrative infringements are not incompatible with the Constitution of Latvia. This led to an increase of incoming administrative cases.

Q098 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

Q098 (2014): In 2014, the statistics of the Supreme Court Criminal Chamber were the following: pending cases on 01.01.2014: 139; incoming cases: 19; resolved cases: 73; pending cases on 31.12.2014: 0.
Due to a court reform, the Chamber of Criminal Cases of the Supreme Court has been liquidated as from 1 January 2015. All cases, which were not resolved on 31 December 2014, were transferred to regional courts.

Q099 (2024): On 1 January of the reference year, a decrease of 22% in pending administrative law cases was observed. This is related to the fact that in 2023, the Supreme court placed increased focus on reducing the backlog of cases, including temporarily reallocating one senator’s position to administrative cases. However, in 2024, the reallocation of the judicial position was cancelled, and by the end of 2024, the case backlog returned to its previous level.

Q099 (2023): The number of cases is as indicated. The Supreme Court has set the timely consideration of cases as one of its priorities, also following the guidelines for the consideration of cases approved by the Council of Justice. This has affected the changes in the number of resolved cases and, accordingly, the number of pending cases.
The number of remaining administrative cases is affected by the decrease in the number of incoming cases, as well as measures to improve the speed of processing cases.

Q099 (2022): Number of incoming cases have diminished in general, therefore all indicators have been affected. For small numbers of cases, the indicator shows an impact although in general there is none.
Q099 (2021): Total number of incoming administrative cases and civil cases has decreased significantly; taken measures to handle backlog of administrative cases has resulted in increased turnover, this has resulted in falling numbers of pending cases. To handle backlog of administrative cases, two additional posts of judges were created for the years 2021 and 2022. For some type of listed cases the total numbers are so small, that even 2-3 cases give discrepancy ratio of 100 % or even more.

Q099 (2020): There has been gradual decrease of incoming cases: civil cases 1336 (2018), 1164 (2019), 1127 (2020) and administrative cases 850 (2018), 844 (2019), 826 (2020). There has been increase of examined cases per judge of the Administrative chamber (+4) and there was additional judge from the Civil chamber allocated to deal with administrative cases (February-September 2019) and substitute judge working at the Supreme Court (September-December 2020). As result the clearance rate for administrative cases in 2019 was 113% and in 2020 was 114%.
The clearance rate for civil cases (Civil chamber) was 120% which is explained by decrease of incoming cases and high number of examined cases per judge (97 cases). Decrease of non-litigious land registry cases is explained, first, by decrease of total numbers of transaction, for example according to the statistics published by the State Cadastre, total number of transaction of land with buildings was 21619 in 2019 and 18616 in 2020. And, second, because majority of land registry cases of previous years concerned aspects of transformation of property rights (privatization and restitution) and economic activity before economic crises of 2008/2009 which are solved by now. Starting from 2019 the Supreme Court uses the same categories of cases as it is used in the first and second instance courts. Therefore previously used category „other cases" disappears.

Q099 (2019): Starting from 2019 the Supreme Court has changed system of classification of cases under different categories for civil cases. During this change we encountered problem of reclassification of cases registered during previous years. This reclassification had as objective to introduce the detailed classification used for first and second instance courts. Statistics for the reference year 2019 encompasses results from both categories. Since 2015 number of unresolved administrative cases increased. During year 2018 additional recourses were allocated to the Administrative department (chamber) of the Supreme Court, including additional judges. As the result, number of resolved cases in 2019 increased. For next coming two years there are two additional judges envisaged for the Administrative department.
Other non-litigious cases (2.3) are specific enforcement procedures which are regarded as uncontested for our civil procedure. These have been received via the specific procedure of a protest submitted by the Prosecutors General Office. The number became available as the result of introduction of the detailed classification regime.

Q099 (2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics
Q099 (2017): Supreme court has provided data for questions 1 & 2. As regards the decrease of Civil (and commercial) litigious cases, there was a major performance raise in 2016. Also, the Supreme court has only recently begun to collect statistics on their work performance and thus there was and still are some NA answers for CEPEJ questionnaire

Q099 (2016): Supreme court had accumulated too many unresolved cases and 1/3 of those ar older than 2 years so they have have made some changes and acheaved progess.
Q099 (2015): An explanation for the rather large difference in case count for general civil and commercial non-litigious cases are changes in civil proceedings - while in 2014 undisputed compulsory execution cases were also heared by Supreme Court, in 2015 it was tasked with hearing decisions from Land registry, sworn baillifs and notaries only.

Q100 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. The Supreme Court has set the timely consideration of cases as one of its priorities, also following the guidelines for the consideration of cases approved by the Council of Justice. This has affected the changes in the number of resolved cases and, accordingly, the number of pending cases.
Q100 (2022): Several judges have retired and new judges have started to work at the Supreme Court. This has made an impact on the case flow. Year 2021 the case flow was slow. Year 2022 the number of resolved cases allowed to diminish the backlog.

Q100 (2021): Total number of pending cases has significantly increased. Measures to handle this problem have been adopted and are under implementation. There are amendments to the Criminal Procedure Law adopted (https://likumi.lv/ta/id/336542-grozijumi-kriminalprocesa-likuma , in force since 3.11.2022.) to transfer competence to review specific agreement process cases to the regional courts. Some internal case management arrangements have been put into action.

Q100 (2020): During last two years 3 out of 8 judges (after increase of number of judges – 9 judges) have retired. Some additional time was needed to replace them (competition and appointment). There was significant decrease of examined cases in 2020 (clearance rate was 102% in 2019 and 95% in 2020) and increase of received cases in 2019: 734 (2018), 764 (2019) and 686 (2020).
Q100 (2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

Lithuania

Q091 (2024): In 2024, Lithuanian district, regional (first instance) and regional administrative courts1
received 193,215 cases and examined 191,417
cases were examined (in 2023, 189,922 cases were received and 190,789 cases were examined; in 2022, 193,001 cases were received and 191,729 cases were examined).
In 2024, the number of cases received by Lithuanian district, regional (first instance) and regional administrative courts increased by 1.7% compared to 2023, while the number of cases examined increased by 0.3%.
increased by 1.7%, the number of cases examined increased by 0.3% compared to 2022, and the number of cases received and examined remained almost unchanged.
The number of cases received and examined by the courts was influenced by changes in civil cases – the number of civil cases received increased by 5% compared to 2023.
On the other hand, in 2024, the number of civil cases received and examined by courts regarding the issuance of court permits continued to decline (by 10%) compared to
2023 (2,485 cases in 2024, 2,756 cases in 2023) . This change was caused by the amendments to the Civil Code of the Republic of Lithuania
and related laws that came into force on January 1, 2023, related to the abandonment of functions not typical of courts2
. The amendments transferred some of the functions of district courts
not related to the resolution of legal disputes to notaries (approval of the mutual consent of spouses to divorce and separation when the spouses have no minor children; court permits for transactions involving real estate that is family property and other court permits) and bailiffs (regarding the renewal of missed deadlines for the submission of enforcement documents for execution).
In 2024, compared to 2023, the number of pending cases increased. At the end of the year, the backlog of unresolved cases in district, regional (first instance) and regional administrative courts amounted to 31,387 cases (29,432 cases in 2023 and 29,266 cases in 2022). In 2024, the backlog of cases
was 7% higher than in 2023 and 2022.
Among the most frequently examined categories of administrative cases, it was noted that in 2024 there was a significant decrease in cases concerning tax legal relations, most of which involved requests for local fees related to municipal waste collection and management, as well as debt recovery. There was also a slight decrease in cases concerning financial support from national, European Union, and foreign institutions, along with environmental protection. By contrast, there was a notable increase in the number of cases concerning the legal status of foreigners and asylum, as well as a growing trend in cases related to construction, the enforcement of penalties, and conditions of detention. Therefore, it can be concluded that the 23% decrease in incoming administrative cases in 2024, together with the 34% decrease in resolved cases within the same category, can be explained by the fact that the decline in cases concerning tax legal relations was significantly greater than the rise in cases related to the legal status of foreigners and asylum, as well as construction matters.
In 2024 contrary to the previous cycles, several subcategories were marked as "NAP" instead of "NA", because those categories do not exist in the system ("NAP").

Q091 (2023): In 2023, compared to 2022, there was a significant increase in debt cases - compared to 2022, the number of cases in this category in 2023 increased by almost 10 thousand. This could be due to a general increase in the number of debtors. There were also an increasing trend of cases related to the protection of property rights. However, there has been a significant decrease in family law cases, namely - due to divorce by mutual consent of both spouses. This decrease could have been influenced by the fact that due to the aforementioned changes in legal regulation from the 1st January 2023, divorce by mutual consent of both spouses, when the spouses do not have minor children, was referred to notaries for non-judicial decision.
Among the most frequently examined categories of administrative cases, it has been noticed that the number of cases related to tax legal relations increases every year (most of them are cases related to debt recovery requests for local fees for municipal waste collection and management), the number of environmental protection cases is increasing slightly. However, as the flow of illegal migration has decreased, the number of asylum cases has decreased significantly. Also, the downward trend in cases regarding execution of sentences and conditions of detention continues to be seen.
The balance of unexamined administrative cases was influenced by the lack of judges, court staff (judge assistants, secretaries of court hearings), as well as in 2022 there was a significant increase in the number of cases regarding the issuance of a court order (regarding debt recovery requests for the local fee for the collection and management of municipal waste), therefore the usual examination of administrative cases according to the general rules of procedure was disrupted, and the duration of the examination of other cases was extended.

Q091 (2022): 2.1. The duration of court hearings is influenced by the number of new cases received at the court and the number of working judges who hear these cases (judge workload), the type or type of the case and its complexity, the cases specified in the law when the hearing must be postponed (e.g. by a party to the proceedings disease etc.). It should be noted that in 2022, 705 judges worked in Lithuanian courts (of which 2 judges were appointed for 2 years), 786 judge positions, that is, 81 positions were not filled, which could lead to a larger balance of unexamined cases at the end of the year. It is noteworthy that in 2022 compared to 2021, the number of civil cases examined in district and district courts (first instance) increased by 1.7%.
3. A significant change in received and examined administrative cases compared to 2021 was due to an increase in the number of administrative cases due to the issuance of a court order, when waste system administrators, due to the increased number of debtors, go to court with requests for the local fee for the collection and management of municipal waste, debt recovery, as well as there has been a significant increase in asylum cases due to the illegal migration crisis in the country.
For registry cases, the answer should be NA, the NAP was chosen for the calculation purposes: it is not possible to identify those cases among all other general civil cases.
Other cases: In 2022, compared to 2021, the number of cases of administrative offenses examined in district courts decreased significantly - by 65% compared to 2020. – decreased by as much as 76%. These changes were caused by changes to the Code of Administrative Offenses, which entered into force in 2021-07-01 and in which certain cases of administrative offenses were transferred from district courts to be examined by non-judicial institutions.

Q091 (2021): in 2021 July 1 the amendments to the Code of Administrative Misdemeanors entered into force, by which the cases of administrative offenses were transferred to be examined (except for the cases referred to in Article 614, paragraph 1, point 3) from district courts out of court to pre-trial institutions.
in 2021 in the district courts, there was a noticeable decrease in the number of civil cases examined by the first instance due to the bankruptcy of legal entities - 1,212 cases (1,624 in 2020, 2,787 in 2019). Compared to 2019, such cases decreased by more than half. It can be assumed that such a decrease in cases in this category could have been caused by the 2020 initiative adopted by the Council of Judges. The impact of the consequences of the novel coronavirus (COVID-19) on Lithuania entered into force Law no. XIII-2861, which was temporarily (until December 2020 31) the initiation of the insolvency process was suspended. It is noteworthy that out of 1212 civil cases on bankruptcy of legal entities, which examined in 2021, the majority - 860 cases - were received by 2020.

Q091 (2020): "Pending non-litigious cases": general decrease of number of cases and application of administrative means. The number of resolved civil and commercial litigious cases might have been affected by the pandemic as not all the categories of cases could have been adjudicated remotely. The number of administrative cases, sa well as for civil and commercial litigious cases could have decreased because of the need for some period to adapt IT and video conference equipment in the situation emerged. The increase of number of pending administrative cases older than 2 years is related to decisions of courts in environmental law cases to stay proceedings pending a decision in a related case, which will be a preliminary ruling in another case:legal entities are challenging a decision requiring them to pay a tax on the pollution of packaging waste from which they were exempted because they had concluded a contract for the organization of waste management. As the documents proving the waste management issued by the licensed recycler were canceled, the documents certifying the waste management of other entities were canceled, which obliged the entities (which had a contract with the waste manager to organize packaging waste management) to pay this fee. The cases are suspended and pending a decision in a case challenging a decision declaring waste management documents issued to applicants invalid because it will have a preliminary ruling in these cases.

Q091 (2019): In 2019 there is a downward trend in the backlog of incoming and resolved cases. At the end of the year, the backlog of pending cases at the district, county (I instance) and county administrative courts amounted to 29 898 cases, at the end of 2018 – 33 233 cases; at the end 2017 - 36 419 cases (10 percent less than in 2018 and 18 percent less than in 2017).
In 2019 the number of court order cases has decreased. This decrease may have been caused by the general decrease of debtors' natural persons in 2017–2019. According to the information provided by the credit bureau Creditinfo
data, on 1st January 2020 there were 163 929 debtors (natural persons), on 1st January 2019 -177 055, on 1st January 2018 - 207 000 debtors (natural persons).
In 2018, the number of administrative cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of 2018 (and to the beginning of the reference year 2019).
In 2019, compared to 2018, the number of administrative cases heard in regional administrative courts increased by 14 percent. The change in the increase was due to a 34 percent increase compared to 2018 in the number of applications for a local fee for the collection and treatment of municipal waste. In 2019 a further upward trend in tax cases, enforcement cases and arrest cases, but there has been a significant reduction in civil liability for damage caused by illegal actions by public authorities.
In 2019, as compared to 2018, the number of administrative misconduct cases investigated in district courts increased by 16 percent. The change was due to a 64 percent increase in the number of cases of administrative offenses related to transport and road transport (370-463 Articles of the Code of Administrative Offenses). In 2019 significantly increased the number of cases of driving under the influence of drugs, psychotropic or other psychoactive substances without driving license. The number of cases related to trade, the financial system and statistics has also increased.

Q091 (2018): The decrease in general civil (and commercial) non-litigious cases (2.1.) may have been due to the overall decrease in debtors' natural persons in 2017 and 2018. The latter suggestion is based in data from the credit bureau Creditinfo (1 January, 2019 number of debtors natural persons was 177,055; 1 January - 207,000; 1 January, 2017 - 252 479). Credit Bureau “Creditinfo“ stores information about credit risk for businesses and private entities, forms the credit history and establishes credit ratings.
The decrease in "other non-litigious cases" (2.3.): civil cases in process of enforcement (execution) in all district courts was due to changes in the law that came into effect in 2017 July 1, on the basis of which the bailiff, rather than the court of first instance, is responsible for dealing with the succession in enforcement proceedings.
The decrease in "other cases" (4): administrative offence cases (including cases in process of enforcement (execution) in 2017-2018 period was due to to the entry into force of the Code of Administrative Offenses on 1 January, 2017 which left the handling of a large proportion of administrative misconduct and the imposition of penalties to various public administration entities (out of court). This could also be due to the expanded list of circumstances in which the person is not prosecuted under the Code of Administrative Offenses. The decrease in these cases was also influenced by the Amendments to the Criminal Code (on 1 January, 2017) that criminalized persons who drove a road vehicle or taught practical driving while under the influence of alcohol with more than 1.5 ounces of alcohol. In 2018, compared to 2017, the number of cases of administrative offences investigated in district courts decreased by 15.66%, compared to 2016, a decrease of 75.83%. Concerning administrative cases (3): in 2018, the number of cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of the reference year.

Q091 (2017): Other non-litigious cases: civil cases in process of enforcement (execution).
Concerning the category “non-litigious cases” the number of pending cases on 1 January 2017 increased considerably compared to their number on 1 January 2016. The same increase characterises the categories “general civil and commercial non litigious cases” and “other non- litigious cases” (pending cases at the beginning of 2017). However, we can observe that at the end of 2017 the number of pending cases decreased concerning the category “non-litigious cases” and the sub-category “other non-litigious cases”. Only with regard to “civil and commercial non-litigious cases” the number of pending cases at the end of 2017 increased. We can see that these variations are the result of variations in the number of incoming cases for the period 2015-2017. Besides, as the numbers are small, variations appear important. The main reason for increased pending cases is the increased number of incoming other non-litigious civil cases, i.e. enforcement cases, in 2017. More precisely, in 2017, the number of civil cases in enforcement procedure – requests to change the recoverer, increased. There is no particular reason, besides the fact that some companies were buying the recoverers‘ rights from other natural persons or legal entities.
As regards the category "other cases", it refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution). Following the entry into force of a new Code of Administrative Offence (1 January 2017), the number of incoming cases of administrative offences decreased. The decrease in the number of incoming administrative law cases in 2017 is explained by the increased number of incoming administrative cases in previous years (due to the decisions of the Constitutional Court).
Registry cases cannot be identified among the overall number of general civil cases.
Administrative law cases: courts received less administrative cases; they are fighting backlogs from previous years.

Q091 (2016): Administrative law cases - courts are fighting backlogs. This led to the growth in the number of resolved cases and consequently to the decrease in the number of pending cases 31 December 2016.
Other non-litigious cases: civil cases in process of enforcement (execution). The increased number of these incoming cases also results in the increase of number of incoming non-litigious cases. The number of increased incoming other non-litigious cases (enforcement) may be due to the number of the resolved civil cases in 2015 (the number of pending cases on 1 January 2016 decreased). As regards registry cases: the answer should be NA, the NAP was chosen for the calculation purposes: it is not possible to identify those cases among all other general civil cases.

Q091 (2015): Civil and commercial non-litigious cases include court orders

Category "other" includes: Cases of administrative offences and cases of administrative offences in process of enforcement (execution).
Q091 (2014): The number of incoming administrative cases increased which affected the total. They were mostly cases on remuneration of public servants due to the decision of the Constitutional Court declaring the laws on the reduction of the remuneration of State servants and judges unconstitutional. For the same reason, the number of cases of administrative offence (in execution process) increased, which affected the category "other". As to the significant decrease in the number of general civil (and commercial) non-litigious cases (pending 31 Dec) in 2014, civil cases on deliver of judicial orders are resolved quickly and such residues are normal.

Q092 (2014): For 2013 and 2014, the category “civil and commercial non-litigious cases” includes court orders.

Q094 (2022): Protracted proceedings in criminal cases are caused by the non-appearance of the parties to the proceedings or their representatives at the court session, the request of the parties to the proceedings to postpone the proceedings and the collection of additional evidence. It can be concluded that the protracted examination of criminal cases is also usually determined by circumstances depending on the actions of the participants in the process.
There were 57 criminal cases (64 in 2021, 72 in 2020), the examination of which lasted longer than 5 years. In the last few years, there has been a trend towards a decrease in the number of criminal cases examined at the first instance in first insance courts, the examination of which lasted longer than 5 years.

Q094 (2018): On 1 January 2017 Amendments to the Criminal Code of the Republic of Lithuania were adopted that provide for criminal liability for persons who drove a road vehicle or taught practical driving while under the influence of alcohol more than 1,5 promilles. This change of regulation had impact on the increase of the number of criminal cases starting from 2017 (in comparison with 2016).
Q094 (2016): The crime situation changed in Lithuania - the number of registered crimes by prosecution also decreased through these years, as a result less cases were received in courts. As regards 94.1 and 94.2: the answer should be NA, the NAP was chosen for the calculation purposes.

Q097 (General Comment): In Lithuania, statistical data on case flow and their classification are made according to the specific regulations and are mainly based on the institutes of Civil, Criminal Codes and the codes of Civil and Criminal procedures, as well as the Code of Administrative Offences and the law on Administrative procedure. Therefore figures for some of the types of cases are unavailable because there is no such classification while making statistical reports. In respect of the variations that can be observed between figures provided for the different evaluation cycles and in the light of the above described peculiarity of the statistic system of Lithuania, it is noteworthy that cases the number of which is not available are included in other categories, i.e. “civil litigious”, “civil non-litigious”. Accordingly, the indicated totals are relevant. Second instance courts deal with some non-litigious cases, but their number is insignificant.

Q097 (2023): 3. In 2023, significantly fewer administrative law cases were received:
regarding the legal status of foreigners - 454 cases (in 2022 - 1583)
asylum - 90 cases (in 2022 - 1237)
tax legal relations - 136 cases (in 2022 - 300);
regarding the judgements of debt for the local municipal waste collection and management fee - 75 (in 2022 - 234);
on conditions of execution of sentences and detention - 167 (in 2022 - 262);
complaints of persons serving a prison sentence regarding compensation for inadequate prison conditions - 157 (in 2022 - 230).
In 2023, compared to 2022, the duration of consideration of administrative cases examined by the appellate instance regarding decisions increased by 70 days, but compared to 2021, it decreased by 50 days.
In 2023, the duration of consideration of administrative cases examined by the appellate instance regarding rulings in the Supreme Administrative Court of Lithuania also lengthened - compared to 2022 extended by 7 days, and compared to 2021 - in 5 days. It should be noted that in 2022 (compared to 2021), the significantly shortened duration of hearing cases could be influenced by the fact that in 2022 March 31 by the resolution of the Seimas of the Republic of Lithuania, 3 judges from the Supreme Court of Lithuania and 2 judges from the Court of Appeal of Lithuania were transferred to the Supreme Administrative Court of Lithuania temporarily (for a period of 3 months) due to the extremely increased number of pending legal status and asylum cases related to the influx of foreigners (illegal migrants) in Lithuania. Meanwhile, the longer duration of the hearings in 2023 compared to 2022 could have been influenced by the fact that, after the transfer period, the aforementioned judges returned to work in the courts from which they were temporarily transferred.

Q097 (2022): 3. in 2021 the duration of the review of decisions of administrative cases at the appellate instance was significantly shortened (more than 130 days compared to 2020), this fact led to a smaller balance of unexamined cases at the beginning of 2022. 3.1. The significant change in administrative cases received and examined by the second instance, compared to 2021, was caused by an increase in complaints regarding the decisions made by the court of first instance regarding debt collection of local fees for the collection and management of municipal waste, as well as complaints regarding asylum requests related to illegal migration to Lithuania.
3.2. The duration of the review of decisions by the appeal instance of administrative cases was significantly reduced (120 days compared to 2021 and 253 days compared to 2020), which led to a smaller balance of unexamined cases at the end of 2022. In 2022, compared to 2021, more complaints about decisions made in courts were examined, as well as accordingly, the ratio of examined complaints and amended or annulled decisions slightly increased.

Q097 (2021): Other cases include appeal cases regarding decisions announced by the district courts in cases of administrative offenses.
The number of incoming administrative cases were increased in 2021 due to 1214 cases received in Vilnius Regional Administrative Court and the Regional Administrative Court regarding asylum (due to decisions taken by the Migration Department under the Ministry of Internal Affairs not to consider the request for granting asylum or decisions not to grant asylum). Only 335 such cases were examined.

Q097 (2020): Second instance courts deal with some non-litigious cases, but their number is insignificant.

Q097 (2019): "Other": administrative offence cases (including cases in process of enforcement (execution)).
"Administrative cases" - the data provided encompasses cases dealt with by the Supreme Administrative Court of Lithuania; it is to notice that these figures include apellation cases (on decisions of the court of first Instance) well as cases that are heard in the Supreme Administrative Court of Lithuania as sole instance.
"Pending cases older than two years": the decrease is due to the fact that cases pending for more than 2 years have been resolved.

Q097 (2018): The decrease in "other cases" (4), i.e. administrative offence cases (including cases in process of enforcement (execution), at second instance courts (appeal) in 2017-2018 period was related to the decreased number of resolved administrative offence cases in the first instance courts (see Q091).

Q097 (2017): As regards the category "other cases" which refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution), the observed decreases in their numbers (pending at the beginning of 2017, incoming, resolved, pending at the end of 2017) are the consequence of the entry into force of the new Code of Administrative Offences.

Q097 (2016): The changes in number of cases are mainly related to the increased number of resolved administrative cases in the first instance administrative courts in 2015 and 2016 (the courts were fighting backlogs from previous years) and the renewed processes that were suspended in the second instance court due to the application to the Constitutional Court of the Republic of Lithuania (related to salaries of civil servants, decreased pensions, etc.).

Q097 (2014): The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category “other cases” since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Q098 (General Comment): There is no separate statistical data allowing to distinguish between severe/minor/and other criminal cases. Neither the court information system is applied to this, nor the courts have obligation to provide the information on the seriousness of the crime. In the court information system offenses are described through the indication of an article (it does not show the severeness of a crime by itself).

Q099 (General Comment): Other cases - jurisdictional cases and administrative offences cases.

Q099 (2024): We apologize, it was mistakenly marked "NA" when it should have been "NAP".

Q099 (2023): jurisdictional cases and administrative offences cases.

Q099 (2022): The Supreme Court of Lithuania hears only those cassation requests that have been selected as meeting the requirements of the law by a special panel of three judges of the Civil Cases Division. Only those cases that are significant in terms of the interpretation and application of equal law come before this court. The judges of the Supreme Court of Lithuania can devote more time and attention to the most important cases in the state. In addition, this ensures the promptness of the court process.
in the Supreme Court of Lithuania in 2022 the duration of civil cases was shortened by 2 days, but the longer duration of cases was also influenced by the fact that not all the posts of judges were filled in this court.

Q099 (2020): In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year. However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.
The decrease in the number of resolved civil and commercial litigious cases and accordingly the increase in the number for pending cases at the end of 2020 are due to the reduction in the number of judicial posts and the lengthy appointment by Parliament procedures for vacancies.

Q099 (2019): Other cases - jurisdictional cases and administrative offences cases.
Over the last five years, there has been an almost consistent decline in cases, including cassation appeals. In 2019, as compared to 2015, 20 percent less civil cassation appeals were filed and 17 percent fewer civil cassation cases were accepted, 43 percent fewer civil cassation cases were examined. In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year.
However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.

Q099 (2018): The number of civil (and commercial) litigious cases (1.) of the cassation instance court (Supreme Court) pending at the end of the year decreased due to the general decrease of resolved cases at first instance. In 2018 the number of civil cases resolved at first instance courts decreased by 10.89% compared to 2017 and was 15.03 % lower than in 2016. This led to the slightly lower inflow and larger number of resolved cases, therefore, to the decreased number of pending cases at the end of the year.

Q099 (2016): NA was changed to NAP only for calculation purpose -situation hasn't changed.

Q099 (2014): In the frame of the 2014 exercise, it has been indicated that the Supreme Court of Lithuania received 1369 appeals (cassation) in criminal cases and 2794 appeals (cassation) in civil cases. 677 appeals in criminal cases and 2038 in civil cases were returned to the complainants.
2014: Different category of cases as in Q91, 97 and 99 exist in Lithuania, but they are all under the category 1. Civil (and commercial) litigious cases and it is not possible at this point to distinguish them from other cases.
The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category "other cases" since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Q100 (2022): In the Supreme Court of Lithuania, not all the posts of judges were filled, which led to a longer duration of hearing cases.
Q100 (2020): general decrease of number of cases

Q100 (2016): The number of admitted cassation claims decreased in 2015 and in 2016 was almost the same as in 2015. Besides, the number of resolved cases increased in 2015 due to the aim to comply with the timeliness.

Luxembourg

Q091 (General Comment): To date, it is not possible to provide information on pending cases older than 2 years.

Q091 (2024): 1. Pending cases 'other than criminal': the 21.56% increase in the total number of pending cases 'other than criminal' at the end of the reference year is explained by the rise in pending administrative cases. This increase can be detailed as follows: the 51% rise in pending cases is due to the increase in incoming cases. In 2024, a series of litigation led to the opening of 641 cases at the administrative court. These cases, not yet resolved, are counted as pending at the end of 2024.
2. Number of incoming/resolved general non-litigious civil (and commercial) cases: this figure corresponds to European payment orders and payment ordinances issued by the two district courts. The increase in these cases observed between 2022 and 2023 continued in 2024 and can be explained on one hand by the natural fluctuation of these figures, and on the other hand, we assume the increase is related to the economic development of various sectors (notably construction). However, no detailed analysis has been conducted on this matter.
3.Administrative cases:
- The 64% increase in incoming cases in 2024 is explained by the filing of a series of litigation, which led to the immediate opening of 641 cases at the administrative court.
- The 51% increase in pending cases is explained by the rise in incoming cases. In 2024, a series of litigation led to the opening of 641 cases at the administrative court. These cases, not yet resolved, are counted as pending at the end of 2024.

Q091 (2023): The number of incoming/resolved non-contentious general civil (and commercial) cases corresponds to European payment orders and payment orders issued by the two district courts. The increase observed between 2022 and 2023 in these cases can be explained on the one hand, by the natural fluctuation of these figures, while on the other hand, we assume that the increase is linked to the economic development of various sectors (particularly construction). However, no detailed analysis has been carried out on this subject.
Q091 (2022): The decrease in the number of non-litigious cases brought before the courts can be attributed to a legislative change in 2021, which raised the jurisdictional threshold from €10,000 to €15,000 in favour of the justices of the peace (https://legilux.public.lu/eli/etat/leg/loi/2021/07/15/a541/jo). This change has resulted in a reduction in both new cases filed and cases concluded by the courts, as certain matters that would have traditionally been brought before the courts are now within the competence of justices of the peace since 2021.

Q091 (2021): The comment provided for 2020 data remains relevant in respect of cases pending at the end of 2020. It should be recalled that since the law of 27 July 2018 establishing the Judge for family law litigation (JAF), which came into force on 1.11. 2018, cases under the jurisdiction of the JAF are included in the category "civil litigious cases". These are cases previously dealt with by the civil chambers, but also cases dealt with by the youth and guardianship court (e.g., cases relating to parental responsibility with regard to a natural child or a child whose parents are divorced) or at the level of the justice of the peace (maintenance cases). Moreover, it can be observed that the number of incoming cases in these matters has increased since they are within the JAF competence. This is explained by the simplification of the access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter; by the emergence of cases on the basis of new legal provisions (e.g., application by the minor); and by all the litigation generated by the new legal provision establishing the institution of generalized joint parental authority. Moreover, since proceedings before the JAF take much less time than before the reform introducing the JAF, motions to modify decisions taken are filed more quickly and thus increase the volume of cases.

Q091 (2020): "The law of July 27, 2018 establishing the family court judge (JAF) went into effect on 1.11. 2018. The cases currently under the jurisdiction of the JAF were included for the first time in the category "contentious civil cases" for the year 2020 which explains the observed increases in the number of new, completed and pending cases compared to the previous data. These are cases previously handled by the civil chambers, but also cases handled by the juvenile and guardianship court (e.g., parental responsibility cases involving a natural child or a child whose parents are divorced) or at the justice of the peace level (alimony cases). In addition, there has been an increase in the number of new cases in these areas since they were handled by the Family Court. This fact can be explained by the simplification of access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter, by the emergence of cases based on new legal provisions (e.g. request emanating from the minor) and by all the litigation generated by the new legal provision of the institution of a generalized joint parental authority? Moreover, since proceedings before the JAF take much less time than proceedings before the introduction of the JAF law, motions to modify decisions are filed more quickly and thus increase the volume of cases.
Including JAF cases, for 2019, new cases would be 7,626 (up from 5,038) while completed cases were 6,714 (up from 5,098).
Including JAF cases, for 2018, 91.1 new cases would be 5,248 (up from 4,807) while completed cases were 4,905(up from 4,857).
Regarding pending cases in 2018, at the end of the years JAF cases constituted a plus of 453, which corresponds to 1,649 pending cases at the end of the 2018 period in item 91.1. instead of the 1,256 cases informed. Taking into account horizontal consistency, the changes in new and completed cases discussed above, imply that at the end of the 2019 period, pending cases (91.1) totaled 2,561 (instead of 1,196).
The figures for previous years remain unchanged.
""Other non-contentious cases"" pending at year-end: Due to containment during the COVID-19 pandemic the number of public hearings was reduced to a minimum, allowing courts to prioritize work on cases not requiring such hearings. In addition, special crisis legislation allowed cases to be taken under advisement without a public hearing, with the agreement of the parties.
"

Q091 (2018): The pending cases at the date of 31/12/2017 had to be adapted, since there were 27 cases of vacation court, which were no longer pending at the end of the year. These 27 cases were withdrawn from the 1,341 pending cases indicated in the Scoreboard 2017 to reach 1,314 other pending non-litigious cases on 01/01/2018.

Q091 (2016): For question 91.1 the new data collection system revealed a higher number of pending cases, previously not considered by those in charge of counting.
For question 91.2.2, the new data collection system provides now information on other non-litigious cases, previously unavailable.
Q091 (2015): The figures given (with the exception of those for the administrative court) are those of the two district courts (Luxembourg and Diekirch).

The three justices of the peace totalized 78.273 national as well as 285 European payment orders.
Q091 (2014): The data (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts are not yet available. The three justices of peace ruled 75 411 national payment orders, 260 european payment orders and resolved a total of 6386 cases for a total of 65840 new cases. The implementation of statistics counters for civil and commercial cases resulted in variations. The applied criteria have been refined and give a more accurate image.

Q092 (2014): 2014: Category 2 (civil (and commercial) non-litigious cases) refers to european payment orders issued by two district courts. They are handled almost immediately, so that there is no stock at the end of the period. That is why the pending cases as well as incoming cases are classified as NAP.

Q094 (General Comment): We have classified as minor criminal cases all cases concluded by penal order in the magistrate's court or district court. Serious offenses encompass all cases concluded by a first-instance judgment in the police, correctional or criminal courts.

The figures listed under 'other cases' correspond to those cases which were referred to the investigating department.

Regarding the unavailability of pending and incoming cases: Due to the specific organization of workflow between courts and public prosecution services, files are only transferred to courts shortly before a hearing date, and if a case is not heard on that scheduled date, it is then returned to the public prosecution service until a new hearing date. Thus, there are - with few exceptions - no pending cases before criminal courts over an extended period, and the number of incoming cases is more or less equal to the number of resolved ones.

Q094 (2024): 3. Other criminal cases: The opening of an investigation by the examining judge at the court follows a request from the Public Prosecutor's Office. There are two types of investigations: judicial information requests concerning offenses or crimes, and 'mini-investigations' based on Article 24-1 of the Code of Criminal Procedure (CCP) (https://legilux.public.lu/eli/etat/leg/code/procedure_penale/20201221#art_24-1).

The year 2023 was marked by a very high number of cases opened at the prosecutor's offices regarding cybercrime (phishing), for which investigations under Article 24-1 of the CCP were initiated. In addition, the investigation chambers were increasingly involved in financial and economic cases.

'Mini-investigations' allow, in cases defined by law, prosecutors to request that the examining judge order an investigative measure without opening a full preparatory investigation. The increase in 'mini-investigations', which allow cases to be processed more quickly than 'classic' investigations, explains the rise in cases closed by the investigation chambers.

Q094 (2023): 3. Other criminal cases: The opening of an investigation by the investigating judge at the Tribunal is based on an indictment issued by the Public Prosecutor. There are two types of investigation: judicial inquiries into misdemeanours or felonies and 'mini-investigations' based on article 24-1 of the Code of Criminal Procedure (CCP (https://legilux.public.lu/eli/etat/leg/code/procedure_penale/20201221#art_24-1). The year 2023 was marked by a very large number of cases opened by public prosecutors' offices relating to cybercrime (phishing) for which investigations based on article 24-1 of the CCP were opened. In addition, the investigating offices were called upon more and more in financial and economic cases. Mini-investigations' allow prosecutors, in cases defined by law, to request the investigating judge to order an investigative measure without opening a preparatory investigation. The increase in 'mini-investigations', which allow cases to be removed from the investigating office more quickly than 'traditional' investigations, explains the rise in the number of cases closed by investigating offices.

Q094 (2022): Among the minor criminal cases, we have included all cases concluded by criminal order in the police court or district court. Serious offenses encompass all cases concluded by judgment at first instance in the police, correctional or criminal court.

The figures recorded under 'other cases' correspond to matters referred to the investigating judge's office.

Q094 (2018): Nous avons compté parmi les infractions mineures, toutes les affaires terminées par ordonnance pénale au tribunal de police ou au tribunal d'arrondissement. Les infractions graves représentent toutes les affaires terminées par jugement en première instance au tribunal de police, correctionnel ou criminel.
L'augmentation du nombre d'affaires résolues est due au fait que, pour les cycles précédents, les ordonnances pénales des tribunaux d'arrondissement n'étaient pas prises en compte au niveau des infractions mineures, qui comptabilisaient seulement les ordonnances pénales de justices de paix. Ainsi, pour 2016, les infractions pénales mineures reportées s'élevaient à 6460 en comptant les ordonnances pénales des tribunaux d'arrondissement, au lieu de 5454. Le total des affaires terminées a considérablement augmenté puisqu'il nous est depuis la période d'évaluation 2018-2020 possible, par l'ajout de la catégorie « Autres affaires » dans le questionnaire, de renseigner les affaires dont le cabinet d'instruction a été saisi. Les chiffres inscrits dans « autres affaires » correspondent donc aux affaires dont a été saisi le cabinet d'instruction.
Regarding the unavailability of the number of pending cases and incoming cases, Due to the specific organization of the work flow between the courts and the public prosecutor's office, files are transferred to the courts only a short time before the hearing, and, if the case is not heard at the given date, are then returned to the public prosecutor's office until the new date of the hearing. Thus, there are – with very few exceptions - no cases pending before the penal courts over a longer period of time, and the number of incoming cases equals more or less the resolved cases. With regard to civil cases, we should be able to provide information on cases pending for more than two years for the next evaluation, once the new application has been used for a longer period of time.

Q097 (2022): Administrative resolved cases: While the number of cases concluded by the Administrative Court has increased by almost 34%, it turns out that this variation was primarily recorded between 2020 and 2021, and commented upon during the assessment of the 2021 data. Between 2021 and 2022, there is a decrease of -6% in the number of resolved cases.

Administrative pending cases on December 31st reference year: The decline in pending cases between 2020 and 2022 is indeed significant, dropping from 240 to 174 cases. However, when compared to the figures provided in 2021, administrative cases have only decreased by -4%, reducing from `182` to `174` the pending cases before the Administrative Court.

Q097 (2021): The increased number of pending administrative law cases at the beginning of 2021 is a consequence of the increase in the number of pending administrative law cases at the end of 2020. In this respect, it should be recalled that the decrease of the Clearance rate for 2020 was mainly due to the increase in the number of appeals, in particular those relating to the general development plan of the City of Luxembourg. These cases had entered the first instance from January to March 2018, while the related judgments, consolidated by the administrative court, were delivered between May and September 2020. The related appeals, 51 in number, were filed between July and November 2020 and were still under investigation on 31 December 2020 due to the fixed time limit regime of investigation, but also due to the pandemic and the introduction of crisis legislation involving a suspension of appeal timeframes.

Q097 (2020):

Administrative cases - the decrease in the RC for 2020 is primarily due to the increase in the number of appeal motions, particularly those related to the City of Luxembourg's general development plan. These cases were entered in the first instance from January to March 2018, while the related judgments, consolidated by the Administrative Court, were issued between May and September 2020. The related appeals, numbering 51, were filed between July and November 2020 and were still being processed on December 31, 2020, due to the fixed timeframe regime (suspension from July 16 to September 15 - one month for the answer - one month for the reply - one month for the rejoinder), but also due to the pandemic and the implementation of crisis legislation involving a suspension of the appeal deadlines (until June 24, 2020). Thus, in addition to the increase in the number of requests for appeal, their investigation has been postponed, leading to an increase in the number of cases pending as of December 31, 2020. Throughout 2020, the Administrative Court was essentially up to date and disposed of cases as soon as they had been heard. The same is true in 2021.

Q097 (2019): Civil and commercial litigious cases pending at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of Appeal (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

Q097 (2016): It is a fact that the number of appeals before the Court decreased between 2014 and 2016. A key reason is that the number of appellate judgments rendered by the court has decreased significantly. The first reason is that the court had to evacuate a large number of cases as a matter of priority under the so-called accelerated procedure provided for by the law of 18 December 2015 on international protection. For the judicial year 2015/2016, 355 judgments out of a total of 938 judgments (excluding striking off) were rendered in accelerated proceedings and therefore not subject to appeal.

Q098 (2024): The 20% increase in the number of appeals against decisions made in first instance by the police courts (which correspond to new cases in second instance at the district court level) corresponds to an increase of 9 appeals between 2023 and 2024. Given that the absolute numbers are low, they are very sensitive to variations. The number of incoming cases depends on the appeals filed, over which the court has no influence, and which in turn depends, among other things, on the number of decisions made at the first instance level.

The observed increase in the number of incoming cases on appeal before the district courts could be explained by a change in the financial stakes for individuals judged in first instance by the justices of the peace. By the law of 21 September 2023 (https://legilux.public.lu/eli/etat/leg/loi/2023/09/21/a679/jo
) amending the law of 14 February 1955 concerning the regulation of traffic on all public roads (https://legilux.public.lu/eli/etat/leg/loi/1955/02/14/n3/jo
), the maximum fines in cases brought before the justices of the peace were changed from 250€ to 1 000€ (Art. 7 of the law of 14 February 1955). Indeed, the increase in the amount of fines, as well as the possibility of combining several offenses, can lead to significant penalties. This situation is likely to encourage more individuals to contest decisions rendered in first instance.

Q098 (2018): Concernant le nombre d'affaire résolues en matière d'affaire pénales grave, une baisse des recours introduits à la Cour d’appel est observée depuis ces dernières années, en conséquence les affaires terminées ont diminué en 2018. Concernant le nombre d'affaire résolues en matière d'affaire pénales mineures, le chiffre plus élevé des affaires d'infractions mineures s’explique par le fait qu’en 2017, 59 recours avaient été introduits sur des jugements du tribunal de police et que ces recours ont été traités pour partie en 2018 seulement.

Q099 (General Comment): Given the small size of Luxembourg, the number of cases handled by the Supreme Court is, in absolute terms, limited. Therefore, even the smallest variation in absolute numbers is likely to produce a significant effect in statistical or percentage terms, without necessarily implying a substantial or structural impact on the Court's activity.

There is no possibility of appeal by way of cassation against the decisions of the Administrative Court of Appeal.

Q099 (2024): Civil and Commercial Cases: The increase in pending cases at the beginning of the year compared to the beginning of the previous year can be explained by the difference between incoming cases in 2023 and the decisions rendered in 2023.

While the number of incoming cases decreased by 25% between 2023 and 2024, it should be noted that in 2023 there had been an increase in incoming cases compared to previous years. The commentary provided in previous years remains valid. The number of incoming cases depends on the appeals filed, over which the Court has no influence, and which in turn depends, among other things, on the number of decisions made at other instances. Legislation has not changed since the previous reference period.

Q099 (2023): While the number of new cases rose by 37% between 2022 and 2023, it should be noted that in 2022 there was a drop in new cases compared with previous years. In 2020, new cases amounted to 108 and even 116 in 2019. The number of new cases depends on the number of appeals lodged over which the Court has no influence and which depends, among other things, on the number of decisions taken on the level of other instances. The legislation has not changed since the previous reference period. At the Court of Cassation, the same magistrates deal with criminal and non-criminal cases. In 2023, there was an increase in the number of resolved criminal cases (in particular applications for judicial review of decisions of the Council Chamber, which are not included in the figures provided). This increase in resolved criminal cases means that the magistrates of the Court of Cassation have had less time to deal with non-criminal cases. In addition, during 2023, there were certain fluctuations in the composition of the Court of Cassation, resulting in the partial/temporary unavailability of certain magistrates, which may have had an impact on the number of resolved cases.
The increase in pending cases is explained by the increase in new cases in 2023 and the decrease in decisions taken in 2022 and 2023.

Q099 (2022): In civil (and commercial) litigious cases, it should be noted that for incoming cases, although the relative variation of -29.63% in figures between 2020 and 2022 is significant, compared to 2021, the number has decreased from 82 to 76 cases, representing an -11% change. The comment provided last year remains relevant. The number of incoming cases depends on appeals filed over which the Court has no influence and is, among other factors, a function of decisions made at other levels. The legislation has not changed since the previous reference period.

Furthermore, the decrease in pending cases as of December 31st can be attributed to the decrease in incoming cases in 2022 since the number of decisions made remained stable between 2020 and 2022.

Q099 (2021): The number of incoming cases depends on the appeals lodged which the Court has no influence on and which is, among other things, a function of the number of decisions taken at the level of the other instances. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decreased number of incoming cases before the Court of Cassation. The legislation has not changed since the previous reference period.

Q099 (2019): Pending cases at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of cassation (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

Q099 (2018): Comparing 2016 to 2018, the increase in pending cases at the end of the period is 40.73%. However, there was already a clear increase in cases pending at the end of the period between 2016 and 2017, which is largely explained by a larger number of new cases in 2017. Between 2017 and 2018, the variation in cases pending at the end of the period is + 5%, which does not seem excessive, especially taking into account the low numbers.

Q099 (2017): Q99: total and civil and commercial litigation cases: the slight increase in the number of incoming cases in 2017 and the relatively stable number of resolved cases explain the increase in the number of pending cases at the end of 2017 to 109 .
Q099 (2014): 2014: several categories are in NAP because the Court of Cassation has no jurisdiction over these categories.

Q100 (General Comment): Given the small size of Luxembourg, the number of cases handled by the Supreme Court is, in absolute terms, limited. Therefore, even the smallest variation in absolute numbers is likely to produce a significant effect in statistical or percentage terms, without necessarily implying a substantial or structural impact on the Court's activity.

The Court of Cassation conducts a review of legality, independent of the severity of the offense. Pending cases are now detailed separately between criminal and civil/commercial matters, providing this additional information for the first time.

Q100 (2024): The increase in pending cases at the beginning of the year compared to the beginning of the previous year can be explained by the difference between incoming cases in 2023 and the decisions rendered in 2023.

Resolved Cases: Two factors can explain the 31% increase in resolved cases at the Court of Cassation. On the one hand, the number of judges at the Court of Cassation increased by one in 2023 (see question 46). Following certain changes in the Court's composition, including retirements, this new composition in 2024 made it possible to render a higher number of decisions. On the other hand, there was an increase in decisions dismissing appeals for failure to prosecute, concerning cases in which a party filed an appeal but did not submit a brief, allowing these cases to be resolved more quickly.

Pending Cases on 31 December of the Reference Year: The number of pending cases decreased by 25%, which corresponds in absolute terms to a difference of 8 pending cases. This is explained by the fact that more cases were resolved than incoming cases were filed in 2024.

Q100 (2023): The number of new cases depends on the number of appeals lodged over which the Court has no influence and which depends, among other things, on the number of decisions taken by other instances. The legislation has not changed since the previous reference period.
The number of pending cases has increased by 23%, which in absolute terms corresponds to a difference of 6 pending cases, with pending cases increasing from 26 to 32, due to a higher number of new cases than completed cases. Comment 2022: Pending cases at 1 January refer to data provided in 2021. This decrease was explained as follows: 'The decrease in pending cases can be explained by the decrease in new cases in 2020, since the number of decisions taken remained stable between 2018 and 2020'.

Q100 (2022): Pending cases as of 1st January refer to the data provided in 2021. This decrease had been explained as follows: 'The decrease in pending cases can be attributed to the decrease in incoming cases in 2020, as the number of decisions made remained stable between 2018 and 2020.

Q100 (2020): "The number of new cases depends on the appeals filed, on which the Court has no influence, and which is, among other things, a function of the number of decisions taken by the other courts. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decrease of new cases at the Court of Cassation. The legislation has not changed since the previous reference period.
The decrease in pending cases can be explained by the decrease in new cases in 2020, since the number of decisions taken remained stable between 2018 and 2020.
"

Malta

Q091 (General Comment): The vast majority of cases heard before the courts of Malta are litigious cases. Nevertheless, there is the Court of Voluntary Jurisdiction which deals with adoptions, appointment of tutor, curators and other administrators, interdiction and incapacitation and opening of secret wills.
The horizontal inconsistencies are due to the current CMS that still relies heavily on the input of the deputy registrars and clerks working with the judiciary.

Q091 (2024): The non-litigious data have not been submitted this year and hence there is a discrepancy in the total incoming and resolved cases of 'other than criminal' cases.
3. Administrative cases: The increase in the pending cases for more than 2 years reflects the increase in the pending caseload which resulted from a decrease in the overall efficiency of this court.

Q091 (2023): The pending caseload of the General Non-Litigious (Sec 2.1) has increased as a result of a decrease in the resolved caseload.

Q091 (2022): In 2022, there was an overall increase in the caseload of the civil courts when compared to the previous evaluation, primarily because this data reflects the normal caseload following the Covid-19 pandemic. Having said this, during this year there was also one specific 1st instance court that has registered an exponential increase in the incoming caseload as a result of legislative issues. This increase in the incoming caseload was reflected in a modest increase in the resolved caseload, but had a more pronounced effect on the pending caseload.
The data provided for 'pending over 2 years' for the civil and commercial civil cases is missing the aged caseload of the Court of Notarial Acts.

Q091 (2021): As from 2021, the civil litigious category includes the data of the Civil Court (Asset Recovery Section) that was established in 2021. A spike in the incoming caseload of civil litigious cases has resulted in the courts not managing to resolve enough cases in order to retain the previous levels of efficiency, despite a marginal increase in the number of resolved cases.

Q091 (2020): The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

Q091 (2019): Non litigious cases - incoming cases: The data was provided by the case managment system of the Court Services Agency and shows an increase in the incoming caseload of these cases over that of the previous year.
Non litigious cases - pending cases at the end of the reference year: The relative high number of pending cases at the end of the year compared by the previous year is the result of the increase of incoming cases but a retention in the number of resolved cases. As a result, efficiency, as expressed as a higher number of pending cases, has suffered.

Q091 (2018): This evaluation cycle contains for the first time the efficiency data of the First Hall, Commercial Section which is a new court established in April 2018. Furthermore there was a registered increase in the incoming caseload particularly of the Court of Voluntary Jurisdiction and in cases of dissolution of marriage.
The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

Q091 (2017): Apart from the provision of the new non-litigious data captured by sub-section 2.1 above, this year we also introduced the data for another civil, litigious court, namely, the Court of Voluntary Jurisdiction, established by the Civil Courts (Establishment of Sections) Order 2003, in terms of Art 2 of the Code of Organisation and Civil Procedure (Chp 12 of the Laws of Malta). The Court has jurisdiction to deal with, amongst other matters, applications related to adoptions, interdictions and incapacitations, matters related to wills and to trusts, and to specific cases falling under the Foster Care Act (Chp 491 of the laws of Malta).
As concerns pending cases at the beginning of the year, information is not available for the newly provided data, namely data from the Court of Voluntary Jurisdiction and the non-litigious data. These data will be available for the next cycle. Increases observed between 2016 and 2017 in the total of incoming and resolved cases result from the fact that new data has been added (data on non-litigious cases and data from the Court of Voluntary Jurisdiction).

Q091 (2016): Horizontal consistency: This is a problem encountered also in previous evaluations. Unfortunately this inconsistency results from the way that the data is logged, and it is practically impossible to resolve it at present. Concerning the variations between cycles: In reality, in 2015 the Administrative Review Tribunal worked real hard to reduce the pending caseload and also resolved one set of interrelated cases that translated in the conclusion of about 150 separate cases. So 2015 was a very good year in which the efficiency parameters of the Tribunal spiked. In 2016, the rhythm by which cases were being resolved went back to 2014 figures, hence the apparent decrease in the number of resolved cases between 2015 and 2016. The reduction in the pending caseload is also the result of the additional 150 odd cases that were resolved in 2015 and that dramatically reduced the pending caseload for good, even if the resolved caseload of 2016 was less than that of 2015.
Concerning Administrative cases: These figures reflect the pending balance at the beginning of 2016. Throughout 2015, the Tribunal resolved one batch of related cases that resulted in a drop in the number of pending cases and a spike in the number of resolved cases.

Q091 (2014): The category “civil litigious cases” covers family mediation cases and cases before the Court of revision of notarial acts and the Small Claims Tribunal. In 2014, another magistrate started presiding over the Administrative Review Tribunal thereby increasing the judicial complement by 2 members. This change resulted in an increase in the number of resolved cases. Following an internal exercise carried out by the Court Administration, cases that have been prescribed, have been cleaned from the system.
Q092 (General Comment): The non-litigious case category is codified under Art 166A of the Code of Organisation and Civil Procedure (COCP), Chp 12 of the Laws of Malta.
Q094 (General Comment): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).
The horizontal inconsistencies are due to the current CMS that still relies heavily on the input of the deputy registrars and clerks working with the judiciary.

Q094 (2023): The increase in the number of incoming severe criminal cases results from the increase in the number of criminal court halls, which enable twice as many 'juries' to be held and more 'pending' cases to be brought to trial (in this court, the system is a bit different from other cases. Trials are brought forward when it is their turn, so the fact that the court administration increased the halls, enables more trials to be opened). In addition, the improvement in the efficiency of the Office of the Attorney General, the chief prosecutor, has resulted in more bills of indictment to be issued.
The increase in the number of halls also reflected in an increase in the number of resolved cases within this category.

Q094 (2022): Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).

Q094 (2020): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:
- Pending 1st January 2020 = 11899 (79 cases Criminal Court and 11820 cases Court of Magistrates)
- Incoming cases 2020 = 11086 (17 cases Criminal Court and 11069 cases Court of Magistrates)
- Resolved cases 2020 = 7321 (5 cases Criminal Court and 7316 cases Court of Magistrates)
- Pending cases 31st December 2020 = 15883 (89 cases Criminal Court and 15794 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.
The decrease in the number of incoming and resolved cases, and the ensuing high number of pending cases, results from the restrictions imposed by the pandemic on the functioning of the Courts of Law.

Q094 (2018): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:
- Pending 1st January 2018 = 11887 (61 cases Criminal Court and 11826 cases Court fo Magistrates)
- Incoming cases 2018 = 13817 (19 cases Criminal Court and 13,798 cases Court of Magistrates)
- Resolved cases 2018 = 14168 (8 cases Criminal Court and 14140 cases Court of Magistrates)
- Pending cases 31st December 2018 = 11589 (72 cases Criminal Court and 11517 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.
The decrease int he number of incoming and resolved cases is a phenomenon we are observing over the past years. The discrepancy between the data of 2016 and 2018 makes sense when one looks at the 2017 data that also shows a decrease in the caseloads from 2016. It is to be noted that the incoming caseload in 2018 is actually a bit higher than that of 2017.

Q094 (2016): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).
This definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 3054; Incoming cases = 827; Resolved cases = 1143; Pending cases on the 31st Dec of Ref Year = 2736. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 10571; Incoming cases = 15887; Resolved cases = 15682; Pending cases on the 31st Dec of Ref Year = 10805.

Q097 (General Comment): In Malta, the civil second instance courts comprise the Civil Court of Appeal in its Inferior and Superior Jurisdiction. To date, whilst we can collect the data relating to the incoming, resolved and pending caseloads of these courts, we cannot easily distinguish between the sub-divisions of case typology outlined above. What we can tell for sure is that all cases filed before the Courts of Appeal are civil and commercial litigious cases (including a minority of administrative law cases) so the figures provided at Category 1 reflect the global total of cases heard at the second instance courts. Non-litigious cases are not filed before these courts (hence NAP answers).

Q097 (2024): Pending cases on 31 December 2024 - Following legislative amendments, the efficiency of this court improved as a result of faster case processing time. These procedural enhancements can be found in Act XXXII of 2021 of the Laws of Malta, Justice Reform (Civil Procedure) Act, available in English at this link: https://legislation.mt/eli/act/2021/32/eng Pending cases for more than 2 years - Most of the cases taking long to resolve relate to cases filed prior to the legislative change. Hence the high ratio of pending cases over 2 years old.

Q097 (2022): The increase in the incoming caseload at 1st Instance has reflected intself in an increase in the incoming caseload at the 2nd Instance across all courts. Moreover, in one particular court, the incoming caseload has increased twofold due to a legal provision that facilitates the filing of specific cases.
The number of resolved cases has increased across all 2nd Instance courts and underscores the efforts of the judiciary to address the burgeoning caseload.

Q097 (2020): The decrease in the Incoming caseload results from the disruption of the pandemic on the court operations.
In the second instance courts, we are still unable to distinguish precisely between the cases that are appealed. Thus, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Q097 (2019): Total other than criminal cases - resolved cases: The data shows an increase in the resolved cseload of the 2nd instance courts and in fact, the pending caseload at the end of the year is less than that registered in 2018. These courts were more efficient in 2019.

Q097 (2017): In Malta, the civil second instance courts comprise the Civil Court of Appeal in its Inferior and Superior Jurisdiction. To date, whilst we can collect the data relating to the incoming, resolved and pending caseloads of these courts, we cannot easily distinguish between the sub-divisions of case typology outlined above. What we can tell for sure is that all cases filed before the Courts of Appeal are civil and commercial litigious cases (including a minority of administrative law cases) so the figures provided at Category 1 reflect the global total of cases heard at the second instance courts. Non-litigious cases are not filed before these courts (hence NAP answers).
Concerning the variation between 2016 and 2017 in the pending cases older than 2 years, the reason is due to a different methodology used in 2016 and in 2017.

Q097 (2016): Regarding Civil (and commercial) litigious cases: 2015 was the best year in terms of number of resolved cases, mainly because the judiciary were trying hard to conclude cases that were ready for sentencing. In fact, our efficiency indicators reflected this effort. As regards to the other data, we do not, as yet, have those statistics at hand and hence, the last 3 evaluations were marked as NAP.

Q097 (2014): The discrepancy in the data provided for 2014 as “pending cases on 31st December 2014” results from an internal exercise being carried out by the Court Administration in which cases that have been prescribed, are being cleaned from the system. This exercise is going to be carried out more frequently so that it does not reflect in discrepancies in the data that is published.

Q098 (2024): The efficiency of these courts in 2023 was very high and hence there was a reduction in the pending caseload. Throughout 2024, there was a registered decrease in the number of resolved cases

Q098 (2022): There was a registered increase in incoming cases across all courts.

Q098 (2021): During 2021, the criminal courts were still largely effected by Covid restrictions. Given that these particular courts did not introduce video-conferencing, it was not possible to counteract the increasing incoming caseload with an equally increasing resolved caseload. As a result of this imbalance, the efficiency parameters of the criminal courts suffered. Having said this, following the removal of the pandemic restrictions, sincere efforts have been made in order to restore the efficiency of the criminal courts to the former levels.

Q098 (2020): The above data reflects the aggregate scores of the Criminal Court of Appeal in its Superior and Inferior Jurisdiction.
The pandemic restrictions effected the caseload of the Court.

Q098 (2018): Given that in the Maltese legal system, the definition of severe/ minor-dismeneanor cases is not fully consistent with the definition built by CEPEJ, the data for these types of cases for Malta, is going to be presented within this section: For severe cases: Pending caseload at 1st January 2018 = 32; Incoming cases = 6; Resolved cases = 14; Pending cases on the 31st December = 21. Minor/ misdemeanour criminal cases: 1st January 2018 = 1266; Incoming cases = 445; Resolved cases = 644; Pending cases on the 31st December = 1018.

Q098 (2016): There was an increase in the pending caseload of the Court of Criminal Appeal, Inferior Jurisdiction.
In the Maltese legal system, the definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 26; Incoming cases = 15; Resolved cases = 10; Pending cases on the 31st Dec of Ref Year = 32. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 1214; Incoming cases = 629; Resolved cases = 485; Pending cases on the 31st Dec of Ref Year = 1358.

Q099 (2017): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

Q099 (2016): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

Q100 (2018): NA

Netherlands

Q091 (General Comment): In the Netherlands, some registers are kept by the judiciary. Those do not include a land- or business registry, see www.rechtspraak.nl/registers. Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situations. Also, there is a register with ‘nevenfuncties’ (jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. The Dutch system does not count mutations in the registers as court cases, so ‘other registry cases’ is NAP.
Regarding the unavailability of the number of pending cases at the beginning of the year, since the Netherlands do not officially measure it, it is not provided.

Q091 (2023): Incoming administrative law cases increased significantly in 2023, compared to the year before. Not only 'regular' administrative law cases increased, but cases regarding foreigners/asylumseekers, and tax cases as well. See also chapter 6.1 of the Annual Report of the Council for the Judiciary:
https://www.rechtspraak.nl/SiteCollectionDocuments/Jaarverslag%20Rechtspraak%202023.pdf

Q091 (2022): In previous years, we were able to produce the number of incoming and pending cases for categories 1, 2, and 2.1, but not this year. The Judiciary has decided on a different norm for one of the components needed for this number, so these numbers are no longer available as of 2022.

Q091 (2021): In previous years, we were able to produce the number of incoming and pending cases for categories 1, 2 and 2.1, but not this year. The Judiciary has decided on a different norm for one of the components needed for this number, so these numbers are no longer available.

Q091 (2020): Administrative law cases include tax cases and immigration / asylum cases.
First instance cases at Council of State, Court of Appeal, including trade tribunal, are excluded.
In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- or business registry, see www.rechtspraak.nl/registers. Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called ‘nevenfuncties’ (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category ‘other registry cases’ the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

Q091 (2019): In The Netherlands, there are some registers which are kept by the judiciary. These do not include a land- or business registry (see www.rechtspraak.nl/registers). Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called 'nevenfuncties' (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category 'other registry cases', the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

Q091 (2018): In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- of business registry. See: https://www.rechtspraak.nl/Registers
Most registers are related to debt, bankruptcy and help or surveillance of people that are unable to handle their financial situation. There is also a register of ‘nevenfuncties’, which lists all the jobs/positions that judges fulfill next to being a judge. Mutations in these registers are not counted as court cases. For the category "other registry cases", since the Dutch system does not count mutations in the registers as court cases, the answer is NAP.

Q091 (2017): None

Q091 (2016): Number of administrative law cases litigious plus non-litigious.
In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detainment) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detainment cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Q094 (General Comment): Classification of severe and minor cases:
Minor offences: mainly traffic offences (speeding tickets, running red lights) and petty theft, vagrancy, littering, etc.
Severe offences: driving while drunk, grand theft, violent crimes, vice, drugs/narcotics, etc.

Q094 (2024): The increase in misdemeanour cases is due to an increase in minor traffic offences, in part due to the activity of so-called 'no cure, no pay'-bureaus.
Q094 (2022): Increase in Category 1 - This is due to a technical change in registration, where it was found that some 14.500 cases were effectively resolved (from a legal standpoint) but had remained 'open' in the administration. This has lead to a decrease of the number of pending cases. Increase in Category 2 - These cases are both minor criminal offences and also traffic fine cases (so-called WAHV- or Mulder-cases). The latter group shows the main increase. Possibly the increase is due to numbers being low in 2020 and 2021 as a result of Corona, and increased mobility since then

Q094 (2020): Classification of severe and minor cases:
Minor offences: mainly traffic offences (speeding tickets, running red lights) and petty theft, vagrancy, littering, etc.
Severe offences: driving while drunk, grand theft, violent crimes, vice, drugs/narcotics, etc.
Effects of the pandemic:
No in person hearings happened in the period between 17 March and April 6 2020. At the start of the pandemic, not everyone was able to work remotely due to insufficient available laptops and that many files were still coming in on paper. There were some exceptions for working remotely as well, such as security, some administrative staff (people that compiled paper files, for example), etc.
Some measures were taken: hearing in other buildings, online or hybrid, and hearings in the evenings. The age restriction for judges was upped from 70 years old to 73 years old, more criminal orders were handled by the public prosecution and more cases were handled by one judge instead of more (enkelvoudig versus meervoudig)

Q094 (2016): In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detainment) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detainment cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Q097 (General Comment): We were able to make an approximation to differentiate between litigious and non litigious cases at second instance. The financial registrations at first instance make a clear distinction between types of cases (that the answer for first instance can be based upon), but for second instances this differentiation does not exist (and thus, the registration is all the samewe have used this approximation).
Q097 (2024): This year, we were able to provide data for 1. Civil litigious cases and 2. Non litigious cases.
-As far as we know, it is possible to have non-litigious cases in second instance.
-We have made an approximation (the best way we are able to at this time), where we arrive at 100% litigious cases and 0% non-litigious cases. Thus, we have filled in 0 for those cases.

Q097 (2021): The number of incoming administrative law cases increased between 2020 and 2021, most probably due to the pandemic. Especially, the number of appeals for tax cases is higher in 2021.
Q097 (2020): It is not possible for us to differentiate between litigious and non-litigious cases at second instance. In short, we can provide this for first instance because the financial registrations makes clear distinction between types of cases (finances differ) that we can base that answer on, but for second instances, this differentiation in finances does not exist and thus, the registration is all the same.
Q097 (2019): .
Q097 (2018): If there is an appeal, cases are litigious in my view. I would tend to enter the value "0", but since the question is being asked, you probably see things differently. So I chose the answer "NA"
Q097 (2017): Administrative law cases, litigeous plus non-litigeous.
Q097 (2016): Administrative law cases, litigeous plus non-litigeous.
Q098 (2014): The reason for the horizontal inconsistency in 2014 is that the figures from the 4 columns of the table are not retrieved at the same time. The number of pending cases on Jan 1st is determined one year before the other 3 columns can be filled. One year later it is possible to determine the number of incoming cases, the number of resolved cases and the number of pending cases on Dec 31st. The definition of 'pending' together with dynamic changes in the registration system mean that the number of pending cases on Jan 1st will have changed. To ensure horizontal consistency, all the 4 columns should be determined after the years' end which would imply to overrule a previously determined and official (i.e. published) number of pending cases on Jan 1st.

Q099 (General Comment): The number of resolved cases presented in the table includes both cases that are resolved with the decision of a judge and cases that were not resolved with the decision of a judge. These are: Cases in which the appeal in cassation has been withdrawn or annulled, cases that have been administratively resolved by the clerk, cases in which the processing of the appeal in cassation has been suspended, and cases that have been discharged upon objection. The number of cases not resolved by the decision of a judge has also been included in the comment for clarification. Before 2024, these numbers were not included in the number of resolved cases, but they were included in the number of pending cases on Dec 31. 2 – Non-litigious cases: in theory, it might possible these cases get to the Supreme Court, but the numbers are not specified for the courts.
3 – Administrative law cases: please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is no third instance court for other administrative cases in the Netherlands, so these are not included in the numbers given. 4 – Other cases: There might be other cases in separate courts, but these numbers are not nationally available.

Q099 (2024): We have included cases that were not resolved with the decision of a judge, see the general comment for an explanation of what types of conclusions these are. It is important to note that these numbers were not included last year, so numbers this year may not be perfectly comparable to last year (we have added the numbers here below as well). 1: Civil cases, number of cases that are not resolved with the decision of a judge: 17 3: Administrative cases, number of cases that are not resolved with the decision of a judge: 324

Q099 (2023): See also the General comment regarding potential discrepancies in the formula for horizontal consistency. 1: Civil cases, number of cases that are not resolved with the decision of a judge: 31
3: Administrative cases, number of cases that are not resolved with the decision of a judge: 384.

Q099 (2021): The formula for pending cases on 31 December might not work satisfactory – there will be a gap between pending cases at the ent of the year and the number of pending cases at the beginning of the year + incoming cases -/- resolved cases. The gap is caused by cases that are labelled ‘outflow other’. These are cases that do not get resolved because of administrative reasons (for instance, the appeals is filed to late, or mandatory court fees have not been paid and there is no dispensation).
2 – Non-litigious cases: in theory, it might possible these cases get to the Supreme Court, but the numbers are not specified for the courts.
3 – Administrative law cases: please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is not third instance court for other administrative cases in the Netherlands, so these are not included in the numbers given. 4 – Other cases: There might be other cases in separate courts, but these numbers are not nationally available. Regarding discrepancy: There are always factors that might influence the number of cases the SC handles in a year. There are no published numbers identifying the various types of cases the tax chamber handles. As mentioned before, we can provide a more general explanation for an increase in SC cases and/or disposition time. For example, delays or catch up in lower courts (increasing/lowering the number of incoming cases), new laws or changes in law that the SC must answer, cases may become more complex due to increasing complexity of laws and differences (and thus, cases may take longer), or cases that are connected are grouped to deal with in clusters (meaning more cases for a longer time). While a specific cause cannot be clearly pinpointed, all these factors might influence the numbers.

Q099 (2020): With regard to 2. Non litigious cases: In theory, it is possible these cases get to the Supreme Court, but these cases are not specified in available numbers for the courts.
With regard to 3. Administrative law cases: Please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is no third instance court for other administrative cases in the Netherlands, so these are not represented in this number.
With regard to 4. Other cases: There might be other cases in separate courts (Kamers), but these numbers are not available nationally.
With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers.

Q099 (2019): Reason for discrepancies: discrepancies seem higher, as absolute values are lower. When asked, the High Court explains that there is always an eb and flow of cases due to several factors.

Q099 (2018): Cases handled by the High Court are 'litigious' by nature (= cases are settled at first instance if one party remains inactive)

Q099 (2017): the answer to this question is still not available.

Q099 (2016): A the moment the Supreme Court has not the data available to answer this question. The National Correspondent is consulting the Supreme Court to improve this situation.

Q100 (General Comment): No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch Supreme Court.
The number of resolved cases presented in the table includes both cases that are resolved with the decision of a judge and cases that were not resolved with the decision of a judge. These are: Cases in which the appeal in cassation has been withdrawn or annulled, cases that have been administratively resolved by the clerk, cases in which the processing of the appeal in cassation has been suspended, and cases that have been discharged upon objection. The number of cases not resolved by the decision of a judge has also been included in the comment for clarification. Before 2024, these numbers were not included in the number of resolved cases, but they were included in the number of pending cases on Dec 31.

Q100 (2024): We have included cases that were not resolved with the decision of a judge, see the general comment for an explanation of what types of conclusions these are. It is important to note that these numbers were not included last year, so numbers this year may not be perfectly comparable to last year (we have added the numbers here below as well). Number of cases that are not resolved by the decision of a judge: 142.

Q100 (2021): No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch SC.
Pending cases at the end of the year are not equal to the number of pending cases at the beginning of the year + incoming cases - solved cases

Q100 (2020): In the numbers and accounts that are kept by the Dutch Supreme Court, no distinction is made between severe criminal cases and misdemeanours and/or minor criminal cases.
With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers. The gap of 213 is caused by cases that are labeled as ‘outflow other’ (in Dutch: uitstroom overig). These are cases that do not get resolved because of administrative reasons (for instance: the appeal is filed too late, or mandatory court fees have not been paid and there is no dispensation).

Poland

Q091 (General Comment): The attention should be drawn on the fact that it is not excluded to notice horizontal inconsistencies due to omissions or mistakes in statistical information generated by courts as well as to structural changes within the court system. As for the category “civil (and commercial) litigious cases”, it includes as well litigious family and labour (employment) cases. Besides, it encompasses also some types of cases decided under chapter II of the Civil Proceedings Code that concern non-litigious cases (such as distribution of inherited assets, separation of common property, demarcation of the real estate) which nature in fact is litigious because of the opposite interests of the parties and contradictory ways of presenting their arguments.

Q091 (2022): * Administrative law cases - In 2022, the number of incoming administrative cases decreased compared to the previous year. The number of incoming complaints about the inaction of public administration bodies and the protracted conduct of proceedings by these bodies also decreased. The decrease in the receipt of such complaints in 2022 was 30.2% compared to 2021. This may be indicative of the catching up of public administration activities caused by the COVID-19 pandemic. Data for the next years will show whether the downward trend will continue.

Q091 (2021): * administrative law cases - It is difficult to identify, apart from the COVID-19 pandemic, any particular reason for the increase in the number of cases brought before provincial administrative courts. A particularly large increase in the number of cases submitted to administrative courts concerned complaints about the inaction of public administration bodies and the protracted conduct of proceedings by these bodies. The increase in the receipt of such complaints in 2021 was 73.2 % compared to 2020. This may also be indicative of some backlog in public administration due to the numerous pandemic restrictions in 2020.

Q091 (2020): Comments: The discrepancies in Table 91. First instance courts: number of other than criminal law cases - compared to the previous periods (2018 and 2019) are mainly due to combinations of two reasons. First - the COVID19 pandemic, which significantly reduced case inflow to the courts (in some type of cases even by several dozen of percent), reduced the number of resolved cases and pendig cases as well. The second factor, which in contrary - caused increase in the volume of cases registered in court system was the inflow of cases related with conversion of the right of perpetual use of built-up land for residential purposes into land ownership (2.2.1 - Non litigious land registry cases). In 2020, there were more than a million incoming cases of this type (in 2019 – more than 2,5 million), which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.
Administrative law cases: the main reason for the slight slowdown in casework was the pandemic.

Q091 (2019): The discrepancies in section 4.2.2. Case flow management - first instance - compared to the previous period mainly concern the data shown in point 2.2.1 Non-litigious land registry cases.
In explaining the above, it should be emphasized that the general state of cases in courts of first instance in 2019 was related to cases brought to the land registry departments with regard to the conversion of the right of perpetual use of built-up land for residential purposes into land ownership. In 2019, more than 2 million incoming cases of this type, which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.
It should be noted that after excluding from the analysis all cases considered in Land Registry Departments, the impact of cases and settlements in 2019 were almost at the same level as in the previous year.

Q091 (2018): The discrepancy between 2016 and 2018 was realised in 2017 due to the increasing number of mostly non-litigious cases. More details in 2017 data.
Number of pending cases in the category 2.1. General civil (and commercial) non-litigious cases has dropped slightly. That situation is caused by high effectiveness of courts. Number of resolved cases is higher than number of incoming cases. That situation has maintained since 2017.
Higher number of pending cases in Non-litigious business registry cases is temporary and it is a result of higher number of initiated compulsory proceedings. If it is ascertained that the application for entry in the Register or compulsory documents have not been submitted despite expiry of the deadline, the registry court shall call on the obliged parties to submit them. We observed that the effectiveness of courts has increased and therefore number of pending cases in mentioned category has dropped at the end of the year.
In regard to non litigious land registry cases we observe in Divisions of Land and Mortgage higher staff turnover. It contributes to problems with solving cases, therefore number of pending cases has increased.
In regard to “other” cases we have observed significant increasing of incoming cases without specified category. In this category we include following cases: exemption from costs, reconstruction of files, affidavit of assets, excluding judge etc.
Higher number of pending cases on 31 Dec. is a consequence of high number of in incoming cases during the year. It was probably temporary situation.

Q091 (2017): As to a general explanation for discrepancies in 2016 to 2017 data, it has to be stated that in 2016, there was a substantial number of incoming non-litigious cases, mostly general civil cases, but also registry cases (around 700k cases total).
This important number of cases was not resolved and the backlog remained important at the end of the year. This could explain the large difference of pending cases between 1 Jan 2016 and 1 Jan 2017.

2.1. In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases on 1 Jan. ref. year has increased. In 2017 we did not notice any problems with mentioned system, so the number of resolved cases has increased significantly. At the same reason the number of pending cases on 31 Dec. 2017 has dropped.
We indicate that fluctuation of the number of cases can be also caused by implemented organizational changes in courts (changes in staff, changes in the organization of work). 2.2. Registry cases (2.2.1+2.2.2+2.2.3) discrepancies are justified in points 2.2.1 and 2.2.2.
2.2.1. Non litigious land registry cases. Higher number of pending cases (on 1 Jan. ref. year and on 31 Dec. ref. year) is caused by Higher number of incoming cases than resolved cases. This situation is related to large-scale investments in infrastructure in Poland Building new roads is closely connected with changes in land registry. We need to indicate that courts have to cope with large number of difficult cases. (Mentioned reason is related to resolved / incoming cases)
2.2.2. Within the changes in business registry cases we can observe significant increase in all types of Application for registration
(first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of
removing from registry). We indicate that it could be caused by fluctuation in compulsory proceedings. Mentioned proceedings are carried on in the cases where it is found that an application for an entry in the National Court Register or the documents whose submission is obligatory were not submitted despite the lapse of the time limit. The registry court shall summon the obliged persons to submit them, and shall set an additional 7-day time limit. We emphasize, that the registry court shall discontinue the compulsory proceedings, if it can be concluded from the circumstances of the case that the proceedings will not lead to the fulfilment of the mentioned obligation. (Mentioned reason is related to resolved / incoming and pending cases)
2.2.3. and 2.3. - Categories do not exist in our judicial system.

Q091 (2016): Within the changes in business registry cases we can observe significant increse in all types of Application for registration (first registration) cases, but there is also considerable increse in general business cases (changes in the registry, including cases of removing from registry).
In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had incresed.

Q092 (General Comment): The category of civil (and commercial) non-litigious cases (including non-litigious family cases) covers all the rest of cases decided under chapter II of the Civil Proceedings Code which are non-litigious cases (such as ascertainment of the acquisition of an inheritance, cases connected with birth, marriage and death records, declaration of dead, adoption as well as summary and injunction proceedings in money payment cases).

Q093 (General Comment): The category “other” includes first of all social security cases and cases related to the application of correctional and educational measures as required in juvenile cases and execution of guardianship or tutoring.

Q094 (2024): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Q094 (2023): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Q094 (2022): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).
Cases under the Criminal Procedure Code and the Misdemeanours Code, which are presented as 'other criminal cases', are preliminary or follow-up proceedings.

Q094 (2020): The discrepancies in Table 94. First instance courts: number of criminal law cases - compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of Misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

Q094 (2014): For the 2014 evaluation, changes in the statistical forms made possible the identification of some types of misdemeanor cases (mainly the organizational ones, which were not considered in 2012). Above this, there is a constant growth in the number of incoming cases.
Q097 (General Comment): The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.
Starting from 2022, administrative cases dealt with by the Supreme Administrative Court are presented in the frame of question 99 (last instance) and are no more within the scope of Q97.

Q097 (2024): The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.
With regard to the reasons for the increase in the impact of second-instance cases in 2024 compared to 2023, it should first be pointed out that this year was another year of an increase in the impact of civil cases concerning claims from contracts denominated/indexed to the Swiss franc to appellate courts, which translated into an overall increase in the impact of civil and commercial cases in appellate courts. In most courts of appeal, civil and commercial cases are heard in the same division, and therefore the increase in the influence of one category of cases also has a negative impact on the hearing of cases of the other category. While in 2023 95,925 civil and commercial cases were submitted to the courts of appeal, in 2024 the impact of such cases amounted to 121,326 (an increase of 26.4%). It should be emphasized that this increase in influence has continued since 2020. For comparison, in 2019, the total impact of civil and commercial cases on the courts of appeal was 54,959. Thus, in 5 years, the (annual) impact of civil and commercial cases on the courts of appeal has more than doubled.
An analysis of the results of the courts' work in the main category of civil procedural cases ACa confirmed that in 2024 compared to 2023, there was an increase in the impact and settlement of the above-mentioned cases in the courts of appeal, as well as, despite the great judicial effort undertaken, an increase in residuals. In 2024, the impact of category ACa amounted to 53,220 compared to 45,704 in 2023 (i.e. an increase of 16.4%), the settlement amounted to 26,041 compared to 22,729 in 2023 (i.e. an increase of 14.6%), and the remainder at the end of 2024 increased to 75,565 compared to 48,386 at the end of 2023 (i.e. an increase of 56.2%).
It should be noted that in 2024, the courts of appeal received 56,281 cases concerning claims arising from bank agreements denominated or indexed to the Swiss franc with the symbol 049cf (the so-called Swiss franc cases), which was due to an increase in settlements in regional courts of first instance, as well as favorable case law for bank customers formed after the resolution of the Supreme Court of 25 April 2024 in the case no. III CZP 25/22 as well as previous judgments of the Court of Justice of the European Union of 2023. The handling of Swiss franc cases in the courts of appeal amounted to 16,641 and increased by 31.4% compared to 2023, but the improvement in handling was insufficient to control the impact (38,732 cases were received; the degree of control of the influence was 43.0%), which resulted in the accumulation of the remaining Swiss franc cases for the following year. At the same time, it should be added that in 2024, the number of civil judges in the courts of appeal was reduced: the limit of judges on the last day of the statistical period was 277.0 compared to 295.0 in 2023.
In 2024, there was also a sharp increase in the impact of ACz appeal cases to the courts of appeal, which was a consequence of the amendment to the Code of Civil Procedure by the Act of 9 March 2023 amending the Act – Code of Civil Procedure and certain other acts: 41,755 cases were received compared to 25,282 cases in 2023 (an increase of 65.2%), which also resulted in an increase in the workload of judges.
Similarly, in the case of regional courts hearing appeals against district court judgments in the second instance, there was a significant increase in the impact of appeal cases Cz: 49,441 cases were rec

eived compared to 38,696 in 2023 (an increase of 27.8%). The impact of Ca's civil litigation cases amounted to 78,522 in 2024 and increased slightly - by 2.2%. However, the limit of judges as of the last day of the statistical period in the second instance was reduced from 509.6 to 497.1, which had an adverse effect on the number of settlements and resulted in an increase in the remainder of category Ca by 9.2% to 51,605.
With regard to the number of appeal cases, it should be noted that the increase in the impact was not associated with an increase in the number of cases that was adequate to the needs, although an increase in the number of resolved cases should be noticed. These data show the enormous effort put into the judges to minimize the effects of the growing influence, which was impossible to control, with the existing human resources. A larger scale of growth in settlements is already very difficult to achieve with the existing human resources, while the improvement of the staffing is hindered due to the suspension of announcements of vacancies for judicial positions from the end of 2023, due to the activities of the National Council of the Judiciary, formed in accordance with the provisions of the Act of 8 December 2017 amending the Act on the National Council of the Judiciary and certain other acts. The resulting staff shortages and their impact on the results obtained cannot be fully eliminated by supervisory activities.
With regard to appellate cases in regional courts, they were also affected by personnel problems related to the suspension of announcements of vacant judicial positions and the delegation of judges from regional courts to courts of appeal. In part, these deficiencies are made up for by the secondment of district court judges to regional courts.
In addition, both in regional courts and in courts of appeal, there is a need to consult experts in appeal cases. In the Annual Information on the Activities of Courts Operating in the Area of Appeals for 2024 and in letters addressed to the Ministry of Justice, the presidents of the courts pointed to increasing problems with the availability of experts, the quality of the opinions prepared and the lengthening deadlines for preparing opinions, often exceeding one year. In addition, the presidents of the courts of appeal reported problems with staffing in the group of court clerks and clerks, as well as the rotation of assistant staff, which also made it difficult to reduce the residue.
The extension of the time for examining appellate cases and the deterioration in the efficiency of proceedings in both regional courts and courts of appeal was also caused by an amendment to the Code of Civil Procedure, as a result of which from 7 November 2019 the inter-instance proceedings, including the examination of formal deficiencies and their supplementation, are conducted by the court of second instance, and not by the court of first instance, as before.
In appellate cases concerning bankruptcy and restructuring cases (regional courts), the efficiency of their examination was negatively affected by the imperfections of the ICT system of the National Register of Debtors, in which these proceedings are conducted.
Finally, the courts pointed to the increasing degree of complexity of cases, which also did not favor a greater increase in the number of cases handled.

Q097 (2023): The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.
I will explain the differences in the data during the quality control and to specific questions from analysts. The increased inflow and the remaining number of civil and commercial cases (Q97, civil) for subsequent reporting periods is to some extent due to the increased inflow of civil cases concerning claims from banking contracts denominated /indexed to the Swiss franc (cases with the symbol 049 cf) in the second instance of common courts. The number of so-called “franc”cases received significantly exceeds the number of cases settled, which results in an increase in the number of cases remaining to be settled in subsequent statistical periods.

Q097 (2022): According to the available data for civil, commercial and labour and social security cases at second instance for 2022. - taking 2021 as a benchmark: In courts of appeal :
(a) In civil and commercial cases, including in the AGa category in 2022, the number of cases settled actually decreased slightly (by 1.0%), with a total increase in settlements in ACa+AGa cases of 7.5% compared to 2021. Thus, overall in civil and commercial appellate cases, the number of settlements in the appellate courts has increased. Despite the increase in settlements, the impact of ACa+AGa cases (65.6%) was not brought under control, due to its drastic increase of 51.9% compared to 2021. (cases involving franking credits).
- In 2022, there was a slight decrease in the handling of ACz (by 1.9%) and AGz (by 2.4%) complaint cases, which can be explained by a decrease in the impact of these categories of cases by 7.3% and 4.9%, respectively, compared to 2021. The impact of ACz cases was controlled at 100.6% and AGz cases at 101.9%;
Thus, in AGa cases, the reason for the decrease in handling (by only 1%) was a drastic increase in the impact of ACa cases (by 64.5%), while the handling of ACa and AGa cases combined increased, so there is no basis for further explanation. In AGz cases, the decrease in disposals should be linked to the decrease in receipts. The decrease in the handling of cases has not impeded the control of the impact of the cases, so there are no grounds for further explanation. b) In labour and social security cases, the total number of cases disposed of in 2022 decreased (by 17%), of which the number of cases disposed of in the APa category decreased by 9.6%, which was due to a 14.8% decrease in the number of cases received in this category, as 104.9% of the cases received were managed, while in the AUa category, the number of cases disposed of decreased by 18.1% (from 21,360 to 17,500 cases) in relation to 2021, This was partly attributable to the 4.9% decrease in receipts, but above all to the inability to handle a larger number of homogeneous AUa cases, as was the case in 2021 regarding the pension amount of women from the so-called "1953 vintage", which were handled in large numbers in 2021. in connection with new decisions of the pension authority, issued on the basis of the provisions of the Act of 19 June 2020 amending the Act on pensions from the Social Insurance Fund (Journal of Laws of 2020, item 1222) implementing the judgment of the Constitutional Tribunal of 6 March 2019. P 20/16. It should be emphasised that the disposition of this type of cases in 2021 was atypically high (in both appellate and district courts) and significantly higher than in 2020, when it amounted to 12 929 cases in appellate courts. Moreover, in 2021, proceedings were discontinued in 6 923 cases in this category, while in 2022, only 1 193 cases were discontinued. only 1 193 cases of this category were discontinued, which resulted in a decrease in the total number of cases handled in the labour and social security division and the inability to control the impact in 2022. (93,6%); - in 2022, the handling of grievance cases in the AUz cat. decreased by 28.9% (from 3,611 to 2,565), which was also due to the decrease in the inflow of cases in this category (by 27.43%) in relation to 2021, as the inflow in this category of cases was contained. In the APz category, the 16.41% decrease in the number of cases settled in 2022 (from 201 to 168 cases) was also due to a 19.40% decrease in the inflow of cases in this category (from 201 to 162 cases) in relation to 2021.
In reg

ional courts:
(a) in civil appellate cases Ca the number of civil cases settled in 2022.decreased in comparison to 2021 only minimally by 0.01% (by 6 cases), so there are no grounds for further clarification;
- in complaint cases Cz at second instance, the number of cases handled in 2022 decreased by 10.60% (from 37,565 to 33,581) compared to 2021, as a result of a 17.48% decrease in receipts (from 36,190 to 29,863).It should be emphasised that, despite the decrease in settlements, receipts in this category were controlled by 112.4% and the backlog was reduced by 38.49% compared to the end of 2021;(b) in Ga commercial appeal cases, the number of cases disposed of fell by 13.4%, as a result of a 19.8% decrease in receipts. It should be emphasised that despite the decrease in disposals, receipts were controlled by 113.3% and the backlog was reduced by 17.5% compared to the end of 2021.
- in Gz grievance cases, the number of cases handled fell by 13.1%, as a result of a 9.9% decrease in receipts. It should be emphasised that, despite the decrease in disposals, receipts were controlled by 102.2% and the backlog was reduced by 9.3% compared to the end of 2021.
c) in labour and social security cases, the number of cases disposed of in 2022 - in Ua appellate cases, the number of civil cases disposed of in 2022 compared to 2021 increased by 1.5% and requires no explanation, while in Pa category cases, the number of cases disposed of compared to 2021 decreased slightly by 2.5% (from 4,775 to 4,656), which was due to a 3.4% decrease in receipts in this category, while receipts were only slightly (97.9%) unmanaged;
- in grievance cases, the number of cases disposed of in the A&E category fell by 15.67% (from 1,557 to 1,313 cases), as a result of a 19.43% decrease in the number of cases disposed of in this category in relation to 2021, while the impact was contained; in the Uz category, the number of cases disposed of in 2022 decreased only slightly by 6 cases (from 459 to 453 cases), which does not require detailed explanation. In cases, Ga and Gz, Cz and Pz, the decrease in handling should be attributed to a decrease in receipts.The decrease in disposals did not prevent the impact of cases from being brought under control, so there are no grounds for further explanation. With regard to the courts of second instance, it should also be pointed out that the transfer of the duty to conduct inter-institutional proceedings to the courts of second instance has resulted in an increased workload for the judges sitting in these divisions. In addition, the Covid-19 pandemic has reduced the ability to conduct court proceedings efficiently and has resulted in a backlog of judges' dockets, which is increasing due to the increase in influence. This is coupled with a sharp increase in the impact of cases in the appellate courts, including in particular an increase in the impact of franking cases referred to the appellate courts.

Q097 (2021): The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.
* administrative law cases - The figures given to you on the receipt of cases at the Supreme Administrative Court and their settlement were affected primarily by two circumstances, i.e. changes in the organizational structure of the Supreme Administrative Court (NSA) and the related transfer of cases between departments, and, as indicated above, restrictions on court operations due to the declared epidemic state in Poland.
As of January 1, 2021, new additional adjudicatory divisions were established in the Finance Chamber and the General Administrative Chamber. Some cases from Divisions I and II of both chambers were transferred to the newly created Division III. These actions had a significant impact on the way the statistics were read.
According to the data provided to you, in 2020 the NSA completed 15786 cases registered in the "SK" repertory (cassation complaints, complaints for the resumption of proceedings). However, this number includes not only cases completed by issuing a substantive decision, but also cases closed due to their transfer to a new department. There were 3115 such cases in 2020. Given the above, the real efficiency in 2020 was 88%, not 110% as reported. Cases closed in the Finance Chamber of the Supreme Administrative Court in 2020 were, in turn, in large part added to the impact in 2021, for they were re-registered in another judicial department.
The re-registration of the aforementioned cases in the Financial Chamber, as well as the re-registration of cases in the General Administration Chamber for similar reasons (4079 cases) were recorded in the total number of cases received by the NSA in 2021. Hence, 7194 cases (re-registered) would have to be deducted from the total number of 26873, which was given to you in earlier correspondence. Thus, the real flow of new cases to the NSA was 19679.
The data on the completion of cases for 2021 shows that 17111 cases were completed at the NSA. It should be noted that this figure also includes cases closed in the General Administration Chamber due to their transfer to Division III. Such cases, as mentioned, were 4079. Thus, it can be assumed that in 2021 the NSA completed 13032 cases through their substantive settlement. These data, in turn, allow us to assume that the NSA's adjudication efficiency in 2021 was 67%.
Despite the decrease in efficiency in 2021 compared to the previous year, it should be noted that in 2021 the NSA settled more cases than in 2020. On the other hand, undoubtedly, the higher inflow of cases to the NSA was due to the increased number of complaints filed with provincial administrative courts, as discussed in more detail in point 1. The increased inflow of cases to the NSA was also due to a partial blockage in the circulation of documentation between administrative courts of both instances, which occurred especially during the first phase of the pandemic (March-May 2020). During this period, far fewer cases were submitted to the NSA, which consequently translated into an increase in impact in the following months of 2020 and 2021. In turn, referring to issues related to the number of cases handled at the NSA in 2021, one can additionally point to staff shortages resulting from the retirement of some judges and the fact that more than a quarter of full-time positions were unfilled (more than 20% of judicial positions remained unfilled). In addition, the COVID-19 pandemic necessitated the reorganization of the Court's work by providing parties

with the opportunity to attend hearings remotely. For technical reasons, fewer cases may be handled at remote hearings than at land-based hearings.

Q097 (2020): “Other than criminal law” cases: compared to the previous period (2018), decreases in the numbers of "incoming cases" before courts and "resolved cases" result from the COVID19 pandemic. As regards increases in the number of pending cases, they are due to increased amount of unresolved specific categories of cases in civil litigious procedures (e.g.claims under the loan agreement) and civil non-litigious procedures (e.g. division of the property). Administrative law cases : In 2020, the court disposed of 57.70% of all cases within 12 months, and within up to 24 months 78.66%. With regard to cassation complaints, 44.06% of cases were dealt with within 12 months. As far as complaints are concerned, 75.99% are settled within 2 months, while within 12 months the rate is 99.57%. 4. "4.Other cases": From the analysis of annual information for 2020 at the level of district courts and appellate courts in the labour and social security division, the following factors had an impact on the decrease in the degree of control of the impact (and thus the number of cases handled) and the increase in the average duration of proceedings in Ua, Uz and AUa and AUz cases in relation to 2019: - restrictions on court activity in 2020 related to the Covid-19 pandemic, due to the declaration of an epidemic state in the territory of the Republic of Poland from 20 March 2020 and the associated need for quarantine, sick leave, isolation, the need to provide care for children under 8 years of age, remote working, resulting in a reduction in the work of adjudicators, clerks and experts; - Insufficient number of experts on the list of expert witnesses compared to the number of cases requiring an opinion and the need to carry out joint or multiple expert opinions from different specialities, refusal of experts to carry out examinations necessary for their opinion (as a result of the epidemic situation in relation to SARS-CoV-2 infections), - a large number of suspended cases resulting from the regulation of the Act of 19 June 2020 on amending the Act on pensions from the Social Insurance Fund (Journal of Laws of 2020, item 1222), concerning a group of women born in 1953 (in these cases the proceedings were suspended by law as of 10 July 2020 until the pension authority issues a new decision recalculating the benefit of entitled persons, but not earlier than after 6 months from the suspension).

Q097 (2019): The decrease of Clearance Rate for 1. Civil and commercial litigious cases and 4. Other cases in 2019 compared with 2018 is caused by increased value of incoming cases. For 1. Civil and commercial litigious cases: from 141 045 cases in 2018 to 155 341 cases in 2019 (increase of 10%) and for 4. Other cases: from 41 242 cases in 2018 to 44 233 cases in 2019 (increase of 7%). The number of judges hearing in these type of cases in 2019 was at comparable level like in 2018 so the number of cases per one judge had increased automatically. In 2019, 16,844 cassation appeals (3,385 appeals less than in 2018) and 80 appeals for reopening the proceedings were submitted to the Supreme Administrative Court. From the previous period, 27,649 complaints and 28 applications for reopening of proceedings remain to be considered. In total, the Supreme Administrative Court had to consider 44,493 cassation appeals. In 2019, a total of 16,375 cassation complaints were examined. In 3,465 cases, the Supreme Administrative Court allowed the cassation appeal (21.16%), dismissed 11,721 cassation appeals (71.58%), and settled 1,189 in a different way (7.26%). Apart from cassation appeals, in 2019 the Supreme Administrative Court handled 4,665 complaints against decisions (orders) of courts of first instance, of which 715 allowed the appeal (15.36% of all appeals), and in 3,773 cases, the Supreme Administrative Court dismissed the appeal (80.88%), and it handled 177 matters in a different way (3.79%).
Moreover, the Supreme Administrative Court examined 162 complaints about violation of a party's right to hear a case in court proceedings without undue delay, of which 4 were admitted (2.47% of all settlements of this type), 60 were dismissed (37.04%), and 98 were settled in other way (60.49%).
In 2019, the Supreme Administrative Court handled 42.33% of all cases within 12 months, and 80.43% within 24 months. With regard to cassation complaints, 23.54% of the cases were settled within 12 months. In the case of complaints, 91.13% are examined by 2 months, and within 12 months, this ratio is 99.72%.

Q097 (2017): 2.2.2. There is not any specific explanation for observed increase. We can indicate only that mentioned increase is related especially to Register of Pledges.
As regards General civil (and commercial) non-litigious cases, we have validated previous data and we have made some corrections. We also indicate that a number of pending cases on 1 Jan. ref. year have been increased due to higher number of incoming cases in 2016.

Q097 (2016): Within the changes in business registry cases we can observe significant increase in all types of Application for registration (first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of removing from registry).
In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had increased.

Q098 (General Comment): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code. The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours. Mainly these are cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code, e.g: complaints against the discontinuation of the proceedings, complaints against the application or extension of pre-trial detention, complaints against the ordering the execution of a substitute prison sentence, complaints against a failure to grant parole.

Q098 (2022): Serious criminal cases include all offences under the Penal Code, the Fiscal Penal Code and offences under other laws. Misdemeanours are cases conducted under the Misdemeanours Code.
The category "Other cases" includes other cases conducted in the criminal courts that are not directly related to serious criminal cases or misdemeanours (mainly cases conducted under the Criminal Procedure Code and the Misdemeanours Code).

Q098 (2021): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the cevere criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Q098 (2020): Variations in the number of criminal law cases in 2020 compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of severe criminal cases (p. 1) and misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release, the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

Q099 (General Comment): While the Supreme Court considers non-contentious cases, there is no inclusion of this category of cases in the internal statistics. Accordingly, the reply is NA. Starting from 2022, administrative cases dealt with by the Supreme Administrative Court are presented in the frame of question 99 (last instance) and are no more within the scope of Q97.

Q099 (2024): *other cases = Statistics of the Extraordinary Review and Public Affairs Chamber (which deals with the Public law cases, inter alia cases originated from the extraordinary complaints or appeals against resolutions of the National Council of the Judiciary, competition and consumer protection cases, cases concerning the regulation of energy, telecommunications and postal services, rail transport, as well as the regulation of the water and sewage market, complaints concerning the excessive length of proceedings or cases concerning the retirement of a judge of the Supreme Court, etc.)
Statistics of the Professional Liability Chamber (which deals with the disciplinary cases or cases of lifting of the judicial and prosecutor immunity).
Compared to previous years, in the year under review (2024), the number of concluded proceedings in the Supreme Court increased. This is particularly visible in the Civil Chamber, where a total of 7,766 cases were resolved in 2024 (in 2023 – 6,308 cases, in 2022 – 5,785 cases). More cases than in 2023 were also resolved in the Labor and Social Security Chamber (in 2024 – 2,707, in 2023 – 2,580). The upward trend is also visible in the Criminal Chamber of the Supreme Court, where 4,374 cases were resolved in 2024. In 2023, this number amounted to 4,254 cases (an increase of 3%). Despite the positive change consisting in the increase in the number of resolved cases, this did not always result in a reduction of the judicial backlog.
In the case of the Civil Chamber of the Supreme Court, in which, despite a 23% increase in the percentage of cases resolved, the number of cases remaining to be resolved from the previous period decreased slightly. At the end of 2023, it amounted to 7,230 cases, and at the end of 2024 – 7,162 cases. This trend results from the very high inflow of new cases to the Civil Chamber, which has been continuing since 2022 (in 2024 – 6,316 cases, in 2023 – 6,424 cases, in 2022 – 6,951 cases), which, given the vacancy of 1/3 of adjudicating positions, cannot be effectively eliminated even with the maximum effort of the judges adjudicating in this Chamber.
The number of cases that were not resolved in the reporting period increased slightly in the case of the Labor and Social Insurance Chamber. It amounted to 2,213 at the end of 2024, while at the end of 2023 it was 2,165. However, it should be noted that this Chamber, like the Civil Chamber, is affected by the greatest staff shortages, and the inflow of cases to the Labor and Social Insurance Chamber was slightly higher in 2024 than in 2023 (a total of 71 cases, i.e. an increase of 2.6%).
The number of backlogged cases also increased in the case of the Criminal Chamber. While in 2023 the backlogged caseload was 1,415 cases, at the end of 2024 this number amounted to 1,504 cases. In this case too, this was related to the increase in the number of cases filed with the Criminal Chamber (4,463 cases in 2024 compared to 4,234 cases in 2023). It is worth emphasizing, however, that the increase in backlogged cases does not apply to cassation appeals heard in the Criminal Chamber, which is the core of its adjudicative activity. The issue of the inflow of cases and their resolution is very specific in the case of the Chamber of Extraordinary Control and Public Affairs. While in 2023 a total of 5,151 cases were filed with this Chamber, in 2024 it was only 1,561 cases. However, this discrepancy results from the fact that 2023 was the year in which elections to the Sejm of the Republic of Poland and the Senate of the Republic of Poland were held, as well

as a nationwide referendum. In connection with the above, as in the case of previous years in which elections or a referendum were held, the vast majority of cases filed with the Chamber of Extraordinary Control and Public Affairs concerned referendum and election protests (in 2023, 3,576). Deducting this category of cases, it should be stated that the inflow from 2024 was at a lower level than in 2023, when it was 1,795 cases. The number of resolved cases was also lower. In 2024, it was at the level of 1,352 cases, and in 2023 – 1,606 cases (after deducting 3,545 resolved election cases).
The year 2024 was the second full year of operation of the Professional Liability Chamber of the Supreme Court, which was established on 15 July 2022. In the reporting year, 680 rulings were issued in the Professional Liability Chamber, which is slightly less than in 2023 (716 rulings).

Q099 (2023): Other cases" include the statistics of the Extraordinary Review and Public Affairs Chamber and Professional Liability Chamber of the Supreme Court.
Statistics of the Extraordinary Review and Public Affairs Chamber (which deals with the Public law cases, inter alia cases originated from the extraordinary complaints or appeals against resolutions of the National Council of the Judiciary, competition and consumer protection cases, cases concerning the regulation of energy, telecommunications and postal services, rail transport, as well as the regulation of the water and sewage market, complaints concerning the excessive length of proceedings or cases concerning the retirement of a judge of the Supreme Court, etc.).
Statistics of the Professional Liability Chamber (which deals with the disciplinary cases or cases of lifting of the judicial and prosecutor immunity).
Compared to previous years, the number of cases pending as of 31 December of the reference year has increased, but it should be noted that the overall number of cases filed with the Supreme Court has increased significantly.
The Supreme Court still does not have all the positions provided for by law filled, which, combined with the growing inflow of cases from year to year, results in an increase in cases to be heard.
However, it should be noted that - even taking into account the above problems - the number of cases handled by the Supreme Court is growing from year to year:
6,308 cases were handled in the Civil Chamber (compared to 5,785 cases handled in 2022);
2,580 cases were handled in the Labor and Social Security Chamber (compared to 2,286 cases handled in 2022).
4,254 cases were handled in the Criminal Chamber (compared to 4,161 cases handled in 2022).
In the Chamber of Extraordinary Control and Public Affairs, 5,151 cases were resolved (compared to 1,617 cases resolved in 2022). However, it should be noted that such a significant increase is dictated by the consideration of electoral cases by this Chamber in connection with the elections to the Sejm and Senate of the Republic of Poland held in the autumn of 2023. The receipt of such cases in 2023 alone is 3,576 compared to 11 cases received in 2022.

Q099 (2022): Compared to previous years, the number of pending cases on 31 December of the reference year has increased, but it should be noted that the number of incoming cases has increased significantly.
In the Civil Chamber, for example, the number of incoming cases doubled compared to the cases received in 2020 (4360 incoming cases in 2020, while 8176 incoming cases in 2023).
Another factor that significantly affects the statistics of case recognition is the new measure introduced by the amendment to the Supreme Court Act of 9 June 2022, which entered into force on 15 July 2022 - the motion to examine the fulfilment of the requirements of independence and impartiality of a Supreme Court judge, taking into account the circumstances of his or her appointment and his or her post-appointment. Article 29(6) of the Supreme Court Act, which provides an additional procedural guarantee for the parties, on the other hand affects the length of the proceedings before the Supreme Court. It can be noted that this measure is widely used by the parties, which can be particularly observed in disciplinary proceedings. Furthermore, it has an impact on other Chambers of the Supreme Court, including the Civil Chamber.
It should also be noted that the Supreme Court has not had all of its legally stipulated Supreme Court judge positions filled for years (as at 31 December 2021, 90 of the 125 positions stipulated in Section 2 of the Supreme Court Rules were filled), which, combined with the increasing number of incoming cases each year, has resulted in an increasing number of pending cases.
Even taking the abovementioned problems into account, it should be noted that the number of cases decided by the Supreme Court is increasing year-on-year.
In the Civil Chamber, 5785 resolved cases (compered to 4926 resolved cases in 2021);
In the Extraordinary Review and Public Affairs Chamber, 1617 resolved cases (compered to 1120 resolved cases in 2021);
In the Criminal Chamber, 4161 resolved cases (compered to 4003 resolved cases in 2021);
Only the Labour and Social Security Law Chamber has recorded a slight decrease in the number of resolved cases - 2286 in 2022 (compered to 2299 resolved cases in 2021).
*3 administrative law cases: in 2022,the lifting of restrictions on court activity due to the declared epidemic state in Poland has increased the number of cases handled by the Supreme Administrative Court.

Q099 (2021): *1. They include cases conducted in the Civil Chamber, the Labor and Social Insurance Chamber Chamber and the Chamber for Extraordinary Control and Public Affairs, including those with the reference NSNc
*4)The data includes cases conducted in the Chamber for Extraordinary Control and Public Affairs with the references NSK, NSKP, NZP, NZ, NSW, NSP NKRS, NWW, and NO signatures. These are cases that fall under the jurisdiction of the Extraordinary Control and Public Affairs Chamber mainly in the field of public law public, i.e., other than extraordinary complaints in both civil and criminal cases (which have been assigned to civil and criminal cases shown in boxes 99 and 100, respectively),
For example, cases in the field of telecommunications regulation, energy, competition protection, but also appeals against resolutions of the National Judicial Council.
*4)Other cases are also disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court.
In the case statistics of the Chamber Civil, Labor and Social Security Chamber, as well as in the statistics of civil cases (extraordinary complaints) of the Extraordinary Control and Public Affairs Chamber, there was an increased receipt in 2021 compared to 2020.This was an increase so significant that the statistics of cases handled declined compared to 2020.It should be assumed that - similar to previous years previous years, the general reason for the less favorable statistics are further organizational changes within the Supreme Court and the impact of the dispute over judicial reform on the efficiency of the work of Supreme Court judges. In addition, following the assumption of the post of President of the Civil Chamber of the Supreme Court by prof. Joanna Misztal-Konecka, there has been a review of the observance of the order in which cases are received in their allocation to individual judges. The Office Instruction was then modified in the part concerning the system of case numbers. Some cases were then assigned new case numbers, which could lead to an artificial overestimation of the number of cases with an unchanged rate of their handling.

Q099 (2020): *Civil cases :- litigious cases heard by the civil chamber and the labour and social insurance chamber: Civil Chamber - pending cases on 1 Jan - 2596, incoming cases - 4360, resolved cases - 5518, pending cases on 31th Dec - 1438; Labour and social insurance chamber - pending cases on 1 Jan - 2161, incoming cases - 1535, resolved cases - 1938, pending cases on 31th Dec - 1758; *Other cases: - cases pertaining to public law, decided by the Chamber for Extraordinary Control and Public Issues and disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court: the Chamber for Extraordinary Control and Public Issues - pending cases on 1 Jan - 149, incoming cases - 6696, resolved cases - 6710, pending cases on 31th Dec - 135; the Disciplinary Chamber of the Supreme Court: pending cases on 1 Jan - 105, incoming cases - 312, resolved cases - 395, pending cases on 31th Dec - 22; Other cases: *These increases must be explained by the election year, in which the Chamber of Extraordinary Control and Public Affairs dealt with numerous protests. This has resulted in a substantial increase in the dynamics of cases in this Chamber.
Discrepancies - Administrative law cases - see data in Q97 and general comment to that question.

Q099 (2019): 1. Civil cases = civil cases + labour and social security cases;
4. Other cases = public law cases + disciplinary cases;
3. Data from Supreme Administrative Court; “1. Civil and commercial litigious cases”: Pending cases on 1 Jan. ref. year : 2586 (civil cases) + 2010 (labour and social security cases); Incoming cases :5105 (civil cases) + 2480 (labour and social security cases); Resolved cases: 5095 (civil cases) + 2329 (labour law and social security cases); Pending cases on 31 Dec. ref. year: 2596 (civil cases) + 2161 (labour and social security cases);
“4.Other cases”: Pending cases on 1 Jan. ref year: 117 (disciplinary cases) + 215 (public law cases); Incoming cases: 269 (disciplinary cases) + 894 (public law cases); Resolved cases: 281 (disciplinary cases) + 955 (public law cases); Pending cases on 31 Dec. ref. year: 105 (disciplinary cases) + 154 (public law cases).
Public law cases and disciplinary cases were not entered in the table in 2018. Public law cases in 2018: Pending cases on 1 Jan. ref. Year – no data; Incoming cases – 293; Resolved cases – 81; Pending cases 31th December – 212; Disciplinary cases in 2018 : In 2018 the Disciplinary Chamber of the Supreme Court received a total of 161 cases, of which 52 to the First Department and 109 to the Second Department. In the First Department, in 2018, 11 cases were resolved. In the Department of the Second Disciplinary Chamber, 17 cases were considered and completed in terms of content, and 16 cases formally (data from the Supreme Court activity report for 2018).

Q099 (2016): In 2014 the Administrative Supreme court cases were not included and they are reintroduced in this cycle. In regard to administrative law cases we kindly indicate that administrative cases are excluded from the jurisdiction of the common courts. Administrative cases are proceeded by the Voivodship Administrative Courts and Supreme Administrative Court, which are only competent to proceeded such cases.
Q100 (General Comment): The Supreme Court does not divide its statistics into categories corresponding to those defined and used by the CEPEJ.

Q100 (2020): The dynamics of the movement of cases of 2020 in the work of the Criminal Chamber of the Supreme Court was due to changes of a personnel nature. In addition, some of the disciplinary cases of advocates were submitted for consideration to the Criminal Chamber on the basis of decisions of the First President of the Supreme Court made in the period until May 2020 or decisions of the President of the Supreme Court directing the work of the Criminal Chamber at a later date, as the Disciplinary Court of the Polish Bar Association refers files of disciplinary cases with cassation appeals to the Criminal Chamber, recognizing that the Disciplinary Chamber should refrain from examining them. At the same time, the above-standard involvement in the work of judges, assistants and all other employees of the Criminal Chamber allowed for an increase in the number of cases dealt with.

Q100 (2018): Number of incoming cases has increased due to implemented law changes in Code of Criminal Procedure. On 15 April 2016 entered into force regulations about complaints against appellate court judgments. Parties may complain to the Supreme Court of the Republic of Poland against an appellate court judgment revoking a judgment of the court of the first instance and referring the case for reconsideration. In the first period of functioning of mentioned regulations there were not many incoming cases. The situation changed in 2018. We have observed that many cases incoming on the base of regulations implemented in 2016. Moreover, in 2018 were carried on some organisational changes e.g. Military Chamber of Supreme Court has been closed and all cases were moved to Criminal Chamber.

Portugal

Q091 (General Comment): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
Q091 (2024): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries.
From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work take non by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2024 are: Pending cases on 1 Jan. 2024: 345538; Incoming cases: 135188; Resolved cases: 138880; Pending cases on 31 Dec. 2024: 341846. This numbers correspond to the total number of existing procedures in Portugal in 2024, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 29,611. The number Incoming cases that correspond only to tax cases is 9388. The number of Resolved cases that correspond only to tax cases is 15,595. The number of Pending cases on 31 Dec. that correspond only to tax cases is 23,404. In what concerns this type of cases, in 2024 there were 79,784 new cases and 38,643 completed cases. However, of these totals, only 79,058 new cases and 37,917 completed cases corresponded to real movements of the beginning and end of cases. The remaining 726 cases refer to cases that were internally transferred between units.
The very significant increase in the number of new, completed and pending cases in 2024 is largely due to the increase in urgent administrative cases. This increase was due to the very high number of applications for authorisation or renewal of the residence permit that were lodged with the Lisbon Administrative Court during 2024.

Q091 (2023): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries.
From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work take non by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2023 are: Pending cases on 1 Jan. 2023: 359238; Incoming cases: 130392; Resolved cases: 142531; Pending cases on 31 Dec. 2023: 347099. This numbers correspond to the total number of existing procedures in Portugal in 2023, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 34769. The number Incoming cases that correspond only to tax cases is 10584. The number of Resolved cases that correspond only to tax cases is 15745. The number of Pending cases on 31 Dec. that correspond only to tax cases is 29608. In what concerns this type of cases, in 2023 there were 25,607 new cases and 30,669 completed cases. However, of these totals, only 25,018 new cases and 30,080 completed cases corresponded to real movements of the beginning and end of cases. The remaining 589 cases refer to cases that were internally transferred between units.

Q091 (2022): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries
From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work take non by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2022 are: Pending cases on 1 Jan. 2022: 394367; Incoming cases: 108036; Resolved cases: 140946; Pending cases on 31 Dec. 2022: 361457. This numbers correspond to the total number of existing procedures in Portugal in 2022, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 38089. The number Incoming cases that correspond only to tax cases is 11619. The number of Resolved cases that correspond only to tax cases is 14888. The number of Pending cases on 31 Dec. That correspond only to tax cases is 34820. In what concerns this type of cases, in 2022 there were 24,212 new cases and 27,051 completed cases. However, of these totals, only 23,483 new cases and 26,322 completed cases corresponded to real movements of the beginning and end of cases. The remaining 729 cases refer to cases that were internally transferred between units.

Q091 (2021): The increase in the number of cases resolved on 1 January 2021 should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

Q091 (2020): The decrease in the number of Civil (and commercial) litigious cases reflects the effects of the Covid 19 pandemic and the consequent lockdown, that had an impact on the functioning of the courts, considering that in certain periods face-to-face services have been interrupted or conditioned.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigma, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring ando f differentiating responsabilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparision of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoingaimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases fot the year 2020 are: Pending cases on 1 Jan. 2020: 521224; Incoming cases: 96047; Resolved cases: 159616; Pending cases on 31 Dec. 2020: 457655. This numbers correspond to the total number of existing procedures in Portugal in 2020, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
In the scope of Working Group within the Ministry of Justice that monitors the development of the procedural processing system of the 1st instance judicial courts (Citius System), work is underway to implement the mechanism in question, in order to allow for autonomous accounting of cases that are awaiting the performance of an act that falls within the competence of the registry or the judge. At the moment, it is not yet possible to estimate a date for the conclusion of the work. The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 44542. The number Incoming cases that correspond only to taxcases is 44329. The number of Resolved cases that correspond only to tax cases is 48704. The number of Pending cases on 31 Dec. That correspond only to tax cases is 40167. In what concerns this typ of cases, in 2020 there were 68,467 new cases and 73,880 completed cases. However, of these totals, only 20,731 new cases and 26,144 completed cases corresponded to real movements of the beginning and end of cases. The remaining 47,736 cases refer to cases that were internally transferred between units, namely due to the establishment of specialised courts in September 2020 (which are not independent legal ent

ities), or that were subject to changes in the subject matter. Considering that in 2020 the number of cases transferred between organizational units was very high in the 1st instance administrative and tax courts, for this cycle we indicated in the table only the numbers of cases opened and closed, without including transferred cases. In previous editions, the figures included transferred cases, which could impair the comparative reading.

Q091 (2019): 91.1 The decrease of the number of pending cases older than 2 years follows the general trend of decrease of pending cases for this category. There were no legislative changes that can explain this decrease.

Q091 (2018): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour. The number of enforcement cases for the year 2018 are: Pending cases on 1 Jan. 2018 700.638; Incoming cases:127.646; Resolved cases:222.480; Pending cases on 31 Dec. 2018: 605.804 This numbers correspond to the total number of existing procedures in Portugal in 2018, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 ”Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 47931
The number Incoming cases that correspond only to tax cases is 14895
The number of Resolved cases that correspond only to tax cases is 16828
The number of pending cases on 31 Dec. that correspond only to tax cases is 45998
91.1 Due to increased efficiency of first instance courts, we can notice for the last several cycles a down-word trend in respect of the number of pending cases, namely civil and commercial litigious cases

Q091 (2017): Q 91.1 - the decrease of pending cases older than 2 years can be explained by the global decrease of theses cases. There were no legislative changes that could explain this decrease.
The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above (the technical work is still on going), the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2017 are: Pending cases on 1 Jan. 2017: 804.423; Incoming cases: 148.713; Resolved cases: 249.837; Pending cases on 31 Dec. 2017: 703.299. This numbers correspond to the total number of existing procedures in Portugal in 2017, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 ”Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 49.943
The number Incoming cases that correspond only to tax cases is 14.707
The number of Resolved cases that correspond only to tax cases is 16.811
The number of pending cases on 31 Dec. that correspond only to tax cases is 47.839

Q091 (2016): " Item 91-1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still on-going aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The data on enforcement cases for the year 2016 is: pending cases on 1 Jan. 2016: 934.860; incoming cases: 158.164; resolved cases: 289.402; pending cases on 31 Dec. 2016: 803.622. These numbers correspond to the total number of existing procedures in Portugal in 2016, following the existing model prior to the entry into force of the said legal diploma. For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators. Item 91_3 ”Administrative law cases”, includes administrative and tax cases. The separate data on tax cases is as follows: pending cases on 1Jan. - 53.597; incoming cases - 16.445; resolved cases - 20.222; pending cases on 31 Dec. - 49.820. Regarding the decrease in the number of incoming administrative law cases, it results from the decrease in the number of incoming tax law cases, in particular in what concerns misdemeanour appeals".

Q091 (2015): The category “civil (and commercial) litigious cases” includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. It is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred in that table. Just for information, the data on the total number of existing enforcement procedures in Portugal in 2015, following the existing model prior to the entry into force of the said legal diploma is the following: pending cases on 1 Jan. 2015: 1.000.446; incoming cases: 199.359; resolved cases: 272.191; pending cases on 31 Dec. 2015: 927.614.
The category “administrative law cases” includes administrative and tax cases. The separate data on tax cases is the following: pending cases on 1Jan - 47.866; incoming cases - 24.808; resolved cases - 19.164; pending cases on 31 Dec. - 53.510.

Q091 (2014): For 2014, data are not available due to technical constraints.

Q094 (2024): 2. The data is correct. The number of cases pending for more than two years has indeed increased compared to the previous year.
3. The data is correct. The increase in the number of pending cases as at 31 December 2024 is related to the fact that in 2024 the number of cases closed was lower than the number of cases filed.

Q094 (2022): In our view, the increase in the number of incoming and outgoing cases in 2022 compared to 2020 reflects the effects of the Covid-19 pandemic and the resulting lockdown, which had an impact on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.
3. "Other criminal cases" - cases involving procedural types provided for in criminal law, which do not fall into the "severe criminal cases" and "minor criminal cases" categories. These are, for example, cases relating to "legal accumulation", "interrogation of foreigners", "judicial expulsion", "compulsory internment" and "habeas corpus".

Q094 (2021): The discrepancy should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

Q094 (2020): 94.1 - The decrease in the number of cases completed in the category "Total of criminal law cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation.
94.2 -The decrease in the number of incoming and outgoing cases in the category "Misdemeanour and / or minor criminal cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation. Still, the number of cases pending on January 1, 2020 reduced compared to the number of cases pending on January 1, 2018, since the number of cases completed from 2018 to 2019 was relatively higher than the number of cases entered in those years. 94.3 - The increase in the number of pending cases older than 2 years in the "Other criminal cases" category in 2020 compared to 2018 may be related to reduced court activity in the year 2020 due to the Covid-19 pandemic situation.

Q094 (2018): Regarding the decrease of the numbers comparing to 2016, there were no legislative changes or others that could explain this decrease. Due to increased efficiency of first instance courts, we can notice for the last several cycles a down-word trend in respect of the number of pending cases, namely criminal law cases.

Q094 (2016): There is no specific reason explaining the decrease in the number of incoming and pending criminal cases in comparison with the values of previous cycles. There were no legislative changes or other that could explain this value. However, we can note that cases at first instance in criminal and other areas have been decreasing in the last years. In addition, this decrease may also result from the fact that the number of criminal cases registered by police forces has been decreasing.

Q097 (General Comment): Since 2007, statistical data concerning pending cases in 2nd instance judicial courts are collected through the courts information systems. Being a dynamic system, allowing regular corrections and up-dating, this data collection may lead to oscillation data from previous years resulting in variations in pending cases.
In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

Q097 (2024): 97.3 The decrease in figures compared to 2023 is justified by the fact that in 2023 the figures were unusually high. In 2023, Decree-Law No. 74-B/2023 of 28 August came into force, which provided for the specialisation of the central administrative courts and their establishment by Order 281-A/2023 of 13 September. As a result of the creation of these specialised sections, the number of cases filed and concluded in the central administrative courts in 2023 was unusually high, due to internal transfers between the organisational units of these courts. In short, the figures for 2024 are in line with those for the years prior to 2023, which was, for the reasons mentioned above, a year with unusually high figures.
Last February, the number of cases heard by the Lisbon Court of Appeal between 2015 and 2023 was changed as a result of a correction made by the court. Following these corrections, the data for 2023 were changed from those originally submitted to the CEPEJ questionnaire last year. For this reason, the figures for cases pending as of December 31, 2023, do not match the figures for January 1, 2024.

Q097 (2023): In 2023, Decree-Law 74-B/2023 of 28 August came into force, which led to the specialisation of the central administrative courts and their installation by Order 281-A/2023 of 13 September. As a result of the creation of these specialised chambers, 11 745 cases were internally transferred between the organic units of these courts.

Q097 (2022): total: The increase in the number of cases filed in 2022 compared to 2020 reflects, from our point of view, the effects of the Covid 19 pandemic and the consequent lockdown, which had an impact on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.
1.The drop in the number of pending cases in 2022 compared to 2020 is related to the fact that in the period from 2020 to 2022 the number of cases completed was higher than the number of cases received.

Q097 (2021): The decrease in the number of pending cases is related to the fact that in 2020 the number of cases that were completed in the second instance courts was higher than the number of new cases. This downward trend in pending cases has been constant since 2016.

Q097 (2020): The decrease in the number of cases under the category "Civil (and commercial) litigious cases" between 2018 and 2020 is justified by the decrease in court activity in 2020 due to the Covid-19 pandemic situation. The number of cases pending on December 31, 2020 has reduced compared to the number of cases pending on December 31, 2018, since the number of cases completed from 2018 to 2020 was relatively higher than the number of cases entered in those years. The increase in the number of cases completed in Administrative Courts between 2018 and 2019 may be justified by the increase in the number of judicial magistrates working in these courts. Even so, despite this increase in cases completed, there was an increase in the number of cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, considering that the number of cases completed from 2018 to 2019 was still relatively lower than the number of cases entered in those years.

Q097 (2019): This increase of resolved cases can be explained by the increase on the number of judges in Administrative Courts.
Q097 (2018): Regarding the increase in the number of pending administrative law cases comparing to 2016, there were no legislative changes or others that could explain this variation".
Q097 (2016): There is no specific explanation as regards the increase in the number of civil and commercial litigious cases pending on 1 January 2016 between 2015 and 2016. The question 97_3 "Administrative law cases", includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 3.909
The number Incoming cases that correspond only to tax cases is 1.809
The number of Resolved cases that correspond only to tax cases is 1.663
The number of Pending cases on 31 Dec. that correspond only to tax cases is 4.055

Q097 (2015): The question 97_3 "Administrative law cases", includes administrative and tax cases.

Q098 (General Comment): When courts handle appeal cases it is not possible to separate appeals that had in their origin a criminal case or a misdemeanor case.
Q098 (2024): The data for 2024 is correct. Last February, the number of cases heard by the Lisbon Court of Appeal between 2015 and 2023 was amended as a result of a correction made by the court. Following these corrections, the data for 2023 were amended, meaning that the number of cases pending in 2023 were corrected compared to those submitted to the CEPEJ questionnaire last year. As such, the differences between the data for 2023 and 2024 will now be smaller. For reference, the figures in the first column (Pending cases on 1 Jan. ref. year) for 2023 are now 3070 and those in the fourth column (Pending cases on 31 Dec. ref. year) are now 2917.

Q098 (2016): There is no specific reason explaining the increase in the number of pending criminal cases on 31 December 2016 in comparison with the values of the previous cycle. There were no legislative changes or other that could explain this change.

Q099 (General Comment): In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of "other than criminal law cases" did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

Q099 (2024): 99.3 - We confirm the decrease in the number of cases pending before the Supreme Administrative Court (STA) in 2024 compared to 2023. In 2023, new legislation redistributed powers between the Central Administrative Courts and the Tax Litigation Section of the STA.
In fact, until 2023, the Tax Litigation Section of the STA had jurisdiction to hear appeals against decisions on the merits of tax courts.
However, in 2023, following the entry into force of Decree-Law No. 74-B/2023 of 28 August, the scope of jurisdiction of the aforementioned Section of the STA was restricted, with that Section now only hearing appeals against decisions on the merits of tax courts (based exclusively on matters of law, whenever the value of the case exceeds the jurisdiction of the central administrative courts and the value of the award exceeds half the jurisdiction of the court to which the appeal is made). Since 2023, fewer cases have been filed with the Tax Litigation Section of the STA as a result of this legislative amendment, and there may have been a tendency for judges to focus on resolving pending cases from then on, which would explain the decline in pending cases in 2024.

Q099 (2022): 1 - 1st column
The increase in the number of pending cases on January 1, 2022 compared to January 1, 2020 is related to the fact that in the period from 2020 to 2021 the number of incoming cases was higher than the number of outgoing cases. In our view, this behavior reflects the effects of the Covid-19 pandemic and the resulting lockdown, which had an impact on the functioning of the courts in 2020 and 2021, considering that in certain periods face-to-face services were interrupted or conditioned.
3 - 1st column
The decrease in the number of cases pending on January 1, 2022 compared to January 1, 2020 is related to the fact that in the period 2020 to 2021 the number of cases closed was higher than the number of cases admitted.

Q099 (2021): The increase in the number of cases pending on 1 January 2021 is related to the fact that in 2020 the number of cases brought was slightly higher than the number of cases completed. There is no specific explanation for these values.

Q099 (2020): There was an increase in the number of cases pending from 2018 to 2020 at the Supreme Court of Justice, considering that the number of cases that ended from 2018 to 2020 was relatively lower than the number of cases brought in those years. The rise in the number of pending cases in the year 2020 is also partly explained by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation.
Q099 (2019): 99 (total) - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.
99.1 - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.
Q099 (2018): Regarding the slight decrease in the number of pending civil and commercial litigious cases at the beginning of the year 2018, comparing to 2016, there were no legislative changes or others that could explain this decrease

Q099 (2017): Q99.1 - The decrease in the number of pending civil and commercial litigious cases on 31 december 2017 is explained by the fact that the number of resolved cases in 2017 was superior to the number of incoming cases in the same year. There were no legislative changes or other that can explain this decrease.
Q099 (2016): In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.
The question 99.3 “Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 783
The number Incoming cases that correspond only to tax cases is 1.039
The number of Resolved cases that correspond only to tax cases is 946
The number of Pending cases on 31 Dec. that correspond only to tax cases is 876

Q099 (2015): The question 99.3 “Administrative law cases”, includes administrative and tax cases.

Q100 (General Comment): The communicated data reflects the case-flow of criminal cases before the highest instance courts.
“Misdemeanor cases” are never taken to high instance courts.
Q100 (2020): The increase in the number of criminal cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, at the Supreme Court is justified by the fact that the number of cases completed from 2018 to 2019 was relatively lower than the number of cases entered in those years.

Q100 (2016): In Portugal, misdemeanour/minor criminal cases may not be dealt in the Supreme Court of Justice.

Romania

Q091 (General Comment): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q091 (2024): In 2024, the number of civil cases resolved was higher than in 2023, which means that the year-end stock remains constant, given that the number of new cases registered in 2024 was also higher than in 2023.
2.2.2 Non-litigious business registry cases: The 2024 decline was operational and systemic — driven by digital transformation, staffing shortages, and temporary disruptions. In mid-2024, ONRC temporarily suspended both its online portal and front-office services to migrate to a new integrated digital system. The transition caused significant delays, reduced processing capacity, and a backlog of pending applications. The Registry faced an acute lack of registrars authorized to perform the legal verification of filings. This led the Government to adopt Emergency Ordinance No. 109/2024, allowing temporary re-assignment of legal advisers and managerial staff to perform registration duties. With the corrective measures already in place, a progressive recovery of registration volumes is anticipated in 2025, once the Trade Registry's new systems and personnel reach full capacity.

Q091 (2023): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
2. The variations could be attributed to a human resources issue: due to a wave of retirements among magistrates following recent legislative changes, the number of active judges has dropped by nearly 15% over three years. This reduction has slowed case resolution rates, which have not kept up with the annual increase in new cases, resulting in a steady rise in year-end backlogs.
2.1 - With the rising trend in new cases and the settlement rate still lagging behind new case inflows, year-end case backlogs, including cases older than three years, are likely to increase annually. However, given the low numbers involved (e.g., 412 cases in 2023 and 276 in 2022), these figures lack statistical significance and cannot be seen as indicators of broader socio-legal trends.

Q091 (2022): There are no explanations for the discrepancies, as for volumes of cases in the order of hundreds no conclusions can be drawn regarding statistical trends.
Q091 (2021): As presented in the comments to the data communicated in the previous CEPEJ cycle, the measures taken in the pandemic period led to an increase in the stock of cases, that explain the number of pending cases on Jan 1st and also some of the values of the pending cases in courts for 2 years. At the same time, as shown in some of the data on resolved cases, although the stock at the beginning of 2021 was considerable by the enhanced activity the number of resolved cases increased
Q091 (2020): The decrease in the number of resolved cases in 2020 was caused by the context of the Covid-19 pandemic. The activity of al the courts was partially suspended between the 15-th of March until the end of May 2020 because a state of emergency was declared. During that period only few urgent cases were adjudicated. Some courts instituted preventive mesures even before the 15-th of March 2020 which included postponing non-urgent cases. After the state of emergency ended there were still in place measures that affected the normal activity of the courts like: the introduction of specific timeframes for each case, hearings through video conference, a strict limitation of human interaction at the auxiliary compartments of the courts that dealt directly with public like the Archive and the Registry office, so that requests and documents had to be submitted by post, fax or e-mail. These measures affected not only the court staff but all court users that had to adapt to the new circumstances and led to the postponement of many cases. There were also gaps in activity caused by cases of Covid-19 among the personnel of the courts. The same explanation is valid for the increased Disposition time which led to an increased numer of pending cases older than 3 years.

Q091 (2019): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Referring to the non-litigious business registry cases,the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant.
Referring to the administartive cases, the decrease in the number of pending cases in administrative matters can be determined by aspects such as: certain types of cases that have been exhausted before courts (e.g cases on salary rights of public servants initiated in 2010) or cases such as those on pollution taxes that were mostly exhausted before courts and for which administrative procedures have been expressly regulated as to discharge the huge workload in courts that they have generated. In terms of incoming administrative cases, when referring to a decrease in their number, similar reasons that justify the decrease in the number of pending administrative cases should be taken into consideration, namely, for example, those referring to the administrative procedures that have been expressly regulated as to discharge the huge workload in courts (e.g. regarding to the cases on pollution taxes). There is no particular explanation on the increased number of general civil and commercial non-litigious cases in 2019, resulting in a slight decrease of the CR for this category. However, it should be noticed that the operatitivity and volume of solved cases has increased.

Q091 (2018): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Referring to the non-litigious business registry cases,the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant.
Referring to the administartive cases, the decrease in the number of pending cases in administrative matters can be determined by aspects such as: certain types of cases that have been exhausted before courts (e.g cases on salary rights of public servants initiated in 2010) or cases such as those on pollution taxes that were mostly exhausted before courts and for which administrative procedures have been expressly regulated as to discharge the huge workload in courts that they have generated. In terms of incoming administrative cases, when referring to a decrease in their number, similar reasons that justify the decrease in the number of pending administrative cases should be taken into consideration, namely, for example, those referring to the administrative procedures that have been expressly regulated as to discharge the huge workload in courts (e.g. regarding to the cases on pollution taxes).

Q091 (2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
“Administrative law cases”: indeed, the data are correct, namely there is a significant increase in the number of incoming cases in 2017 that could be explained by the changes brought in 2013 to the Law no. 554/2004 of administrative litigations; the amendments resulted in a high number of second appeals in this matter (by number of second appeals we understand all second appeals under the competence of both the Supreme Court (High Court of Cassation and Justice) and of the courts of appeal, because in this matter some of the cases shall be judged in first instance by tribunals and others by the courts of appeals).

Q091 (2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The high clearance rate of administrative cases in previous cycles has led to lower significantly the number pending cases. The increase of the number of incoming cases is a consequence of a higher number of requests filed in administrative domain that also triggers an increase in the number of resolved cases. The decrease in the number of non-litigious pending cases as well as "other" pending cases is mostly due to lower number of incomming ases.

Q091 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The initial total number of pending cases has increased as a result of reporting the data into Ecris database. The number of incoming cases and this of resolved cases are comparable from one year to another for the period 2010-2013. The stocks at the end of the period is in relation to the adjustment of the stocks at the beginning of the period, but comparable with 2012.
Concerning the number of administrative law cases the workload has constantly decreased starting with 2012. The increase of stocks initially communicated for 2013 comes from the high number of incoming cases in 2012. The final stock of 2014 is lower also because of the lower number of the new cases in 2013. It may also be noticed that the new cases closed in 2013 was higher than in 2012. The high decrease in the number of incoming, resolved and pending administrative law cases on 31 December between 2013 and 2014 is progressive and is caused by the social climate.

Q092 (General Comment): Divorce with the consent of the parties, granting of legal personality, modification of the constitutive acts of legal persons, requests related to unions, non-litigious requests (civil, litigation with professionals, minors and family).

Q093 (General Comment): NAP

Q094 (General Comment): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q094 (2024): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2. The stock at the beginning of 2024 was higher than that at the beginning of 2023, which is one of the possible explanations for the fact that the stock of year-end files older than 2 years has this increase.

Q094 (2023): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q094 (2020): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased numer of pending cases older than 3 years. In criminal law cases postponements were reccurent in cases involving persons serving a prison senstence, because generaly they have to be brought to every court hearing which was not always possibile due to the curantine measures taken by the prison administrations.

Q094 (2018): The changes brought to the code of criminal procedure may be among the reasons for the augmentation of the total number of criminal law cases pending on January 1st between 2016 and 2018, namely for e.g. the procedure regarding the prosecutor's decision to discontinue the criminal investigation has to be confirmed by a judges/in court, according to the new provisions.

Q094 (2016): In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;

In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.
The total number of incoming criminal cases in first instance courts has substantially increased when compared to 2014 data (+41%). These figures have been confirmed by the CEPEJ National Correspondent.

Q094 (2014): The significant increase in the number of total pending cases on 1st of January within the period 2012 – 2014 is due to the new way of counting the statistical data by the application Statis. The time of reaching a decision is not equivalent to the time of drafting the decision. For the present evaluation, files where a decision is reached but is not drafted yet are not counted.

Q097 (General Comment): It is worth specifying that, since 2010, the first table (question no. 91) centralizes all the first instance cases (irrespective of the level of the courts), the second table (question no. 97) centralizes all the second instance cases – appeal (irrespective of the level of the court) and table no. 3 (question no. 99) shows the statistical data on all second appeal cases (last instance cases) from all courts (irrespective of their level).
In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q097 (2022): Due to the large number of magistrates retiring in 2022, the number of solved cases decreased, as a result the stock of files at the end of the year increased, while the number of newly entered cases followed an upward trend compared to the previous reporting cycle.

Q097 (2021): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases, therefore the the stock with old cases increased in some cases.

Q097 (2020): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased numer of pending cases older than 3 years.

Q097 (2019): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q097 (2018): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continous increase since the entry into force of the provisions.

Q097 (2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continous increase since the entry into force of the provisions.

Q097 (2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The general increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed. Accordingly, the number of appeals in the new Civil Procedure Code includes the number of appeals and second appeals from the old Code and shows continuous increase after 2014.

Q097 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The meaningful increases in figures observed between 2012 and 2014 are due to the fact that, in relation to the appeal, beyond the differences recorded in Statis, there was a change of jurisdiction in civil matters. Accordingly, the appeal (apel) became the main instrument to challenge a decision.

Q098 (General Comment): There is no classification of severe and less severe offences in the Romanian statistics.

Q098 (2016): In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

Q098 (2014): The significant increase of the total of criminal cases in respect of all the enumerated categories (pending, incoming and resolved cases) in 2014 is due to the entry into force of the new Codes and the changes of jurisdiction.

Q099 (2023): Concerning variations in the category 'pending for more than 2 years', they cannot be considered as consequences of any socio-legal phenomenon ocurring in 2023.
Q099 (2022): There are no explanations for the discrepances, anyway for volumes of cases in the order of hundreds no conclusions can be drawn regarding statistical trends.
Q099 (2021): The increase in Pending cases older than 2 years for administrative cases could be explained both by the significant increase in 2017 of the number of incoming cases of this type and by the limited capacity for resolving cases during the pandemic crises (from 30038 in 2019 to 26800 in 2020); therefore, the effect shall be seen in terms of statistics after 3 years in the number of pending cases (according to our statistical application the pending cases are registered in the category cases pending for more than 3 years).
Q099 (2019): In 2017 there was a significant increase in the number of incoming administrative cases explained by the modifications in terms of procedure, namely amendments regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system). Since 2017 and the described peak, the number of incoming administrative cases is decreasing.

Q099 (2018): The differences compared to the previous cycle are due to changes brought by the Constitutional Court's decisions to the interpretation given by the High Court of Cassastion and Justice to the legislation regarding the increasing number of incoming civil litigious cases and the decreasing number of civil litigious cases pending for more than 2 years.

Q099 (2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. The increase in the number of incoming administrative cases may be explained by the modifications in terms of procedure, namely modifications regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system); moreover, there should be mentioned that the number of second appeals in this question, refers to both the second appeals judged by the supreme court (High Court of Cassation and Justice) and by the courts of appeals, aspect that is valid even for the previous cycles.

Q099 (2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. As result of the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal Consequently the number of cases in Supreme court shows significant decrease in all categories.

Q099 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators and offers data with greater value for 2014. This partly explains the considerable increase of the number of pending administrative cases on 1st January between 2012 and 2014. Besides, the number of incoming cases in 2013 was higher than in 2014.

Q100 (2022): according to the application for statistics

Q100 (2021): according to the application for statistics

Q100 (2018): The increase in the total of criminal law cases incoming between 2016 and 2018 can be explained by the retrail / re-examination of a high important number of cases (to be noted that none of these cases were new) according to the Constitutional Court's decision that brought changes to the interpretation given by the High Court of Cassation and Justice in the matter of judicial organisation.

Q100 (2016): The jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal Consequently the number of cases in Supreme court shows significant decrease in all categories.
In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

Q100 (2014): The significant decrease between 2012 and 2014 of the total of criminal cases in respect of the following categories – incoming, resolved and pending on 31st December, is due to the entry into force of the new Codes and the changes of jurisdiction.

Slovak Republic

Q091 (General Comment): For 2016 data, new methodology was implemented based on the working group's conclusions and CEPEJ mission's recommendation (06/2016). Former reporting structure was not consistent with the methodology of CEPEJ, which could lead to inappropriate comparison of Slovak Republic (SR) with other countries. Also, the Ministry of Justice (MoJ) realized that evaluation of courts' performance by disposed and unresolved (decided and undecided) cases is discriminating SR in comparison with other countries in European Union (EU) as this methodology is not counting a decision of first instance court as disposed until the case becomes valid. This results into reporting such case as unresolved despite respective court has already made a decision and it is no longer in its disposition how - and more importantly when - the case will be resolved (disposed) by the second instance court. This is the nature of reporting of many "unresolved" cases on courts despite court already decided, in fact. Newly proposed way of reporting extracts the numbers of decided cases in respective court instances from "unresolved" and allocates these numbers to those court instances that made an actual decision in respective time. This means that decision validity state is not being awaited for as it could potentially contain an appeal and thus also a time that a case spends on second instance court. Upon decision's validity the case would become „disposed/resolved" at the first instance court but most probably it would not be disposed in the same period when it was decided by the (first instance) court. This past methodology (applied by 2016) resulted (visually) in accumulation of unresolved cases while some of them were already decided by first instance court.

Q091 (2024): Registry cases and non litigious business registry cases- The decrease in the number of resolved cases can be attributed to several factors, such as the involvement of notaries in the registration of changes in commercial companies (the percentage of persons who process their changes through a notary rather than through a court has been increasing month by month). This results in a lower inflow of new cases to the courts; however, it is also necessary to assess the allocation of the "complexity" or "problematic nature" of cases between courts and notaries. At the same time, within their activities the courts continue to "clean up" the Business Register, i.e. identifying companies that have failed to fulfil statutory obligations in the past (for example, the obligation to convert their registered capital from Slovak crowns to euros).

Q091 (2023): TBE

Q091 (2022): Discrepancy between the pending cases on 31 Dec. 2021 and the pending cases on 1 Jan. ref. year in the line 1. and Total is due to an administrative error caused by the court. In the rest lines, there is no discrepancy between the pending cases on 31 Dec. 2021 and the pending cases on 1 Jan. ref. year (compared with the previous year).
A significant increase in the Business registry cases category in 2022 (comparing incoming and resolved to 2020) is related to legislative changes to Act no. 530/2003 Coll. on the Commercial Register. The amendment to the law - included the birth-number among the recorded data with the aim of unambiguously identifying natural persons registered in the business register. In the case that it was not possible to add this data automatically from other reference sources into the the business register, it had to be added based on a court proposal submitted by September 30, 2022 (increase in incoming cases).
Other discrepancies are reflection either of the submission activity of the public (incoming cases) or productivity of the judicial system itself - in resolved cases.

Q091 (2021): An erroneous reporting of decided cases at the courts in 2020 had to be corrected in Pending cases at 1st January 2021 by 1128 cases (line 2. and Total of other than criminal law cases).
2.2.2 Non-litigious business registry cases - the increase in cases comming to the courts in 2019 due to the new legislation gradually stabilized over the course of the year 2020, 2021.
The category “other” encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons),inheritance proceedings and other. In covid years especialy the number of cases inheritance proceedings rose.
3. Administrative law cases - new reform of Administrative courts was expected and the clearance rate of the regional courts dropted to 80 %.

Q091 (2020): Exolanation of the discrepancies:
In the category 2.2.3. Other registry cases was added register "RPVS" - Register of public sector partners. The Register of public sector partners has the character of a register of legal and natural persons, which receives from the state, local-government and other public sector entities public financing or property above the limit specified by law. The persons who conclude a contract, framework agreement or concession contract pursuant to public procurement regulations, healthcare providers and so on. The classification of the registry in category 2.2.3. was consulted with CEPEJ organization.
In the category 2.2.2 and consequently in the category 2.2. - at the end of year 2019, the incoming cases into the business register was enormously increased due to new applied legislation, which caused high level of the pending cases at the beginning of the year 2020.
Administrative law cases - keeps the high level of pending cases.
Non-litigious business registry cases - the cause of the increase is explained below:
The Commercial Code (Act No. 513/1991 Coll) was amended by the Act No. 390/2019 Coll, which became effective from the 1st of October 2020. This amendment brought following changes (also changes to the Commercial register):
1. From October 1, 2020, it is possible to submit an application for registration of data in the Commercial Register only in electronic form (including objections to the refusal of registration)
2. Obligation of the company´s founders to submit the consent of the real-estate owner to setting up a registered seat of the company with verified signature of the owner.
3. The list of the information is being expanded in order to identify these persons more precisely. In the case of natural persons, a date of birth and a birth number must be given, if it was assigned. In the case of legal persons, their registration number must be given. The existing companies are required to complete this information by September 30, 2021.
4. The amendment also covers one of the reasons why the court is entitled to dissolve a company without liquidation. It is a breach of the obligation filing the financial statement into the collection of deeds within the specified period of 9 months from its preparation. This means, that if a company doesn’t deposit this financial statement in the collection of documents within 15 months from its preparation, the registry court will decide on its dissolution without a proposal.
The other discrepancies are mainly caused by the situation in 2020 due to Covid-19 pamdemic situation.
The emergency situation due to COVID 19 has been ongoing since March 2020. Since then, hearings have been held to the necessary extent, which is determined by a decree of the Ministry of Justice. The decree was amended 4 times according to the development of the epidemic situation.
Thus, the courts were not closed in 2020, but operated in a restricted regime, and that restricted regime depended on the development of the epidemic situation. There were situations where hearings were organised to the absolute minimum, for example in April 2020, almost no hearings were held. Since May 2020, it has been up to the courts to ensure hearings to the extent necessary and in accordance with other regulations related to the pandemic situation.
In several measures in 2020, the Ministry of Justice recommended that courts organize work so that court staff and judges work from home.As for an access to the file for lawyers, it was provided.

Q091 (2019): The changes in the total number of Pending cases on 1 Jan. ref. year - the courts, which did not comply with the established methodology for reporting bankruptcy and restructuring, corrected the data in 2019 and thus the initial state of 2019, which causes differences compared to 2018 pending cases. Similar situation is in the other non-litigious cases, where the methodology for the cases (acceptance of things into custody of court) was changed due the legislation changes in the court register during the year 2019.
Line 2; 2.1;2.2;2.2.2: According to the act. no. 390/2019 Coll. on the end user of benefits for entrepreneurs, the entrepreneurs became obliged to make the corresponding entry in the Business Register by 31 December 2019. The increase in new-coming cases was mainly in the last three months of 2019 by 117 thousand cases in business register courts.
The deadline for processing proposals for the registration of end-user benefit data by the court has been postponed to 30 June 2020, due to the large expected new-coming cases of business records at the end of the year.

Q091 (2018): 1. Differences in the initial states of things as of 1 January 2018 different from the final states as of 31 December 2017 are due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper collection of previous periods. These differences should not occur in the next year due to the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection.
2. Another reason for the differences in the opening cases as of 1 January 2018 from the closing stocks as of 31 December 2017 is the change in the classification of some court registers between rows in the table in question 91. The change of classification was carried out on the basis of the recommendation of the national correspondent for the SR and after its thorough consultation with the members of the working group GT CEPEJ - EVAL

Q091 (2017): The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a “paper” collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the ongoing project between CEPEj and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.
The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, until the 30. June 2016 the case-jurisdiction in administrative matters in the first instance stipulated by law was divided between Regional courts and the district courts. The general rule was, that the general jurisdiction in first instance lies at the Regional courts. However, there was a small number of proceedings (enumerated in law) where the District courts had the jurisdiction to act as a court of first instance. In reality, more than 90% of all administrative cases were tried by the Regional court as the courts of first instance.
Since 1. July 2016 the new Code of the administrative procedure came into force. According to this new law the Regional courts have the exclusive jurisdiction to try administrative cases as the courts of first instance.
As for the appeal procedure, there is the general rule that the appellate court is the court one level above in the structure of the court system. It means that the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.
In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings were indicated in table to Q 97
All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

Q091 (2016): The new structure of data presented by the Ministry of Justice is the reason for the discrepancies and incompatibility of the data with the previous cycles. As regards the category "general civil non-litigious cases" we notice a decrease of incoming cases as of the year 2013.
In this cycle the succession cases were classified as "Other non litigious cases" while in previous years they were classified as "general civil (and commercial) non litigious cases.

Q091 (2014): The increase in the number of incoming and pending other than criminal law cases at all levels of the judiciary is due to the increase in the number of litigious cases. The Slovak judicial system for a several years faces significant increases of claims filed with the courts by debt-collecting companies and non-bank loan companies against consumers, as well as class actions of one private company against the State for alleged damages etc. The higher number of resolved administrative cases was achieved by the intensive effort to reduce the existing backlogs in administrative matters.

Q092 (General Comment): The category "civil (and commercial) non-litigious cases" includes all cases arisen from legal relationships regulated by family law (maintenance cases, custody of the child, visiting rights, guardianship, divorce cases with the ruling on rights and obligations towards the minor child etc.), cases related to assessment of the legal capacity of natural persons, reminder procedure (electronic payment orders).

Q093 (General Comment): The category “other” encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons), issuing of the enforcement permission for the enforcement agents, enforcement of court rulings on the visiting rights to minor child and enforcement of court fees receivables.

Q094 (General Comment): The statistical data collected by the Ministry of Justice of the Slovak Republic does not allow the categorization of the criminal matters according to the types of criminal offences as defined in explanatory note.

Q094 (2022): Among "Other criminal cases" it is possible to include, for example, motions regarding the expungement of a conviction, motions regarding the imposition of protective measures and the execution of detention, motions related to custody and the execution of a sentence, motions for conditional release, motions related to probation and mediation, requests from domestic and foreign authorities in criminal cases, motions that are decided in preliminary proceedings, etc.
Other discrepancies are reflection either of the submission activity of the prosecutors or productivity of the judicial system (judicial staff) in resolved cases.

Q094 (2020): Sources: Analytical center, Ministry of Justice of the Slovak republic

Q094 (2018): There is a big discrepancy between pending cases on 31st of December 2016 and “Pending cases on 1st of January 2018”. This is caused of two factors: The first one and major is in delivered data in 2016. In the 2017 was the data collection still in paper form and in the old methodology, as we explained already. In the same time the project Audit with the experts from CEPEJ was already influencing the newly growing Analytical center and motivated as to try collect pending cases for 2016 backward. Since there were no electronic tools for collecting data available neither for courts nor for Ministry of Justice; the result were obviously full of mistakes. Analytical center had no chance to make data check, since pending cases were never collected before, so we had to rely on the courts data without possible checkup. After 2017, when was already available electronic tool (AZU) for collecting data from courts with implemented controlling formulas, then the mistakes from previous manual collection have occurred significantly especially in the first instance criminal agenda. The second factor is, that the Clearance rate dropped from 106, 52% in 2016 to the level 101, 81% in 2018.

Q094 (2016): For 2016 data, new methodology was implemented to make the reporting structure consistent with the CEPEJ methodology and leads to better comparison of Slovak Republic (SR) with other countries. The previous methodology was not counting a decision of first instance court as resolved until the case becomes finalised at last instance. This resulted in reporting such case as unresolved despite respective court has already made a decision. This is the nature of reporting of many “unresolved” cases on courts despite court already decided, in fact. New way of reporting extracts the numbers of decided cases in respective court instances from “unresolved” and allocates these numbers to those court instances that made an actual decision in the reference period that is in correspondence with CEPEJ methodology and better comparable with other countries.

Q097 (General Comment): The decrease in the number of new cases can be attributed to an improved ability to resolve matters already at first instance, as several procedural steps exist to facilitate reaching a solution before a case proceeds to the second instance. Furthermore, the involvement of notaries and their ability to engage in informal communication with clients results in first-instance courts receiving applications that can be accepted without dispute.

Q097 (2024): Non-litigious cases: The decrease in the number of new cases can be attributed to an improved ability to resolve matters already at first instance, as several procedural steps exist to facilitate reaching a solution before a case proceeds to the second instance. Furthermore, the involvement of notaries and their ability to engage in informal communication with clients results in first-instance courts receiving applications that can be accepted without dispute.

Q097 (2023): Starting 2023 - according to the CEPEJ methodology Administrative cases are reported in Q99

Q097 (2022): The decline in litigious and non-litigious cases has been gradual since 2017. This phenomenon was not analysed in more detail. The decrease may be caused by the impact of the activity of courts of first instance as well as the behaviour of participants in court proceedings - a lower number of appeals.
There is some small amount of non-litigious registry cases, but they can not be monitored separately, they are part of the bigger group.
In August 2021, the Supreme Administrative Court of the Slovak Republic was established as a separate institution and it took over all the administrative law cases of the Supreme Court of the Slovak Republic. The Supreme Administrative Court of the Slovak Republic acts as second instance court in the administrative cases.
Source: https://www.nssud.sk/web_object/stat_2022.pdf

Q097 (2021): Explained in the table.

Q097 (2020): More significant decline of incoming cases and resolved cases as well in the Second instance courts as a result of a pandemic situation. In the category 3. Administrative law cases was only one pending case on 1 January 2020, which was resolved during the year and no case came into the Second instance courts in the year 2020.
The number of non-litigious business registry cases is included in "general civil and commercial non-litigious cases".

Q097 (2019): The decrease in the number of cases (especially incoming and pending on 31 December) was not analysed yet but we can confirm that there were no significant changes in the system or legislation.

Q097 (2018): The discrepancies in the number of pending cases as of 1 January 2018 in comparison with the final numbers as of 31 December 2017 were caused due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing the electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper data collection of previous periods. These differences should not occur in the next year, given the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection

Q097 (2017): As regards the trends of the decrease in all monitored indicators, the decrease in caseload at first instance courts has a secondary impact on the drop in caseload at the courts of appeal. We did not analyse in details the cause of decrease and the detail structure of caseload. The decrease of caseload has the positive effect of raising the CR to 121% and decreasing of total number of pending (unresolved) cases.
The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a “paper” collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.
The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, since 1 July 2016 the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.
In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings appear in this table. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

Q097 (2016): The new structure of data presented by the Ministry of Justice influenced also the second instance. Registry cases are all included in 2.1 and can not be separated by categories.
Q097 (2014): In respect of the variations observed in 2014 with regard to the category “administrative law cases”, it is worth mentioning that the low number of cases makes small absolute variation large in relative terms.

Q098 (2022): In the line "Total" of the table in Q 98 are data for all court registers in the criminal appeal agenda. Among the category “Other criminal cases” are included for example cases in which the appeals court decides on jurisdictional disputes, objections of bias, on complaints for inaction and other complaints filed after the filing of the indictment, etc.
Sources: Analytical center, Ministry of Justice of the Slovak Republic.

Q098 (2020): Sources: Analytical center, Ministry of Justice of the Slovak republic

Q098 (2016): The 2016 data are based on the new methodology which may cause inconsistency comparing to previous cycles. The 2014 data are based on the methodology that covered only two main criminal court registers, while the 2016 data are based on the methodology that covers more than two criminal court registers. This makes the basic and key difference.

Q099 (General Comment): The collected statistical data for the Supreme Court do not distinguish the litigious and non-litigious cases. In the civil and commercial matters the Supreme court decides primarily on the applications for appellate review on legal questions. In the commercial cases it decides also in the appellate procedure against the decisions of the Regional courts as the courts of first instance. The fluctuation in the number of cases can be attributed to the judicial reform, as new administrative courts were established. Consequently, the judicial system is in the process of stabilization, which may have affected both the timing of the filing of applications to the courts and their processing.

Q099 (2024): 3. Administrative law cases: The fluctuation in the number of cases can be attributed to the judicial reform, as new administrative courts were established. Consequently, the judicial system is in the process of stabilization, which may have affected both the timing of the filing of applications to the courts and their processing.

Q099 (2023): As of 2023, administrative law cases treated by the Supreme Administrative Court are reported in Q99, as required by the CEPEJ methodology of data presentation.
Q099 (2022): The collected statistical data for the Supreme Court do not distinguish the litigious and non-litigious cases.
Information delivered by the Supreme Court of the Slovak Republic available on internet https://www.nsud.sk/data/att/f59/688231.22d3e0.pdf. The new Supreme Administrative Court of the Slovak Republic took over the Administrative law cases from the Supreme Court .
Data for new Supreme Administrative Court of the Slovak Republic are not mentioned in the table, since the table is only for the Supreme Court of the Slovak Republic.
The data for new Supreme Administrative Court of the Slovak Republic in 2022 were:
Pending cases on 1 Jan. ref. year - 2106
Incoming cases - 2015
Resolved cases - 1889
Pending cases on 31 Dec. ref. year - 2232
Pending cases older than 2 years from the date the case came to the Supreme Court - 103
Source: https://www.nssud.sk/web_object/stat_2022.pdf

Q099 (2021): As to the number of administrative law cases, in August 2021, the Supreme Administrative Court of the Slovak Republic was established as a separate institution and it took over all the administrative law cases of the Supreme Court of the Slovak Republic. Therefore, the above-mentioned figures of the administrative law cases cover only the period from January to July 2021.
Q099 (2020): Decline of incoming cases and resolved cases as well in the Supreme court as a result of a pandemic situation.

Q099 (2019): No cases in the category other cases
Line 1: A significant drop in the number of cases for 2019 compared to 2018 has been caused by a massive decrease of incoming cases of a certain plaintiff - Pohotovosť s. r. o., a legal person which back then overwhelmed the Supreme Court´s Civil and Commercial law divisions with thousands of appeals and caused an abnormal caseload. Therefore, the indicators for 2019 should be considered as regular average numbers. Compared to e.g. 2018 and previous years which were rather exceptional.
Q099 (2018): The decrease in numbers of both incoming and resolved other than criminal cases may be explained by two important issues. First of all this is the complex change of the Civil and Administrative court procedure by introducing the new procedural rules which came into force since 1 July 2016. The other reason is the decrease of the caseload at the lower courts which naturally influence the number of cases at the Supreme court level.

Q099 (2017): The decrease in numbers of both incoming and resolved cases must be understood in connection with the data for previous years. As we explained in previous cycles (data 2014, 2015, 2016), at the level of the Supreme Court of the Slovak Republic there was the enormous increase of incoming (and resolved) cases related to consumer protection in civil and enforcement procedure. We recorded in previous years thousands of recurring submissions of several private loans' companies. These submissions started to be processed quicker and subsequently, its number dropped. The similar explanation is relevant also for the administrative cases.
As regards the variations, some inconsistencies in data between the old and new system persist, and they can be explained as the transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in this table.

Q099 (2016): The enormous increase of the incoming cases is related to consumer protection in civil and enforcement procedure.
Q100 (General Comment): The collected statistical data does not distinguish between the two types of criminal offences.

Q100 (2022): Information delivered by Supreme Court of the Slovak Republic available on internet https://www.nsud.sk/data/att/f59/688231.22d3e0.pdf
Q100 (2018): The decrease in incoming and resolved cases is influenced by the decrease of the caseload at the lower courts

Q100 (2016): During 2015 there were more pending cases created

Slovenia

Q091 (General Comment): Category 1.Category 1. 'Civil (and commercial) litigious cases' at first instance includes: civil litigious cases at local and district courts, various civil cases at local and district courts, commercial litigious cases at district courts, labour law cases at labour courts,
social law cases at social court, various labour and social law at labour and social courts, insolvency cases including compulsory composition, bankruptcy of legal person, bankruptcy of physical person, bankruptcy of inheritance, compulsory dissolution, simplified compulsory composition and preventive restructuring at district courts.
The number includes the labour law and social law cases (before specialised labour and social law courts) due to their similarity to litigious cases in material and procedural aspects.
Q91 - Category 2.1. 'General civil (and commercial) non-litigious cases': see Q92.
Q91 - Category 2.2.1. 'Non litigious land registry cases' at first instance includes (at local courts): land registry cases, decisions on appeals at first instance and various land registry cases.
Q91 - Category 2.2.2 'Non-litigious business registry cases ' at first instance includes (at district courts): business registry cases and various business registry cases.
Q91 - Category 2.2.3. 'Other registry cases': No cases were included in this category.
Q91 - Category 2.3. 'Other non-litigious cases': No cases were included in this category.
Q91 -Category 3. 'Administrative law cases' at first instance include (at the Administrative court): - administrative cases and various administrative cases.
Q91 - Category 4. 'Other cases': see Q93.
The above listed cases are classified into CEPEJ categories slightly differently over the years.
Q 91, 97, 99, 101 - Inconsistencies:
Inconsistencies within the tables are possible due to the peculiarity of the Supreme Court`s Data Warehouse (used in the Slovenian judiciary as the official source of data since January 1st 2012, at every court, and for providing data to the Ministry of Justice and at the Judicial Council).
It is a "live" system (dynamic reporting), meaning that the reported figures for a specific date or period of time inevitably vary for different reasons (e.g. the data was not promptly entered into the CMS; in some instances, the decision, in which category some specific new cases should be included, may be subsequently changed and when data are unified some figures change; there is also the possibility that a mistake was done when entering the data and was later detected in the quality check and corrected.)
In Data warehouse reports, every category (column in the table) is calculated (counted) separately, therefore the „Pending on 31 Dec“ may not equal to the formula (Pending 1 Jan + Incoming – Resolved) due to fore mentioned influences."

Q091 (2024): Discrepancies: 2.2.2. (Incoming cases): please note small absolute number of cases.

Q091 (2023): Other cases - Pending cases older than 2 years: While most of cases in this category are resolved within few months, some of them are on-hold due to the fact that the party died mid-process and inheritance procedure has to take place to continue; or party is under insolvency proceedings; or there are delays with serving of court writings to parties in other countries.

Q091 (2022): 2.2. Registry cases and 2.2.2. Land Registry cases - Pending cases on 31 Dec – increase by 123%/143%: In 2020, the number of incoming cases decreased due to Covid-19 pandemics and its effect on the sales of real estate. Consequently, the number of pending cases at the end of 2020 decreased. In 2022, it returned to usual level. 2.2.2. Bussines Registry cases – Pending cases older than 2 years – increase by 300%: Please note the small number of cases (4 cases in 2022), compared to incoming/resolved cases (approx 43.000 per year).
3. Administrative cases – Pending cases older than 2 years – increase by 149%:
In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the number of pending and resolved cases. In the aforementioned cases, the court was also faced with new legal and factual issues, as well as administrative difficulties. In recent years, the Administrative court is also dealing with a considerable number of priority or urgent cases (e.g. asylum seekers), which means a longer waiting line for “regular” cases. Though administrative and managerial actions have been taken, the number of (older) pending cases has increased due to the aforementioned difficulties and the overburdening of the court.
4. Other cases – Pending cases on 31 Dec – decrease by 46%:
Due to the limitation of operation of courts due to Covid-19 pandemics in 2020, the number of pending cases was unusually high. In 2022 it returned to usual level. 4. Other cases – Pending cases older than 2 years - increase by 86%:
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction). This is automated and fast procedure (average duration is between 1 and 2 months), however some of those cases could not be completed due to legal reasons (e.g. waiting for inheritance cases regarding parties to finish). Please note the small number of cases (approx. 100 cases), compared to incoming/resolved cases (approx 120.000 per year).

Q091 (2021): 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 1 Jan.: decrease by approx. 50%
In 2020, the number of incoming cases decreased due to Covid-19 pandemics and its effect on the sales of real estate. Consequently, the number of pending cases at the beginning of 2021 decreased. 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Incoming cases/Resolved cases: increase by approx. 25%
In 2021, the number of incoming (and consequently resolved) cases increased, most likely due to the loosening of Covid-19 restrictions and its effect on the real estate market.
2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 31 Dec.:
In 2021, the number of incoming and resolved cases increased (see above). However, the increase in resolved cases was slightly lower, hence the increase in pending cases at the end of the year (Disposition time in register cases is low – approx. 0,2 months; ratio of Resolved vs. Pending cases is approx. 65:1).
2.2.2. Non litigious business registry cases – Pending cases older than 2 years from the date the case came to the first instance court: decrease by 200%:
Please note the small (absolute) number of cases (less than 5 cases).
4. Other cases - Pending cases on 31 Dec.: decrease 38%
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court in Ljubljana – exclusive jurisdiction), where the trend of decrease of pending cases is observable in 2021 and 2022. More factors could have contributed to the decrease, but no specific major reason can be identified.
4. Other cases - Pending cases older than 2 years: increase by 58%
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction). Some of those cases are waiting for inheritance cases regarding parties to finish. Please note the small number of cases (less than 100 cases), compared to incoming cases (more than 100.000 per year).

Q091 (2020): The decrease in the number of resolved cases at 1. Civil (and commercial) litigious cases and 4. Other cases is due to the limitation of operation of courts due to Covid-19 pandemics.
The decrease in the number of pending cases at the end of the year at 2.2.1 Non litigious land registry cases (and consequently at 2.2 Registry cases) is not unusual due to the high number of incoming and resolved cases in a year compared to pending cases at the end of the year (around 1-2%).
Regarding the increase in Administrative law cases - Pending cases older than 2 years: In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the number of pending and resolved cases. In the aforementioned cases, the court was also faced with new legal and factual issues, as well as administrative difficulties. In recent years, the Administrative court is also dealing with a considerable number of priority or urgent cases (e.g. asylum seekers), which means a longer waiting line for “regular” cases. Though administrative and managerial actions have been taken, the number of (older) pending cases has increased due to the aforementioned difficulties and the overburdening of the court.

Q091 (2019): In general, the trend of decrease in the number of incoming cases can be observed in all types of civil cases, causing also a decrease in the number of resolved and pending cases. In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and partly to a successful introduction of new business models in the
Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Accordingly, in the last years, the clearance rate is at or slightly above 100%.
In 2019, a new Family Code and new Non-Contentious Civil Procedure Act stepped into force. The main change for district courts was establishing family law cases as non-litigious cases (before 2019 classified as litigious cases). Additionally, local courts became competent to decide in tutelage cases (before 2019 in competence of the executive branch).
This reflected in a decreased number of reported 1. Civil litigious cases, while the number of 2.1 General civil non-litigious cases did not change (an increase in new cases is similar to the decrease in the number of incoming cases that is generally observed).
Administrative cases: In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the pending and resolved cases. In the aforementioned cases, the court is faced with new legal and factual issues, as well as administrative difficulties. Though administrative and managerial actions have been taken, an increase in the number of pending cases is expected due to the aforementioned difficulties and the overburdening of the court.

Q091 (2018): In general, the trend of decreasing number of incoming cases can be observed in all types of civil cases, causing also a decrease in number of resolved and pending cases. In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and partly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Accordingly, in last years, clearance rate is at or slightly above 100%.
Administrative cases: The Administrative court is faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (24,5 % of incoming cases in 2017). This caused an increase in the pending and resolved cases. In these cases, the court is faced with new legal and factual issues, as well as administrative difficulties - the actions are often incomplete or the information is insufficient, filled in foreign languages, the foreign parties have yet to nominate a proxy etc. The court has established a special office to perform a preliminary examination of the actions and assist in the exchange of documents between parties, however longer times for resolving cases are expected due to the aforementioned difficulties and the overburdening of the court.

Q091 (2017): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases. For discrepancies, see general comments.
The Administrative court is faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (24,5 % of incoming cases in 2017). In these cases, the court is faced with new legal and factual issues, as well as administrative difficulties - the actions are often incomplete or the information is insufficient, filled in foreign languages, the foreign parties have yet to nominate a proxy etc. The court has established a special office to perform a preliminary examination of the actions and assist in the exchange of documents between parties, however longer times for resolving cases are expected due to the aforementioned difficulties and the overburdening of the court. At the end of 2017, the first case was ready to be processed on the merits of the case.

Q091 (2016): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases. For discrepancies, see general comments.

Q091 (2015): In recent years, the number of incoming non-litigious cases is generally decreasing partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary. Considering the higher number of incoming cases (number of pending cases is approx. 15%-20% of all incoming cases), a slight variation in incoming cases have a considerable effect on the number of pending cases.

Q091 (2014): In previous cycles, insolvency cases have been accounted in former category 1. 'Civil (and commercial) litigious cases'. For 2014, they are encompassed within the item "other". The 2014 data includes labour law and social law cases decided before specialised labour and social law courts, due to their similarity to litigious cases in material (employment contract derives from civil law contract) and procedural (the court procedure in labour and social cases is based on general civil law procedure) aspects.
Q092 (General Comment): Categories used in “Civil and commercial non-litigious cases”: all non-litigious civil cases at local and district courts, non-litigious commercial cases at district courts (different kinds of personal and family status, property and other disputes, provided by the Non Contentious Procedure Act or other law, procedures for issuing a payment order at local and district courts in civil matters, procedures for issuing a payment order in commercial matters at district courts, cases pursuant to the Inheritance Act at local courts, cases pursuant to the Mental Health Act at local courts; and civil enforcement cases on the basis of an enforcement title, commercial enforcement cases on the basis of an enforcement title, cases for enforcement on real-estate property, enforcement cases on the basis of authentic document in civil matters after the writ for the execution became final, temporary injunctions in civil matters, temporary injunctions in commercial matters, various enforcement cases.

Q092 (2014): 2014 Category 2.1 „General civil (and commercial) non-litigious cases“at the first instance includes
1. (former category 2. „General civil (and commercial) non-litigious cases“): N, Ng, Pl, Plg, D, Pr; and 2. (former category 3. ' Non litigious enforcement cases'): I, Ig, In, VL, Z, Zg and R-i.

Q093 (General Comment): Category 4. „Other cases“ at first instance includes: free legal aid at district courts, labour courts and at the Administrative court, enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction), international attestations at district courts, attestations according to the Hague convention at district courts, legal aid between national courts at local and district courts, international legal aid at district courts.

Q093 (2014): 2014 4. „Other cases“ at first instance includes: Bpp ,COVL, Ov-i, Ov-H and St [(St-01), (St-02), (St-03), (St-04) (St-05)].
In previous cycles, all the mentioned St cases have been accounted in former category 1. 'Civil (and commercial) litigious cases'."

Q094 (General Comment): Severe criminal law cases include all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. Minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. Minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws.
The figures in the table include the following cases:
Severe criminal cases:
criminal cases at local and district courts,
criminal cases against juveniles at district courts.
Misdemenour cases:
minor offences in regular court procedure – request for judicial protection,
minor offences in regular court procedure – accusation proposals,
cancellation of validity of the driver's licence according to the legal limit of punitive points
Other cases:
criminal investigations at district courts,
criminal cases against juveniles in preparatory proceedings,
execution of the sanction of prison, execution of criminal sanctions of foreign courts,
criminal investigation actions at local and district courts,
cases of the out-of-hearing senate,
clemency procedures at local and district courts,
legal aid between national courts in criminal matters,
international legal aid in criminal matters,
cases of decisions to permit interventions within human rights and freedoms,
legal aid between courts in minor offences,
international legal aid in minor offences,
search of premises,
setting a task for the good of the community or the local community,
compliance detention,
various criminal matters at local and district courts and in minor offences at local courts.
Regarding criminal investigations at district courts: Slovenia has a system where the state public prosecutor requests a first instance court to perform a criminal investigation (or individual investigatory acts). When this procedure at court is finished, the case is returned to the state prosecutor, who can decide whether to dismiss a case or file an accusatory act at the (same) court. When the accusatory act is filed, a criminal trial (i.e. deliberating on the responsibility and sanctioning of the offender) begins.
Regarding setting a task for the good of the community or the local community: A request for prison sentence or fine to be replaced by a task for the good of the community can be filed after the finality of the main court decision and is decided upon in a separate proceedings.

Q094 (2024): Criminal investigation cases (reported under Other criminal cases): 2.435 incoming cases; 2.089 resolved cases in 2024.
Criminal cases against juveniles in preparatory proceedings (reported under Other criminal cases): 607 incoming cases, 631 resolved cases in 2024.
Discrepancies: 3. (Pending cases on 1 Jan. ref. year): The number of "international legal aid in minor offences" increased significantly (by 88%; from 1.215 to 2.288) because some countries have raised the fines for certain offences, which are now being enforced by the Slovenian court based on EU regulations (number of such incoming cases increased by 46%). In addition, the competent Slovenian court is facing a shortage of judicial staff. These are two main reasons for the increase in unresolved cases.

Q094 (2023): Criminal investigation cases (reported under Other criminal cases): 2.266 incoming cases; 2.335 resolved cases in 2023.
Criminal cases against juveniles in preparatory proceedings (reported under Other criminal cases): 593 incoming cases, 458 resolved cases in 2023.
Discrepancy to 2022 data in 3. Other criminal cases (Pending cases on 31 Dec. ref. year): The increase is notable in 1) legal aid between national courts in criminal matters and international legal aid in criminal matters (34% of pending cases) and 2) criminal investigation (15% of pending cases). In 2023 both aforementioned types of cases saw increase in incoming cases and resolved cases, resulting in 87% and 97% CR respectively.

Q094 (2022): In 2022, approx. 25-30% of pending cases and 6-7% of incoming/resolved cases were criminal investigation cases (see general comment).
1. Severe criminal cases - Pending cases older than 2 years – increase by 39%;
3. Other cases - Pending cases older than 2 years – increase by 25%:
Factors contributing to this increase are: increased complexity of cases (cases with multiple offenders, cases with offenders in detention, need for experts, international element), trouble finding and serving court documents to foreign offenders and victims, non-responsiveness of parties, delays due to international legal aid, limitation of operation of courts due to Covid-19 pandemics in 2020 and 2021 and lack of candidates for new judges at district courts.

Q094 (2021): 1. Severe criminal cases - Pending cases on 1 Jan.: increase by 22%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
1. Severe criminal cases - Resolved: increase by 17%
In 2020 first instance courts resolved less cases than usual due to Covid-19 restrictions, hence the increase in resolved cases in 2021.
2. Misdemeanour and / or minor criminal cases - Pending cases older than 2 years from the date the case came to the first instance court: decrease by 34%.
The decrease is due to the more efficient work of courts in resolving older cases.
3. Other criminal cases - Pending cases on 1 Jan. ref. year: increase by 16%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
In 2021, approx. 30% of pending cases and 7% of incoming/resolved cases were criminal investigation cases (see general comment).

Q094 (2020): Until now, at "1. Severe criminal cases" we have reported both criminal investigation and criminal trial cases (see general comment) for the same criminal offence. For 2020, we have excluded data on investigations to report data on criminal trials only, and criminal investigation is reported at 3. Other criminal cases. The main reason is the comparability of data between countries as criminal investigation is not within the juridiction of courts in most countries. Investigation cases, that were previously reported at 1. Severe criminal cases and are now reported under 3. Other cases represent 5-10% of all reported cases.
The number of incoming Severe criminal cases decreased by 1% in 2019 and the number of resolved cases decreased by 2% in 2019. However, in 2020 the number of incoming cases decreased by 1%, and the number of resolved cases decreased by 23%, mostly due to limitations of operations of courts due to the Covid-19 pandemics. Consequently, the number of pending cases has also increased by 22%.
The number of pending Severe criminal cases, older than 2 years increased in 2019 (by 15%) and stayed roughly the same in 2020, while the number of Misdemeanour cases stayed roughly the same in 2019 and increased significantly (by 128%) in 2020. No specific explanation can be given for any of the mentioned changes. This two factors resulted in increase in total number of pending cases older than 2 years.

Q094 (2018): Severe criminal law cases include all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. Minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. Minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws.
Discrepancies: This year, some of the cases, previously reported at Severe or Misdemeanor cases, are reported under new category - Other cases (for details, please see general comment). The metodology for the total number of cases reported did not change, and the changes for total are below 20%.

Q094 (2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).
Q094 (2014): According to 2014 data, the category “severe criminal law cases” includes all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. At first instance, this category encompasses: criminal cases at local and district courts (K); criminal investigations at district courts (Kpr); criminal cases against juveniles at district courts (Km); criminal investigation actions at local and district courts (Kpd); various criminal matters at local and district courts (Kr); clemency procedures at local and district courts (Po); criminal cases against juveniles in preparatory proceedings (Kmp); cases of the out-of-hearing senate (Ks); execution of the sanction of prison (IKZ); execution of criminal sanctions of foreign courts (IKZt); cases of decisions to permit interventions within human rights and freedoms (Pp). The attention should be drawn on the fact that the 2014 data is not comparable to pre-2014 results, because until 2014, only first 3 categories above were reported. In 2015, the reporting method was further improved, and other types of cases were also included in the reporting.
The minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. The minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws. At first instance, this category subsumes: minor offences in regular court procedure – request for judicial protection (PR-zsv); minor offences in regular court procedure – accusation proposals (PR-obp); cancellation of validity of the driver’s licence according to the legal limit of punitive points (EPVD); compliance detention (PRuz). This category does not include: legal aid in minor offences (PomPR); international legal aid in minor offences (PomPRi); search of premises (PRhp); setting a task for the good of the community or the local community (PRnk) and various cases in minor offences (PRr).

Q097 (General Comment): The distribution of cases for Q97 is the same as for Q91.
Inconsistences noticed are due the Data Warehouse system explained in Q91.
Q097 (2024): Discrepancies:
2.2 and 2.2.2: please note small (absolute) number of cases.

Q097 (2023): Discrepancies to 2022 data: Pending cases on 1 Jan. ref. year – increase by 23% - 35%: in 2022, a slight decrease in number of incoming and resolved cases is observable. Clearance rate was slightly below 100%. In 2022, the number of second instance judges decreased by 7% (mostly due to retirement) which resulted in decreased number of resolved cases. Please note the ratio between pending and incoming/resolved cases is approx. 1:5 (a slight decrease in % of resolved cases will reflect in higher % increase in pending cases).

Q097 (2022): Pending cases on 1 Jan. (all categories) - decrease by approx. 35-50%: In 2021, the number of pending cases decreased by approx. 50% due to effects of Covid-19 pandemics in 2020. In 2022, the number increased again (by approx 20%). For (land) registry cases (2.2. and 2.2.1) please note small (absolute) number of cases.
Incoming cases (2.2 and 2.2.2) – decrease by 21% and 36%: please note small (absolute) number of cases.
Resolved cases (2.2. and 2.2.2) - decrease by 21% and 35%: please note small (absolute) number of cases and low disposition time (number of resolved cases is highly dependant on number of new cases).
Pending cases on 31 Dec. (all categories) – increase by 50% - 90%: in reporting period a slight decrease in number of incoming cases and more significant decrease in number of resolved cases is observable (especially in 2021). Clearance rate was slightly below 100%. Please note the ratio between pending and incoming/resolved cases is approx 1:5 (a slight decrease in % of resolved cases will reflect in higher % increase in pending cases). The decrease in the number of resolved cases in 2021 is due to two factors: 1. impact of Covid-19 pandemics, namely the higher number of judges and court staff on sick leave or quarantined (compared to 2020), and 2. more general human resources issues (retirement of judges, prolonged sick leaves etc.). In 2022, the number of second instance judges decreasd by 7% (mostly due to retirement) which resulted in decreased number of resolved cases.

Q097 (2021): All categories - Pending cases on 1 Jan.: decrease by approx. 50%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As second instance courts deal with the majority of cases without hearing of parties, their functioning was not affected that much. The number of appeals coming from first instance decreased, which resulted in the decrease of pending cases at second instance courts at the beginning of 2021.
Resolved cases: The decrease in the number of resolved cases is due to two factors: 1. impact of Covid-19 pandemics, namely the higher number of judges and court staff on sick leave or quarantined (compared to 2020), and 2. more general human resources issues (retirement of judges, prolonged sick leaves etc.).
Categories 1, 2 and 2.1 - Pending cases on 21 Dec.: increase by approx. 10-30%
Higher courts resolved approx. 10% less cases in 2021, which resulted in a greater increase of pending cases on 31. Dec (Disposition time in higher courts is low – 1-2 months; ratio of Resolved vs. Pending cases is approx. 10:1)
Categories 2.2/2.2.1 - Pending cases on 21 Dec.: increase by approx. 60/90%
Please note the increase in resolved land registry cases in 2021 (Q91) which may result in an increase of appeals, and small (absolute) number of cases at second instance (20-30 pending cases).
Category 2.2.2 - Pending cases on 21 Dec.: decrease by approx. 25%
Please note the small (absolute) number of cases at second instance (less than 5 pending cases).

Q097 (2020): The decrease in pending cases at the beginning and the end of the year is due to the fact that higher courts are sucesfully reducing the number of pending cases. The decrease in incoming and resolved cases is partially due to the national trend observed in general, and paritally due to the limitation of operation of courts due to Covid-19 pandemics.
The discrepancies in categories 2.2.1. Non litigious land registry cases and 2.2.2 Non-litigious business registry cases (and subsequently in 2.2. Registry cases), as well as at Pending cases older than 2 years from the date the case came to the second instance court are due to a small absolute number of cases.

Q097 (2019): No particular explanation can be given for the general decrease of incoming cases (national trend) which resulted in the decrease in the number of incoming and pending cases.
The increase in incoming Non-litigious business registry cases in 2018 resulted in an increased number of pending cases in the beginning of 2019. Please note small (absolute) number of cases.
Q097 (2018): No particular explanation can be given for the general decrease of incoming cases (national trend), as well as for the increase in number of incoming registry cases.
Q097 (2017): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.

Q097 (2016): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.

Q097 (2015): In recent years, the number of incoming non-litigious cases is generally decreasing partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary. Considering the higher number of incoming cases (number of pending cases is approx. 15%-20% of all incoming cases), a slight variation in incoming cases have a considerable effect on the number of pending cases.

Q098 (General Comment): For explanation on severe criminal cases and minor offences please see comment to Q94.Figures for severe criminal law cases at the second instance include: appeals in criminal cases (Kp),Figures for minor offences cases at the highest instance include: appeals in minor offences in regular court procedure – request for judicial protection (PRp-obp), appeals in minor offences in regular court procedure – accusation proposals (PRp-zsv), apppeals in procedures for cancellation of validity of the driver's licence according to the legal limit of punitive points (EPVDp).
Figures for other cases at the highest instance include: appeals in cases for setting a task for the good of the community or the local community (PRnkp),
- appeals in substitution of imprisonment cases (Prnzp)
- appeals in compliance detention cases (PRuzp),
- various criminal and misdemnour cases in higher courts (cases not fitting in the categories above) (Kr, Prr).
For general explanation on types of cases, see Q94.

Q098 (2024): Discrepancies: 3. please note small (absolute) number of cases.

Q098 (2022): Discrepancies (to 2020 data) – 2. Misdemeanour and / or minor criminal cases (also reflected in Total):
An increase is due to two factors: 1) Until 2020, the appeal in minor offences in regular court procedures – request for judicial protection was limited (depending on the criteria – sanction) by the Minor Offences Act. At the end of 2020 the Constitutional court established that the aforementioned limitation for appeal was unconstitutional, which lead to the increase in the number of appeals in 2021 and 2022; 2) the higher court, competent for the coastal region received multiple cases of fishermen regarding border-crossing issues (in relation to the Arbitration under the arbitration agreement between the government of the Republic of Croatia and the Government of the Republic of Slovenia; PCA CASE NO. 2012-04). Pending cases older than 2 years: plase note small (absolute) number of cases.

Q098 (2021): All categories - Pending cases on 1 Jan.: decrease by approx. 10-70%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As second instance courts deal with the majority of cases without hearing of parties, their functioning was not as affected that much. The number of appeals coming from first instance decreased, which resulted in the decrease of pending cases at second instance courts at the beginning of 2021.
2. Misdemeanour and / or minor criminal cases – Incoming/Resolved cases: increase by approx. 150/90%, Pending cases on 21 Dec.: increase by approx. 1400% (this also reflected in Total)
The increase in incoming cases at second instance in 2021 is mostly due to two factors: 1) according to the Minor Offences Act, the appeal in minor offences in regular court procedures – request for judicial protection was limited (depending on the criteria - sanction). At the end of 2020 the Constitutional court established that the aforementioned limitation for appeal was unconstitutional, which lead to the increase in the number of appeals in 2021; 2) In 2021, the higher court, competent for the coastal region received multiple cases of fishermen regarding border-crossing issues (in relation to the Arbitration under the arbitration agreement between the government of the Republic of Croatia and the Government of the Republic of Slovenia; PCA CASE NO. 2012-04). Despite the efforts (see the number of resolved cases), the number of pending cases at the end of the year increased (Disposition time in higher courts is low – less than 1 month; ratio of Resolved vs. Pending cases is approx. 33:1).

Q098 (2020): The decrease in pending cases at the beginning and the end of the year is due to the fact that higher courts are sucesfully reducing the number of pending cases. the decrease in incoming and resolved cases is due to the limitation of operation of courts due to Covid-19 pandemics
The discrepancies at Pending cases older than 2 years from the date the case came to the second instance court are due to a small absolute number of cases.

Q098 (2018): Discrepancies: This year, some of the cases, previously reported at Severe or Misdemeanor cases, are reported under new category - Other cases (for details, please see general comment). The metodology for the total number of cases reported did not change, and the changes for total are below 20%.

Q098 (2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).
Q098 (2014): According to 2014 data, the figures for “severe criminal law cases” at second instance includes: criminal cases (Kp) and various criminal cases (Kr). In this respect, it should be highlighted that the 2014 data is not comparable to pre-2014 results, because until 2014, only first category was reported. In 2015, the reporting method was further improved, and other types of cases were also included in the reporting.
The figures for “minor offences cases” at second instance included: minor offences in regular court procedure – request for judicial protection (PRp-zsv); minor offences in regular court procedure – accusation proposals (PRp-obp); cancellation of validity of the drivers license according to the legal limit of punitive points (EPVDp); compliance detention (PRuzp); setting a task for the good of the community or the local community (PRnkp); various cases in minor offences (PRr).

Q099 (General Comment): The Supreme court has Criminal, Civil, Commercial, Labour and Social and Administrative department, The categories 1., 2.1 and 2.2.1 include corresponding cases from Civil, Commercial and Labour and Social departments registers. Category 3. includes registers of the Administrative department. The distribution of cases for Q99 is the same as for Q91.
Inconsistences noticed are due the Data Warehouse system explained in Q91.
The reported data includes cases concerning extraordinary legal remedies (the Supreme Court in its capacity ass the court of final instance) and cases subject to the separate procedure for manifest inadmissibility.

Q099 (2024): Discrepancies: please note small (absolute) number of cases.

Q099 (2022): Total of other than criminal law cases/1. Civil (and commercial) litigious cases - Pending cases on 1 Jan. - decrease: A trend of decrease of pending cases is observable.
Total of other than criminal law cases/1. Civil (and commercial) litigious cases/3. Administrative cases - Pending cases older than 2 years - decrease: Please note the small (absolute) number of cases at the Supreme Court instance.
2. Non litigious cases (all discrepancies): Please note the small (absolute) number of cases at the Supreme Court instance.
2.2 Registry cases (all discrepancies): Please note the small (absolute) number of cases at the Supreme Court instance.

Q099 (2021): 1. Civil (and commercial) litigious cases - Pending cases on 1 Jan.: decrease by approx. 40%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As the Supreme Court deals with the majority of cases without hearing of parties, its functioning was not affected as much and it managed to resolve more cases than it had received.
2. Non litigious cases (2.1+2.2+2.3); 2.1 General civil (and commercial) non-litigious cases; 2.2 Registry cases; 2.2.1 Non litigious land registry cases Please note the small (absolute) number of cases at the Supreme Court instance.

Q099 (2020): Please note, the procedure of manifested inadmissibility cases are included in figures above.
The decrease in the number of (all) pending cases is due to the efficient work of the court in 2019 and 2020. Discrepancies in sub categories (form 1. through 3) are due to a small absolute number of cases).
Q099 (2019): The differences are due to a small (absolute) number of cases in some legal areas. The decrease in pending cases at the end of 2019 is due to more efficient work of the Supreme court (changes in criteria for manifested inadmissibility in 2017).
Q099 (2018): Administrative cases - in 2017, the procedure of manifested inadmissibility was introduced in aministrative cases, reducing the number of incoming (as well as resolved and pending) cases. As for other categories and Total, the difference is due to more efficient work of the Supreme court and due to aforementioned reason.
Please note, the procedure of manifested inadmissibility cases are included in figures above.

Q099 (2017): Administrative cases: the higher number of pending administrative law cases older than two years is partially a result of higher workload of the court. Partially this is the consequence of the fact that some older cases are waiting on the decision of the Constitutional court regarding laws in question (mainly taxes and public access to information issues).

Q099 (2015): Differences in pending, incoming and resolved cases Non litigious and administrative cases are mainly due to the small absolute number of cases and the nature of the cases (most complicated cases).

Q099 (2014): 2014: Variations: The numbers in that almost all categories for 2014 deviates more than +/- 20% from the 2012 data. This is due to a small (absolute) number of cases but also because the number of judges is smaller when compared to first and second instance and a single absence due to prolonged illness has a significant impact on the solving of some types of cases. We also believe that changes in economy (financial crisis), as well as in legislation, had impact on the overall statistics, but since cases at the Supreme Court level are "filtered" through courts of first and second instance, a direct connection cannot be established.

Q100 (General Comment): For explanation on severe criminal cases and minor offences please see comment to Q94.
Figures for severe criminal law cases at the highest instance include:
- Kp – appeals in criminal cases,
- Ips – requests for protection of legality in criminal cases, against a decision ordering or prolonging a detention, extraordinary mitigation of punishment,
- I Kr – other criminal cases – delegations, jurisdiction disputes, prolongation of detention, other.
Figures for minor offences cases at the highest instance include:
- IV Ips – requests for protection of legality in minor offences cases.

Q100 (2024): Discrepancies: please note small (absolute) number of cases.

Q100 (2022): Total of criminal law cases/ 1. Severe criminal cases - Pending cases on 1 Jan/ Pending cases on 31 Dec – decrease by approx. 30-40%: In last 5 years, number of incoming and resolved cases was relatively stable. Clearance rate has been above 100% since 2020. In 2021, the number of resolved cases increased (by 15%; clearance rate 111%), hence the decrease in pending cases.
2. Misdemeanour and / or minor criminal cases (all discrepancies): Plese note the small (absolute) number of cases.

Q100 (2021): Discrepancies: Please note the small (absolute) number of cases at the Supreme Court instance.

Q100 (2020): The discrepancies are due to a small absolute number of cases.

Q100 (2018): Discrepancies are due to small (absolute) of cases which fluctuate between years.
For distinction see general comment.
Q100 (2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).
Q100 (2014): According to 2012 and 2014 data, figures for “severe criminal law cases” at the highest instance include: appeals in criminal cases (Kp); requests for protection of legality in criminal cases (I Ips); requests for protection of legality against a decision ordering or prolonging a detention (XI Ips); extraordinary mitigation of punishment (IX Ips); other criminal cases – delegations, jurisdiction disputes (I Kr); other criminal cases – prolongation of detention (II Kr); other criminal cases (III Kr). Figures for “minor offences cases” at the highest instance include requests for protection of legality in minor offences cases (IV Ips).

Spain

Q091 (2024): The data has been obtained using the same criteria as in previous years and follows the trend published by the General Council of the Judiciary.
In relation to the increase in incoming civil (and commercial) litigious cases, a specific rise in the number of summary proceedings (juicios verbales) can be observed. The reform introduced by Royal Decree-Law 6/2023 expanded the scope of summary proceedings (juicios verbales) not only by increasing the monetary threshold from €6,000 to €15,000, but also by incorporating new subject matters that must now be processed under this simplified procedure. These include individual actions related to general contractual conditions, claims for amounts by homeowners’ associations, and actions for the division of jointly owned property.

Q091 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain’s rates.

Q091 (2022): There are increases of incoming and resolved cases compared to the number of cases in 2020. It should be taken into account that information from 2020 represents the year of the pandemic. The recovery of normal work increased the number of cases, incoming and resolved.
Q091 (2021): The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved cases.
Q091 (2020): Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission
of the Register (Land or Commercial) or of the Directorate General for Registers and Notaries, he/she can appeal the decision against
Courts.

Q091 (2018): The Court of Justice of the European Union (CJEU) of December 21, 2016 and other previous Judgments have meant a massive interposition of lawsuits based on that doctrine, for the civil challenge of general conditions included in financing contracts with real estate guarantees in which the borrower is a natural person. Measures, referred to in previous CEPEJ questionnaires, of specialization of certain judicial bodies have been adopted.
Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission of the Register (Land or Commercial) or of the Directorate General for Registers and Notaries, he/she can appeal the decision against Courts.

Q091 (2016): Concerning the Administrative Law cases, between 2014 and 2016, the decrease of 'Pending cases' is probably because the number of resolved cases, both in 2015 and 2016 has been higher than the number of incoming cases (reinforcement measures have been applied).

Q091 (2015): The horizontal consistency can not be respected because of reopened, cumulated and regularised cases. Law 10/2012 governing certain fees in the area of the Administration of Justice could explain (especially in Administrative Law cases) the decrease in the number of incoming administrative cases, and logically the decrease in the number of resolved and pending cases.

Q091 (2014): The number of “civil and commercial litigious cases” decreased for 2 reasons. Since the payment order procedures do not need a decision made by a judge but are of the competence of the judicial counsellor, they have been subsumed in the category of non-litigious civil and commercial cases. Since paying court fees for natural persons has been compulsory until March this year, there has been a decrease in the incoming cases. In respect of the category "administrative law cases", it should be recalled that in 2012, there was a decrease in the number of files related to the Public Administration owing to two parameters: plaintiffs have been sentenced to pay the court fees; since 2012, they have to be assisted by a lawyer to file an administrative case, on the other hand.

Q092 (2014): For the 2014 exercise, the category “civil and commercial non-litigious cases” encompasses payment order procedures and requests for undisputed matters such as settlement proceedings and divorce with mutual consent.

Q094 (2024): The data has been obtained using the same criteria as in previous years and follows the trend published by the General Council of the Judiciary.
Q094 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain’s rates.

Q094 (2022): There are increases of incoming and resolved cases compared to the number of cases in 2020. It should be taken into account that information from 2020 represents the year of the pandemic. The recovery of normal work increased the number of cases, incoming and resolved.
Q094 (2021): The number of incoming severe criminal cases increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved cases.

Q094 (2020): Possibly the pandemic, and the restrictions it entailed, have had an impact on the decrease of the number of resolved cases.
Q094 (2016): The Organic Law 1/2015 eliminated 'faltas' (misdemeanour) of the Criminal Code, qualifying some of them as minor offenses, and others as administrative infractions. Accordingly, we can observe decreases in the numbers of misdemeanour cases which also affects the total of criminal law cases.
Q094 (2014): The Law 41/2015 has amended the Criminal Procedural Law in the sense that those files opened by the police concerning crimes committed by an unknown person will not be submitted to courts but will remain at the police offices at the disposal of the judge and prosecutor, with the exception of those crimes affecting life, sexual integrity, freedom or corruption, in which case the police report will necessarily be referred to the criminal court. As a result, it is expected that the number of incoming cases before the criminal courts will decrease. In addition, the law 1/2015 amended the Penal Code by suppressing the misdemeanors which now will be judged as administrative or civil matters according to their nature or as minor crimes.

Q097 (General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies. It is noteworthy that the small (probably insignificant) number of Registry cases that arrive to the Second Instance is not distinguished of the Litigious cases. This is why, the total number of cases can be provided.
Regarding "other non-litigious cases", the most correct answer is NA (because we can appeal against certain decisions of 'voluntary jurisdiction' not included in the CEPEJ categories).

Q097 (2024): The data is calculated using the same criteria as in previous years.
When a court identifies inaccuracies in its statistical reporting, it may regularize the data in its Statistical Bulletin by replacing the incorrect figure with one that reflects the actual situation, even if it diverges from previously reported values. Such regularizations are a recognized source of horizontal inconsistencies
In relation to the increase in incoming civil (and commercial) litigious cases, a significant rise in the number of appeals can be observed.

Q097 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain's rates.

Q097 (2022): 2020 was a year marked by the pandemic, the reduction of work in judicial bodies, despite digitalization, and by mobility restriction measures. The increase in the pace of work in 2022 is logical and it explains the increase in the number of incoming civil (and commercial) litigious cases. The reduced clearance rate has been due to the increase in appeals against judgements in ordinary trials related to floor clauses (cláusulas suelo); clause that a specific financial institution can include in a variable interest mortgage loan contract and that establishes the minimum interest rate that customers will pay.

Q097 (2021): For civil and commercial litigious cases the number of incoming cases increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. This also affected the increases of the number of pending cases at the end of the year.
Q097 (2020): There is an increase in the number of incoming administrative appeal cases in the Autonomous Regions High Courts. It is possible that certain modifications in the Contentious Administrative Jurisdiction, as well as the Judgement of the Constitutional Court in 2015 that eliminated the fees to appeal, have had an impact on the number of incoming cases.

Q097 (2019): "Civil and commercial litigious cases": the increased number of pending cases at the beginning of the year is partly due to the low clearance rate in 2018. In general there is an increase in incoming issues. In civil law many appeals are related to cases of general conditions included in financing contracts with real estate guarantees in which the borrower is a natural person (object of massive cases in Spain since the doctrine of the CJEU).
"Administrative cases": The increase of administrative appeals may probably be due to Aliens (inmigration) cases, which had a strong increase in resolution in 2018.

Q097 (2018): The Court of Justice of the European Union (CJEU) of December 21, 2016 and other previous Judgments have meant a massive interposition of lawsuits based on that doctrine, for the civil challenge of general conditions included in financing contracts with real estate guarantees whose Borrower is a natural person. Measures, referred to in previous assessments, of spatialization of certain judicial bodies have been adopted. In 2018, the appeales to the judgments in matters of individual suitcases against general conditions included in financing contracts with real estate guarantees whose borrower is a natural person have reached the Provincial Courts (second Instance). The small (probably insignificant) number of Registry cases that arrive to the Second Instance is not distinguished of the Litigious cases. This is why the total number of cases can be provided

Q097 (2016): In respect of the increase in the number of incoming civil and commercial litigious cases as well as the increase of the total of incoming cases between 2014 and 2016, it should be mentioned that since March 2015 the fees to bring a case to the court were abolished in case of natural persons. Besides, in July 2016, the Constitutional Court declared the nullity of the fees to appeal.
Q097 (2015): Law 10/2012 governing certain fees in the area of the Administration of Justice could explain (especially in Administrative Law cases) the decrease in the number of incoming administrative cases, and logically the decrease in the number of resolved and pending cases.
Q097 (2014): For the 2014 exercise, the decrease of the number of pending administrative law cases in the beginning and in the end of the year is the result of the decreases observed and explained in fist instance.
Q098 (General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called "alarde"), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

Q098 (2023): .

Q098 (2022): 2020 was a year marked by the pandemic, the reduction of work in judicial bodies, despite digitalization, and by mobility restriction measures. The increase in the pace of work in 2022 is logical and it explains the increase of incoming and resolved cases compared to 2020.
Q098 (2021): The number of incoming and pending cases for both severe and minor criminal case categories increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved minor criminal cases.
Q098 (2020): The reduction in criminal appeals during 2020 may be an effect of the pandemic.

Q098 (2016): The number of pending severe criminal cases decreased due to the decrease in the number of incoming cases. The decreases observed in respect of the numbers of Misdemeanour cases can be due to the elimination of "Faltas" (Misdemeanour cases) by the Organic Law 1/2015. Some of theme were transformed in minor offences, but other disappeared or were transformed in administrative infractions.

Q099 (2024): The data are calculated using the same criteria as in previous years.

Q099 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain's rates.

Q099 (2022): 2020 was a year marked by the pandemic, the reduction of work in judicial bodies, despite digitalization, and by mobility restriction measures. The increase in the pace of work in 2022 is logical and it explains the increase of incoming and resolved cases compared to 2020.

Q099 (2021): The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the entry of more cases, as well as to greater efficiency and increased number of resolved cases. The comparison is with 2020, the year in which the pandemic forced mobility restrictions.

Q099 (2020): In administrative law cases, judgements based on the unified doctrine related Tax on the Retail Sales of Certain Hydrocarbons facilitated the resolution of cases in previous years and partly caused the good clearance rate of the Supreme Court Administrative Room in 2019. However, there were fewer of these cases in 2020, so the number of resolved cases decreased.

Q099 (2019): In respect of administrative law cases, the very positive clearance rate in 2018, added to the trend that continues being positive in 2019, explains the decrease in pending cases.

Q099 (2018): The Administrative Procedural Law allows the inadmissibility of the cassation appeal by resolution of a lower level than Civil Procedural Law. This explains partially the different clearance rate between this two rooms.
In relation to the good resolution rate in Administrative is due in part to this cause: In previous years, a Judgement of the Court of Justice of the European Union declared Spanish law contrary to Community law authorizing the tax on retail sales of certain hydrocarbons. This fact meant the massive presentation of claims for the patrimonial responsibility of the State for the undue payment of the so-called "sanitary cent". Once the Supreme Court established jurisprudence, many of these cases were resolved more quickly.

Q099 (2017): The cause of the raise of administrative cases (pending at the beginning of 2017 and resolved) in the Supreme Court is the reform of the cassation appeal by the Final Disposition Third of the Organic Law 7/2015, and, on the other hand, a new organisation of the Third Courtroom.

Q099 (2016): As concerns the variations observed between 2014 and 2016 regarding the categories "total of other than criminal law cases"; "civil and commercial litigious cases"; "administrative law cases", it should be noted that:
- the increase in the number of cases in civil matters is due to the increase in conflicts of competence entered and resolved as well as the increase in the number of resolutions of appeals for unification of doctrine.
- the high increase in administrative matters is due to the massive presentation of claims for the State's patrimonial responsibility for the undue payment of the called "sanitary cent", because of the Judgement of the Court of Justice of the European Union that declared contrary to the Community law the Spanish law that authorized the Tax on Retail Sales of Certain Hydrocarbons.

Q099 (2015): Regarding administrative cases in 2015, there was a significant flow of incoming cases related with tax on retail sales of certain hydrocarbons. But before that, since 2011, the incoming administrative cases dropped due to the Law of courts' fees.

Q099 (2014): For the 2014 exercise, the decreases observed in respect of the number of pending administrative law cases in the beginning of the year and the number of resolved administrative law cases, are the result of the decreases observed and explained in fist instance.
The increase in the number of pending civil and commercial litigious cases on 31 December between 2012 and 2014 is due to the economic crisis which resulted in the increase of the number of cases in the civil jurisdiction.

Q100 (General Comment): The Criminal Procedure Law was amended by Law 41/2015, and thus the scope of the cassation appeal that reach the Supreme Court in Criminal Matters was broadened. The objective of the Law was to try to homogenize the doctrine in criminal matters, since previously, in cases that had not criteria of Supreme Court, the criteria of the Provincial Courts could be different.

Q100 (2024): The data are calculated using the same criteria as in previous years.
When a court identifies inaccuracies in its statistical reporting, it may regularize the data in its Statistical Bulletin by replacing the incorrect figure with one that reflects the actual situation, even if it diverges from previously reported values. Such regularizations are a recognized source of horizontal inconsistencies

Q100 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain's rates.

Q100 (2021): In 2021, the recovery of greater activity (after the restrictions of the pandemic) has been able to contribute to greater efficiency and increased number of resolved cases.
Q100 (2020): Considering the broadening the scope of the cassation appeal that reach the Supreme Court, the number of cases has been increasing. Already in 2018, the final pending cases were higher than the initial. In 2019, those incoming also increased. All this resulted in significant increase in the number of pending cases at the end of 2020.

Q100 (2014): The number of total criminal pending cases on 31 December has decreased of 30% between 2012 and 2014. It has to be noted that both in 2013 and 2014, the Supreme Court has resolved more cases than the number of incoming cases.

Indicator 3: The performance of courts at all stages of the proceedings

Comments provided by the national correspondents

organised by question no.

Question 091

Austria

Q091 (2024): 2.2. Registry cases (2.2.1+2.2.2+2.2.3) and 2.2.2 Non-litigious business registry cases: there is no known explanation for the reduction in cases. A connection to the Covid-19 pandemic is possible, but not certain. We just know that a lot of cases were resolved in 2023, but have no specific reason for this. It might be normal fluctuation.

Q091 (2023): Starting from 2022, "non-litigious family matters" are taken into consideration in the category "general civil non-litigious cases", while before they were communicated in "other".
Discrepancy (2.2.2.) is due to an above-average completion rate in 2023. The reason for this is unknown.

Q091 (2022): Starting from 2022, "non-litigious family matters" are taken into consideration in the category "general civil non-litigious cases", while before they were communicated in "other".

Q091 (2021): "Non litigious business registry cases": Sec. 3a para. 2 of the COVID-19 act concerning corporate law ("Gesellschaftsrechtliches COVID-19-Gesetz") allows corporations to file their annual accounts and other documents, that have to be published by law, not only within 9 but within 12 months from the account date (mostly: December 31st of a year). Usually, the duty to file these reports within 9 months leads to a high number of incoming files in September. 2020 and 2021 the special rules lead to such high incoming file numbers in December and thereby to an increase in pending cases at the end of the year.

Q091 (2020): "Non litigious business registry cases": Sec. 3a para. 2 of the COVID-19 act concerning corporate law ("Gesellschaftsrechtliches COVID-19-Gesetz") allows corporations to file their annual accounts and other documents, that have to be published by law, not only within 9 but within 12 months from the account date (mostly: December 31st of a year). Usually, the duty to file these reports within 9 months leads to a high number of incoming files in September. 2020 the special rules lead to such high incoming file numbers in December and thereby to an increase in pending cases at the end of the year.
"4. Other cases": The number of incoming and resolved cases surged due to an increase of "general civil proceedings, that are not allocated to other categories of cases" because the district administrative authorities (Bezirksverwaltungsbehörden) had to notify the district courts of every single person against which a quarantine measure (SARS-CoV-2) had been taken. In concerns of statistical data every such notification resulted in an incoming (and resolved) case.
Generally, no courts were closed during the lockdowns. During the first lockdown (middle of March until the end of April 2020) the number of incoming cases dropped significantly. Nearly all court hearings had to be postponed during the first lockdown. In total (all case types) in April 2020 there were 89.25 % less court hearings than in April 2019. In general litigious civil matters of first instance there were even 94.59 % less hearings. A comparison of the total number of court hearings held in the period of March 2019 to February 2020 on the one hand and of March 2020 to February 2021 on the other hand shows that there were 22.22 % less hearings since the first lockdown. The significant drop in incoming cases and held court hearings in April 2020 resulted in the opportunity to concentrate on finishing pending cases in which all hearings had already been held. The statistical data shows that the number of judgments pending more than 2 months since the final hearing declined considerably (1st of July 2020: -75 % compared to 1st of April 2020). Judges did always (even before the Covid-19 pandemic) have the opportunity to work from home. Many have made use of this option during the lockdowns. The Federal Ministry of Justice does not keep statistics on this matter (number of judges working from home) since judges are not obliged to record their working times or places.

Q091 (2019): There is a lack of horizontal consistency concerning the catgeory "general civil and commercial non-litigious cases". Figures provided by the statistical system were double checked in this respect and are correct.

Q091 (2017): Due to the absolut low numbers of pending cases on 1 Jan./31 Dec. high deviations in percentage are normal.
Note to 2.1.1.: Because of an inaccuracy by analysing pending non-litigious business registry cases the count had to be corrected on 1st December 2017. Therefore the pending cases on 31.12.2016 do not comply with those of 01.01.2017.

Q091 (2016): Due to the low absolute numbers of pending cases on 1 Jan./31 Dec. high deviations in percentage are normal.

Q091 (2015): In the category litigious are counted all proceedings (in civil matters, labour and social security cases at first instance courts) which are marked as being litigious in the court register (f.e. from the second court hearing on).

Civil and commercial non-litigious cases include commence of bankruptcy proceedings, Bankruptcy proceedings, composition proceedings, non-litigious proceedings about rent, non profit cooperative association for housing, home ownership, proceedings about Lease of farm land, wardship cases in connection with administration of assets, custody and maintenance, uncontested payment orders, enforcement cases.

Category "other" includes Probate Proceedings, cases concerning the Administration of justice, Cancellation proceedings and proceedings in connection with [official] declaration of death
authentication of signatures, proceedings to render legal assistance in civil matters for other courts (also international ones), General civil proceedings, that are not allocated to other categories of cases, Some Non litigious family matters.

Belgium

Q091 (2024): Q 91 “1. Civil (and commercial) litigation cases" - the discrepancy between the number of cases pending on January 1, 2024 and the number of cases pending on December 31, 2023, is due to a data cleanup operation: some cases had been temporarily excluded from the statistics pending verification by the clerks of the courts concerned.
Data for “youth” cases are only partially available, with only the number of incoming cases available (1 443 in 2024). As a result, “youth” civil litigation is not included in the table. Labor courts: data on “collective debt settlement” cases are not available for 2024 due to their migration to a new ICT program (JustRestart). As a result, they are not included in the table.
Concerning administrative cases (= sum of the figures for the Council of State, Aliens Litigation Council, and the Flemish administrative courts -Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen): it should be noted that the last figure 1 330 (Cases pending for more than 2 years) only concerns the Council of State.
For the Council of State, the figures are as follows: 4 725; 2 549; 2 461; 4 774 and 1 330; for the Aliens Litigation Council: 13 935; 23 159 (a ruling may close several cases, hence the lack of complete horizontal consistency); 19 579; 17 509 and NA (for the last column).

Q091 (2023): For category 2 (non-litigious matters): there was a sharp increase in the number of cases filed electronically in 2023. This increase is linked to legislative changes (Act of 23 March 2019 introducing the new Code of Companies and Associations and containing various provisions’; effective from 1 May 2019; requiring amendment of the bylaws of ASBLs. Companies began complying with this requirement from September 2023, as the deadline was 1 January 2024. A large number of requests for amendments are currently being processed by the registry, as not all companies have yet finalised the necessary changes.
For administrative cases (= sum of the figures for the Council of State, the Aliens Litigation Council and the Flemish administrative courts - Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen): it should be noted that the last figure 1 546 (see last column ‘Cases pending for more than 2...’) only concerns the Council of State. Thus, for the Council of State (Conseil d'Etat), the figures are as follows: 4 521; 2 499; 2 049; 4 662 and 1 546; for the Aliens Litigation Council (Conseil du Contentieux des Etrangers): 9 584; 20 892 (one judgment may close several cases); 16 539; 13 935 and NA (for the last column). For administrative cases, the increase concerns cases brought before the Aliens Litigation Council (not those brought before the Council of State). This is due to an influx of applications before this court for the year 2023.

Q091 (2022): As concerns administrative matters, the total number of cases includes figures for the Council of State, the Alien Litigation Council and the Flemish administrative courts Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen. However, the figure of 1392 (in the last column 'Pending cases older than 2 years from the date the case came to the first instance court') only concerns the Council of State. Thus data can be broken down as follows: for the Council of State: 4 425 (pending at the beginning of 2022); 2 214 (incoming); 1 996 (resolved); 4 523 (pending at the end of 2022) and 1 392 (pending for more than 2 years); for the Alien Litigation Council : 9 273 (pending at the beginning of 2022);16 456 (incoming; a judgment may close different cases hence there is a lack of horizontal conistency);16 139 (resolved); 9 584 (pending at the end of 2022) and NA.

Q091 (2021): Administrative law cases are those of the Council of State, the Aliens Litigation Council and the Flemish administrative courts Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen. However, the figure 1 428 (in the last column “Pending cases older than 2 years from the date the case came to the first instance court”) concerns the sole Council of State. Thus, with regard to the Councul of State, the figures are the following: 4 936; 2 191; 2 208; 4 420 and 1 428; with regard to the Aliens Litigation Council: 14 415; 14 124 (one judgment can close several cases which may result in a lack of horizontal consistency); 19 256; 9 273 and NA.
Juvenile cases are not counted in the category “other cases”. In fact, this case type includes both civil and criminal litigation.

Q091 (2020):
"The health crisis has impacted the numbers.
*Justice of the Peace: no pending cases (start + end). The way justice of the peace cases are counted has been adapted and unlike previous cycles, all dockets have also been taken into account for 2020. *Civil courts of first instance: no pending cases (start + end). The same counting method was applied as last year. Omissions as well as so-called "dormant cases" are counted in the closed cases.
*Corporate courts: same counting method as last year. Only cases registered in the corporate court computer application, called TCKH, are counted in these figures. There are also corporate court cases that are only recorded in the RegSol computer application (since mid-2017) in bankruptcy proceedings, for example, between the receiver and the bankruptcy judge. Cases only registered in RegSol are not counted in these figures, which induces an underestimation. Commercial investigations (chambers of distressed companies) are not taken into account as the figures are unreliable due to the very disparate registration methods in the different company courts. No pending cases.
*As far as administrative cases are concerned, the total number of cases includes the figures for the Council of State, the Aliens Litigation Council and the Flemish administrative courts Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen. However, the figure of 1489 (in the last column ""Cases pending for more than 2 years from the date on which the case is brought before the courts of first instance") concerns only the Council of State. Thus, - for the Council of State, the figures are: 4,564; 2,119; 2,019; 4,936 and 1,489; for the Conseil du Contentieux des Etrangers: 16,009; 14,238 (a judgment can close different cases hence the absence of complete horizontal logic); 15,769; 14,451 and NA.
"

Q091 (2019): Regarding the category "4. other cases" which refers to "protection cases", the statistical service does not have figures for 2019, following discussions on the counting rules between the courts. However, we kept the total for “other than criminal” cases since protection cases represent more or less 10,000 cases, or 1% of the total. Their actual number will not change the total figure significantly.
"Administrative cases pending at the end of the year": the lack of horizontal consistency is due to the fact that the number of judgments does not necessarily correspond to the number of closed cases. For example, a judgement that closes two cases is recorded as one stop

Q091 (2018): Civil and commercial cases include cases of justices of the peace, courts of first instance, civil, family and youth sections, labour courts and company courts (known as "commercial courts")
Civil and family courts: no data for pending cases. New rules for counting and recording cases mean that the statistics are not comparable to previous years. In particular, cases where there is a permanent referral are now counted as a case.
Concerning juvenile courts: no data for completed or pending cases due to the lack of uniform practice and low registration of completed cases.
Concerning registry cases: these are immediate acts, which is why the number of incoming cases is equal to the number of resolved cases. Administrative affairs: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Q091 (2017): The difference with the 2016 data is due to the lack of data on justices of the peace cases. In respect of justices of the peace, from July 2017 to June 2018, a deployment of new codes was carried out at the national level. The support service of the College of Courts and Tribunals is currently in the process of defining accounting rules for justices of the peace. For this reason, no figures were issued in 2018 pertaining to 2017 data.
Civil data are not included or only partially included for 5 courts; Youth courts: no data from Brussels (Dutch-speaking); no data for resolved cases and pending cases; No data for civil cases from police courts; Commercial courts: no data for pending cases + new counting rules for resolved cases. For this reason, comparison with previous data is made difficult; not all activities carried out in commercial courts are reflected in the statistics provided. Indeed, the following services are not covered: commercial investigation service, business continuity law, bankruptcy and dissolutions/liquidations.

Q091 (2016): Administrative cases: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.
The sharp decrease in administrative cases is due to immigration cases. There are 5 administrative courts, two of which are at federal (national) level: the State Council and the Aliens Litigation Council. It is within the latter that there has been a decrease in the number of cases. Immigration and asylum cases are handled by the Conseil du Contentieux des Etrangers. The Aliens Litigation Council is an independent administrative court, which deals with cases "in the first instance", i.e. full substantive litigation or "in cassation", i.e. a decision "in annulment" or "suspension". The Council may be seized with appeals against decisions of the "Commissariat général aux Réfugiés et aux Apatrides", against decisions of the "Office des Etrangers" and against all other individual decisions taken pursuant to the Act of 15 December 1980 on access to the territory, residence, establishment and removal of aliens (Aliens Act).
Please also note that figures for juvenile courts as well as figures for civil cases treated by the police courts are not included in this cycle. These figure present very small number from the total number of cases.

Q091 (2015): The pending cases of commercial courts, first instance (civil, youth, family) and justice of the peace are not included. Included in pending cases are: labor courts, police courts, courts of appeal.

Q091 (2014): With regard to non-litigious business registry cases, the central register of notices of seizure, delegation, transfer, collective debt settlement and loan is managed by the National Chamber of Bailiffs. Administrative cases are handled by the State Council (except for cassationrulings), the Alien Litigation Council and the Flemish regional administrative colleges, "Raad voor verkiezingsbetwistingen, Raad voor milieuhandhaving by Raad voor vergunningenbetwistingen".

Bulgaria

Q091 (General Comment): Proceedings related to registration in the Business and Land Registers (items 2.2.1 and item 2.2.2.) are heard by the Registry Agency at the Ministry of Justice, therefore the answers submitted for item 2.2. are NAP, as they refer to data on cases and/or proceedings that are not heard by the Bulgarian court system and, respectively, are not collected by the Supreme Judicial Council. The SJC also does not collect information on registration of associations and foundations, since according to the Non-profit Legal Persons Act, they are carried out in a register maintained by the Registry Agency and, respectively, RA is competent to provide data on them.
"Civil (and commercial) non-litigious cases" include only data available at the Supreme Judicial Council on the number of cases heard at first instance in district courts, initiated upon an application for issuing an order for the execution of a monetary obligation under Art. 410 and Art. 417 of the Civil Procedure Code – the so-called Order for payment cases and cases for divorce by mutual consent.

Q091 (2020): As it is impossible to distinguish between litigious and non-litigious cases for the present, for 2020 the following data is available as to the sum of all civil and commercial litigious and non-litigious cases: pending at the beginning 85 460; incoming 282 768, resolved 285 461 and pending at the end of the year 82 767. It is noteworthy that since 2020, the Unified Court Information System (UIS) has been gradually introduced in all courts, developed within the project “Creating a Model for Optimizing the Court Card of Bulgarian Courts and Prosecutor's Offices and Developing a Unified Court Information System” with the financial support of Operational Program "Good Governance" 2014-2020. Depending on the functionalities of the system, it is possible to collect information on the next cycle according to the indicators in question 91.

Q091 (2018): The observed increase in the number of incoming administrative law cases and accordingly in the number of pending administrative law cases at the end of 2018, is a consequence of an increase characterizing the period 2016-2017. As explained in the comment accompanying 2017 data, there is no specific reason for the increase in the number of incoming administrative law cases between 2016 and 2017. During this period there was an increase in the number of cases before the administrative courts (mainly claims under the Administrative Procedure Code, Management of Resources from the European Structural and Investment Funds Act, Tax and Social Insurance Procedure Code, Competition Protection Act, etc.).

Q091 (2017): 02/11/2018 7:17:04 AM There is no specific reason for the increase in the number of incoming administrative law cases between 2016 and 2017. During this period there was an increase in the number of cases before the administrative courts (mainly claims under the Administrative Procedure Code, Management of Resources from the European Structural and Investment Funds Act, Tax and Social Insurance Procedure Code, Competition Protection Act, etc.).

Q091 (2014): The number of all civil cases (litigious and non-litigious) considered as an overall category could be obtained by extracting from the total the number of administrative cases (67 513 pending cases on 1 January 2014; 294 657 incoming cases; 300 799 resolved cases; 61 371 pending cases on 31 December 2014.

Croatia

Q091 (2024): The Statistical Review of Court Operations for 2024 has also been updated to reflect the revised number of 36,411 in section 2.2.1, "Non-litigious land registry cases - Pending cases on January 1st of the reference year."
Although the number of cases in 2024 was roughly the same as the previous year, the courts' efficiency improved, as evidenced by the higher number of cases resolved and, as a result, a smaller number of unresolved cases at the end of 2024 (unlike in 2023, when courts were unable to process cases fully due to the strike of public and civil servants).
During 2023, the courts were unable to process the incoming caseload in its entirety, leading to an increase in the number of pending cases at the end of 2023 and continuing into 2024. This trend has persisted throughout 2024. For Pending cases older than 2 years from the date the case came to the first instance court - In the course of case resolution activities, a greater number of cases older than two years were addressed, resulting in a reduction of 77 unresolved cases of this category compared to 2023.
3. Administrative law cases - During 2023, the courts were unable to process the incoming caseload in its entirety, leading to an increase in the number of pending cases at the end of 2023 and continuing into 2024. This trend has persisted throughout 2024. For Pending cases older than 2 years from the date the case came to the first instance court - In the course of case resolution activities, a greater number of cases older than two years were addressed, resulting in a reduction of 77 unresolved cases of this category compared to 2023.
With regard to land registry cases — which account for nearly half of the total inflow of court cases in the Republic of Croatia — it is particularly important to emphasize the scope and volume of these data. The data are obtained exclusively through the Joint Information System of Land Registers and Cadastre (ZIS). The reliability and consistency of data concerning the work of 109 land registry departments largely depend on the timeliness and completeness of updates within the system itself. It is therefore likely that horizontal inconsistencies primarily arise for this reason.
Discrepancies in comparison with data from the previous year can be further explained by the extraordinary circumstances that affected court operations during 2023. Owing to the strike of court clerks and judges, there was a temporary suspension in the receipt and processing of cases, which resulted in a decline in activity. In 2024, following the resumption of regular operations, an increase was recorded both in the number of incoming and resolved cases, which is also reflected in the overall indicators. This increase should therefore not be interpreted solely as a result of structural changes in court operations, but also as compensation for the reduced level of activity in the previous period.

Q091 (2023): According to the comment of the previous period: „In 2022, the number of incoming Civil (and commercial) litigious cases dropped because of the unique situation from the previous cycle of a significant number of incoming collective labour cases from the public sector workers (more than 60.000 incoming cases). As a result of the characteristics of the previous period and, civil servants and employees' strike in 2023. the decrease is documented in the following categories: Pending cases on January 1 ref. year - 1. Civil (and commercial) litigious cases decreased by 20.92% and and Resolved cases decreased by 22.79%.
Q91.3 - The increase in incoming cases is due to the cases brought against the City of Zagreb in response to the cancellation of one of the social programs. We believe that this increase is extraordinary in this period.

Q091 (2022): In 2022, the number of incoming Civil (and commercial) litigious cases dropped because of the unique situation from the previous cycle of a significant number of incoming collective labour cases from the public sector workers (more than 60.000 incoming cases). Since they were resolved in 2022, this has led also to a significant increase in the number of resolved cases.
Regarding General civil (and commercial) non-litigious cases, as this includes enforcement cases which have had legislative changes during 2021, a new type of case has been recorded in courts by the end of 2021, which now seems to be a permanent increase in both incoming cases and resolved cases (up from an average of 40.000 cases received and resolved every year prior to 2021 to about 60.000 cases in 2021 and 90.000 cases in 2022. These are all cases of small value that are very quick to resolve.
For non-litigious registry cases, there is a slightly bigger horizontal inconsistency due to additional corrections from the sides of courts after the official published data.

Q091 (2021): Between 2020 and 2021, there was an increase of incoming civil and commercial cases caused by the receipt of a large number of civil cases, namely lawsuits in labor disputes due to payment based on rights arising from the collective agreement, which occurred in the first quarter of 2021 and continued, to a somewhat lesser extent, throughout the rest of the year. Also there was an increase of the number of incoming enforcement cases that courts received during the last quarter of 2021, which was caused by a change of legislative framework in September 2021.

Q091 (2020): Regarding your comment about decreased number of incoming cases (except business registry cases) shown in this table: Due to the pandemic caused by COVID-19, in 2020., court proceedings for limited period in 2020 were submitted under specific conditions and measures, which contributed to decreased number of incoming cases, as well as court hearings especially in litigious cases.
Regarding the number of incoming non-litigious business registry cases - New article added by the Act on Amendments to the Court Register Act (Official Gazette No. 40/19) which came into force at the end of 2019., stipulated the obligation of companies to submit a request for entry of at least one e-mail address to the courts managing business registry. This was the reason for temporarily increased number of requests (cases), which were all resolved by the end of January 31, 2021.

Q091 (2019): In 2019 new amendments to the Personal Bankruptcy Law came into force. That caused significant income of other than criminal cases to the municipal courts. There was an increase in the number of land registry incoming cases too. The increased number of incoming land registry cases is caused by intensified economic activities and activities on the real property market. With the same number of employees working on these cases, pending cases increased at the end of the year. Additionally, a large number of citizens started civil lawsuits against banks regarding loans in Swiss currency. These factors combined led to the increase of pending cases at the end of the year as well. The decrease in the number of civil and commercial non litigious cases is due to enforcement cases: courts solved a significant amount of these cases during 2018, while the number of incoming cases decreased as well. For that reason, at the end of 2018 /beginning of 2019 there are fewer cases than at the end of 2017/ beginning of 2018.
As regards "administrative cases", administrative courts resolved more cases during 2018. That decreased the pending stock of the cases at the end of 2018/beginning of 2019.

Q091 (2018): Decrease of the number of incoming cases (34%) in category 2.1. in comparison to previous cycle is due to the significant decrease of enforcement cases which are calculated in this category. Majority of enforcement cases are aimed at debtor’s monetary assets based on trustworthy documents – i.e. documents that make the existence of debt highly plausible (such as regular utility bills, telecom operators’ invoices, credit card invoices, unpaid installments of bank loans, etc.). Those cases were removed from jurisdiction of courts to public notaries already in 2012., and since then there is year after year decrease of enforcement cases in municipal courts - enforcement based on other types of enforcement titles (other than trustworthy document), as well as enforcement against real property.

Q091 (2017): The cases relative to the Personal Bankruptcy Act which came into force on 1st January 2016 are handled by the 1st instance Municipal Courts. The data about these cases was not available in the moment of completing the questionnaire for the Evaluation (CEPEJ study for EU Scoreboard) (data 2016) but the data is now available within the ICMS system for the year 2017 and they are incorporated in the category 1. Civil (and commercial) litigious cases (including litigious enforcement cases and if possible without administrative law cases, see category 3). There were 268 pending Personal Bankruptcy cases on January 1st 2017, 377 incoming cases in 2017, 281 cases resolved in 2017 and 365 pending cases on 31st December 2017.
"Registry cases": In this category there is more than 20% increase of pending cases at the beginning of reference year in comparison to the beginning 2016. The reason are land registry cases. As stated in the previous cycle, the reason for the increased number of pending land registry cases is the significant income of these cases during 2016 and the difficulty for courts to cope with this income in same amount as in 2015. This all reflects on data for 2017.
The reason for the decrease in the number of pending administrative cases at the end of the 2017 is laying in the fact that administrative courts received almost 18% less cases than in 2016. Although judges resolved less cases than in previous year, in relation to the income, it was enough to decrease the number of pending cases at the end of 2017 for more than 20%.

Q091 (2016): More land registry cases has been received in 2016 than in 2014 so the total number of registry cases has increased as well.
During the two-year period (through 2014 and 2015), administrative courts accumulated unresolved cases - they solved significantly less than they received, which led to 15024 pending cases at the beginning of 2016. By the end of 2015, a total of 5 judges were transferred to administrative courts from other legal branches, which resulted in better results in 2016 (more resolved cases).

Q091 (2015): In 2015 the reorganization of the judicial system in the Republic of Croatia, which is partly related to the reorganization of the second instance proceedings, has been carried out. Consequently, in the county courts there has been a harmonization of case registers and case codes (litigious, non-litigious and other) in a way that in 2015 courts carried out the alignment and correction of the indication of certain types of second-instance civil cases. For this reason, in 2015 the correction of the category of cases according to the new methodology of monitoring has been carried out.

The total of all categories is aligned with the continuity of previous cycle (horizontal consistency), whereas the individual categories in the column “Pending cases on Jan. 1 2015” are presented under the new revised indication of the types of cases. For example, some cases that have been categorized in previous cycles under category 'Other', the courts have categorized according to the certain types of dispute which was possible after new case registers were open (e.g. Enforcement – Security by lien on the basis of an agreement of the parties).

Q091 (2014): In 2014, a new methodology of monitoring unresolved land registry cases was introduced, in a way that regular land registry cases (i.e. registration, note, caution) are not being monitored anymore and are not presented in the total. Other land registry cases (i.e. objections, appeals, specific corrections,etc.) are still being monitored. The overall number of enforcement cases is subsumed in the category “general civil and commercial non-litigious cases”. The Municipal Civil Court undertook the harmonization of data due to data migration. After the new standardization of the audit, the Supreme Court has started to be less up-to-date since the number of received cases is far beyond the number of cases which may be resolved (priority is given to urgent and old cases).

Cyprus

Q091 (General Comment): The reason for not having data for the subcategories of cases is that there was no electronic filing system that would enable us to have statistical data on different types of cases.

Q091 (2024): 1. Total of other than criminal cases:
There was an increase of cases filled before the new civil procedures rules were entered into force in September 2023.
Pre-action protocols, set by the new rules, essentially refer to several rules and procedures that need to be followed by the parties before any action in Court and encourage a sufficient negotiation between the parties in order to achieve an out of court settlement which reduced the number of cases filed. This has led to many insurance cases being settled.
A new law was enacted establishing an out-of-court, fast-track procedure for the sale (foreclosure) of mortgaged immovable property
3. Administrative cases: Incoming cases decrease: this was due to the rejection of asylum to economic immigrants. Every appeal that is filed is formally registered and proceeds to trial, the only preliminary checks that are conducted, concern administrative details such as the applicant’s name/address and so on. The observed 22% decrease in incoming cases is likely linked to external factors, such as a reduction in the number of new asylum applications or a slower rate of decisions, made by the Cyprus Asylum Service, which directly affects the number of appeals submitted to the Court
Resolved cases decrease: the court now has to go into the subject matter of the case. Since 2023 the profile and nationality of filed cases have shifted significantly. The Court’s backlog has transitioned from being primarily composed of applicants from South and Southeast Asia, to a predominance of cases from Sub-Saharan Africa. Previously decision making was comparatively faster, as many of the appeals from Asian applicants involved largely unfounded or purely financial claims. The newer composition however, tends to have more complex and substantive cases, as is evident by the increased rate in positive decisions, requiring a deeper examination. While this has led to longer processing times, the overall backlog has remained relatively stable, after an initial increase, owing to a concurrent reduction in the overall numbers of appeals filed.

Q091 (2023): The courts have jurisdiction to deal with non litigious cases, however we do not have data on the number of such cases

Q091 (2022): The total number of resolved cases has increased as there was an increase in the number of judges.
Administrative law cases include the cases filled at the Administrative court of international protection.

Q091 (2021): In the administrative cases, the applications for international protection are included and there was an increase in these applications in 2021, as a result of more asylum seekers coming into Cyprus. From 1 January 2021, the Review authority for refugees was abolished.

Q091 (2020): In the previous cycle a big number of cases were tried together. This is the reason why number of resolved cases in 2020 might appear lower than in 2019.
Reducing delays in the disposition time is part of the reform process. The difference in the pending cases in administrative cases compared with previous year is that in this figure we included the cases filed before the Administrative court of international protection which was set up.

Q091 (2019): In the previous campaigns the number of cases filled and resolved was increased as a result of a big number of cases filed together (in one bundle) and tried together.

Q091 (2018): The increase in the number of resolved cases is a consequence of the cases tried together. For number of administrative cases, it should be taken into account that cases were consolidated and that 2724 consolidated cases were withdrawn.

Q091 (2017): The variation concerning incoming (total) and resolved (total and administrative) cases (decrease) is due to the fact that, in 2016, cases were filed and tried in a bundle but each was considered separately for statistical purposes. Put differently, cases were joined together and therefore there was an increase in the number of resolved cases. Accordingly, we can observe a decrease in the number of resolved cases between 2016 and 2017.

Q091 (2015): Variations: The increase in the number of pending cases between 2010 and 2015 is a result of the bail in Cyprus a lot of administrative cases had been filed against that decision.
The reason for the decrease in the number of resolved cases is that the bail in cases had been consolidated and was tried jointly after 31st of December 2014.

Q091 (2014): The increase in the number of pending cases is a result of the bail in Cyprus; a lot of administrative cases had been filed against that decision. The reason for the decrease in the number of resolved cases is that the bail in cases had been consolidated and was tried jointly after 31st of December 2014.

Czech Republic

Q091 (General Comment): For years 2010, 2012 and 2013, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts (question 97). On the contrary, since 2014, administrative cases, business registry cases and insolvency cases (and also some litigious cases) which are still decided by the second instance courts acting as first instance courts, are subsumed within the table of question 91 (which was already the case for the 2008 exercise). Methodology has been changed in year 2015 – more case types have been included, which led to the big increment in the number of cases. There are no further changes expected.

Q091 (2024): There was a methodology change in 2023 and insolvency cases had been moved to category litigous cases. Also change was made for pending insolvency cases. It now only involves cases before the court decision about insolvency.
2.2. Registry cases (2.2.1+2.2.2+2.2.3) - Business registry cases are very quickly resolved and there is quite a variance between years. The number of cases is probably affected by many factors – new laws, economic situation and much more. This is also reflected in the number of pending cases.
2.3. Other non-litigious cases - All – It is relatively minor and “not very important” case type. The number of cases is quite small. It follows that there is big variance in the data between years.

Q091 (2023): There was a methodology change in 2023 and insolvency cases had been moved to category litigous cases. Also change was made for pending insolvency cases. It now only involves cases before the court decision about insolvency.
2.2. Registry cases and 2.2.2 Non-litigious business registry cases - Bussiness registry cases are very quickly resolved and there is quite a variance between years. The number of cases is probably affected by many factors – new laws, economic situation and much more.
2.3. Other non-litigious cases (pending cases on 31 Dec. ref. year) - it is relatively minor and “not very important” case type. The number of cases is quite small. It follows that there is big variance in the data between years.

Q091 (2022): Pending cases on 31 Dec. ref. year: In general, the number pending cases in Czech republic is decreasing, which can be seen in the table.
Administrative law cases: There is a significant and steady decrease in law administrative cases in last years. Thanks to the decreasing number of incoming cases and thanks to the increasing of the number of judges, the pending cases are rapidly decreasing.

Q091 (2021): Business registry cases are very quickly resolved and there is quite a variance between years. The number of cases is probably affected by many factors – new laws, economic situation and much more. This is also reflected in the number of pending cases.
2.3 Other non-litigious cases - It is relatively minor and “not very important” case type. The number of cases is quite small. It follows that there is big variance in the data between years.

Q091 (2020): The registry cases are very quickly resolved and the numbers can vary between years significantly. In 2019, courts managed to resolve more cases than was the number of incoming cases, which led to decrease in pending cases. The same explanation applies to “other non-litigious cases”. The number of cases is quite small. It follows that there is big variance in the data between years. Furthermore, during 2019 courts managed to resolve significantly more cases than in 2018, no special reasons were reported other than a fact that number of cases is relatively small and the cases are not complex. This also resulted in further redaction of the number of cases at the end of 2019. In 2020, the courts again managed to resolve more cases than was the numer of incoming cases for both registry cases and other non-litigious cases.
Bussiness registry cases are very quickly resolved and there is quite a variance between years. The number of cases is probably affected by many factors – new laws, economic situation and much more.
Other cases: The number of incoming cases has grown, probably due to changes in insolvency legislation.

Q091 (2019): The registry cases are very quickly resolved and the numbers can vary between years significantly. Last year, courts managed to resolve more cases than was the number of incoming cases, which led to decrease in pending cases at 1 January of the reference year. For Other non-litigious cases the same reasons apply for the number of cases at the beginning of the year. Furthermore, during 2019 courts managed to resolve significantly more cases than last year, no special reasons were reported other than a fact that number of cases is relatively small and the cases are not hard. This also resulted in further redaction of the number of cases at the end of the reference year. For incoming Other cases, there was a legislative change in insolvency law that is probably a reason for the significant grow in the number of incoming cases.

Q091 (2018): Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases.

Q091 (2017): Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases. Generally the number of incoming cases is decreasing, more use of ADR.
In the previous year the number of resolved cases greatly exceeded the number of incoming cases for other non-litigious cases, which led to huge drop in pending cases and discrepancy appeared.
Non-litigious business registry cases are very easy to resolve and the variance between years in the number of cases (incoming, resolved and pending) is quite big in general. Thus the annual change could easily be (and is) greater than 25 %.
Courts have problems with resolving administrative cases. It follows that number of incoming cases was last year much bigger than number of incoming cases. Thus number of pending cases increased greatly cases and discrepancy appeared.
As to Other cases, insolvency cases are reported. This is relatively new and very specific agenda, which usually takes 5 years to resolve. There was an increase in case fillings five years ago, which resulted in growth in the number of resolved cases nowadays. On the other hand, for various reasons (including legislative changes) the number of incoming cases is decreasing.

Q091 (2016): Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases. Generally the number of incoming cases is decreasing, more use of ADR.

Q091 (2015): Methodology has been changed in 2.1 in year 2015 – more case types have been included, which led to the big increment in the number of cases.

Civil and commercial non-litigious cases include: 2.1 - uncontested payment orders, cases of the upbringing and maintenance of a minor, declaration of admissibility of taking or keeping of a person in a medical (health care) institution, declaration of the death of a person, inheritance proceedings, judicial deposit cases

Category "other includes: insolvency cases and incidence disputes

Q091 (2014): For 2014, business register cases, administrative cases, insolvency registry cases and also some litigious cases which are decided by the regional courts (second instance courts) acting as first instance courts are subsumed within the table of question 91.

For 2014 the category “other” encompasses insolvency cases.

In 2014, the high increase of insolvency cases is due to numerous cases of personal bankruptcies as well as to an unfavourable economic situation.

Denmark

Q091 (General Comment): As concerns "non-litigious business registry cases", it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. Furthermore, the reason for the discrepancy is that we do not have pending figures from the Maritime and Commercial High Court. Administrative courts do not exist in Denmark, and administrative cases are initially dealt outside courts by court-like bodies, like appeal boards, committees, or councils. The number of “administrative law cases” which are litigious and go to courts is encompassed in the number of “civil and commercial litigious cases”.
With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.
Administrative law cases:
1. What is included in “administrative law cases” and what is the distinguishment between litigious and non-litigious administrative law cases; and what are non-litigious administrative case in Denmark. It is challenging to provide a clear answer for Denmark. Due to the way data is collected within the Danish Court Administration, it is unfortunately not possible to distinguish between the specific types of cases included under administrative law cases. The courts indicate whether a case is of an administrative nature, however, administrative cases occur across almost all categories within civil cases. Consequently, it is difficult to state unequivocally which types of cases they most appropriately belong to. 2. The approximate number of administrative law cases that are litigious and go to court, and their part of the overall “civil litigious cases
In the period from 2023-2025 the number of civil cases in Denmark was 181.064, and out of those, 10.947 was of administrative nature. Furthermore, approximately 6 percent of all civil cases over the past three years have been classified as administrative law cases. Cases concerning forced removal often fall within the scope of administrative law, however, such cases represent only about 2 percent of the total civil caseload. The two other categories with a notable share of administrative law cases are “general civil cases” and cases under “the simplified procedure”. Both of these categories are quite extensive in terms of volume as well as broad in their classification, meaning that administrative law cases constitute only a relatively small proportion within them. 3. The composition of the bodies such as appeal boards and committees Denmark has a well-developed system of specialized complaints boards that serve as administrative appeal bodies for decisions made by public authorities. These boards, such as Ankestyrelsen and the Consumer Complaints Board, provide citizens with accessible and cost-effective avenues to challenge administrative decisions. Denmark has over 80 complaints boards and committees across various sectors. They generally consist of a chairperson – often a judge or legal expert – and a mix of legally trained members and specialists relevant to the board’s area. Membership terms are typically four years. The exact composition varies by board: for example, the Consumer Complaints Board includes a chair (judge), vice-chairs, and representatives of consumer and business interests, while the Patient Complaints Board combines judges and health professionals. Appointments are usually made by ministries or local authorities, often based on nominations from relevant organizations.

Q091 (2024): 2. Non litigious cases (2.1+2.2+2.3) + 2.1. General civil (and commercial) non-litigious cases (Pending cases on 31 Dec. ref. year): The lower number of registry cases is due to changes in the activity of mortgage bonds etc., which among other things depends on the number of housing transactions and restructuring of mortgage loans.
2.2.1. Non litigious land registry cases: we no longer register the pending cases for land registry as the system has been digitalized which means the processing time has decreased to an extent where it does not make sense to register.
4. Other cases: Notary services are increasing substantially with the advent of advance care directives in Denmark
Administrative law cases: changed from NAP to NA since Denmark does have administrative cases in courts, but they cannot be counted exactly.

Q091 (2023): The lower number of registry cases is due to changes in the activity of mortgage bonds etc., which among other things depends on the number of housing transactions and restructuring of mortgage loans.
Regarding 2.2.1 – we no longer register the pending cases for land registry as the system has been digitalized which means the processing time has decreased to an extent where it does not make sense to register.

Q091 (2022): The number of administrative litigious cases that go to courts in 2022 are estimated at 2600 which is 5,5% of the total number of incoming civil and commercial litigious cases in Denmark. They can not be easily separated from the other civil and commercial cases.
In 2022 there was still an aftermath of the unusual situation of the Covid-19 related to the periods with clos-ing down the society, including the courts. It has created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it. Land registration is the major source of in-coming cases with very large figures. It fluctuates a lot depending on interest rates, loan rescheduling etc.
2.1. General civil (and commercial) non-litigious cases: The courts have successfully reduced the number of pending cases.
As concerns "2.2.2. Non-litigious business registry cases", it is important that because of new regula-tions/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases.

Q091 (2020): 2020 was an unusual year because of the Covid-19 related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it. Land registration is the major source of incoming cases. It fluctuates a lot depending on interest rates, loan rescheduling etc.
2.1. General civil (and commercial) non-litigious cases: The courts have successfully reduced the number of pending cases.
As concerns "2.2.2. Non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. The courts received many extra backlogged cased from the Danish Commerce and Companies Agency reenforced closure of companies that were still backlogged in the early 2020. The courts were closed for 3 weeks except for vital cases and government assistant to companies helped them and reduced bankruptcies and closures of companies that would normally have happened.

Q091 (2019): Variation in land registration (loans etc) as market and interest rates always vary from year to year.
For non-litigious business registry cases: Received markedly fewer enforced cases re enforced closure in 2019 than in 2018; Solved many extra insolvency cases in the beginning of year 2019 received in late autumn / winter 2018; pending cases on 31 December - It is important to understand the figure, that we succeeded to include pending cases from the Maritime and Commercial court.

Q091 (2018): As concerns "non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. Besides from that it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. Furthermore, the reason for the discrepancy is that we do not have pending figures from the Maritime and Commercial High Court. The number of “administrative law cases” which are litigious is encompassed in the number of “civil and commercial litigious cases”.
With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

Q091 (2017): The figures provided in respect of this question are not fully consistent. The Maritime and Commercial Court only measures incoming and resolved insolvency cases but not pending cases. Accordingly, when the data on processed/resolved cases from this court are included, there will always be a small inconsistency. Therefore, vertical and horizontal figures are not totally consistent.
Concerning the category "land registry cases", the number of pending cases on 1 January 2017 is a residual figure from received, finalized and pending cases ultimo the year; it may deviate from pending cases ultimo 2016, but it is a residual figure. The number of pending cases on 31 December 2017 is an actual figure. Concerning the category "registry cases", it is specified that the Maritime and Commercial Court does not publish pending cases which results in a discrepancy.

Q091 (2016): As concerns "non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. Besides from that it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. The number of “administrative law cases” which are litigious is encompassed in the number of “civil and commercial litigious cases”.
With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

Q091 (2014): Due to an improved business situation, courts at all levels receive fewer cases, i.e. civil cases, enforcement cases, forced sales, insolvency cases; pending cases are also reduced thereby. Non-litigious business registry cases follow the overall tendency.

Estonia

Q091 (General Comment): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

Q091 (2024): The workload of judges handling civil cases has increased.

Q091 (2023): no comment provided

Q091 (2022): No comment could be provided on the variations in the caseflow between 2020 and 2022.

Q091 (2021): The increased number of administrative law cases pending at the end of 2021 is due to COVID-19 related cases that have taken more time to be solved.
Concerning general civil and commercial non litigious cases, it should be mentioned that during the second Covid-19 year, courts processed cases that they were not able to process during the first Covid-19 year.

Q091 (2020): MoJ
In 2020, there have been difficulties with filling the vacancies of judge positions in the biggest county court (judges going on maternity leave or retirement), which may have resulted in an increase in pending cases older than 2 years in general.

Q091 (2019): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

Q091 (2018): The variations in total and in the non litigious cases are due to the number of entrepreneurs that has grown every year, so the number of incoming case is also increasing. Furthermore, the number of real estate transactions has increased and the market is active.The number pending cases end of 2017 is different because the numbers are taken later and the data has been corrected.

Q091 (2017): There are not any particular reasons to explain variations in the number of non-litigious business registry cases, causing variations in respect of the category "registry cases" and "non-litigious cases". As regards item 2.1 “general civil and commercial non-litigious cases”, there is an important discrepancy between the number of pending cases on 31 December 2016 and the number of pending cases on 1 January 2017. The reason is related to the time the numbers have been taken out of the system (see general comment). The fifth column “pending cases older than 2 years”, includes cases that are suspended (part 9 of our Code of Civil Procedure, https://www.riigiteataja.ee/en/eli/506022018001/consolide). The proceedings may be suspended for example if the one of the parties dies or fells seriously ill; or if in order to solve the dispute the court needs a resolution of an another case.

Q091 (2016): The decrease in the number of incoming administrative court cases is due to the decrease in the number of inmate complaints. The variations in total and in the non litigious cases are due to increase of incoming business and land registry cases.

Q091 (2014): The increase in the number of incoming administrative law cases is due to a rise of complaints of prisoners. As to the decrease in the total of pending other than criminal law cases on 1 January 2014, the performance indicators of courts have justified supplementary budget resources. Agreements between the Ministry of Justice and courts are expected concerning the efforts that need to be undertaken in court to clear the backlog and accelerate proceedings. For 2014, non-litigious enforcement cases are included in the category “general civil (and commercial) non-litigious cases”.

Finland

Q091 (General Comment): The pending cases older than two years are not collected in Finland. The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

Q091 (2024): These explanations apply to questions 91, 97 ja 99 together. There may be several reasons for the increase of the case amounts. Firstly, in the last round, the reports had been taken on the 31 of December and now they have been taken in August. There can be significant changes in a half a year. At this stage, it is no longer possible to provide the data from 31 of December. Secondly, there has been an increase on the first instance case amounts. One explanation is the growth of summary civil cases.

Q091 (2021): Comments The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

Q091 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

Q091 (2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:
1) Incoming cases 2) Resolved cases
3) Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.
The number of administrative cases increased dramatically in 2016 due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well.
As to “civil and commercial litigious cases”, we can notice a very high Clearance Rate for 2016 due to the fact that in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. Accordingly, the number of pending cases decreased between 2016 and 2019.
“General civil and commercial non-litigious cases”: the number of pending cases at the end of 2019 increased slightly between 2018 and 2019. In this respect, it should be noticed that the partial switch to the new case management system AIPA (as for example divorce cases are already processed in this system) can be the explanation as some initial challenges in the reporting tool has been noted recently.

Q091 (2018): The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.
The number of administrative cases increased dramatically in 2016 due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well.
As to “civil and commercial litigious cases”, we can notice a very high Clearance Rate for 2016 due to the fact that in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. Accordingly, the number of pending cases decreased between 2016 and 2018.

Q091 (2017): 1. Civil (and commercial) litigious cases: in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases; accordingly, the number of pending civil litigious cases at the beginning of 2017 has decreased. 2.2.1 From the beginning of the year 2010 Land register cases were transferred to National Land Survey of Finland.
3. Administrative law cases: On appeal, the administrative court reviews the legality of the decision of the authority. The number mentioned in category 3 includes cases dealt with by Administrative Courts, Market Court and Insurance Court.
It is worth mentioning that in 2016 the number of administrative cases increased dramatically due to the asylum crisis. As a result, the number of pending administrative cases at the beginning of 2017 increased considerably. Against this background, Finland had adopted different measures to face the asylum crisis (e.g. decentralisation of the competence in respect of asylum cases from one administrative court (Helsinki) to three other administrative courts). Accordingly, the number of incoming administrative cases for 2017 decreased (28%).

Q091 (2016): In 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. The number of administrative cases increased dramatically due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well. For that reason, statistics show variations as concerns the number of pending administrative law cases in 2016. The number of pending administrative law cases on 1.1.2016 was 20 4775, but due to the decentralization around 5000 cases were transferred from Helsinki to these other courts. In the statistics, these cases do not appear as pending anymore. It is not possible to say how many of them have been resolved, but they are included in the number of resolved administrative law cases.

Q091 (2014): Non-litigious enforcement cases are subsumed in the category “general civil (and commercial) non-litigious cases”. The enforcement is of the competence of the enforcement authorities, not of this of courts. Cases mentioned here are appeals in execution proceedings before district courts.

France

Q091 (General Comment): Non-litigious cases relating to the commercial register are handled by the registry of the Commercial Court. These registries are charges and their activities do not fall within the remit of the Ministry of Justice.

Q091 (2024): Civil justice: following a change in methodology for calculating the case stock, the number of pending cases as of January 1, 2024 differs from the number of pending cases as of December 31, 2023 (provided in the 2024 questionnaire, based on an estimate). The data provided last year was based on estimates. We now have, from an annual survey, the total stock of the first instance court. We then categorised this stock (litigious cases, non-litigious cases, and other cases), based on the distribution observed for resolved cases. The data provided this year is based on input from the courts' software, which allows us to categorise these cases accurately according to their different types.
However, this change in methodology results in a significant downward revision of the "other cases" stock and a significant upward revision of the "civil litigious cases" stock (the assumption we had based our estimate on was incorrect).
Following the 2021 divorce reform, and to avoid a break in the series, an estimate is used for 2024 (for litigious civil cases and non-litigious civil cases) based on 2019 data.
Due to the lack of data reporting, the stock of "civil and commercial litigious cases" at the beginning and end of the year does not include cases related to political electoral disputes. These cases represent 0.2% of the resolved cases in 2024.
Due to the lack of data reporting, the stock of "non-litigious civil cases" at the beginning and end of the year does not include prior attempts at conciliation. These cases represent 0.1% of the resolved cases in 2024.
Due to the lack of data reporting, the stock of "other cases" at the beginning and end of the year does not include cases (excluding consumer law) before the local court and wage garnishments. These cases represent 2.1% of the resolved cases in 2024 (respectively 0.4% and 1.7%).
For administrative courts:
Since 2024, cases from the National asylum court (Cour nationale du droit d'asile) are included in the number of first-instance administrative cases. The raw data for the CNDA is as follows:
•Pending cases on 1 Jan. = 26 132
•Incoming cases = 56 497
•Resolved cases = 61 593
•Pending cases on 31 Dec. = 22 194
•Pending cases for more than 2 years = 199
The 2024 data do not include those from the Paid parking court (Tribunal du stationnement payant). For your information, the raw data for these cases is:
•Pending cases on 1 Jan. = 224,637
•Incoming cases = 202 111
•Resolved cases = 146 267
•Pending cases on 31 Dec. = 281 392
•Pending cases for more than 2 years = 165 469
The data regarding pending cases before the Paid parking court excludes cases categorized as "automatic withdrawal of action". If, after the deadline given to the claimant to regularise their application, no regularisation occurs, the case is not processed and is rejected without a decision (inadmissibility due to incomplete documentation).

Q091 (2023): Source(s) for SSER data: exploitation of the General Civil Register, of the survey related to Administrative Activities and Statement 4 of the former "tribunaux d'instance", and the survey Annual Civilian Indicators.
Note: Following the 2021 divorce reform, and in order to avoid a break in series, an estimate is used for 2023 (civil litigious cases and civil non-litigious cases);
Due to the lack of data reporting, the stocks of "civil and commercial litigious cases" at the beginning and end of the year do not include cases relating to political electoral disputes. In 2023, these cases represent 0% of resolved cases;
Due to the lack of data reporting, the stocks of "civil non-litigious cases" at the beginning and end of the year do not include prior attempts at conciliation. In 2023, these cases represent 0.1% of resolved cases;
Due to the lack of data reporting, the stocks of "other cases" at the beginning and end of the year do not include applications (out of the scope of the Consumer Code) before the local court and seizures of earnings. In 2023, these cases represent 2.2% of resolved cases (0.4% and 1.8% respectively);
Due to the use of different sources to calculate pending, incoming and resolved cases, and the lack of data reporting explained above, the number of pending cases at the end of the year does not correspond to the result of (pending cases at the beginning of the year + incoming cases) – resolved cases (horizontal consistency).
The stock of non-litigious cases as of 1 January 2023 has been revised compared to the stock as of 31 December 2022 (provided in the previous evaluation cycle).
Civil litigious cases: general litigious cases before ordinary courts, local courts and courts for rural leases, family cases, cases relating to sales, agricultural work accidents, proceedings relating to companies in difficulty (safeguard, receivership and judicial liquidation) before the "tribunal judiciaire" and the commercial court, cases of "juges aux orders", the liberty and detention judge (detention of foreigners and compulsory hospitalization) and the social division of the "tribunal judiciaire", ordinary procedures before the labour tribunal, litigious cases before the commercial court, cases relating to the protection of adults, cases relating to political electoral disputes.

Q091 (2022): Source: Ministry of Justice/SG/SEM/SDSE, General Civil Registry; Council of State.
Following a change in methodology, the "civil (and commercial) litigious cases" now include: general litigation cases before the judicial tribunal, local court and "tribunaux paritaires des beaux ruraux", family matters, sales-related cases, agricultural work accidents cases, proceedings related to companies in difficulty (safeguarding, reorganization and judicial liquidation) before the judicial tribunal and commercial court , judge's orders matters, liberty and detention judge matters (detention of foreigners and involuntary hospitalization), as well as social division proceedings before the judicial tribunal; ordinary procedures before the labor courts; litigious cases before commercial courts; protection of adults' cases as well as political electoral disputes.

Following the 2021 divorce reform in order to avoid any disruption in series continuity, an estimate is used for 2022 (civil litigious and non-litigious cases).

Due to lack of data, the number of pending cases at the beginning and the end of 2022 related to political electoral disputes is not included in the number of pending civil litigious cases. These represent 0.6% of the resolved case-load in 2022. The same applies to attempts at conciliation. These represent 0.6%of completed case load in 2022. Due to the lack of data, the number of pending "other cases" at the beginning and end of the refernce year do not include applications (excluding the Consumer Code) before the local court and seizures on remuneration. In 2022, these cases accounted for 8.3% of resolved cases (1.7% and 6.6% respectively). The lack of data on pending cases for the enumerated case types explains the lack of horizontal consistency in the table.

Q091 (2021): Source SDSE
Source Council of State

Q091 (2020): Comments on volumes.
Completed cases are down more than new cases, both civil/2019 and felonies/2018 (contravention are surprisingly up / 2018).
The health crisis and containment may have played on TAs (completed cases) (reducing the ability of courts to process cases) but also on NAs (new cases) (fewer misdemeanors committed, fewer cases brought to court). Prior to this, a major lawyers' strike and a transport strike had mainly affected the TAs.
Commentary provided by the highest adminsitrative Court concerning the administrative order: the measures derogating from the ordinary law of contentious administrative procedure adopted to respond to the situation arising from the health crisis caused by the Covid-19 epidemic were provided for by order no. 2020-305 of March 25, 2020, then by order no. 2020-1402 of November 18, 2020, and decree no. 2020-1406 of the same day. I - Concerning the rules relating to the organization or holding of hearings 1°) Use of audiovisual or any other means of electronic communication
The two orders of March 25 and November 18, 2020 provided for the possibility of using an audiovisual means of telecommunication for the holding of hearings or any other means of electronic communication.
When this device was used, it was used, in almost all the jurisdictions that had recourse to it, for less than 10% of the cases judged in collegiality during the same period.
The most common configuration used was that in which one or more members of the panel were at a distance and the president, the other members of the panel, and the parties and their counsel were in the courtroom (approximately 75% of the courts that used videoconferencing chose this configuration and 53% of them used it for less than 10% of the cases tried by the panel). Very few courts have used video-conferencing with remote parties. The reasons for which the courts have used video-conferencing are linked to the constraints linked to the health crisis, in particular the difficulties encountered by lawyers to travel, especially in overseas territories, and the isolation imposed on certain people (judges or lawyers) declared to be in contact or recognized as fragile.
As regards single judges, the courts have made a very measured application of the provisions allowing the use of an audiovisual means of telecommunication, since only 6 administrative courts out of 35 have indicated that they have used it.
The administrative courts indicated that they had used videoconferencing, as a single judge, for the processing of emergency proceedings in matters concerning foreigners, particularly in cases where the foreigner was in administrative detention. Finally, 15 administrative courts indicated that they held summary proceedings by videoconference. For almost all of these courts, the summary proceedings judge was in the courtroom and the parties were at a distance, and less than 10% of summary proceedings cases were judged in this configuration.
Travel difficulties were the main reasons why the courts of first instance held summary proceedings by videoconference. The texts applicable during the state of health emergency allowed the use of any means of electronic communication, other than videoconferencing, in case of impossibility to use it. Only a few TAs used this procedure and for less than 10% of the cases in the courts that used it.
Generally speaking, the courts have made a very measured application of the provisions of the orders allowing hearings to be held by videoconference and this use was justified by the constraints and difficulties linked to the hea

lth crisis. 2°) The provisions allowing to limit the number of persons attending the hearing were applied by a large number of courts and in a frequent manner. On the other hand, the provisions allowing the president of the court to decide that the hearing will be held without the presence of the public have been used very little. 3°) The dispensation of the public rapporteur's conclusions has been used very little by the courts. This dispensation was applied because of the vulnerable state of the public rapporteur or to limit the length of the hearings (in these cases the dispensation was granted for cases that did not present any difficulty).
4°) The orders of March and November 2020 allowed the interim relief judge to rule without a hearing, in addition to the cases provided for in article L. 522-3 of the Code of Administrative Justice.
Many courts have indicated that they have dispensed with a hearing. The dispensation of a hearing was most frequently applied in the case of summary proceedings for suspension. In the case of interim relief, this dispensation was applied in a more measured way.
Finally, summary proceedings other than suspension and liberty have been exempted from a hearing in many jurisdictions.
5°) The possibility for the administrative courts of appeal to rule by order without a hearing on applications for a stay of execution was little applied, since only 3 CAA indicated that they had applied it.
6°) In matters of DALO-Injunction, the possibility of ruling by order was used by 12 courts and, for almost all of these courts, for more than 60% of the cases judged during the same period.
II - The courts made very little use of the derogation provisions relating to the composition of the trial panels. In fact, no court made use of the possibility of completing a panel of judges with the participation of an honorary magistrate from another court. Only one administrative court requested the participation of a judge from another court (one judge came to assist for a period of three months).
III - The provisions allowing heads of court to appoint advisers to rule by order under the conditions set out in article R. 222-13 of the CJA were hardly used: only two administrative courts applied them. One head of court had appointed one or more advisers but no order was made by this magistrate or these magistrates. Another head of court indicated that the designated magistrate(s) signed more than 200 orders. In total, it appears that the measures provided for have been used very differently depending on the measure taken into account.
Video hearings and the new rules for summary proceedings have opened up possibilities, with provisions that can be seen as having been the medium for experimentation. "

Q091 (2019): Administrative law cases pending for more than 2 years: in contrast with previous cycle, 2019 data are expressed in net figures, excluding serial cases presenting the same legal issue for trial.

Q091 (2018): With regard to the reduction of the number of non-contentious cases, this corresponds both to the impossibility of including data relating to adults under protection in 2018, due to a technical problem, and to the abolition of the approval of over-indebtedness plans by the judge of the Court of First Instance, the proceedings before which are processed by the Over-indebtedness Commission, as from 1 January 2018. Act No. 2016-1547 of 18 November 2016 on the modernization of 21st century justice, known as the "Justice 21 Act" and the Act of 9 December 2016, abolished judicial approval of the measures recommended by the over-indebtedness commission. As a reminder, divorces by mutual consent no longer fall within the competence of the family court.

Q091 (2016): The important increase in the number of pending non-litigious cases is due to the increased number of requests for ending unions - 60% (especially in 2016) and the increased number of pending cases before execution judges within the TGI in respect of a third party (without significant increase in the number of incoming cases, but a regular increase, namely for the last two years in the number of cases under consideration).

Q091 (2014): In civil litigation, cases relating to the activity of the liberty and custody judge amount to 98 300 cases in 2014 and have increased by 6.8% compared to 2013. These cases have significantly increased in 2012 (+ 65.5%), due to the law No. 2011-803 of July 2011 on the rights and protection of persons under psychiatric care. The reform systematised the control of psychiatric hospitalisations without the consent of the liberty and custody judge.

Germany

Q091 (General Comment): General information on the statistics used as sources for answering the questions in this section:
Once per year, the Federal Statistical Office compiles and publishes the statistics of the civil, criminal, administrative, finance, social, family and labour courts. Nationwide uniform ordinances define the scope and rules of data collection for these statistics. The courts collect the data and submit it to the statistical offices of the federal states, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the ordinances provide two different kinds of data collection sheets: The "procedural surveys" that collect data on the specifics of the proceedings happening at a court and the "monthly surveys" that track the caseload of a court. With regard to the caseload count, the monthly surveys distinguish between "caseload of proceedings covered by the procedural surveys" and "other caseload". For the cases from the first category (proceedings covered by the procedural surveys), the monthly surveys collect the number of cases pending at the beginning and at the end of a month as well as the number of received and resolved cases. For the "other caseload", the monthly surveys only count the number of received cases.
2.1 General civil (and commercial) non-litigious cases: The figure represents the number of non-litigious enforcement cases. In the monthly survey for the statistics of the civil courts, these cases fall into the category of "other caseload". This is the reason why only the number of incoming cases is available.
2.2.1. Non litigious land registry cases: The figure represents the number of incoming requests with regard to entries, change of entries or deletion of entries in the land registry. This data is not part of the statistics of the civil courts but was taken from the statistics on the workload of the Local Courts in matters of non-contentious jurisdiction (according to the Act on Proceedings in Family Matters and in Matters of Non-contentious Jurisdiction - FamFG). The number of pending and resolved land registry cases is not collected within the framework of this statistic.
Pending cases older than 2 years from the date the case came to the first instance court:
With regard to the statistics of the civil, criminal, administrative, finance, social, family and labour courts, a statistical record of the day a case came to the court only exists for the cases covered by the procedural surveys. Courts submit the data from the procedural surveys to the statistical offices after the case has been concluded for the respective court and at the respective instance. This means that the duration of a proceeding is unknown for pending cases. The monthly surveys count the number of pending cases at the beginning and at the end of a month, but do not collect any information on the date the pending cases came to the court. The statistics compiled by the Federal Statistical Office include information on the percentage of cases that were resolved within certain time frames but no numbers on how many proceedings took longer than two years. The statistic on the workload of the Local Courts in matters of non-contentious jurisdiction does not collect any data regarding the date a case first came to court.
Horizontal inconsistencies in the table:
The inconsistencies with regard to the pending cases at the end of the year also occur in the statistics published by the Federal Statistical Office. The reason for this is, that courts submit count corrections for the monthly surveys at the end of the year.

Q091 (2024): "Non-litigious civil cases" represent non-litigious enforcement cases.
"Non-litigious business registry cases" represent - the number of registrations in the business registry (Handelsregister) at the end of the previous year
- the number of new registrations during the reference year
- the number of deleted registrations during the reference year
- the number of registrations at the end of the reference year
"Administrative law cases" include cases at the administrative, social and finance courts
"Other cases" include family cases at the local courts and cases at the labour courts (family matters are not assigned to the category civil cases, because they are subject to a different procedural law).
Horizontal inconsistencies in the table:
The inconsistencies with regard to the pending cases at the end of the year also occur in the statistics published by the Federal Statistical Office. The reason for this is, that courts submit count corrections for the monthly surveys at the end of the year.

Q091 (2023): "Non-litigious civil cases" represent non-litigious enforcement cases.
"Non-litigious business registry cases" represent - the number of registrations in the business registry (Handelsregister) at the end of the previous year
- the number of new registrations during the reference year
- the number of deleted registrations during the reference year
- the number of registrations at the end of the reference year
"Administrative law cases" include cases at the administrative, social and finance courts
"Other cases" include family cases at the local courts and cases at the labour courts (family matters are not assigned to the category civil cases, because they are subject to a different procedural law).
Land registry and business registry cases: One federal state could not yet submit numbers for 2023. The federal state's 2022 data was used to calculate the total.

Q091 (2022): "Non-litigous civil cases" represent non-litigous enforcement cases.
"Non-litigious business registry cases" represent - the number of registrations in the business registry (Handelsregister) at the end of the previous year
- the number of new registrations during the reference year
- the number of deleted registrations during the reference year
- the number of registrations at the end of the reference year
"Administrative law cases" include cases at the administrative, social and finance courts
"Other cases" include family cases at the local courts and cases at the labour courts (family matters are not assigned to the category civil cases, because they are subject to a different procedural law). Discrepancies in comparison with the 2020 cycle:
There has been a general decrease in incoming and resolved litigous civil cases als well as non-litigous civil cases (enforcement cases). No specific reason could be identified for this development.
Regarding pending "other cases", additional data on pending guardianship cases at the family courts has become available. Until 2021, only the number of incoming and resolved guardianship cases was available. These figures were included in the total of incoming and resolved "other cases" in previous years. The number of pending cases at 1 Jan. and 31 Dec did not include guardianship cases, because their their number was unknown. This year for the first time, pending guardianship cases were inculded in other cases pending on 1. Jan and 31. Dec. They amount to 118 751 pending cases on 1 Jan and 128 580 pending cases on 31 Dec.

Q091 (2021): 2.2.2: data represents - the number of registrations in the business registry (Handelsregister) at the end of the previous year
- the number of new registrations during the reference year
- the number of deleted registrations during the reference year
- the number of registrations at the end of the reference year
"other cases" include: family and labour law cases

Q091 (2020): There is no special reason explaining the slight decrease in the number of incoming administrative law cases.

Q091 (2019): The horizontal consistency in the table is not ensured because the data are continuously checked.

Q091 (2018): The high number of administrative pending cases on January 1st and December 31st is a result from the numerous unresolved cases in 2017 due to the rise of asylum seekers since 2015.
Cases of guardianship law in 2018 are not included in the "other cases " category, because changeover of data collections by the Lander.

Q091 (2017): Source: Federal Statistical Office (DESTATIS)
No. 4 - Other cases: Cases of guardianship law in 2017 are not included, because changeover of data collections by the Länder.

Q091 (2016): Source: Federal Statistical Office (DESTATIS)

Q091 (2015): For civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office for 2015. As for the category “other”, it refers to the most recent available data at the closing date of the CEPEJ data collection and encompasses information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. However, some of the Länder were unable to provide complete data regarding this category. Accordingly, the information for this category remains incomplete. The category "other" refers to: local court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

Q091 (2014): For civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office for 2014. As for the category “other”, it refers to the most recent available data at the closing date of the CEPEJ data collection and encompasses information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. However, some of the Länder were unable to provide complete data regarding this category. Accordingly, the information for this category is incomplete and is not comparable. The category "other" includes: local court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

Greece

Q091 (2024): Independent Department of Collection and Processing of Judicial Statistical Data (JustStat).
pending cases at the beginning of the period show a significant increase compared to 2023. This is due to the implementation of Law 5108/2024 on the consolidation of first instance jurisdiction. According to the aforementioned law, as of September 16, 2024, the Magistrates' Courts were abolished, but their caseload (incoming and pending cases) was transferred to the respective Courts of First Instance with which the former Magistrates' Courts were merged. As an example, we mention the case of the Athens Court of First Instance, the largest court in Greece in terms of case load, where in the third quarter of 2024, before the Law 5108/2024 was implemented, 18,956 civil law cases were filed, while in the fourth quarter of 2024, when the aforementioned law was implemented, the number of cases filed rose to 36,278 (a percentage change of 91%).

Q091 (2023): Other cases:This increase compared to 2022 is obviously due to the normalisation of the functioning of the courts following the lifting of the restrictive measures imposed due to Covid19, which restricted the functioning of the civil courts in particular.
"Civil litigious cases pending for more than two years": During the Covid-19 pandemic period, which was declared by the WHO on 11/03/2020, the prevention and management measures for the virus were implemented in Greece on 11 March. These measures also affected the functioning of the courts and civil courts, as most cases, especially civil cases, were suspended. The measures were fully implemented on 15 March 2022, when the functioning of the courts gradually started to normalise. During this period, judicial officers were given the opportunity and time to process cases that had been backlogged during the previous period. This resulted in a reduction in the number of pending cases in civil and criminal courts, which is reflected in the statistics for the year 2023.

Q091 (2022): The data has been provided by the office for the collection and processing of judicial statistics.
It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data, such as the training of staff and the creation of an instructional manual guide with definitions and instructions. These measures were intended to help collecting more reliable data from both small and large courts and prosecution services and eliminate the standard errors in judicial statistics. As our methodology is developing, discrepancies in data can be observed. Besides, as regards “Other cases”, it should be mentioned that some types of cases that were previously included in this category, are now distributed in the other case-categories in the table.

Q091 (2021): The data has been collected from the 63/63 First Instance courts of Greece.

Q091 (2020): The courts from March 2020 due to Covid 2019 operated under special conditions and dealt with priority mainly criminal cases, this is the reason for the differentiation of pending cases of civil and administrative nature.
Civil cases are answered NA, because not all courts could provide the data.

Q091 (2019): The Council of State did not provide the Ministry of Justice with data regarding the Administrative law cases

Q091 (2018): -

Q091 (2017): The divergence between 31.12.2016 and 1.1.2017 regarding the Civil and Commercial cases (First column of this year's data) is mainly due to the recent operation of the NEW system (integrated Civil and Criminal Court case management system -OSDDY PP) in the Court of First Instance of Pireaus (1587 more cases on 1.1.2017 than those on 31.12.2016). In 2017, the number of “incoming” and “resolved” civil and commercial litigious cases at first instance courts increased due to the fact that in 2017 the function of the courts was not affected by the strike of lawyers, which took place in 2016. The horizontal consistency of the table is not ensured with regard to civil and commercial litigious cases because in 2017 some of the courts which do not yet have an automated system had to make minor adjustments in the statistical data provided to the MoJ. Concerning administrative law cases, any deviations from the 2016 figures, regarding the number of cases on 31.12.2016 and of 1.1.2017 (240650) are due to a number of factors that the General Commission of the State is trying to track down and gradually eliminate. A slight deviation has been noticed for the 2017 data of the administrative first instance courts of Athens and Piraeus, which is due to the data migration to a new information technology (IT) system called "Integrated Court Management System for the Administrative Justice (OSDDY-DD)". This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY-DD, is expected to lapse gradually within the next years. Furthermore, deviations have also emerged from the new way of collecting statistical data that the central Organizational Committee is trying to establish in order to ensure the uniform input of data by each court and from recent verifications of relevant numerical data that were subsequently sent by the courts. Finally, discrepancies are also due to errors of the information system itself, for which an effort is being made to identify and inform about, the contractor of the system. The deviation regarding the Number of resolved cases of 2017 from 2016 is due to the fact that in 2017 the function of the courts was not affected by the strike of the lawyers, which took place in 2016. Regarding the new integrated court management system, for administrative cases it has been implemented at all court levels since autumn 2016 and for civil and commercial cases and more especially in the Court of First Instance of Piraeus, the integrated court management system was gradually implemented from March 2016 resulting to an accurate calculation of pending cases of 1/1/2017.

Q091 (2016): Any deviations from the 2015 figures are due to a new way of collecting statistics. In fact, in 2016, a working group was set up to update and simplify the content of the statistical data requested by the judicial services of the country. The working group created tables followed by detailed instructions and training in relation to the requested information. According to the instructions given to the courts, some procedures they handle, in those which there is no participation of a judge, are not included in the data collected. In addition, in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction in the number of cases (especially civil and commercial litigious cases).
The number 79.872 of resolved administrative law cases does not include joint cases, i.e. decisions that refer to more than one case. Furthermore, for the 2016 data of the administrative First Instance Courts of Athens and Piraeus a slight deviation has been noted which is due to the data migration to a new information technology (IT) system called “Integrated Court Management System for Administrative Justice (OSDDY-DD)”. This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY – DD is expected to lapse gradually within the next years.
As concerns the category "civil and commercial litigious cases" - incoming and resolved - in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of numbers regarding the cases.

Q091 (2014): The significant increase in the number of pending cases on 1 January for the total of “other than criminal law cases” is due to lawyers’ abstention in the years 2013 and 2014.

Hungary

Q091 (2024): Discrepancy explanation:
2.2. The reason for the change is the modification of the data specified in point 2.2.2.
2.2.2. The number of cases that remained pending at the beginning of the year was summarized, amounting to 20,159 cases in 2024 and 26,634 cases in 2023.
3. The percentage difference can be explained by the low numerical value based on the data compared to the previous year. (57 cases)
4. Labour cases as well as insolvency cases were consolidated. The number of pending cases at the beginning of the year was 46.83% higher in 2024 (26,813 cases) compared to the previous year (18,261 cases).

Q091 (2023): Discrepancy explanation regarding point "4. Other cases":
Due to emergency measures in 2020/2021, certain involuntary cancellation procedures were suspended by law, leading to a decline in their numbers. With the resumption of these procedures in 2022 – since they were mostly continued as insolvency cases - the number of incoming procedures has significantly increased.

Q091 (2021): The number of incoming cases decreased in general and the situation was the same for administrative cases. As the number of incoming cases decreased and the courts were able to finish more cases than the number of the "new" cases, the backlog was reduced.

Q091 (2020): The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31th of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. Regarding administrative cases the re-organization of administrative jurisdiction also could have an effect on the case-flow.

Q091 (2018): One of the reasons of the decreasing number of incoming cases is the new civil procedural code coming into force on the 1st of January 2018. This resulted that many of those parties (especially those who were represented by lawyer) who had the chance to do so, filed their petition before the end of 2017 under the scope of the old and well-known procedural code. Regarding the discrepancy between 2017 and 2018 in the number of registry cases, it is due to the fact that for the first time in 2018, the number of non-litigious business registry cases is available.

Q091 (2017): Regarding the categories “2.1 general civil (and commercial) non-litigious cases”, and "4. other cases" the number of pending cases on 1st of January differ from the closing number of the previous year because of data collection problems at certain regional courts.
In the category "registry cases" the higher number of incoming and resolved cases in 2016 was the result of a large number of involuntary dissolution cases. As the courts finished these cases and backlog cases from previous years the number of resolved cases in 2016 was higher than incoming cases in contrast with 2017.

Q091 (2016): In category "4. other cases" there is a difference between the number of pending cases on 31 December 2015 and the number of pending cases on 1 January 2016. The cause of this difference is the change of the IT system and the cleansing of the database.
2.1 General civil and commercial non-litigious cases: there was a change in the statistical methodology at the largest regional court that caused a difference in the figures pertaining to pending cases on 1 January 2016.
2.2.3. “other registry cases” include registration of civil societies.
The increase in the number of general civil (commercial) non litigious cases pending on 1 January 2016 is due to the change in the statistical methodology at the largest regional court that caused a difference in the figures.
The number of incoming “other registry cases” increased between 2014 and 2016 because of the increasing number of registry cases of civil societies. Accordingly, the number of resolved “other registry cases” increased also for the same period. With regard to the category “other non-litigious cases”, the increased numbers characterizing the period 2014-2016 are the consequence of the increasing number of court mediation cases and non-litigious labour cases.

Q091 (2015): There is a difference between the number of pending cases on 31 December 2014 and the number of pending cases on 1 January 2015. The cause of this difference is the change of the calculation method at some regional courts.

The category “civil and commercial non-litigious cases” includes all cases that are not concluded through the rules of the civil procedure, but through a more or less simplified procedure. Thus, there is a very wide range of related categories set forth by the Civil Procedure Code or other acts. For example, a reference was made to: exclusion of a judge; preliminary verification; issuance of a restraining order and review of that; declaration of dead; declaration of missing; revision of the medical care of mentally disordered patients, deposit at the court; company registration procedures; registration of associations, foundations etc.

The category “other registry cases” include registration of civil societies.

The category “other non-litigious cases” include court mediation and non-litigious labour cases.

The category "other" include Insolvency cases and labour cases.

Q091 (2014): In 2014, in contrast with the 2013 evaluation, some registration cases as well as non-litigious enforcement cases were also included within the category “civil and commercial non-litigious cases”. The item “other registry cases” includes registration of civil societies. The item “other non-litigious cases” includes court mediation and non-litigious labour cases. Before 2013, non-litigious administrative law cases were counted as “non-litigious civil and commercial cases”. Since 2013, non-litigious and litigious administrative law cases are provided together. The increased number of investigations conducted by administrative authorities (e.g. tax authorities) resulted in an increased number of reviews against these decisions.

Ireland

Q091 (General Comment): Historically, the number of pending civil cases has not been recorded in caseload data, as many cases initiated before the Irish courts either settle out of court or are not proceeded with by the plaintiff/applicant without there being any procedural requirement that the parties inform the court of either a settlement or an intention not to proceed with the case. Civil (and commercial) non-litigious cases include proceedings not resolved inter partes, such as undefended pecuniary claims, deed poll applications, probate (grants of representation), wardship proceedings, registrations of enduring powers of attorney, appointment of care representatives, unopposed personal and corporate insolvency proceedings, liquor licencing applications and marriage notice exemption applications.
Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Q091 (2024): Ireland does not have a separate category for Administrative Law cases. As such, administrative cases are included in the figure for Civil (and Commercial) litigious cases.

Q091 (2023): Ireland does not have a separate category for Administrative Law cases. As such, administrative cases are included in the figure for Civil (and Commercial) litigious cases.

Q091 (2022): The COVID pandemic had an effect on the courts' ability to deal with incoming business in 2020 especially, which explains the discrepancies with number of court cases in 2022.

Q091 (2021): As the Courts Service is not in a position to confirm to increase or decrease, we can note the following: There was a decrease in over 2,500 in personal injuries cases, recovery of debt cases overall decreased by about 1,500 cases and small claims decreased by 40 percent to 2,134, licensing was down 18 percent to 10,764. We can say it is very likely that ongoing covid restrictions contributed to this in licensing.

Q091 (2020): Reduction in non-litigious cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.

Q091 (2017): We are not in a position to offer further comment on the figure for resolved Civil (and commercial) litigious cases.
We are not in a position to offer further comment on variations in the number of incoming and resolved "other" cases.

Q091 (2016): The decrease in the number of incoming and resolved "other cases" observed for the period 2014 - 2016 is due to a sharp reduction on taxations of legal costs since 2014.

Q091 (2015): Category "other" includes: Taxation of bills of costs.

Q091 (2014): A substantial number of cases which have been completed (through settlement or non-pursuit of the case by the plaintiff without notice to the court) are not recorded and counted as completed. Consequently, the clearance rate appearing from the case flow data provided is considered to understate significantly the actual case clearance rate.

Italy

Q091 (General Comment): A different methodology of classification of civil cases is used since 2012. The result is an improved classification and a better split between litigious and non-litigious cases. For 2010, 2012 and 2013, the category of civil and commercial non-litigious cases has an identical content, namely: separation and divorce by mutual consent, interdiction and incapacitation, protective measures for underage, guardianship and trusteeship etc. Since 2014, it subsumes uncontested payment orders, uncontested divorces, technical appraisals, judicial interdiction and incapacitation, hereditament, etc. In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at
https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html
The main goal is a general reduction of the disposition time by 40% in the civil sector by June 2026 (all three instances together). More specifically, the targets for reducing the civil backlog in the First Instance Courts are: - Intermediate disposal target to be achieved by 31.12.2024: 95% reduction of civil cases registered (filed) until 31/12/2016 and still pending as of 31/12/2019 (baseline); - Final disposal target to be achieved by 30.06.2026: 90% reduction of civil proceedings registered (filed) from 01/01/2017 to 31/12/2022 and still pending as of 31/12/2022 (baseline).

Q091 (2022): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at
https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html

Q091 (2020): In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT). The number of pending older than 2 years is not available because figures include the activity of both tribunals and justice of peace offices and for the latter this information is not available.

Q091 (2019): Number of "pending cases older than 2 years" is not available because it refers to first instance causes which also include the activity of Justice of peace offices, for which this information is no available.

Q091 (2018): Administrative cases. – It should be noted that fast-track simplified proceedings are available for dispute resolution in important areas of administrative law, such as public procurement (“rito appalti”). In 2018, the disposition time for such disputes was 237 days in the first instance and 274 days before the Consiglio di Stato (CDS). Furthermore, requests of interim measures are frequent in administrative law cases (about one third of the cases in first instance and half of the cases before the CDS). They provide fast legal protection of the claimant’s rights, often anticipating the final judgment on the merits.

Q091 (2015): Figures at Q.91 (points 1 and 2) have been extracted from a new IT system called “Civil Data warehouse”. This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases.

As far as figures at Q.91 (point 3), please consider that Administrative Justice doesn’t fall under the umbrella of the Ministry of Justice as it is administered by the Council of State (Consiglio di Stato). However, figures at Q.91 (point 3) were not provided by the Council of State, they were rather taken from a public document available online at https://www.giustizia-amministrativa.it/cdsintra/cdsintra/Notiziasingola/index.html?p=NSIGA_3826149
Since the administrative cases (Q.91 point 3) refers to a different administration, it wouldn’t be reasonable to compare these numbers against the number of judges provided at Q.46.

Civil and commercial non-litigious cases include: Uncontested payment orders, uncontested divorces, technical appraisals, judicial interdiction and incapacitation, hereditament, etc.

Q091 (2014): In 2014, figures for the category “administrative law cases” have been submitted for the first time. The administrative justice doesn’t fall under the umbrella of the Ministry of Justice as it is a completely different administration.

Latvia

Q091 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible. In 2022 the increase in the balance of pending cases is related to changes in data collection, more specifically, from 2023 it is possible to determine the number of unfinished cases in non-litigious land registry cases.
In the spring of 2023, the Court Administration made improvements to the statistical data recording system, which prevented the collection of incomplete data related to the reorganization of the courts in previous periods. For these reasons, previously published data may differ and not be comparable.
Within the Court Information System, submissions received in the previous year but registered the next year are considered as incoming cases for the new year. "Non-litigious business registry cases" are not defined in the Civil Code and are not within the competence of courts in the first instance. "Non-litigious land registry cases" is one of the cases which are one of the functions of district (city) courts in accordance with the Land Register Law. Examination of the Land Register matters shall be under the jurisdiction of district (city) courts.
The category "civil and commercial non-litigious cases" encompasses: applications for securing claim prior to initiation of the matter in a court; applications for securing of evidence prior to initiation of the matter in a court; applications for execution of obligations through the court; undisputed compulsory execution of obligations; execution of obligations in accordance with warning procedures; voluntary sale of immovable property at auction through the court; submitting the subject-matter of an obligation for safekeeping in the court; applications for Commercial Court adjudication execution procedures; applications for arbitrary court decision compulsory execution; applications for property protection if there is no inheritance case; applications concerning execution of court adjudications.

Q091 (2024): The inconsistency in the number of cases can be observed both with the merging of cases, and with the separation of individual cases from the overall judicial procedure.
Incoming cases of General civil (and commercial) non-litigious cases, e.g. uncontested payment orders, request for a change of name, non-litigious enforcement cases etc. - In 2024, a significant +31.67% increase was observed in the number cases of uncontested enforcement of obligations and cases of enforcement of Obligations according to warning procedures and cases of voluntary sale of immovable property at auction through the court. This trend was likely influenced by amendments to the Civil Procedure Law adopted on 5 October 2023, which entered into force on 2 November. These amendments enhanced procedural efficiency, clarified the application process, and expanded the scope of the procedure. As a result, the warning procedure became more attractive to creditors, particularly financial institutions and utility service providers. In addition to legal changes, the increase was also driven by economic factors—such as payment delays and inflationary pressures on household budgets—as well as the availability of digital tools that simplified the submission and processing of applications.
Pending cases on 31 Dec. of General civil (and commercial) non-litigious cases, e.g. uncontested payment orders, request for a change of name, non-litigious enforcement cases etc. (if possible without administrative law cases, see category 3; without registry cases and other cases, see categories 2.2 and 2.3) - In 2024, there was a significant increase in the number of pending cases, particularly in the category of "debt enforcement under the warning procedure", where the number of unresolved cases rose by more than 60%. This increase is primarily attributed to two key factors: sharp rise in the number of initiated cases – In 2024, a substantial increase in the volume of cases was observed in this category and decrease in the number of judges specializing in this type of case. This has led to a backlog of cases and a slower pace of proceedings.
Pending cases on 31 Dec. Total - Due to the substantial increase in applications under the warning procedure, which falls under non-litigious civil matters, the courts of first instance experienced a backlog that significantly contributed to the rise in the total volume of pending cases across all civil case categories.
Pending cases older than 2 years from the date the case came to the first instance court - Data indicates that the most significant growth occurred in administrative cases, where the number rose from 10 to 36 cases. A second notable increase in long-pending cases was observed in the group of litigious civil cases. Within this group, the highest number of unresolved cases older than two years was recorded in: insolvency proceedings – 552 cases and claims for debt recovery and damages – 361 cases.

Q091 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. The timely consideration of cases as one of its priorities, also following the guidelines for the consideration of cases approved by the Council of Justice. This has affected the changes in the number of resolved cases and, accordingly, the number of pending cases and pending cases older than 2 years.
The inconsistency in the number of cases can be observed both with the merging of first instance courts both in 2022 and 2023, with the merging of cases, and with the separation of individual cases from the overall judicial procedure.
Every year from 2019, significant increase in the number of received non-litigious civil cases has been observed. Mainly, it is due to the amendments to the Civil procedure law, which entered into forced in the end of 2021, which made it easier to submit applications for enforcement of obligations according to warning procedures, these changes contributed to the increase in the number of non-litigious cases received. Civil Procedure Law determines that the judge shall, within seven days take a decision. The pending cases in the end of the 2022 were high, therefore also the pending cases on 01.01.2023. are higher, but during the year the ratio between received and resolved cases are balanced, because of the short case review period, which contributes that the number of received and completed cases is similar.

Q091 (2022): In 2022 the increase in the balance of pending cases is related to changes in data collection, more specifically, from 2023 it is possible to determine the number of unfinished cases in non-litigious land registry cases.
The number of pending cases on Jan. and on 31.Dec. is higher than 2020 year due high number of pending non-litigious cases. Every year from 2019, significant increase in the number of non-litigious civil cases has been observed. Compared to the 2020, the number of incoming cases and resolved cases increased significantly. The increase of incoming cases and resolved cases of non-litigious civil cases affected increase of pending cases. In the end of 2021, amendments to the Civil Procedure Law entered into force, which made it easier to submit applications for enforcement of obligations according to warning procedures, these changes contributed to the increase in the number of non-litigious cases received. Civil Procedure Law determines that the judge shall, within seven days take a decision The short case review period contributes to that the number of received and completed cases is similar.
The number of pending cases (pending for more then 2 years) has decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending civil and administrative cases.

Q091 (2021): The number of pending cases on January differs from pending cases on December, 2020 registered data due the living Court information system database. The number of pending cases on Jan. is higher than previous year due high number of pending non-litigious cases. See comments from previous campaigns. Every year from 2019, a significant increase in the number of non-litigious civil cases has been observed. Compared to the previous period, the number of cases increases by 25%. According to the Civil Procedure Law, judge should examine application within seven days. The consideration time determined by the law also affects the amount of resolved cases, and accordingly indicates a direct connection with the amount of incoming cases.
Administrative cases: At the end of 2021, the number of cases received, (which were directed against the Covid-19 restrictive measure - mandatory vaccination), increased significantly, and it was not possible to resolve these cases until the end of the year
The number of pending cases (pending for more then 2 years) has decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending civil and administrative cases.

Q091 (2020): The number of resolved and incoming cases of general civil (commercial) non litigious cases are higher because there was significant increase on applications for the undisputed enforcements. Usually, cases on the undisputed enforcement are submitted electronically and solved in written procedure. The increment of such cases are probably closely connected with activities of creditors` intensity.
We cannot find the main reason why pending cases older than 2 years are resolved more than in previous years. Representatives of courts point out the effect of Covid19 restrictions because many old cases were re-classified from oral to written procedure if it was possible and if parties of case agreed to that.

Q091 (2019): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved. The reform of the judiciary could also have affected the backlog of cases pending for more than 2 years, as it is undoubtedly that when transferring a backlog from one court to another, another judge needs extra time to go into the case file. However, the methodology for processing statistical data must also be taken into account, i.e. the functionality of the database, that the period of suspension of proceedings is taken into account during the proceedings and other external economic factors could have affected the number of long-standing civil cases. Taking into account also the peculiarities of litigation in our country, for example, that commercial cases are not separated from civil cases and that one civil case may contain several claims which are considered in one procedure, this generally means that the case takes longer to process.

Q091 (2018): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved.

Q091 (2017): Data updated after court reorganisation in 2018.

Q091 (2016): Data updated after court reorganisation in 2018.

Q091 (2014): Variations concerning administrative law cases over the period 2012-2014 are due to a change in the legislation. Namely, from July2012, appealed administrative decisions of institutions are handed to District courts.

Lithuania

Q091 (2024): In 2024, Lithuanian district, regional (first instance) and regional administrative courts1
received 193,215 cases and examined 191,417
cases were examined (in 2023, 189,922 cases were received and 190,789 cases were examined; in 2022, 193,001 cases were received and 191,729 cases were examined).
In 2024, the number of cases received by Lithuanian district, regional (first instance) and regional administrative courts increased by 1.7% compared to 2023, while the number of cases examined increased by 0.3%.
increased by 1.7%, the number of cases examined increased by 0.3% compared to 2022, and the number of cases received and examined remained almost unchanged.
The number of cases received and examined by the courts was influenced by changes in civil cases – the number of civil cases received increased by 5% compared to 2023.
On the other hand, in 2024, the number of civil cases received and examined by courts regarding the issuance of court permits continued to decline (by 10%) compared to
2023 (2,485 cases in 2024, 2,756 cases in 2023) . This change was caused by the amendments to the Civil Code of the Republic of Lithuania
and related laws that came into force on January 1, 2023, related to the abandonment of functions not typical of courts2
. The amendments transferred some of the functions of district courts
not related to the resolution of legal disputes to notaries (approval of the mutual consent of spouses to divorce and separation
when the spouses have no minor children; court permits for transactions involving real estate that is family property and other court permits) and bailiffs (regarding the renewal of missed deadlines for the submission of enforcement documents for execution).
In 2024, compared to 2023, the number of pending cases increased. At the end of the year, the backlog of unresolved cases in district, regional (first instance) and regional administrative courts amounted to 31,387 cases (29,432 cases in 2023 and 29,266 cases in 2022). In 2024, the backlog of cases
was 7% higher than in 2023 and 2022.
Among the most frequently examined categories of administrative cases, it was noted that in 2024 there was a significant decrease in cases concerning tax legal relations, most of which involved requests for local fees related to municipal waste collection and management, as well as debt recovery. There was also a slight decrease in cases concerning financial support from national, European Union, and foreign institutions, along with environmental protection. By contrast, there was a notable increase in the number of cases concerning the legal status of foreigners and asylum, as well as a growing trend in cases related to construction, the enforcement of penalties, and conditions of detention. Therefore, it can be concluded that the 23% decrease in incoming administrative cases in 2024, together with the 34% decrease in resolved cases within the same category, can be explained by the fact that the decline in cases concerning tax legal relations was significantly greater than the rise in cases related to the legal status of foreigners and asylum, as well as construction matters.
In 2024 contrary to the previous cycles, several subcategories were marked as "NAP" instead of "NA”, because those categories do not exist in the system ("NAP").

Q091 (2023): In 2023, compared to 2022, there was a significant increase in debt cases - compared to 2022, the number of cases in this category in 2023 increased by almost 10 thousand. This could be due to a general increase in the number of debtors. There were also an increasing trend of cases related to the protection of property rights. However, there has been a significant decrease in family law cases, namely - due to divorce by mutual consent of both spouses. This decrease could have been influenced by the fact that due to the aforementioned changes in legal regulation from the 1st January 2023, divorce by mutual consent of both spouses, when the spouses do not have minor children, was referred to notaries for non-judicial decision.
Among the most frequently examined categories of administrative cases, it has been noticed that the number of cases related to tax legal relations increases every year (most of them are cases related to debt recovery requests for local fees for municipal waste collection and management), the number of environmental protection cases is increasing slightly. However, as the flow of illegal migration has decreased, the number of asylum cases has decreased significantly. Also, the downward trend in cases regarding execution of sentences and conditions of detention continues to be seen.
The balance of unexamined administrative cases was influenced by the lack of judges, court staff (judge assistants, secretaries of court hearings), as well as in 2022 there was a significant increase in the number of cases regarding the issuance of a court order (regarding debt recovery requests for the local fee for the collection and management of municipal waste), therefore the usual examination of administrative cases according to the general rules of procedure was disrupted, and the duration of the examination of other cases was extended.

Q091 (2022): 2.1. The duration of court hearings is influenced by the number of new cases received at the court and the number of working judges who hear these cases (judge workload), the type or type of the case and its complexity, the cases specified in the law when the hearing must be postponed (e.g. by a party to the proceedings disease etc.). It should be noted that in 2022, 705 judges worked in Lithuanian courts (of which 2 judges were appointed for 2 years), 786 judge positions, that is, 81 positions were not filled, which could lead to a larger balance of unexamined cases at the end of the year. It is noteworthy that in 2022 compared to 2021, the number of civil cases examined in district and district courts (first instance) increased by 1.7%.
3. A significant change in received and examined administrative cases compared to 2021 was due to an increase in the number of administrative cases due to the issuance of a court order, when waste system administrators, due to the increased number of debtors, go to court with requests for the local fee for the collection and management of municipal waste, debt recovery, as well as there has been a significant increase in asylum cases due to the illegal migration crisis in the country.
For registry cases, the answer should be NA, the NAP was chosen for the calculation purposes: it is not possible to identify those cases among all other general civil cases.
Other cases: In 2022, compared to 2021, the number of cases of administrative offenses examined in district courts decreased significantly - by 65% compared to 2020. – decreased by as much as 76%. These changes were caused by changes to the Code of Administrative Offenses, which entered into force in 2021-07-01 and in which certain cases of administrative offenses were transferred from district courts to be examined by non-judicial institutions.

Q091 (2021): in 2021 July 1 the amendments to the Code of Administrative Misdemeanors entered into force, by which the cases of administrative offenses were transferred to be examined (except for the cases referred to in Article 614, paragraph 1, point 3) from district courts out of court to pre-trial institutions.
in 2021 in the district courts, there was a noticeable decrease in the number of civil cases examined by the first instance due to the bankruptcy of legal entities - 1,212 cases (1,624 in 2020, 2,787 in 2019). Compared to 2019, such cases decreased by more than half. It can be assumed that such a decrease in cases in this category could have been caused by the 2020 initiative adopted by the Council of Judges. The impact of the consequences of the novel coronavirus (COVID-19) on Lithuania entered into force Law no. XIII-2861, which was temporarily (until December 2020 31) the initiation of the insolvency process was suspended. It is noteworthy that out of 1212 civil cases on bankruptcy of legal entities, which examined in 2021, the majority - 860 cases - were received by 2020.

Q091 (2020): "Pending non-litigious cases": general decrease of number of cases and application of administrative means.
The number of resolved civil and commercial litigious cases might have been affected by the pandemic as not all the categories of cases could have been adjudicated remotely. The number of administrative cases, sa well as for civil and commercial litigious cases could have decreased because of the need for some period to adapt IT and video conference equipment in the situation emerged. The increase of number of pending administrative cases older than 2 years is related to decisions of courts in environmental law cases to stay proceedings pending a decision in a related case, which will be a preliminary ruling in another case:legal entities are challenging a decision requiring them to pay a tax on the pollution of packaging waste from which they were exempted because they had concluded a contract for the organization of waste management. As the documents proving the waste management issued by the licensed recycler were canceled, the documents certifying the waste management of other entities were canceled, which obliged the entities (which had a contract with the waste manager to organize packaging waste management) to pay this fee. The cases are suspended and pending a decision in a case challenging a decision declaring waste management documents issued to applicants invalid because it will have a preliminary ruling in these cases.

Q091 (2019): In 2019 there is a downward trend in the backlog of incoming and resolved cases. At the end of the year, the backlog of pending cases at the district, county (I instance) and county administrative courts amounted to 29 898 cases, at the end of 2018 – 33 233 cases; at the end 2017 - 36 419 cases (10 percent less than in 2018 and 18 percent less than in 2017).
In 2019 the number of court order cases has decreased. This decrease may have been caused by the general decrease of debtors' natural persons in 2017–2019. According to the information provided by the credit bureau Creditinfo
data, on 1st January 2020 there were 163 929 debtors (natural persons), on 1st January 2019 -177 055, on 1st January 2018 - 207 000 debtors (natural persons).
In 2018, the number of administrative cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of 2018 (and to the beginning of the reference year 2019).
In 2019, compared to 2018, the number of administrative cases heard in regional administrative courts increased by 14 percent. The change in the increase was due to a 34 percent increase compared to 2018 in the number of applications for a local fee for the collection and treatment of municipal waste. In 2019 a further upward trend in tax cases, enforcement cases and arrest cases, but there has been a significant reduction in civil liability for damage caused by illegal actions by public authorities.
In 2019, as compared to 2018, the number of administrative misconduct cases investigated in district courts increased by 16 percent. The change was due to a 64 percent increase in the number of cases of administrative offenses related to transport and road transport (370-463 Articles of the Code of Administrative Offenses). In 2019 significantly increased the number of cases of driving under the influence of drugs, psychotropic or other psychoactive substances without driving license. The number of cases related to trade, the financial system and statistics has also increased.

Q091 (2018): The decrease in general civil (and commercial) non-litigious cases (2.1.) may have been due to the overall decrease in debtors' natural persons in 2017 and 2018. The latter suggestion is based in data from the credit bureau Creditinfo (1 January, 2019 number of debtors natural persons was 177,055; 1 January - 207,000; 1 January, 2017 - 252 479). Credit Bureau “Creditinfo“ stores information about credit risk for businesses and private entities, forms the credit history and establishes credit ratings.
The decrease in "other non-litigious cases" (2.3.): civil cases in process of enforcement (execution) in all district courts was due to changes in the law that came into effect in 2017 July 1, on the basis of which the bailiff, rather than the court of first instance, is responsible for dealing with the succession in enforcement proceedings.
The decrease in "other cases" (4): administrative offence cases (including cases in process of enforcement (execution) in 2017-2018 period was due to to the entry into force of the Code of Administrative Offenses on 1 January, 2017 which left the handling of a large proportion of administrative misconduct and the imposition of penalties to various public administration entities (out of court). This could also be due to the expanded list of circumstances in which the person is not prosecuted under the Code of Administrative Offenses. The decrease in these cases was also influenced by the Amendments to the Criminal Code (on 1 January, 2017) that criminalized persons who drove a road vehicle or taught practical driving while under the influence of alcohol with more than 1.5 ounces of alcohol. In 2018, compared to 2017, the number of cases of administrative offences investigated in district courts decreased by 15.66%, compared to 2016, a decrease of 75.83%. Concerning administrative cases (3): in 2018, the number of cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of the reference year.

Q091 (2017): Other non-litigious cases: civil cases in process of enforcement (execution).
Concerning the category “non-litigious cases” the number of pending cases on 1 January 2017 increased considerably compared to their number on 1 January 2016. The same increase characterises the categories “general civil and commercial non litigious cases” and “other non- litigious cases” (pending cases at the beginning of 2017). However, we can observe that at the end of 2017 the number of pending cases decreased concerning the category “non-litigious cases” and the sub-category “other non-litigious cases”. Only with regard to “civil and commercial non-litigious cases” the number of pending cases at the end of 2017 increased. We can see that these variations are the result of variations in the number of incoming cases for the period 2015-2017. Besides, as the numbers are small, variations appear important. The main reason for increased pending cases is the increased number of incoming other non-litigious civil cases, i.e. enforcement cases, in 2017. More precisely, in 2017, the number of civil cases in enforcement procedure – requests to change the recoverer, increased. There is no particular reason, besides the fact that some companies were buying the recoverers‘ rights from other natural persons or legal entities.
As regards the category "other cases", it refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution). Following the entry into force of a new Code of Administrative Offence (1 January 2017), the number of incoming cases of administrative offences decreased. The decrease in the number of incoming administrative law cases in 2017 is explained by the increased number of incoming administrative cases in previous years (due to the decisions of the Constitutional Court).
Registry cases cannot be identified among the overall number of general civil cases.
Administrative law cases: courts received less administrative cases; they are fighting backlogs from previous years.

Q091 (2016): Administrative law cases - courts are fighting backlogs. This led to the growth in the number of resolved cases and consequently to the decrease in the number of pending cases 31 December 2016.
Other non-litigious cases: civil cases in process of enforcement (execution). The increased number of these incoming cases also results in the increase of number of incoming non-litigious cases. The number of increased incoming other non-litigious cases (enforcement) may be due to the number of the resolved civil cases in 2015 (the number of pending cases on 1 January 2016 decreased). As regards registry cases: the answer should be NA, the NAP was chosen for the calculation purposes: it is not possible to identify those cases among all other general civil cases.

Q091 (2015): Civil and commercial non-litigious cases include court orders

Category "other" includes: Cases of administrative offences and cases of administrative offences in process of enforcement (execution).

Q091 (2014): The number of incoming administrative cases increased which affected the total. They were mostly cases on remuneration of public servants due to the decision of the Constitutional Court declaring the laws on the reduction of the remuneration of State servants and judges unconstitutional. For the same reason, the number of cases of administrative offence (in execution process) increased, which affected the category "other". As to the significant decrease in the number of general civil (and commercial) non-litigious cases (pending 31 Dec) in 2014, civil cases on deliver of judicial orders are resolved quickly and such residues are normal.

Luxembourg

Q091 (General Comment): To date, it is not possible to provide information on pending cases older than 2 years.

Q091 (2024): 1. Pending cases ‘other than criminal’: the 21.56% increase in the total number of pending cases ‘other than criminal’ at the end of the reference year is explained by the rise in pending administrative cases. This increase can be detailed as follows: the 51% rise in pending cases is due to the increase in incoming cases. In 2024, a series of litigation led to the opening of 641 cases at the administrative court. These cases, not yet resolved, are counted as pending at the end of 2024.
2. Number of incoming/resolved general non-litigious civil (and commercial) cases: this figure corresponds to European payment orders and payment ordinances issued by the two district courts. The increase in these cases observed between 2022 and 2023 continued in 2024 and can be explained on one hand by the natural fluctuation of these figures, and on the other hand, we assume the increase is related to the economic development of various sectors (notably construction). However, no detailed analysis has been conducted on this matter.
3.Administrative cases:
- The 64% increase in incoming cases in 2024 is explained by the filing of a series of litigation, which led to the immediate opening of 641 cases at the administrative court.
- The 51% increase in pending cases is explained by the rise in incoming cases. In 2024, a series of litigation led to the opening of 641 cases at the administrative court. These cases, not yet resolved, are counted as pending at the end of 2024.

Q091 (2023): The number of incoming/resolved non-contentious general civil (and commercial) cases corresponds to European payment orders and payment orders issued by the two district courts. The increase observed between 2022 and 2023 in these cases can be explained on the one hand, by the natural fluctuation of these figures, while on the other hand, we assume that the increase is linked to the economic development of various sectors (particularly construction). However, no detailed analysis has been carried out on this subject.

Q091 (2022): The decrease in the number of non-litigious cases brought before the courts can be attributed to a legislative change in 2021, which raised the jurisdictional threshold from €10,000 to €15,000 in favour of the justices of the peace (https://legilux.public.lu/eli/etat/leg/loi/2021/07/15/a541/jo). This change has resulted in a reduction in both new cases filed and cases concluded by the courts, as certain matters that would have traditionally been brought before the courts are now within the competence of justices of the peace since 2021.

Q091 (2021): The comment provided for 2020 data remains relevant in respect of cases pending at the end of 2020. It should be recalled that since the law of 27 July 2018 establishing the Judge for family law litigation (JAF), which came into force on 1.11. 2018, cases under the jurisdiction of the JAF are included in the category "civil litigious cases". These are cases previously dealt with by the civil chambers, but also cases dealt with by the youth and guardianship court (e.g., cases relating to parental responsibility with regard to a natural child or a child whose parents are divorced) or at the level of the justice of the peace (maintenance cases). Moreover, it can be observed that the number of incoming cases in these matters has increased since they are within the JAF competence. This is explained by the simplification of the access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter; by the emergence of cases on the basis of new legal provisions (e.g., application by the minor); and by all the litigation generated by the new legal provision establishing the institution of generalized joint parental authority. Moreover, since proceedings before the JAF take much less time than before the reform introducing the JAF, motions to modify decisions taken are filed more quickly and thus increase the volume of cases.

Q091 (2020): "The law of July 27, 2018 establishing the family court judge (JAF) went into effect on 1.11. 2018. The cases currently under the jurisdiction of the JAF were included for the first time in the category "contentious civil cases" for the year 2020 which explains the observed increases in the number of new, completed and pending cases compared to the previous data. These are cases previously handled by the civil chambers, but also cases handled by the juvenile and guardianship court (e.g., parental responsibility cases involving a natural child or a child whose parents are divorced) or at the justice of the peace level (alimony cases). In addition, there has been an increase in the number of new cases in these areas since they were handled by the Family Court. This fact can be explained by the simplification of access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter, by the emergence of cases based on new legal provisions (e.g. request emanating from the minor) and by all the litigation generated by the new legal provision of the institution of a generalized joint parental authority? Moreover, since proceedings before the JAF take much less time than proceedings before the introduction of the JAF law, motions to modify decisions are filed more quickly and thus increase the volume of cases.
Including JAF cases, for 2019, new cases would be 7,626 (up from 5,038) while completed cases were 6,714 (up from 5,098). Including JAF cases, for 2018, 91.1 new cases would be 5,248 (up from 4,807) while completed cases were 4,905(up from 4,857).
Regarding pending cases in 2018, at the end of the years JAF cases constituted a plus of 453, which corresponds to 1,649 pending cases at the end of the 2018 period in item 91.1. instead of the 1,256 cases informed. Taking into account horizontal consistency, the changes in new and completed cases discussed above, imply that at the end of the 2019 period, pending cases (91.1) totaled 2,561 (instead of 1,196).
The figures for previous years remain unchanged.
""Other non-contentious cases"" pending at year-end: Due to containment during the COVID-19 pandemic the number of public hearings was reduced to a minimum, allowing courts to prioritize work on cases not requiring such hearings. In addition, special crisis legislation allowed cases to be taken under advisement without a public hearing, with the agreement of the parties.
"

Q091 (2018): The pending cases at the date of 31/12/2017 had to be adapted, since there were 27 cases of vacation court, which were no longer pending at the end of the year. These 27 cases were withdrawn from the 1,341 pending cases indicated in the Scoreboard 2017 to reach 1,314 other pending non-litigious cases on 01/01/2018.

Q091 (2016): For question 91.1 the new data collection system revealed a higher number of pending cases, previously not considered by those in charge of counting.
For question 91.2.2, the new data collection system provides now information on other non-litigious cases, previously unavailable.

Q091 (2015): The figures given (with the exception of those for the administrative court) are those of the two district courts (Luxembourg and Diekirch).

The three justices of the peace totalized 78.273 national as well as 285 European payment orders.

Q091 (2014): The data (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts are not yet available. The three justices of peace ruled 75 411 national payment orders, 260 european payment orders and resolved a total of 6386 cases for a total of 65840 new cases. The implementation of statistics counters for civil and commercial cases resulted in variations. The applied criteria have been refined and give a more accurate image.

Malta

Q091 (General Comment): The vast majority of cases heard before the courts of Malta are litigious cases. Nevertheless, there is the Court of Voluntary Jurisdiction which deals with adoptions, appointment of tutor, curators and other administrators, interdiction and incapacitation and opening of secret wills.
The horizontal inconsistencies are due to the current CMS that still relies heavily on the input of the deputy registrars and clerks working with the judiciary.

Q091 (2024): The non-litigious data have not been submitted this year and hence there is a discrepancy in the total incoming and resolved cases of 'other than criminal' cases.
3. Administrative cases: The increase in the pending cases for more than 2 years reflects the increase in the pending caseload which resulted from a decrease in the overall efficiency of this court.

Q091 (2023): The pending caseload of the General Non-Litigious (Sec 2.1) has increased as a result of a decrease in the resolved caseload.

Q091 (2022): In 2022, there was an overall increase in the caseload of the civil courts when compared to the previous evaluation, primarily because this data reflects the normal caseload following the Covid-19 pandemic. Having said this, during this year there was also one specific 1st instance court that has registered an exponential increase in the incoming caseload as a result of legislative issues. This increase in the incoming caseload was reflected in a modest increase in the resolved caseload, but had a more pronounced effect on the pending caseload.
The data provided for 'pending over 2 years' for the civil and commercial civil cases is missing the aged caseload of the Court of Notarial Acts.

Q091 (2021): As from 2021, the civil litigious category includes the data of the Civil Court (Asset Recovery Section) that was established in 2021. A spike in the incoming caseload of civil litigious cases has resulted in the courts not managing to resolve enough cases in order to retain the previous levels of efficiency, despite a marginal increase in the number of resolved cases.

Q091 (2020): The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

Q091 (2019): Non litigious cases - incoming cases: The data was provided by the case managment system of the Court Services Agency and shows an increase in the incoming caseload of these cases over that of the previous year.
Non litigious cases - pending cases at the end of the reference year: The relative high number of pending cases at the end of the year compared by the previous year is the result of the increase of incoming cases but a retention in the number of resolved cases. As a result, efficiency, as expressed as a higher number of pending cases, has suffered.

Q091 (2018): This evaluation cycle contains for the first time the efficiency data of the First Hall, Commercial Section which is a new court established in April 2018. Furthermore there was a registered increase in the incoming caseload particularly of the Court of Voluntary Jurisdiction and in cases of dissolution of marriage.
The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

Q091 (2017): Apart from the provision of the new non-litigious data captured by sub-section 2.1 above, this year we also introduced the data for another civil, litigious court, namely, the Court of Voluntary Jurisdiction, established by the Civil Courts (Establishment of Sections) Order 2003, in terms of Art 2 of the Code of Organisation and Civil Procedure (Chp 12 of the Laws of Malta). The Court has jurisdiction to deal with, amongst other matters, applications related to adoptions, interdictions and incapacitations, matters related to wills and to trusts, and to specific cases falling under the Foster Care Act (Chp 491 of the laws of Malta).
As concerns pending cases at the beginning of the year, information is not available for the newly provided data, namely data from the Court of Voluntary Jurisdiction and the non-litigious data. These data will be available for the next cycle. Increases observed between 2016 and 2017 in the total of incoming and resolved cases result from the fact that new data has been added (data on non-litigious cases and data from the Court of Voluntary Jurisdiction).

Q091 (2016): Horizontal consistency: This is a problem encountered also in previous evaluations. Unfortunately this inconsistency results from the way that the data is logged, and it is practically impossible to resolve it at present. Concerning the variations between cycles: In reality, in 2015 the Administrative Review Tribunal worked real hard to reduce the pending caseload and also resolved one set of interrelated cases that translated in the conclusion of about 150 separate cases. So 2015 was a very good year in which the efficiency parameters of the Tribunal spiked. In 2016, the rhythm by which cases were being resolved went back to 2014 figures, hence the apparent decrease in the number of resolved cases between 2015 and 2016. The reduction in the pending caseload is also the result of the additional 150 odd cases that were resolved in 2015 and that dramatically reduced the pending caseload for good, even if the resolved caseload of 2016 was less than that of 2015. Concerning Administrative cases: These figures reflect the pending balance at the beginning of 2016. Throughout 2015, the Tribunal resolved one batch of related cases that resulted in a drop in the number of pending cases and a spike in the number of resolved cases.

Q091 (2014): The category “civil litigious cases” covers family mediation cases and cases before the Court of revision of notarial acts and the Small Claims Tribunal. In 2014, another magistrate started presiding over the Administrative Review Tribunal thereby increasing the judicial complement by 2 members. This change resulted in an increase in the number of resolved cases. Following an internal exercise carried out by the Court Administration, cases that have been prescribed, have been cleaned from the system.

Netherlands

Q091 (General Comment): In the Netherlands, some registers are kept by the judiciary. Those do not include a land- or business registry, see www.rechtspraak.nl/registers. Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situations. Also, there is a register with ‘nevenfuncties’ (jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. The Dutch system does not count mutations in the registers as court cases, so ‘other registry cases’ is NAP.
Regarding the unavailability of the number of pending cases at the beginning of the year, since the Netherlands do not officially measure it, it is not provided.

Q091 (2023): Incoming administrative law cases increased significantly in 2023, compared to the year before. Not only 'regular' administrative law cases increased, but cases regarding foreigners/asylumseekers, and tax cases as well. See also chapter 6.1 of the Annual Report of the Council for the Judiciary:
https://www.rechtspraak.nl/SiteCollectionDocuments/Jaarverslag%20Rechtspraak%202023.pdf

Q091 (2022): In previous years, we were able to produce the number of incoming and pending cases for categories 1, 2, and 2.1, but not this year. The Judiciary has decided on a different norm for one of the components needed for this number, so these numbers are no longer available as of 2022.

Q091 (2021): In previous years, we were able to produce the number of incoming and pending cases for categories 1, 2 and 2.1, but not this year. The Judiciary has decided on a different norm for one of the components needed for this number, so these numbers are no longer available.

Q091 (2020): Administrative law cases include tax cases and immigration / asylum cases.
First instance cases at Council of State, Court of Appeal, including trade tribunal, are excluded.
In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- or business registry, see www.rechtspraak.nl/registers. Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called ‘nevenfuncties’ (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category ‘other registry cases’ the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

Q091 (2019): In The Netherlands, there are some registers which are kept by the judiciary. These do not include a land- or business registry (see www.rechtspraak.nl/registers). Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called 'nevenfuncties' (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category 'other registry cases', the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

Q091 (2018): In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- of business registry. See: https://www.rechtspraak.nl/Registers
Most registers are related to debt, bankruptcy and help or surveillance of people that are unable to handle their financial situation. There is also a register of ‘nevenfuncties’, which lists all the jobs/positions that judges fulfill next to being a judge. Mutations in these registers are not counted as court cases. For the category "other registry cases", since the Dutch system does not count mutations in the registers as court cases, the answer is NAP.

Q091 (2017): None

Q091 (2016): Number of administrative law cases litigious plus non-litigious.
In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detainment) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detainment cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Poland

Q091 (General Comment): The attention should be drawn on the fact that it is not excluded to notice horizontal inconsistencies due to omissions or mistakes in statistical information generated by courts as well as to structural changes within the court system. As for the category “civil (and commercial) litigious cases”, it includes as well litigious family and labour (employment) cases. Besides, it encompasses also some types of cases decided under chapter II of the Civil Proceedings Code that concern non-litigious cases (such as distribution of inherited assets, separation of common property, demarcation of the real estate) which nature in fact is litigious because of the opposite interests of the parties and contradictory ways of presenting their arguments.

Q091 (2022): * Administrative law cases - In 2022, the number of incoming administrative cases decreased compared to the previous year. The number of incoming complaints about the inaction of public administration bodies and the protracted conduct of proceedings by these bodies also decreased. The decrease in the receipt of such complaints in 2022 was 30.2% compared to 2021. This may be indicative of the catching up of public administration activities caused by the COVID-19 pandemic. Data for the next years will show whether the downward trend will continue.

Q091 (2021): * administrative law cases - It is difficult to identify, apart from the COVID-19 pandemic, any particular reason for the increase in the number of cases brought before provincial administrative courts. A particularly large increase in the number of cases submitted to administrative courts concerned complaints about the inaction of public administration bodies and the protracted conduct of proceedings by these bodies. The increase in the receipt of such complaints in 2021 was 73.2 % compared to 2020. This may also be indicative of some backlog in public administration due to the numerous pandemic restrictions in 2020.

Q091 (2020): Comments: The discrepancies in Table 91. First instance courts: number of other than criminal law cases - compared to the previous periods (2018 and 2019) are mainly due to combinations of two reasons. First - the COVID19 pandemic, which significantly reduced case inflow to the courts (in some type of cases even by several dozen of percent), reduced the number of resolved cases and pendig cases as well. The second factor, which in contrary - caused increase in the volume of cases registered in court system was the inflow of cases related with conversion of the right of perpetual use of built-up land for residential purposes into land ownership (2.2.1 - Non litigious land registry cases). In 2020, there were more than a million incoming cases of this type (in 2019 – more than 2,5 million), which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period. Administrative law cases: the main reason for the slight slowdown in casework was the pandemic.

Q091 (2019): The discrepancies in section 4.2.2. Case flow management - first instance - compared to the previous period mainly concern the data shown in point 2.2.1 Non-litigious land registry cases.
In explaining the above, it should be emphasized that the general state of cases in courts of first instance in 2019 was related to cases brought to the land registry departments with regard to the conversion of the right of perpetual use of built-up land for residential purposes into land ownership. In 2019, more than 2 million incoming cases of this type, which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.
It should be noted that after excluding from the analysis all cases considered in Land Registry Departments, the impact of cases and settlements in 2019 were almost at the same level as in the previous year.

Q091 (2018): The discrepancy between 2016 and 2018 was realised in 2017 due to the increasing number of mostly non-litigious cases. More details in 2017 data.
Number of pending cases in the category 2.1. General civil (and commercial) non-litigious cases has dropped slightly. That situation is caused by high effectiveness of courts. Number of resolved cases is higher than number of incoming cases. That situation has maintained since 2017.
Higher number of pending cases in Non-litigious business registry cases is temporary and it is a result of higher number of initiated compulsory proceedings. If it is ascertained that the application for entry in the Register or compulsory documents have not been submitted despite expiry of the deadline, the registry court shall call on the obliged parties to submit them.
We observed that the effectiveness of courts has increased and therefore number of pending cases in mentioned category has dropped at the end of the year.
In regard to non litigious land registry cases we observe in Divisions of Land and Mortgage higher staff turnover. It contributes to problems with solving cases, therefore number of pending cases has increased.
In regard to “other” cases we have observed significant increasing of incoming cases without specified category. In this category we include following cases: exemption from costs, reconstruction of files, affidavit of assets, excluding judge etc. Higher number of pending cases on 31 Dec. is a consequence of high number of in incoming cases during the year. It was probably temporary situation.

Q091 (2017): As to a general explanation for discrepancies in 2016 to 2017 data, it has to be stated that in 2016, there was a substantial number of incoming non-litigious cases, mostly general civil cases, but also registry cases (around 700k cases total).
This important number of cases was not resolved and the backlog remained important at the end of the year. This could explain the large difference of pending cases between 1 Jan 2016 and 1 Jan 2017.

2.1. In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases on 1 Jan. ref. year has increased. In 2017 we did not notice any problems with mentioned system, so the number of resolved cases has increased significantly. At the same reason the number of pending cases on 31 Dec. 2017 has dropped.
We indicate that fluctuation of the number of cases can be also caused by implemented organizational changes in courts (changes in staff, changes in the organization of work). 2.2. Registry cases (2.2.1+2.2.2+2.2.3) discrepancies are justified in points 2.2.1 and 2.2.2.
2.2.1. Non litigious land registry cases. Higher number of pending cases (on 1 Jan. ref. year and on 31 Dec. ref. year) is caused by Higher number of incoming cases than resolved cases. This situation is related to large-scale investments in infrastructure in Poland Building new roads is closely connected with changes in land registry. We need to indicate that courts have to cope with large number of difficult cases. (Mentioned reason is related to resolved / incoming cases)
2.2.2. Within the changes in business registry cases we can observe significant increase in all types of Application for registration (first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of removing from registry). We indicate that it could be caused by fluctuation in compulsory proceedings. Mentioned proceedings are carried on in the cases where it is found that an application for an entry in the National Court Register or the documents whose submission is obligatory were not submitted despite the lapse of the time limit. The registry court shall summon the obliged persons to submit them, and shall set an additional 7-day time limit. We emphasize, that the registry court shall discontinue the compulsory proceedings, if it can be concluded from the circumstances of the case that the proceedings will not lead to the fulfilment of the mentioned obligation. (Mentioned reason is related to resolved / incoming and pending cases)
2.2.3. and 2.3. - Categories do not exist in our judicial system.

Q091 (2016): Within the changes in business registry cases we can observe significant increse in all types of Application for registration (first registration) cases, but there is also considerable increse in general business cases (changes in the registry, including cases of removing from registry).
In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had incresed.

Portugal

Q091 (General Comment): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.

Q091 (2024): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries.
From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work take non by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2024 are: Pending cases on 1 Jan. 2024: 345538; Incoming cases: 135188; Resolved cases: 138880; Pending cases on 31 Dec. 2024: 341846. This numbers correspond to the total number of existing procedures in Portugal in 2024, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 29,611. The number Incoming cases that correspond only to tax cases is 9388. The number of Resolved cases that correspond only to tax cases is 15,595. The number of Pending cases on 31 Dec. that correspond only to tax cases is 23,404. In what concerns this type of cases, in 2024 there were 79,784 new cases and 38,643 completed cases. However, of these totals, only 79,058 new cases and 37,917 completed cases corresponded to real movements of the beginning and end of cases. The remaining 726 cases refer to cases that were internally transferred between units.
The very significant increase in the number of new, completed and pending cases in 2024 is largely due to the increase in urgent administrative cases. This increase was due to the very high number of applications for authorisation or renewal of the residence permit that were lodged with the Lisbon Administrative Court during 2024.

Q091 (2023): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries.
From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work take non by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2023 are: Pending cases on 1 Jan. 2023: 359238; Incoming cases: 130392; Resolved cases: 142531; Pending cases on 31 Dec. 2023: 347099. This numbers correspond to the total number of existing procedures in Portugal in 2023, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 34769. The number Incoming cases that correspond only to tax cases is 10584. The number of Resolved cases that correspond only to tax cases is 15745. The number of Pending cases on 31 Dec. that correspond only to tax cases is 29608. In what concerns this type of cases, in 2023 there were 25,607 new cases and 30,669 completed cases. However, of these totals, only 25,018 new cases and 30,080 completed cases corresponded to real movements of the beginning and end of cases. The remaining 589 cases refer to cases that were internally transferred between units.

Q091 (2022): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries
From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work take non by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2022 are: Pending cases on 1 Jan. 2022: 394367; Incoming cases: 108036; Resolved cases: 140946; Pending cases on 31 Dec. 2022: 361457. This numbers correspond to the total number of existing procedures in Portugal in 2022, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 38089. The number Incoming cases that correspond only to tax cases is 11619. The number of Resolved cases that correspond only to tax cases is 14888. The number of Pending cases on 31 Dec. That correspond only to tax cases is 34820.
In what concerns this type of cases, in 2022 there were 24,212 new cases and 27,051 completed cases. However, of these totals, only 23,483 new cases and 26,322 completed cases corresponded to real movements of the beginning and end of cases. The remaining 729 cases refer to cases that were internally transferred between units.

Q091 (2021): The increase in the number of cases resolved on 1 January 2021 should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

Q091 (2020): The decrease in the number of Civil (and commercial) litigious cases reflects the effects of the Covid 19 pandemic and the consequent lockdown, that had an impact on the functioning of the courts, considering that in certain periods face-to-face services have been interrupted or conditioned.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigma, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring ando f differentiating responsabilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparision of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoingaimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases fot the year 2020 are: Pending cases on 1 Jan. 2020: 521224; Incoming cases: 96047; Resolved cases: 159616; Pending cases on 31 Dec. 2020: 457655. This numbers correspond to the total number of existing procedures in Portugal in 2020, following the existing model prior to the entry into force of the said legal diploma. For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
In the scope of Working Group within the Ministry of Justice that monitors the development of the procedural processing system of the 1st instance judicial courts (Citius System), work is underway to implement the mechanism in question, in order to allow for autonomous accounting of cases that are awaiting the performance of an act that falls within the competence of the registry or the judge. At the moment, it is not yet possible to estimate a date for the conclusion of the work. The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 44542. The number Incoming cases that correspond only to taxcases is 44329. The number of Resolved cases that correspond only to tax cases is 48704. The number of Pending cases on 31 Dec. That correspond only to tax cases is 40167. In what concerns this typ of cases, in 2020 there were 68,467 new cases and 73,880 completed cases. However, of these totals, only 20,731 new cases and 26,144 completed cases corresponded to real movements of the beginning and end of cases. The remaining 47,736 cases refer to cases that were internally transferred between units, namely due to the establishment of specialised courts in September 2020 (which are not independent legal ent

ities), or that were subject to changes in the subject matter. Considering that in 2020 the number of cases transferred between organizational units was very high in the 1st instance administrative and tax courts, for this cycle we indicated in the table only the numbers of cases opened and closed, without including transferred cases. In previous editions, the figures included transferred cases, which could impair the comparative reading.

Q091 (2019): 91.1 The decrease of the number of pending cases older than 2 years follows the general trend of decrease of pending cases for this category. There were no legislative changes that can explain this decrease.

Q091 (2018): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour. The number of enforcement cases for the year 2018 are: Pending cases on 1 Jan. 2018 700.638; Incoming cases:127.646; Resolved cases:222.480; Pending cases on 31 Dec. 2018: 605.804 This numbers correspond to the total number of existing procedures in Portugal in 2018, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 ”Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 47931
The number Incoming cases that correspond only to tax cases is 14895
The number of Resolved cases that correspond only to tax cases is 16828
The number of pending cases on 31 Dec. that correspond only to tax cases is 45998
91.1 Due to increased efficiency of first instance courts, we can notice for the last several cycles a down-word trend in respect of the number of pending cases, namely civil and commercial litigious cases

Q091 (2017): Q 91.1 - the decrease of pending cases older than 2 years can be explained by the global decrease of theses cases. There were no legislative changes that could explain this decrease.
The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above (the technical work is still on going), the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2017 are: Pending cases on 1 Jan. 2017: 804.423; Incoming cases: 148.713; Resolved cases: 249.837; Pending cases on 31 Dec. 2017: 703.299. This numbers correspond to the total number of existing procedures in Portugal in 2017, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 ”Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 49.943
The number Incoming cases that correspond only to tax cases is 14.707
The number of Resolved cases that correspond only to tax cases is 16.811
The number of pending cases on 31 Dec. that correspond only to tax cases is 47.839

Q091 (2016): " Item 91-1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still on-going aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The data on enforcement cases for the year 2016 is: pending cases on 1 Jan. 2016: 934.860; incoming cases: 158.164; resolved cases: 289.402; pending cases on 31 Dec. 2016: 803.622. These numbers correspond to the total number of existing procedures in Portugal in 2016, following the existing model prior to the entry into force of the said legal diploma. For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators. Item 91_3 ”Administrative law cases”, includes administrative and tax cases. The separate data on tax cases is as follows: pending cases on 1Jan. - 53.597; incoming cases - 16.445; resolved cases - 20.222; pending cases on 31 Dec. - 49.820. Regarding the decrease in the number of incoming administrative law cases, it results from the decrease in the number of incoming tax law cases, in particular in what concerns misdemeanour appeals".

Q091 (2015): The category “civil (and commercial) litigious cases” includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. It is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred in that table. Just for information, the data on the total number of existing enforcement procedures in Portugal in 2015, following the existing model prior to the entry into force of the said legal diploma is the following: pending cases on 1 Jan. 2015: 1.000.446; incoming cases: 199.359; resolved cases: 272.191; pending cases on 31 Dec. 2015: 927.614.
The category “administrative law cases” includes administrative and tax cases. The separate data on tax cases is the following: pending cases on 1Jan - 47.866; incoming cases - 24.808; resolved cases - 19.164; pending cases on 31 Dec. - 53.510.

Q091 (2014): For 2014, data are not available due to technical constraints.

Romania

Q091 (General Comment): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q091 (2024): In 2024, the number of civil cases resolved was higher than in 2023, which means that the year-end stock remains constant, given that the number of new cases registered in 2024 was also higher than in 2023.
2.2.2 Non-litigious business registry cases: The 2024 decline was operational and systemic — driven by digital transformation, staffing shortages, and temporary disruptions. In mid-2024, ONRC temporarily suspended both its online portal and front-office services to migrate to a new integrated digital system. The transition caused significant delays, reduced processing capacity, and a backlog of pending applications. The Registry faced an acute lack of registrars authorized to perform the legal verification of filings. This led the Government to adopt Emergency Ordinance No. 109/2024, allowing temporary re-assignment of legal advisers and managerial staff to perform registration duties. With the corrective measures already in place, a progressive recovery of registration volumes is anticipated in 2025, once the Trade Registry’s new systems and personnel reach full capacity.

Q091 (2023): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
2. The variations could be attributed to a human resources issue: due to a wave of retirements among magistrates following recent legislative changes, the number of active judges has dropped by nearly 15% over three years. This reduction has slowed case resolution rates, which have not kept up with the annual increase in new cases, resulting in a steady rise in year-end backlogs.
2.1 - With the rising trend in new cases and the settlement rate still lagging behind new case inflows, year-end case backlogs, including cases older than three years, are likely to increase annually. However, given the low numbers involved (e.g., 412 cases in 2023 and 276 in 2022), these figures lack statistical significance and cannot be seen as indicators of broader socio-legal trends.

Q091 (2022): There are no explanations for the discrepancies, as for volumes of cases in the order of hundreds no conclusions can be drawn regarding statistical trends.

Q091 (2021): As presented in the comments to the data communicated in the previous CEPEJ cycle, the measures taken in the pandemic period led to an increase in the stock of cases, that explain the number of pending cases on Jan 1st and also some of the values of the pending cases in courts for 2 years. At the same time, as shown in some of the data on resolved cases, although the stock at the beginning of 2021 was considerable by the enhanced activity the number of resolved cases increased

Q091 (2020): The decrease in the number of resolved cases in 2020 was caused by the context of the Covid-19 pandemic. The activity of al the courts was partially suspended between the 15-th of March until the end of May 2020 because a state of emergency was declared. During that period only few urgent cases were adjudicated. Some courts instituted preventive mesures even before the 15-th of March 2020 which included postponing non-urgent cases. After the state of emergency ended there were still in place measures that affected the normal activity of the courts like: the introduction of specific timeframes for each case, hearings through video conference, a strict limitation of human interaction at the auxiliary compartments of the courts that dealt directly with public like the Archive and the Registry office, so that requests and documents had to be submitted by post, fax or e-mail. These measures affected not only the court staff but all court users that had to adapt to the new circumstances and led to the postponement of many cases. There were also gaps in activity caused by cases of Covid-19 among the personnel of the courts. The same explanation is valid for the increased Disposition time which led to an increased numer of pending cases older than 3 years.

Q091 (2019): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Referring to the non-litigious business registry cases,the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant. Referring to the administartive cases, the decrease in the number of pending cases in administrative matters can be determined by aspects such as: certain types of cases that have been exhausted before courts (e.g cases on salary rights of public servants initiated in 2010) or cases such as those on pollution taxes that were mostly exhausted before courts and for which administrative procedures have been expressly regulated as to discharge the huge workload in courts that they have generated. In terms of incoming administrative cases, when referring to a decrease in their number, similar reasons that justify the decrease in the number of pending administrative cases should be taken into consideration, namely, for example, those referring to the administrative procedures that have been expressly regulated as to discharge the huge workload in courts (e.g. regarding to the cases on pollution taxes). There is no particular explanation on the increased number of general civil and commercial non-litigious cases in 2019, resulting in a slight decrease of the CR for this category. However, it should be noticed that the operatitivity and volume of solved cases has increased.

Q091 (2018): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Referring to the non-litigious business registry cases,the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant. Referring to the administartive cases, the decrease in the number of pending cases in administrative matters can be determined by aspects such as: certain types of cases that have been exhausted before courts (e.g cases on salary rights of public servants initiated in 2010) or cases such as those on pollution taxes that were mostly exhausted before courts and for which administrative procedures have been expressly regulated as to discharge the huge workload in courts that they have generated. In terms of incoming administrative cases, when referring to a decrease in their number, similar reasons that justify the decrease in the number of pending administrative cases should be taken into consideration, namely, for example, those referring to the administrative procedures that have been expressly regulated as to discharge the huge workload in courts (e.g. regarding to the cases on pollution taxes).

Q091 (2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
“Administrative law cases”: indeed, the data are correct, namely there is a significant increase in the number of incoming cases in 2017 that could be explained by the changes brought in 2013 to the Law no. 554/2004 of administrative litigations; the amendments resulted in a high number of second appeals in this matter (by number of second appeals we understand all second appeals under the competence of both the Supreme Court (High Court of Cassation and Justice) and of the courts of appeal, because in this matter some of the cases shall be judged in first instance by tribunals and others by the courts of appeals).

Q091 (2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The high clearance rate of administrative cases in previous cycles has led to lower significantly the number pending cases. The increase of the number of incoming cases is a consequence of a higher number of requests filed in administrative domain that also triggers an increase in the number of resolved cases. The decrease in the number of non-litigious pending cases as well as "other" pending cases is mostly due to lower number of incomming ases.

Q091 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The initial total number of pending cases has increased as a result of reporting the data into Ecris database. The number of incoming cases and this of resolved cases are comparable from one year to another for the period 2010-2013. The stocks at the end of the period is in relation to the adjustment of the stocks at the beginning of the period, but comparable with 2012.
Concerning the number of administrative law cases the workload has constantly decreased starting with 2012. The increase of stocks initially communicated for 2013 comes from the high number of incoming cases in 2012. The final stock of 2014 is lower also because of the lower number of the new cases in 2013. It may also be noticed that the new cases closed in 2013 was higher than in 2012. The high decrease in the number of incoming, resolved and pending administrative law cases on 31 December between 2013 and 2014 is progressive and is caused by the social climate.

Slovak Republic

Q091 (General Comment): For 2016 data, new methodology was implemented based on the working group's conclusions and CEPEJ mission's recommendation (06/2016). Former reporting structure was not consistent with the methodology of CEPEJ, which could lead to inappropriate comparison of Slovak Republic (SR) with other countries. Also, the Ministry of Justice (MoJ) realized that evaluation of courts' performance by disposed and unresolved (decided and undecided) cases is discriminating SR in comparison with other countries in European Union (EU) as this methodology is not counting a decision of first instance court as disposed until the case becomes valid. This results into reporting such case as unresolved despite respective court has already made a decision and it is no longer in its disposition how - and more importantly when - the case will be resolved (disposed) by the second instance court. This is the nature of reporting of many "unresolved" cases on courts despite court already decided, in fact. Newly proposed way of reporting extracts the numbers of decided cases in respective court instances from "unresolved" and allocates these numbers to those court instances that made an actual decision in respective time. This means that decision validity state is not being awaited for as it could potentially contain an appeal and thus also a time that a case spends on second instance court. Upon decision's validity the case would become „disposed/resolved" at the first instance court but most probably it would not be disposed in the same period when it was decided by the (first instance) court. This past methodology (applied by 2016) resulted (visually) in accumulation of unresolved cases while some of them were already decided by first instance court.

Q091 (2024): Registry cases and non litigious business registry cases- The decrease in the number of resolved cases can be attributed to several factors, such as the involvement of notaries in the registration of changes in commercial companies (the percentage of persons who process their changes through a notary rather than through a court has been increasing month by month). This results in a lower inflow of new cases to the courts; however, it is also necessary to assess the allocation of the "complexity" or "problematic nature" of cases between courts and notaries. At the same time, within their activities the courts continue to "clean up" the Business Register, i.e. identifying companies that have failed to fulfil statutory obligations in the past (for example, the obligation to convert their registered capital from Slovak crowns to euros).

Q091 (2023): TBE

Q091 (2022): Discrepancy between the pending cases on 31 Dec. 2021 and the pending cases on 1 Jan. ref. year in the line 1. and Total is due to an administrative error caused by the court. In the rest lines, there is no discrepancy between the pending cases on 31 Dec. 2021 and the pending cases on 1 Jan. ref. year (compared with the previous year).
A significant increase in the Business registry cases category in 2022 (comparing incoming and resolved to 2020) is related to legislative changes to Act no. 530/2003 Coll. on the Commercial Register. The amendment to the law - included the birth-number among the recorded data with the aim of unambiguously identifying natural persons registered in the business register. In the case that it was not possible to add this data automatically from other reference sources into the the business register, it had to be added based on a court proposal submitted by September 30, 2022 (increase in incoming cases).
Other discrepancies are reflection either of the submission activity of the public (incoming cases) or productivity of the judicial system itself - in resolved cases.

Q091 (2021): An erroneous reporting of decided cases at the courts in 2020 had to be corrected in Pending cases at 1st January 2021 by 1128 cases (line 2. and Total of other than criminal law cases).
2.2.2 Non-litigious business registry cases - the increase in cases comming to the courts in 2019 due to the new legislation gradually stabilized over the course of the year 2020, 2021.
The category "other" encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons),inheritance proceedings and other. In covid years especialy the number of cases inheritance proceedings rose.
3. Administrative law cases - new reform of Administrative courts was expected and the clearance rate of the regional courts dropted to 80 %.

Q091 (2020): Exolanation of the discrepancies:
In the category 2.2.3. Other registry cases was added register "RPVS" - Register of public sector partners. The Register of public sector partners has the character of a register of legal and natural persons, which receives from the state, local-government and other public sector entities public financing or property above the limit specified by law. The persons who conclude a contract, framework agreement or concession contract pursuant to public procurement regulations, healthcare providers and so on. The classification of the registry in category 2.2.3. was consulted with CEPEJ organization.
In the category 2.2.2 and consequently in the category 2.2. - at the end of year 2019, the incoming cases into the business register was enormously increased due to new applied legislation, which caused high level of the pending cases at the beginning of the year 2020.
Administrative law cases - keeps the high level of pending cases.
Non-litigious business registry cases - the cause of the increase is explained below:
The Commercial Code (Act No. 513/1991 Coll) was amended by the Act No. 390/2019 Coll, which became effective from the 1st of October 2020. This amendment brought following changes (also changes to the Commercial register):
1. From October 1, 2020, it is possible to submit an application for registration of data in the Commercial Register only in electronic form (including objections to the refusal of registration)
2. Obligation of the company´s founders to submit the consent of the real-estate owner to setting up a registered seat of the company with verified signature of the owner.
3. The list of the information is being expanded in order to identify these persons more precisely. In the case of natural persons, a date of birth and a birth number must be given, if it was assigned. In the case of legal persons, their registration number must be given. The existing companies are required to complete this information by September 30, 2021.
4. The amendment also covers one of the reasons why the court is entitled to dissolve a company without liquidation. It is a breach of the obligation filing the financial statement into the collection of deeds within the specified period of 9 months from its preparation. This means, that if a company doesn't deposit this financial statement in the collection of documents within 15 months from its preparation, the registry court will decide on its dissolution without a proposal.
The other discrepancies are mainly caused by the situation in 2020 due to Covid-19 pamdemic situation.
The emergency situation due to COVID 19 has been ongoing since March 2020. Since then, hearings have been held to the necessary extent, which is determined by a decree of the Ministry of Justice. The decree was amended 4 times according to the development of the epidemic situation.
Thus, the courts were not closed in 2020, but operated in a restricted regime, and that restricted regime depended on the development of the epidemic situation. There were situations where hearings were organised to the absolute minimum, for example in April 2020, almost no hearings were held. Since May 2020, it has been up to the courts to ensure hearings to the extent necessary and in accordance with other regulations related to the pandemic situation.
In several measures in 2020, the Ministry of Justice recommended that courts organize work so that court staff and judges work from home.As for an access to the file for lawyers, it was provided.

Q091 (2019): The changes in the total number of Pending cases on 1 Jan. ref. year - the courts, which did not comply with the established methodology for reporting bankruptcy and restructuring, corrected the data in 2019 and thus the initial state of 2019, which causes differences compared to 2018 pending cases. Similar situation is in the other non-litigious cases, where the methodology for the cases (acceptance of things into custody of court) was changed due the legislation changes in the court register during the year 2019.
Line 2; 2.1;2.2;2.2.2: According to the act. no. 390/2019 Coll. on the end user of benefits for entrepreneurs, the entrepreneurs became obliged to make the corresponding entry in the Business Register by 31 December 2019. The increase in new-coming cases was mainly in the last three months of 2019 by 117 thousand cases in business register courts.
The deadline for processing proposals for the registration of end-user benefit data by the court has been postponed to 30 June 2020, due to the large expected new-coming cases of business records at the end of the year.

Q091 (2018): 1. Differences in the initial states of things as of 1 January 2018 different from the final states as of 31 December 2017 are due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper collection of previous periods. These differences should not occur in the next year due to the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection.
2. Another reason for the differences in the opening cases as of 1 January 2018 from the closing stocks as of 31 December 2017 is the change in the classification of some court registers between rows in the table in question 91. The change of classification was carried out on the basis of the recommendation of the national correspondent for the SR and after its thorough consultation with the members of the working group GT CEPEJ - EVAL

Q091 (2017): The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a “paper” collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the ongoing project between CEPEj and Ministry of justice of the Slovak republic. There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.
The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, until the 30. June 2016 the case-jurisdiction in administrative matters in the first instance stipulated by law was divided between Regional courts and the district courts. The general rule was, that the general jurisdiction in first instance lies at the Regional courts. However, there was a small number of proceedings (enumerated in law) where the District courts had the jurisdiction to act as a court of first instance. In reality, more than 90% of all administrative cases were tried by the Regional court as the courts of first instance.
Since 1. July 2016 the new Code of the administrative procedure came into force. According to this new law the Regional courts have the exclusive jurisdiction to try administrative cases as the courts of first instance.
As for the appeal procedure, there is the general rule that the appellate court is the court one level above in the structure of the court system. It means that the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.
In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings were indicated in table to Q 97
All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

Q091 (2016): The new structure of data presented by the Ministry of Justice is the reason for the discrepancies and incompatibility of the data with the previous cycles. As regards the category "general civil non-litigious cases" we notice a decrease of incoming cases as of the year 2013.
In this cycle the succession cases were classified as "Other non litigious cases" while in previous years they were classified as "general civil (and commercial) non litigious cases.

Q091 (2014): The increase in the number of incoming and pending other than criminal law cases at all levels of the judiciary is due to the increase in the number of litigious cases. The Slovak judicial system for a several years faces significant increases of claims filed with the courts by debt-collecting companies and non-bank loan companies against consumers, as well as class actions of one private company against the State for alleged damages etc. The higher number of resolved administrative cases was achieved by the intensive effort to reduce the existing backlogs in administrative matters.

Slovenia

Q091 (General Comment): Category 1.Category 1. 'Civil (and commercial) litigious cases' at first instance includes: civil litigious cases at local and district courts, various civil cases at local and district courts, commercial litigious cases at district courts, labour law cases at labour courts,
social law cases at social court, various labour and social law at labour and social courts, insolvency cases including compulsory composition, bankruptcy of legal person, bankruptcy of physical person, bankruptcy of inheritance, compulsory dissolution, simplified compulsory composition and preventive restructuring at district courts.
The number includes the labour law and social law cases (before specialised labour and social law courts) due to their similarity to litigious cases in material and procedural aspects.
Q91 - Category 2.1. 'General civil (and commercial) non-litigious cases': see Q92.
Q91 - Category 2.2.1. 'Non litigious land registry cases' at first instance includes (at local courts): land registry cases, decisions on appeals at first instance and various land registry cases.
Q91 - Category 2.2.2 'Non-litigious business registry cases ' at first instance includes (at district courts): business registry cases and various business registry cases.
Q91 - Category 2.2.3. 'Other registry cases': No cases were included in this category.
Q91 - Category 2.3. 'Other non-litigious cases': No cases were included in this category.
Q91 -Category 3. 'Administrative law cases' at first instance include (at the Administrative court): - administrative cases and various administrative cases.
Q91 - Category 4. 'Other cases': see Q93.
The above listed cases are classified into CEPEJ categories slightly differently over the years.
Q 91, 97, 99, 101 - Inconsistencies:
Inconsistencies within the tables are possible due to the peculiarity of the Supreme Court`s Data Warehouse (used in the Slovenian judiciary as the official source of data since January 1st 2012, at every court, and for providing data to the Ministry of Justice and at the Judicial Council).
It is a "live" system (dynamic reporting), meaning that the reported figures for a specific date or period of time inevitably vary for different reasons (e.g. the data was not promptly entered into the CMS; in some instances, the decision, in which category some specific new cases should be included, may be subsequently changed and when data are unified some figures change; there is also the possibility that a mistake was done when entering the data and was later detected in the quality check and corrected.)
In Data warehouse reports, every category (column in the table) is calculated (counted) separately, therefore the „Pending on 31 Dec“ may not equal to the formula (Pending 1 Jan + Incoming – Resolved) due to fore mentioned influences."

Q091 (2024): Discrepancies: 2.2.2. (Incoming cases): please note small absolute number of cases.

Q091 (2023): Other cases - Pending cases older than 2 years: While most of cases in this category are resolved within few months, some of them are on-hold due to the fact that the party died mid-process and inheritance procedure has to take place to continue; or party is under insolvency proceedings; or there are delays with serving of court writings to parties in other countries.

Q091 (2022): 2.2. Registry cases and 2.2.2. Land Registry cases - Pending cases on 31 Dec – increase by 123%/143%: In 2020, the number of incoming cases decreased due to Covid-19 pandemics and its effect on the sales of real estate. Consequently, the number of pending cases at the end of 2020 decreased. In 2022, it returned to usual level. 2.2.2. Bussines Registry cases – Pending cases older than 2 years – increase by 300%: Please note the small number of cases (4 cases in 2022), compared to incoming/resolved cases (approx 43.000 per year).
3. Administrative cases – Pending cases older than 2 years – increase by 149%:
In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the number of pending and resolved cases. In the aforementioned cases, the court was also faced with new legal and factual issues, as well as administrative difficulties. In recent years, the Administrative court is also dealing with a considerable number of priority or urgent cases (e.g. asylum seekers), which means a longer waiting line for “regular” cases. Though administrative and managerial actions have been taken, the number of (older) pending cases has increased due to the aforementioned difficulties and the overburdening of the court.
4. Other cases – Pending cases on 31 Dec – decrease by 46%:
Due to the limitation of operation of courts due to Covid-19 pandemics in 2020, the number of pending cases was unusually high. In 2022 it returned to usual level. 4. Other cases – Pending cases older than 2 years - increase by 86%:
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction). This is automated and fast procedure (average duration is between 1 and 2 months), however some of those cases could not be completed due to legal reasons (e.g. waiting for inheritance cases regarding parties to finish). Please note the small number of cases (approx. 100 cases), compared to incoming/resolved cases (approx 120.000 per year).

Q091 (2021): 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 1 Jan.: decrease by approx. 50%
In 2020, the number of incoming cases decreased due to Covid-19 pandemics and its effect on the sales of real estate. Consequently, the number of pending cases at the beginning of 2021 decreased. 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Incoming cases/Resolved cases: increase by approx. 25%
In 2021, the number of incoming (and consequently resolved) cases increased, most likely due to the loosening of Covid-19 restrictions and its effect on the real estate market.
2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 31 Dec.:
In 2021, the number of incoming and resolved cases increased (see above). However, the increase in resolved cases was slightly lower, hence the increase in pending cases at the end of the year (Disposition time in register cases is low – approx. 0,2 months; ratio of Resolved vs. Pending cases is approx. 65:1).
2.2.2. Non litigious business registry cases – Pending cases older than 2 years from the date the case came to the first instance court: decrease by 200%:
Please note the small (absolute) number of cases (less than 5 cases).
4. Other cases - Pending cases on 31 Dec.: decrease 38%
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court in Ljubljana – exclusive jurisdiction), where the trend of decrease of pending cases is observable in 2021 and 2022. More factors could have contributed to the decrease, but no specific major reason can be identified.
4. Other cases - Pending cases older than 2 years: increase by 58%
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction). Some of those cases are waiting for inheritance cases regarding parties to finish. Please note the small number of cases (less than 100 cases), compared to incoming cases (more than 100.000 per year).

Q091 (2020): The decrease in the number of resolved cases at 1. Civil (and commercial) litigious cases and 4. Other cases is due to the limitation of operation of courts due to Covid-19 pandemics.
The decrease in the number of pending cases at the end of the year at 2.2.1 Non litigious land registry cases (and consequently at 2.2 Registry cases) is not unusual due to the high number of incoming and resolved cases in a year compared to pending cases at the end of the year (around 1-2%).
Regarding the increase in Administrative law cases - Pending cases older than 2 years: In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the number of pending and resolved cases. In the aforementioned cases, the court was also faced with new legal and factual issues, as well as administrative difficulties. In recent years, the Administrative court is also dealing with a considerable number of priority or urgent cases (e.g. asylum seekers), which means a longer waiting line for “regular” cases. Though administrative and managerial actions have been taken, the number of (older) pending cases has increased due to the aforementioned difficulties and the overburdening of the court.

Q091 (2019): In general, the trend of decrease in the number of incoming cases can be observed in all types of civil cases, causing also a decrease in the number of resolved and pending cases. In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and partly to a successful introduction of new business models in the
Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Accordingly, in the last years, the clearance rate is at or slightly above 100%.
In 2019, a new Family Code and new Non-Contentious Civil Procedure Act stepped into force. The main change for district courts was establishing family law cases as non-litigious cases (before 2019 classified as litigious cases). Additionally, local courts became competent to decide in tutelage cases (before 2019 in competence of the executive branch).
This reflected in a decreased number of reported 1. Civil litigious cases, while the number of 2.1 General civil non-litigious cases did not change (an increase in new cases is similar to the decrease in the number of incoming cases that is generally observed).
Administrative cases: In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the pending and resolved cases. In the aforementioned cases, the court is faced with new legal and factual issues, as well as administrative difficulties. Though administrative and managerial actions have been taken, an increase in the number of pending cases is expected due to the aforementioned difficulties and the overburdening of the court.

Q091 (2018): In general, the trend of decreasing number of incoming cases can be observed in all types of civil cases, causing also a decrease in number of resolved and pending cases. In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and partly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Accordingly, in last years, clearance rate is at or slightly above 100%.
Administrative cases: The Administrative court is faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (24,5 % of incoming cases in 2017). This caused an increase in the pending and resolved cases. In these cases, the court is faced with new legal and factual issues, as well as administrative difficulties - the actions are often incomplete or the information is insufficient, filled in foreign languages, the foreign parties have yet to nominate a proxy etc. The court has established a special office to perform a preliminary examination of the actions and assist in the exchange of documents between parties, however longer times for resolving cases are expected due to the aforementioned difficulties and the overburdening of the court.

Q091 (2017): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.
For discrepancies, see general comments.
The Administrative court is faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (24,5 % of incoming cases in 2017). In these cases, the court is faced with new legal and factual issues, as well as administrative difficulties - the actions are often incomplete or the information is insufficient, filled in foreign languages, the foreign parties have yet to nominate a proxy etc. The court has established a special office to perform a preliminary examination of the actions and assist in the exchange of documents between parties, however longer times for resolving cases are expected due to the aforementioned difficulties and the overburdening of the court. At the end of 2017, the first case was ready to be processed on the merits of the case.

Q091 (2016): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.
For discrepancies, see general comments.

Q091 (2015): In recent years, the number of incoming non-litigious cases is generally decreasing partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary. Considering the higher number of incoming cases (number of pending cases is approx. 15%-20% of all incoming cases), a slight variation in incoming cases have a considerable effect on the number of pending cases.

Q091 (2014): In previous cycles, insolvency cases have been accounted in former category 1. 'Civil (and commercial) litigious cases'. For 2014, they are encompassed within the item "other". The 2014 data includes labour law and social law cases decided before specialised labour and social law courts, due to their similarity to litigious cases in material (employment contract derives from civil law contract) and procedural (the court procedure in labour and social cases is based on general civil law procedure) aspects.

Spain

Q091 (2024): The data has been obtained using the same criteria as in previous years and follows the trend published by the General Council of the Judiciary.
In relation to the increase in incoming civil (and commercial) litigious cases, a specific rise in the number of summary proceedings (juicios verbales) can be observed. The reform introduced by Royal Decree-Law 6/2023 expanded the scope of summary proceedings (juicios verbales) not only by increasing the monetary threshold from €6,000 to €15,000, but also by incorporating new subject matters that must now be processed under this simplified procedure. These include individual actions related to general contractual conditions, claims for amounts by homeowners' associations, and actions for the division of jointly owned property.

Q091 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain's rates.

Q091 (2022): There are increases of incoming and resolved cases compared to the number of cases in 2020. It should be taken into account that information from 2020 represents the year of the pandemic. The recovery of normal work increased the number of cases, incoming and resolved.

Q091 (2021): The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved cases.

Q091 (2020): Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission
of the Register (Land or Commercial) or of the Directorate General for Registers and Notaries, he/she can appeal the decision against Courts.

Q091 (2018): The Court of Justice of the European Union (CJEU) of December 21, 2016 and other previous Judgments have meant a massive interposition of lawsuits based on that doctrine, for the civil challenge of general conditions included in financing contracts with real estate guarantees in which the borrower is a natural person. Measures, referred to in previous CEPEJ questionnaires, of specialization of certain judicial bodies have been adopted.
Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission of the Register (Land or Commercial) or of the Directorate General for Registers and Notaries, he/she can appeal the decision against Courts.

Q091 (2016): Concerning the Administrative Law cases, between 2014 and 2016, the decrease of 'Pending cases' is probably because the number of resolved cases, both in 2015 and 2016 has been higher than the number of incoming cases (reinforcement measures have been applied).

Q091 (2015): The horizontal consistency can not be respected because of reopened, cumulated and regularised cases.
Law 10/2012 governing certain fees in the area of the Administration of Justice could explain (especially in Administrative Law cases) the decrease in the number of incoming administrative cases, and logically the decrease in the number of resolved and pending cases.

Q091 (2014): The number of "civil and commercial litigious cases" decreased for 2 reasons. Since the payment order procedures do not need a decision made by a judge but are of the competence of the judicial counsellor, they have been subsumed in the category of non-litigious civil and commercial cases. Since paying court fees for natural persons has been compulsory until March this year, there has been a decrease in the incoming cases. In respect of the category "administrative law cases", it should be recalled that in 2012, there was a decrease in the number of files related to the Public Administration owing to two parameters: plaintiffs have been sentenced to pay the court fees; since 2012, they have to be assisted by a lawyer to file an administrative case, on the other hand.

Question 092

Austria

Q092 (2014): For the year 2014, this category has been extended to the enforcement cases.

Croatia

Q092 (General Comment): The category "civil (and commercial) non-litigious cases" encompasses all non-litigious cases that are not stated in the different categories.

Q092 (2014): For 2013 and 2014, the provided examples concern only question 92: exercise of the parental care; meeting and spending time with parent; obtaining the capacity to exercise rights of minor that became parent; decision with whom the child will be living; issuing of the permit for entering into marriage before age of majority; deprivation/returning of capacity to exercise rights; deprivation/returning /prolongation of parental care; deprivation of parents' right to live with the child and raise the child; content of court will; security of evidence; setting-up/derogation of necessary passage; setting-up of court deposit, opening of a safe; verification of a contract on life-long support; amortization of documents; trust of a child with behavioural disorder; the recognition of foreign court decisions; declaring a missing person dead; co-ownership dissolution; meetings and spending time with grandmother, grandfather, sister, brother, half-sister, step-brother; land borders; regulation of relations between co-owners; restraining a child; providing legal aid; conclusion of court settlement; inheritance statement; proof of death; regulation of co-ownership relationships; boundaries and necessary passage; determination of extramarital union; other- family non-litigious proceedings; storage of the testament; providing international legal assistance; verification; other –the rest of non-litigious proceedings; international child abduction; other - proclamation of the deceased and proof of death; the appointment of members of the companies body; the appointment of auditors, temporary/interim administrator; the safeguard of evidence; the establishment of a court deposit; opening of the safe deposit box; registry cases; previous measures; forcible establishment of lien; temporary measure; temporary and previous measures, recognition of arbitration decisions; recognition of a foreign court decision; cases entering in the scope of Article 4 point 2 of the Companies Act; court insurance by the transfer of ownership and rights.

Czech Republic

Q092 (2014): For all of the four exercises (2010, 2012, 2013 and 2014) the category of civil and commercial non-litigious cases encompasses cases of upbringing and maintenance of a minor. In 2014, it subsumes also declarations of admissibility of taking or keeping a person in a medical (health care) institution and declarations of death of persons.

Denmark

Q092 (General Comment): Paternity, adoption, guardianship and others in the same category; cases under inquisitorial procedures.

Finland

Q092 (General Comment): The number includes cases dealt in the summary proceedings, divorce cases and petitions. Summary civil cases are undisputed civil cases that are decided by a district court in summary procedure, in other words in the written procedure. Such cases include undisputed debt collection cases, such as cases concerning unpaid rents, consumer credits and phone and electricity bills, as well as undisputed cases concerning evictions, restoration of possession or a disrupted circumstance. Summary proceedings can be initiated at a district court with an application for a summons that contains less information than what is required for other civil proceedings. The prerequisite for using the less detailed application for a summons is that the plaintiff, i.e. the creditor, has stated that to his or her knowledge the matter is not under dispute.
Enforcement cases: The enforcement authorities have the competence to decide on enforcement cases, not the courts. Cases mentioned here are appeals of enforcement measures to the district courts.
Requests for a change of name are handled in the Digital and Population Data Services Agency, not in the courts.

France

Q092 (General Comment): Other non-litigious civil cases include the following: divorce by mutual consent, legal separation, change of matrimonial regime, applications relating to parental authority, adoption, medically assisted procreation, incapacity of a minor, inheritance, compensation for violation of privacy, change of name, civil status, nationality, the operation of a group and the discipline of notaries and ministerial officers.

Q092 (2014): In 2014, the category civil cases (and commercial) non-litigious are also included in non-litigious cases relating to enforcement.

Ireland

Q092 (2014): Starting 2014 the category: "Appointment of care representatives" was added to the "Civil (and commercial) non-litigious cases"

Italy

Q092 (General Comment): Non-litigious cases include -amongst others- divorce and separation by mutual consent, change of divorce/separation conditions, judicial interdiction and incapacitation, hereditament, some family-related procedures, etc. Under this category also fall the following: order for payment procedures, proceedings for validation of eviction, precautionary proceedings and proprietary measures.

Lithuania

Q092 (2014): For 2013 and 2014, the category “civil and commercial non-litigious cases” includes court orders.

Luxembourg

Q092 (2014): 2014: Category 2 (civil (and commercial) non-litigious cases) refers to european payment orders issued by two district courts. They are handled almost immediately, so that there is no stock at the end of the period. That is why the pending cases as well as incoming cases are classified as NAP.

Malta

Q092 (General Comment): The non-litigious case category is codified under Art 166A of the Code of Organisation and Civil Procedure (COCP), Chp 12 of the Laws of Malta.

Poland

Q092 (General Comment): The category of civil (and commercial) non-litigious cases (including non-litigious family cases) covers all the rest of cases decided under chapter II of the Civil Proceedings Code which are non-litigious cases (such as ascertainment of the acquisition of an inheritance, cases connected with birth, marriage and death records, declaration of dead, adoption as well as summary and injunction proceedings in money payment cases).

Romania

Q092 (General Comment): Divorce with the consent of the parties, granting of legal personality, modification of the constitutive acts of legal persons, requests related to unions, non-litigious requests (civil, litigation with professionals, minors and family).

Slovak Republic

Q092 (General Comment): The category "civil (and commercial) non-litigious cases" includes all cases arisen from legal relationships regulated by family law (maintenance cases, custody of the child, visiting rights, guardianship, divorce cases with the ruling on rights and obligations towards the minor child etc.), cases related to assessment of the legal capacity of natural persons, reminder procedure (electronic payment orders).

Slovenia

Q092 (General Comment): Categories used in “Civil and commercial non-litigious cases”: all non-litigious civil cases at local and district courts, non-litigious commercial cases at district courts (different kinds of personal and family status, property and other disputes, provided by the Non Contentious Procedure Act or other law, procedures for issuing a payment order at local and district courts in civil matters, procedures for issuing a payment order in commercial matters at district courts, cases pursuant to the Inheritance Act at local courts, cases pursuant to the Mental Health Act at local courts; and civil enforcement cases on the basis of an enforcement title, commercial enforcement cases on the basis of an enforcement title, cases for enforcement on real-estate property, enforcement cases on the basis of authentic document in civil matters after the writ for the execution became final, temporary injunctions in civil matters, temporary injunctions in commercial matters, various enforcement cases.

Q092 (2014): 2014 Category 2.1 „General civil (and commercial) non-litigious cases“at the first instance includes
1. (former category 2. „General civil (and commercial) non-litigious cases“): N, Ng, Pl, Plg, D, Pr; and 2. (former category 3. ' Non litigious enforcement cases'): I, Ig, In, VL, Z, Zg and R-i.

Spain

Q092 (2014): For the 2014 exercise, the category “civil and commercial non-litigious cases” encompasses payment order procedures and requests for undisputed matters such as settlement proceedings and divorce with mutual consent.

Question 093

Bulgaria

Q093 (General Comment): .

Croatia

Q093 (2014): In 2013 and 2014 the reply NAP in respect of the category “other” is due to the fact that a bankruptcy registry has not been established in the Republic of Croatia.

Cyprus

Q093 (General Comment): In Cyprus the number of cases presented in Q91 includes military court cases, rent tribunal cases, labour court cases and admiralty cases.

Czech Republic

Q093 (General Comment): For 2010 and 2012 the category “other” subsumes electronic payment orders and probate proceedings, while for 2013, it encompasses only electronic payment orders. By contrast, for 2014, its content covers insolvency cases. Since 2015 category "other cases" includes insolvency cases and incidence disputes.

Denmark

Q093 (General Comment): Estate after a deceased person, notary, insolvency cases not included under 2.2.2. above.

Finland

Q093 (General Comment): The land courts deal with disputes and appeals arising from surveying operations. The most common case types are the divisions, parcellings and encumbrances referred to in the Surveying Act, as well as the procedures under the Expropriation Act and the Private Roads Act. The procedure is very similar to the civil procedure in a district court. Land court cases are dealt with by the District Courts of South Savo, East Uusimaa, Kanta-Häme, Lapland, Oulu, Ostrobothnia, North Savo, and Southwest Finland. The land court, which acts as a separate department of the district court, has a district judge specialising in these matters as chairperson and a land court engineer and two lay members in the main proceedings. The decisions of a land court can be appealed against to the Supreme Court.
All matters concerning insolvency are classified as matters of petition, which means that they require court involvement. These matters are therefore not categorised as civil cases, i.e. dispositive matters between the parties. But, these matters can of course turn out to be litigious in the sense that there are conflicting opinions about the outcome, and the court must decide upon these after a more or less regular trial proceeding. Not all cases become litigious and the court may rule on insolvency/bankruptcy when the legal merits are met. In Finland we tend to define these as two-or-more-party disputes that may be concluded in agreement of the parties (dispositive) and the court is bound by the agreement. The indispositive cases are characterised by the “official principle” which means that only the court can decide the outcome after proceedings are initiated. The indispositive cases also tend to have different rules regarding the costs of the trial than regular civil cases. As a special court, the task of the labour court is to process and resolve disputes concerning collective agreements, as well as disputes based on the laws on collective agreements and collective agreements, defined in more detail in the law on proceedings in the labour court. Most of the time, the question is about the correct content or interpretation of the said agreements, or violations of agreements or labour and collective agreement laws and the resulting sanctions. In addition, the labour court, as an appellate court, resolves appeals against the decisions of the board for confirmation of the general bindingness of the collective agreement and appeals against the decisions issued by the labour council in certain exemption cases. The Labor Court is the only competent court in the above-mentioned matters. Its judgments cannot be appealed but are final and immediately enforceable. Note: The labour court therefore does not deal with all labor law disputes. Disputes arising from the employment contract between the employer and the employee are dealt with in the relevant district court, the decision of which, under certain conditions, has the right of appeal to the Court of Appeal and the Supreme Court.

Germany

Q093 (2014): For the 2013 and 2014 exercises, the category “other” includes: Local Court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

Greece

Q093 (General Comment): Obviously, when we refer to appeals, we do not include their discussion before the court, but their filing as a civil remedy, which in the case of the Greek procedural system is filed, and in some cases even discussed in the courts of first instance. Payment orders are included in "other" because there is only one field "other cases" on the JastSTat platform where the cases listed in table 93 are entered collectively. In the future we will try to transfer the payment orders to category 2.1 in the new JastStat platform.

Ireland

Q093 (2014): From 2014, the range of 'Other cases' has been revised to incorporate the category 'certificates of taxation of legal costs issued'. This can explain the fact that different elements have been included in the category 'other' in 2013 and 2014.

Italy

Q093 (2014): In the ambit of the 2014 exercise, the category “other” encompasses the number of enforcement cases.

Poland

Q093 (General Comment): The category “other” includes first of all social security cases and cases related to the application of correctional and educational measures as required in juvenile cases and execution of guardianship or tutoring.

Romania

Q093 (General Comment): NAP

Slovak Republic

Q093 (General Comment): The category “other” encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons), issuing of the enforcement permission for the enforcement agents, enforcement of court rulings on the visiting rights to minor child and enforcement of court fees receivables.

Slovenia

Q093 (General Comment): Category 4. „Other cases“ at first instance includes: free legal aid at district courts, labour courts and at the Administrative court, enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction), international attestations at district courts, attestations according to the Hague convention at district courts, legal aid between national courts at local and district courts, international legal aid at district courts.

Q093 (2014): 2014 4. „Other cases“ at first instance includes: Bpp ,COVL, Ov-i, Ov-H and St [(St-01), (St-02), (St-03), (St-04) (St-05)]. In previous cycles, all the mentioned St cases have been accounted in former category 1. 'Civil (and commercial) litigious cases'."

Question 094

Austria

Q094 (General Comment): We cannot differentiate between severe criminal cases and misdemeanours within the administrative cases. So while in administrative criminal law deprivation of liberty is hardly ever used, it is still possible to use it in a sentence. It is also an alternative way of a sentence in case the person is not able to pay the fine.
However, the administrative courts are apparently not able to separate their data according to the type of sentence they pass (even though prison sentences are so rare and one might think this is easy).

Q094 (2024): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for criminal courts. However, the total number includes administrative criminal law cases as well, where distinction is not possible.

Q094 (2023): “The distinction between misdemeanour criminal cases and severe criminal cases is possible only for criminal courts. However, the total number includes administrative criminal law cases as well, where distinction is not possible.”

Q094 (2021): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the ciminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

Q094 (2020): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the ciminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

Q094 (2018): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the criminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

Q094 (2016): Administrative criminal cases are included in misdemeanour and in total

Belgium

Q094 (2024): It should be mentioned that cases dealt with by juvenile courts - “protectional (non-civil) cases” - are not included in the table. Due to technical reasons, only data on incoming such cases are currently available (10 178).
Cases heard by the investigation judge (Chambre du conseil) are not included in the table in order to avoid double counting the same criminal cases.

Q094 (2023): It should be noted that data on cases of the juvenile court are not included in the table. Due to technical reasons only figures for incoming cases (10 078) are currently available.
Point 3 “Other criminal cases”: there were 7 580 cases pending before the Investigation Court (Chambre du Conseil) on 1 January 2023; 17 191 incoming cases; 16 031 resolved cases; 8 740 cases pending at 31/12; 2 286 cases pending for more than 2 years. These figures are not included in the table, so as not to count the same cases twice.

Q094 (2022): Also to be noted: 9 398 for cases related to juvenile protection (only the category 'incoming cases' is available), not accounted for in the table. Point 3: Other criminal cases: the figure of 15 309 corresponds to cases before the Council Chamber (this figure is not included in the total of incoming criminal cases because data on resolved cases are not available). The figures for pending and resolved criminal cases are not available.

Q094 (2021): "Severe criminal cases": all cases that are dealt with by first instance criminal courts; "Minor criminal cases": all cases that are dealt with by the Police courts. Protectional cases - youth: 9 227 incoming cases in matters of youth protection. For this case category the number of resolved cases is not available for 2021. These are protectional cases dealt with by the juvenile court (in respect of parents, situations of concern, extremely urgent situations of concern, facts classified as offences).

Q094 (2020): "The health crisis has had an impact on the numbers.
"

Q094 (2016): Severe: all cases that are dealt with at first instance by the criminal courts of first instance; Minors: all cases that are dealt with by the police court
Three sites could not provide statistics for severe cases.

Q094 (2014): Offences handled by the police court (although this court can pronounce prison sentences) are considered as minor offences.

Bulgaria

Q094 (General Comment): For most of the crimes, the Bulgarian Criminal Code provides for a deprivation of liberty, which makes the distinction hard to be made. The offences could be divided into two categories: common offences and offences subject to private prosecution. For the common offences, the search of responsibility is subordinated to the common regime (there is a public interest concerned or public interest and personal goods). Such are the crimes against individuals (homicide, grievous or intermediate bodily harm, rape, fornication and etc.), crimes against the property (the list is not exhaustive). As to the offences subject to private prosecution, the criminal proceedings are initiated upon a complaint by the affected person (personal interests of the affected person, and usually the affected person and the perpetrator are close relatives). Those offences have a lower degree of public danger and affect less the rights of the concerned person. Such offences are the minor bodily injury, the insult, the slander and etc.
"Total criminal cases" includes all criminal cases - criminal cases of a general nature, criminal cases of a private nature, cases of exemption from criminal liability with the imposition of an administrative penalty in accordance with Art. 78a of the Criminal Code, private criminal cases, interrogation and administrative-criminal cases heard by the first instance courts.

Q094 (2022): "Total criminal cases" includes all criminal cases - criminal cases of a general nature, criminal cases of a private nature, cases of exemption from criminal liability with the imposition of an administrative penalty in accordance with Art. 78a of the Criminal Code, private criminal cases, interrogation and administrative-criminal cases heard by the first instance courts.

Q094 (2020): It should be noticed that since 2020, the Unified Court Information System (UIS) has been gradually introduced in all courts, developed within the project “Creating a Model for Optimizing the Court Card of Bulgarian Courts and Prosecutor's Offices and Developing a Unified Court Information System” with the financial support of Operational Program "Good Governance" 2014-2020.
Depending on the functionalities of the system, it may be possible to collect information on the next cycle according to the indicators mentioned in question 94.

Croatia

Q094 (2024): Due to the strike of court clerks and judges, there was a disruption in the receipt and resolution of cases, which resulted in a temporary decline in activity. In 2024, with the resumption of regular operations, an increase was recorded both in the number of incoming and resolved cases, which is also reflected in the overall indicators. This increase therefore does not indicate structural changes in court operations, but rather compensation for the reduced level of activity in the previous period.

Q094 (2023): Horizontal inconsistency corresponds to 2.62% of corrections to the "e-spis" system during a year.

Q094 (2022): The data for 2022 in “Other criminal cases” include only the execution of sanctions (imprisonment), investigation actions of a judge and cases connected to procedural matters. In this cycle, the number of other criminal cases decreased because we aligned our methodology with CEPEJ reporting and excluded some of the case types which in previous cycles were included. This is due to the fact that data for misdemeanour cases came from a separate case management system in the previous cycles (prior to 2020), and it was not possible to exclude those cases which do not fit any of the above categories.

Q094 (2021): In category "Other cases" are included (from last cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)

Q094 (2020): In category "Other cases" are included (from last cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)
Regarding decreased number of resolved minor criminal cases: Due to the pandemic caused by COVID-19, in 2020., court proceedings for limited period in 2020 were submitted under specific conditions and measures, which contributed to decreased number of court hearings, also in minor criminal cases.
Regarding horizontal inconsistency: For most of the categories, the full horizontal inconsistency can not be ensured, due to some adjustments and changes in the Case Management System used by courts.

Q094 (2018): In category "Other cases" are included (from this cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)

Q094 (2016): Starting from 1 June 2013, when the Act on Amendments to the Misdemeanours Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases displayed in this table continuously and significantly had been reduced. The number of resolved cases reduced as well, but due to a significant decrease in inflows, the number of unresolved cases reduced by the end of the period. This reflected also on High Misdemeanours Court, whose data is shown in this table.

Q094 (2014): The new Criminal Procedure Act entered into force in September 2011, introducing the investigation conducted by the State Attorney Offices (instead of court investigation), as well as new and wider opportunities for negotiating settlements. Besides, the decrease of the total number of misdemeanour cases at all levels was the main goal of adopting the Act on the Amendments of the Misdemeanour Act in 2013. The definition of misdemeanour act was changed, the principle of opportunity as well as the simplification of the procedure were introduced, more active role was given to the plaintiff etc. The Register of Unpaid Fines was established. There is no more suspension of the proceedings because of the statute of limitations.

Cyprus

Q094 (General Comment): The reason for not having data for the subcategories of cases is that there was no electronic filing system that would enable us to have statistical data on different types of cases.

Q094 (2024): other criminal cases include cases before the military court.

Q094 (2018): There were fewer criminal cases in 2018.

Q094 (2014): As a result of the bail in, the total number of first instance criminal pending cases on 1 January 2014 increased with 27% between 2012 and 2014.

Czech Republic

Q094 (General Comment): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases".

Q094 (2018): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

Q094 (2014): Severe criminal cases are crimes in respect of which the law provides for a minimum term of imprisonment of 5 years. They are decided by regional courts acting in first instance. Minor criminal cases are tried by district courts in first instance, regional courts being the appellate courts in such matters.

Denmark

Q094 (General Comment): Danish Court Administration has not worked out a statistics on pending cases older than 2 years. When we categorize cases as "severe", it does not mean that privation of liberty is the end result, but based on the category chosen by the court to deal with the case could include severe cases. Minor cases are typically fines that will never have as a result of privation of liberty. Probably there are too many cases under the category "severe" then, but that is the figures we have.

Q094 (2024): There is a general incongruence in data due to faulty 2023 data, where second instance cases were mistakenly included. Pending cases on 31 Dec. ref. year (Total, 1 and 2) +1. Severe criminal cases (incoming):The substantial difference between incoming and resolved cases is partly due to the prosecution services being short-staffed and accruing case piles over the course of 2024, and partly due to the courts undertaking special efforts to reduce case piles.
The decrease in incoming severe criminal cases in 2024 can be attributed to the police and prosecution services having accrued a substantial case load surplus. They are not currently staffed to be attend court dates to the degree that is needed, and so a bottleneck effect has caused the number of cases being submitted to the courts to plummet. A three-year agreement to grant funding to the police and prosecution services is currently (as of fall 2025) in negotiations at state-level, after which the number of cases is expected to rise to previous levels.
Another, lesser factor of the drop in case numbers is the change to Danish procedural law implemented in 2024, where the threshold for whenever a case demanded lay judges was increased. The Danish Court Administration define severe criminal cases by whether lay judges are assigned or not. Fewer cases with lay judges equal fewer severe criminal cases in our data model.

Q094 (2023): The higher number of cases in 2023 is due to the comparison of 2021, where there was lower activity due to COVID-19. Compared with data from 2022 the pending cases from 1/1/2023 appears higher. This is mainly due to late registration, where more pending cases can appear in the current extraction compared to when the CEPEJ data from 2022 was extracted. It's also partly due to a new method of calculation with more accurate data than previously. The number of pending cases from 1/1/2023 is the same as the number of pending cases from 31/12/2022 in our database. The Danish Courts are currently in the process of transitioning to a new registration system for criminal case types and certain non-litigious case types, so a period of adjustment was to be expected

Q094 (2022): In 2022 the courts are still dealing with a high number of pending cases in the aftermath of the situation with covid-19.

Q094 (2021): 2020 was an unusual year because of the Covid-19 pandemic, related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it.

Q094 (2020): 2020 was an unusual year because of the Covid-19 related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it.

Q094 (2018): Our statistics on criminal cases does not have data on pending cases older than 2 years. We can not differentiate pending cases according to age. When we categorize cases as "severe", it does not mean that privation of liberty is the end result, but based on the category chosen by the court to deal with the case could include severe cases. Minor cases are typically fines that will never have as a result of privation of liberty. Probably there are too many cases under the category "severe" then, but that is the figures we have.

Q094 (2016): Our statistics on criminal cases does not have data on pending cases older than 2 years. We can not differentiate pending cases according to age.
The reason pending cases per 31 December 2016 has decreased is that the courts have resolved more cases than incoming cases.

Q094 (2014): For the period 2010-2014, district courts have been able to resolve more cases than the number of incoming cases, especially concerning minor criminal cases (traffic offences etc.) which have been given a higher priority. In 2012, district courts received more minor criminal cases due to a new procedure according to which the police sent cases where citizens haven’t paid their fines to courts. This was changed again in the end of 2012 where warnings were sent out first and the number of minor cases dropped therefore markedly in 2013. In 2014 the number of received minor criminal cases has gone up again following a decision of the police to step up on issuing fines for traffic offences. Besides, city courts resolved more cases through the plea guilty procedure.

Estonia

Q094 (General Comment): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

Q094 (2020): Other criminal cases: for example different enforcement and pretrial cases. The pandemic has affected the courts activity in criminal matters in general. The criminal procedure law was not as flexible when judges had to work online. The complete revision of the criminal procedure law is ongoing and will come into force next year.

Q094 (2018): Increase of incoming misdemeanor and minor criminal cases.

Q094 (2016): Misdemeanour cases can be joined and solved together in court. Cases that can lead to deprivation of liberty of less to five years are still included under severe criminal cases.
Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below : Severe criminal cases : Pending cases on 1 Jan. ref. year : 803
Incoming cases : 7628
Resolved cases : 7463
Pending cases on 31 Dec. ref. year: 824
Pending cases older than 2 years from the date the case came to the first instance court : 23
Misdemeanour and / or minor criminal cases :
Pending cases on 1 Jan. ref. year : 1835
Incoming cases : 10032
Resolved cases : 10628
Pending cases on 31 Dec. ref. year: 891
Pending cases older than 2 years from the date the case came to the first instance court : 3

Q094 (2014): The variations observed over the years 2010, 2012 and 2014 are most likely due to the fact that the Ministry of Justice and the biggest court in Estonia (Harju County court) had an agreement setting the target for eliminating backlogs.

Finland

Q094 (General Comment): The cases are not statistically catecorised in severe criminal cases and misdemeanour and / or minor cases in Finland.
The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on january 2023 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

Q094 (2024): The growth of cases is linked to a large so-called Vastaamo criminal case which has an exceptionally large group of plaintiffs.

Q094 (2023): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

Q094 (2021): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. This year we have included military court cases and co-er-cive mea-sures which were previously not included in this number.

Q094 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available
data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

Q094 (2018): There is no particular explanation regarding the decreased clearance rate of criminal cases.

France

Q094 (2024): Source(s): SSER, frame-survey of prosecution services and Cassiopée statistical file (serious offenses: crimes and felonies); Minos statistical file (minor offenses = infractions, excluding the catgeory C5).

Q094 (2023): Source(s): SSER, survey of public prosecutors and Cassiopée statistical file (serious offences: crimes and offences); Cassiopée statistical file (minor offences = fines, with the exception of 5th class offences).
In order to be able to distinguish, as requested, the cases that have gone through the investigation (arrived and completed), the volumes indicated in the category "Other criminal cases" are already contained in the 2 previous categories. The total is therefore not equal to the sum of the 3 volumes but to the sum of lines 1 and 2.

Q094 (2022): Source: Ministry of Justice/SG/SEM/SDSE, Cassiopeia statistical file.

With regard to "pending cases", it is not possible to provide this information as the data on the pending cases before police courts ('Minor Offences') are not available.

Furthermore, the line 'Total number' does not correspond to 1+2+3 but rather to 1+2. Indeed, in accordance with the request from CEPEJ, cases falling under the Investigating Judge have been classified under '3. Other Criminal Cases'. These are provided for indicative purposes only and should not be added to the other two categories so as to avoid duplication (which may fall within either minor or major offences depending on how each case proceeds).

Q094 (2021): source SDSE

Q094 (2020):
"Comments on volumes.
Closed cases are down more than incoming cases cases, both civil/2019 and felonies/2018 (contravention are surprisingly up / 2018).
The health crisis and containment may have played on TAs (completed cases) (reducing the ability of courts to process cases) but also on NAs (new cases) (fewer misdemeanors committed, fewer cases brought to court). Prior to this, a major lawyers' strike and transportation strike had mostly affected TAs.

Germany

Q094 (General Comment): General information on the statistics used as sources for answering the questions in this section: please refer to the general comment Q 91
The category “severe criminal cases” includes criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” subsumes regulatory fine proceedings before criminal courts.
“Other cases” include:
- proceedings concerning suspension of execution of the remainder of a sentence of life imprisonment or concerning suspension of execution of placement in a psychiatric hospital or in preventive detention - determinate custodial sentences - proceedings under sections 109, 110, 138 of the Prison Act (Strafvollzugsgesetz, StVollzG) - proceedings under Part IV of the Act on International Legal Assistance in Criminal Matters (Gesetz über die internationale Rechtshilfe in Strafsachen, IRG) and section 71 (4) of Part II - supervision of conduct
- complaints about costs/fees - complaints against search/seizure orders - complaints in economic cases and tax cases
- complaints in matters concerning detention - cases in matters falling within the Regulatory Offences Act (Ordnungswidrigkeitengesetz, OWiG) registered in the complaints register - other complaints - subsequent or reserved preventive detention
- proceedings regarding the order of subsequent or reserved preventive detention - proceedings regarding the suspension of execution of a sentence where the court has reserved the order of preventive detention, in the cases covered by section 462a (2), third sentence, of the Code of Criminal Procedure (Strafprozessordnung, StPO)
- proceedings before the judicial service court
- proceedings regarding health professionals, tax consultants, agents in tax matters, patent lawyers or architects
- other disciplinary proceedings - proceedings regarding legal remedies in matters of enforcement of youth custody, youth detention and remand detention
Only the number of incoming cases is available for "other criminal cases", because with regard to data collection through the "monthly surveys" these cases fall into the category “other caseload” (please refer to general comment Q91);
Pending cases older than 2 years from the date the case came to the first instance court: please refer to the general comment Q 91;
Horizontal inconsistencies: Please refer to the general comment Q 91

Q094 (2024): “Severe criminal cases” include criminal proceedings according to the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” includes regulatory fine proceedings before criminal courts.
“Other criminal cases” include: - proceedings at the penal execution chambers (concerning suspension of execution of the remainder of a sentence of life imprisonment or concerning suspension of execution of placement in a psychiatric hospital or in preventive detention, determinate custodial sentences, proceedings under sections 109, 110, 138 of the Prison Act (Strafvollzugsgesetz, StVollzG), proceedings under Part IV of the Act on International Legal Assistance in Criminal Matters (Gesetz über die internationale Rechtshilfe in Strafsachen, IRG) and section 71 (4) of Part II)
- proceedings regarding supervision of conduct
- complaints about costs/fees - complaints against search/seizure orders - complaints in economic cases and tax cases
- complaints in matters concerning detention - cases in matters falling within the Regulatory Offences Act (Ordnungswidrigkeitengesetz, OWiG) registered in the complaints register - other complaints - subsequent or reserved preventive detention
- proceedings regarding the order of subsequent or reserved preventive detention - proceedings regarding the suspension of execution of a sentence where the court has reserved the order of preventive detention, in the cases covered by section 462a (2), third sentence, of the Code of Criminal Procedure (Strafprozessordnung, StPO)
- proceedings before the judicial service court
- proceedings regarding health professionals, tax consultants, agents in tax matters, patent lawyers or architects
- other disciplinary proceedings - proceedings regarding legal remedies in matters of enforcement of youth custody, youth detention and remand detention With regard to "other criminal cases", only the number of incoming cases is recorded (exception: proceedings concerning supervision of conduct).

Q094 (2023): “Severe criminal cases” include criminal proceedings according to the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” includes regulatory fine proceedings before criminal courts.
“Other criminal cases” include: - proceedings at the penal execution chambers (concerning suspension of execution of the remainder of a sentence of life imprisonment or concerning suspension of execution of placement in a psychiatric hospital or in preventive detention, determinate custodial sentences, proceedings under sections 109, 110, 138 of the Prison Act (Strafvollzugsgesetz, StVollzG), proceedings under Part IV of the Act on International Legal Assistance in Criminal Matters (Gesetz über die internationale Rechtshilfe in Strafsachen, IRG) and section 71 (4) of Part II)

- other disciplinary proceedings - proceedings regarding legal remedies in matters of enforcement of youth custody, youth detention and remand detention
With regard to "other criminal cases", only the number of incoming cases is recorded (exception: proceedings concerning supervision of conduct).

Q094 (2018): As only the number of resolved “other cases” is available, these will not be included in the total.

Q094 (2014): The information provided in the frame of the 2014 evaluation refers to 2013 data (the 2014 data is not available).

Greece

Q094 (General Comment): The category "other criminal cases" includes cases relating to pre-trial matters, imposition of criminal sanctions, commutation of sentences, granting of suspension, community service.

Q094 (2024): Independent Department of Collection and Processing of Judicial Statistical Data (JustStat).
The observed fluctuations in criminal cases can be partly explained by the legislative reforms introduced by Law 5090/2024, which amended the Greek Criminal Code and the Code of Criminal Procedure. These reforms included the reinstatement of public prosecution for selected misdemeanors, the strengthening of the prosecution of domestic violence and organized crime. These changes may have affected the classification, volume, and speed of processing of criminal cases, resulting in deviations that are considered expected and explainable. Additional factors affecting statistics are: • transitional provisions: some changes were implemented gradually until July 1, 2024; • reclassification of offenses: changes in the classification of acts as misdemeanors or felonies; • revision of competences: transfer of competences from prosecutors to judicial councils for certain acts.

Q094 (2023): The data are provided by the Office for the collection and processing of judicial statistics.
The variations in the numbers should be construed in the light of the pandemic contexte. In the year 2022, courts were, even for part of the year, under a restricted regime due to the measures implemented in Greece to contain the Covid-19 pandemic. This gave the judges the opportunity, alongside new cases, to deal with cases that had already been heard. At the same time, however, due to the courts not being fully operational, the number of cases to be pending increased at the end of 2022, which were transferred for adjudication in 2023, when the courts were fully operational and consequently the flow of judgments was limited.
Moreover, it should be considered that there were 3 consecutive elections in Greece in 2023, which resulted in the suspension of the courts for about 3 months in total.
Obviously this increase is due to the full normalization of the operation of the courts after the lifting of the restrictions on their operation that had been put in place to deal with the Covid 19 pandemic, which came into full effect in 2022 (note that the judicial year in Greece runs from September to July, usually)

Q094 (2022): It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data. The content of the categories of criminal cases in the table are the same as for the previous evaluation cycle, but the services now monitor and record these cases better so discrepancies in data can be observed. This is especially the case for the Misdemeanour and / or minor criminal cases.

Q094 (2021): The courts' function in cooperation with the prosecution's offices. For example, postponed cases get to the prosecutor offices and then to the courts, in repeat 2-3 times, during the period (year). The definition of the pending cases included postponed cases or the cases the trial date has been setting out of the refence year or hasn't been determined during the year. The data has been collected from 63 out of 63 First instance courts in Greece.

Q094 (2020): To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

Q094 (2018): To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

Q094 (2016): Filling in the requested information regarding the criminal procedure is not possible at the moment. To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which is expected to be completed by November 2018, an integrated information system will be implemented, which will include individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data. For 2016 the available data regarding the criminal procedure are as follows: Courts of First Instance: Criminal Cases Discussed: 473.457, Convictions/Acquittals: 206.311, Postponements: 262.433, Courts of Appeal: Criminal Cases Discussed: 59.643, Convictions/Acquittals: 24.995, Postponements: 33.601

Hungary

Q094 (General Comment): Criminal offences are severe or minor crimes. Severe crimes (bűntett) are committed intentionally and are punishable with at least two years of imprisonment. All other criminal offences are minor crimes (vétség). Crimes that are not committed intentionally are always considered as minor crimes, despite the possible punishment.
Misdemeanours (szabálysértés) are not considered as criminal offences, but are unlawful acts that are endangering the society. The authorities intervening in their respect are the police, the district office, or the National Tax and Customs Office. Their decisions can be reviewed by the relevant section of the respective district court upon request of the accused person. Generally, the court rules without oral hearings, based upon the available documents. However, it can set a hearing if it finds it necessary or if the person charged by a misdemeanor requests it. The judgment is a final and enforceable decision.
It is noteworthy that the Hungarian law identifies also the category of civil offences encompassing offences mainly against public administration. However some criminal offenses, such as property crimes involving objects of small value (under 50000 HUF), are classified in this category as well. Civil offences fall under the jurisdiction of various administrative agencies, local governments or traffic police, but not the courts.
Concerning the methodology of presentation of data, as according to the Hungarian Criminal Code not only severe crimes (bűntett), but also almost every minor crime (vétség) are punishable with imprisonment, both categories were included into the category "severe criminal cases". Thus misdemeanors (szabálysértés) were included into the category "minor criminal cases".

Q094 (2024): Discrepancy explanation:
Total: The difference is due to the change explained in the subpoints, which has affected the overall result as well.
1. At the end of 2023, there were 1,322 cases pending for more than two years, which increased by 30.79% to 1,729 cases by the end of 2024.
2. With regard to misdemeanour cases, at the end of 2024 there were 27,600 pending cases, which is 28.66% more compared to the previous year.

Q094 (2022): As misdemeanour cases have very strict deadlines, the number of resolved cases strongly correlates with the number of incoming cases. The decrease of incoming cases may be a result of the end of the pandemic as misdemeanours in connection with it "disappeared" as well.

Q094 (2021): New types of misdemeanours were introduced into the legal system in accordance with the measures taken against the COVID-19 pandemic. As the number of incoming cases increased the number of resolved cases increased as well.

Q094 (2018): Criminal offences are severe or minor crimes. Severe crimes are commited intenitionally and are punishable with at least two years of imprisonment. All other criminal offences are minor crimes.
Misdemanours are not considered as criminal offences, but are unlawful acts that are endangering the society.

Q094 (2014): The increase in the number of incoming misdemeanour cases in 2012 and 2014 is the consequence of an amendment of the relevant legislation. This increase resulted also in higher numbers of resolved and pending cases.

Ireland

Q094 (General Comment): Except for the Supreme Court, criminal cases are generally counted by offence rather than case due to the various ICT systems used. This is due to data collection/ ICT systems that are in use by the Court Service.
Akin to question 91, the number of pending criminal law cases cannot be provided within the frame of question 94, provided that it is not recorded in caseload data.
We cannot provide data per case. Where there is more than one penalty imposed in respect of an offence, for example a fine, imprisonment and disqualification, a separate order would be made in respect of each penalty. However, if a case is dismissed or struck out, only one order is made. Our system records by outcome and as there may be more than one outcome in any one offence, it may appear that the figures for resolved cases are higher than those for incoming.
Misdemeanour and/or minor criminal cases include all cases triable summarily (e.g. common assault, public order offences, burglary or theft in other that aggravated circumstances).

Q094 (2022): The COVID pandemic had an effect on the courts' ability to deal with incoming business in 2020 especially, which explains the discrepancies with number of resolved cases in 2022. Regarding severe criminal cases both the Circuit Criminal Courts and Central Criminal Courts showed an increase in resolved cases (offences) in 2022. Resolved cases are cases where orders are made. There may be more than one order made in some cases which is why the figure for resolved cases is higher than that for incoming cases.

Q094 (2021): Severe criminal cases are taken to mean indictable offences that are dealt with in the Circuit and High Court. Misdemeanour is taken to mean minor offences and indictable offences dealt with summarily in the District Court. The number of incoming cases will never equal the number of resolved cases. It is worth noting that the number of resolved cases in 2021 was a significant increase in the resolved cases from 2020. It is also worth noting that not all offences are proceeded with by the prosecutor, particularly minor offences. Criminal cases are generally counted by offence rather than case due to the various ICT systems used

Q094 (2020): Misdemeanour and minor criminal cases are cases heard in the District Court. There were fewer such cases incoming and resolved because of Covid-19.

Q094 (2018): From 2016 extra judicial resources were applied by Senior Judiciary to the Courts dealing with some of the most serious criminal matters, which explains the increase of the number of resolved severe cases.

Q094 (2016): With regard to the number of resolved severe criminal cases, there is no particular reason explaining the observed discrepancy between 2014 and 2016, except for the fact that in 2014 figures were exceptionally high.

Q094 (2014): The previous data in respect of severe criminal cases were presented by reference to the defendant rather than to the offence(s) charged, whereas the data for 2014 reflects offence(s) charged, to align with the unit of measurement for minor criminal cases.

Italy

Q094 (General Comment): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogeing/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html The main goal is a general reduction of the disposition time by 25% in the criminal sector by June 2026 (all three instances together).

Q094 (2022): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html

Q094 (2021): In Italy there is no formal definition of minor criminal cases. For the purposes of this exercise, are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices.

Q094 (2018): The reduction in the number of resolved first instance criminal cases, and consequently the increase in the Disposition Time, between 2018 and 2016 comes from the decriminalization measures introduced in 2016 that led to a sharp increase in the number of case dismissals in that year. Indeed, the data for 2017 are:
Incoming: 1.311.900
Resolved: 1.293.054
Pending: 1.282.406
Disposition time: 362 days
These figures show a positive trend of the DT between 2014 and 2017, maintained in 2018.

Latvia

Q094 (General Comment): Severe criminal cases include all criminal cases according to the Criminal law - it includes all cases where a harmful offense (act or failure to act) committed deliberately (intentionally) or through negligence, provided for the Criminal Law, and for the commission of which criminal punishment is set out shall be considered a criminal offense. Misdemeanor and / or minor criminal cases includes all administrative infringement cases according to the Law on Administrative liability about administrative offence of a person for which administrative liability is provided for in a law or binding regulations of local governments.
Other criminal cases include execution of a sentence, cases on penal order of the prosecutor, cases on determination of compulsory measures of a medical nature.

Q094 (2024): Other criminal cases include execution of a sentence, cases on penal order of the prosecutor, cases on determination of compulsory measures of a medical nature. The inconsistency in the number of cases can be observed both with the merging of cases, and with the separation of individual cases from the overall judicial procedure.
Pending cases on 1 Jan. ref. year, In 2024, noticeable reduction in the backlog of other criminal cases was observed at the beginning of the year, with a discrepancy ratio of -32.80%, indicating a significant drop in pending cases compared to the previous period. This decrease is largely attributed to a decline in the number of cases involving prosecutor's penal orders.
Incoming cases. In 2024, compared to 2023, there was a significant increase in the number of criminal cases, particularly in categories involving severe offences. The most notable growth was observed in the following groups: criminal offences in road traffic safety: +128.25%, criminal offences against family and minors: +67.16%, criminal offences against the judiciary: +45.87%, criminal offences against public safety and order: +27.35%, criminal offences against property: +17.97%. This trend reflects a growing burden on the judicial system, especially in areas related to public safety, vulnerable groups, and traffic-related violations.
Resolved cases. In 2024, first instance courts saw an increase in the number of resolved criminal cases, with 5,766 cases adjudicated across key categories such as offences against property, traffic safety, and public order. This rise is directly linked to the high volume of incoming cases (6,548), particularly in severe criminal matters. Pending cases. The increase in the number of criminal cases received in 2024 had a direct impact on the volume of pending cases.
By the end of the year, the number of unresolved cases had grown. It should be noted that over the past two years, there has been a consistent rise in criminal case volume, which has had a negative effect on the clearance rate (CR%) across all first instance courts.

Q094 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. The increase in the number of pending cases (older than 2 years) could be related that in the courts the court hearings in -person were restored, lifting the restrictions of Covid, when cases were mostly adjudicated in written procedure. The inconsistency in the number of cases can be observed both with the merging of first instance courts both in 2022 and 2023, with the merging of cases, and with the separation of individual cases from the overall judicial procedure.

Q094 (2022): The decrease in the number of resolved cases is related to the drop in the number of cases received in the courts of first instance.
Decrease of pending cases on 1 Jan is related to the decrease of misdemeanour and / or minor criminal cases. In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming and resolved of misdemeanour and / or minor criminal cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming misdemeanour and / or minor criminal cases.
In 2022 the increase in the number of pending cases at the end of the year is related to changes in data collection systems` audit, more specifically, for misdemeanour and / or minor criminal cases. Severe criminal cases, which are assessed according to the Latvian Criminal Law and Criminal Procedure Law, are decreasing each year. The tendency of the decrease in the number of criminal cases has been observed for a longer period of time. The reduction of severe criminal cases can be explained by changes in legislation. (In the summer of 2020, amendments to the Criminal Procedure Law entered into force, which stipulated that the case for minor violations of the criminal law is not referred for initiation of criminal proceedings (Section 373 An investigator with a consent of a prosecutor or a prosecutor may refuse to initiate criminal proceedings, if a misdemeanor has been committed), which affected the the total number of criminal law cases received in court. A decrease in the number of criminal cases received has been observed since 2019.
The number of pending cases (pending for more then 2 years) has significantly decreased. The decrease in cases is due to the lifting of restrictions, which were related to limiting the spread of Covid-19. The reduction of pending cases also is related to the court reform, increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases. Starting from 2022, data on "other criminal cases" are also collected and inserted in the table.

Q094 (2021): Pending cases: The number of pending cases in January differs from pending cases in December 2020 registered data due the living Court information system database
Severe criminal cases include all criminal cases according to the Criminal law - it includes all cases where a harmful offense (act or failure to act) committed deliberately (intentionally) or through negligence, provided for the Criminal Law, and for the commission of which criminal punishment is set out shall be considered a criminal offense. Misdemeanor and / or minor criminal cases includes all administrative infringement cases according to the Law on Administrative liability about administrative offence of a person for which administrative liability is provided for in a law or binding regulations of local governments.
Criminal cases, which are assessed according to the Latvian Criminal Law and Criminal Procedure Law, are decreasing. The reduction from 2020 was influenced by changes in legislation. However, the tendency of the decrease in the number of criminal cases has been observed for a longer period of time, and it cannot be explained by the activities of the courts, but by assumptions about the general development trends of society.
In the summer of 2020, amendments to the Criminal Procedure Law entered into force, which stipulated that the case for minor violations of the criminal law is not referred for initiation of criminal proceedings (Section 373 An investigator with a consent of a prosecutor or a prosecutor may refuse to initiate criminal proceedings, if a misdemeanor has been committed), which affected the the total number of criminal law cases received in court. A decrease in the number of criminal cases received has been observed since 2020.
In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases. The number of pending cases (pending for more then 2 years) has significantly decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases. In 2021, courts of first instance resolved more criminal cases than in previous periods, which is related to the court's ability to adapt to resolve cases in the restrictive conditions of the Covid-19.
Data of 2020 for minor criminal cases are revised for incoming and resolved cases: 5 755 incoming cases and 6 631 resolved cases.

Q094 (2020): Data on resolved severe criminal cases is decreased because of Covid-19 restrictions. We have already pointed out the limitations of court work: written procedure, prohibition of face-to-face meetings, cancellation of court hearings etc.

Q094 (2018): There may be some change in data due to court system reform.

Q094 (2016): Severe criminal cases - All sections of The Criminal Law
Misdemeanor and / or minor criminal cases - All sections of Latvian Administrative Violations Code

Q094 (2014): According to 2014 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment.

Lithuania

Q094 (2022): Protracted proceedings in criminal cases are caused by the non-appearance of the parties to the proceedings or their representatives at the court session, the request of the parties to the proceedings to postpone the proceedings and the collection of additional evidence. It can be concluded that the protracted examination of criminal cases is also usually determined by circumstances depending on the actions of the participants in the process.
There were 57 criminal cases (64 in 2021, 72 in 2020), the examination of which lasted longer than 5 years. In the last few years, there has been a trend towards a decrease in the number of criminal cases examined at the first instance in first insance courts, the examination of which lasted longer than 5 years.

Q094 (2018): On 1 January 2017 Amendments to the Criminal Code of the Republic of Lithuania were adopted that provide for criminal liability for persons who drove a road vehicle or taught practical driving while under the influence of alcohol more than 1,5 promilles. This change of regulation had impact on the increase of the number of criminal cases starting from 2017 (in comparison with 2016).

Q094 (2016): The crime situation changed in Lithuania - the number of registered crimes by prosecution also decreased through these years, as a result less cases were received in courts. As regards 94.1 and 94.2: the answer should be NA, the NAP was chosen for the calculation purposes.

Luxembourg

Q094 (General Comment): We have classified as minor criminal cases all cases concluded by penal order in the magistrate's court or district court. Serious offenses encompass all cases concluded by a first-instance judgment in the police, correctional or criminal courts.

The figures listed under 'other cases' correspond to those cases which were referred to the investigating department.

Regarding the unavailability of pending and incoming cases: Due to the specific organization of workflow between courts and public prosecution services, files are only transferred to courts shortly before a hearing date, and if a case is not heard on that scheduled date, it is then returned to the public prosecution service until a new hearing date. Thus, there are - with few exceptions - no pending cases before criminal courts over an extended period, and the number of incoming cases is more or less equal to the number of resolved ones.

Q094 (2024): 3. Other criminal cases: The opening of an investigation by the examining judge at the court follows a request from the Public Prosecutor’s Office. There are two types of investigations: judicial information requests concerning offenses or crimes, and ‘mini-investigations’ based on Article 24-1 of the Code of Criminal Procedure (CCP) (https://legilux.public.lu/eli/etat/leg/code/procedure_penale/20201221#art_24-1).

The year 2023 was marked by a very high number of cases opened at the prosecutor’s offices regarding cybercrime (phishing), for which investigations under Article 24-1 of the CCP were initiated. In addition, the investigation chambers were increasingly involved in financial and economic cases.

‘Mini-investigations’ allow, in cases defined by law, prosecutors to request that the examining judge order an investigative measure without opening a full preparatory investigation. The increase in ‘mini-investigations’, which allow cases to be processed more quickly than ‘classic’ investigations, explains the rise in cases closed by the investigation chambers.

Q094 (2023): 3. Other criminal cases: The opening of an investigation by the investigating judge at the Tribunal is based on an indictment issued by the Public Prosecutor. There are two types of investigation: judicial inquiries into misdemeanours or felonies and 'mini-investigations' based on article 24-1 of the Code of Criminal Procedure (CCP (https://legilux.public.lu/eli/etat/leg/code/procedure_penale/20201221#art_24-1). The year 2023 was marked by a very large number of cases opened by public prosecutors' offices relating to cybercrime (phishing) for which investigations based on article 24-1 of the CCP were opened. In addition, the investigating offices were called upon more and more in financial and economic cases. Mini-investigations' allow prosecutors, in cases defined by law, to request the investigating judge to order an investigative measure without opening a preparatory investigation. The increase in 'mini-investigations', which allow cases to be removed from the investigating office more quickly than 'traditional' investigations, explains the rise in the number of cases closed by investigating offices.

Q094 (2022): Among the minor criminal cases, we have included all cases concluded by criminal order in the police court or district court. Serious offenses encompass all cases concluded by judgment at first instance in the police, correctional or criminal court.

The figures recorded under 'other cases' correspond to matters referred to the investigating judge's office.

Q094 (2018): Nous avons compté parmi les infractions mineures, toutes les affaires terminées par ordonnance pénale au tribunal de police ou au tribunal d'arrondissement. Les infractions graves représentent toutes les affaires terminées par jugement en première instance au tribunal de police, correctionnel ou criminel.
L'augmentation du nombre d'affaires résolues est due au fait que, pour les cycles précédents, les ordonnances pénales des tribunaux d'arrondissement n'étaient pas prises en compte au niveau des infractions mineures, qui comptabilisaient seulement les ordonnances pénales de justices de paix. Ainsi, pour 2016, les infractions pénales mineures reportées s'élevaient à 6460 en comptant les ordonnances pénales des tribunaux d'arrondissement, au lieu de 5454. Le total des affaires terminées a considérablement augmenté puisqu'il nous est depuis la période d'évaluation 2018-2020 possible, par l'ajout de la catégorie « Autres affaires » dans le questionnaire, de renseigner les affaires dont le cabinet d'instruction a été saisi. Les chiffres inscrits dans « autres affaires » correspondent donc aux affaires dont a été saisi le cabinet d'instruction.
Regarding the unavailability of the number of pending cases and incoming cases, Due to the specific organization of the work flow between the courts and the public prosecutor's office, files are transferred to the courts only a short time before the hearing, and, if the case is not heard at the given date, are then returned to the public prosecutor's office until the new date of the hearing. Thus, there are – with very few exceptions - no cases pending before the penal courts over a longer period of time, and the number of incoming cases equals more or less the resolved cases. With regard to civil cases, we should be able to provide information on cases pending for more than two years for the next evaluation, once the new application has been used for a longer period of time.

Malta

Q094 (General Comment): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).
The horizontal inconsistencies are due to the current CMS that still relies heavily on the input of the deputy registrars and clerks working with the judiciary.

Q094 (2023): The increase in the number of incoming severe criminal cases results from the increase in the number of criminal court halls, which enable twice as many 'juries' to be held and more 'pending' cases to be brought to trial (in this court, the system is a bit different from other cases. Trials are brought forward when it is their turn, so the fact that the court administration increased the halls, enables more trials to be opened). In addition, the improvement in the efficiency of the Office of the Attorney General, the chief prosecutor, has resulted in more bills of indictment to be issued.
The increase in the number of halls also reflected in an increase in the number of resolved cases within this category.

Q094 (2022): Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).

Q094 (2020): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:
- Pending 1st January 2020 = 11899 (79 cases Criminal Court and 11820 cases Court of Magistrates)
- Incoming cases 2020 = 11086 (17 cases Criminal Court and 11069 cases Court of Magistrates)
- Resolved cases 2020 = 7321 (5 cases Criminal Court and 7316 cases Court of Magistrates)
- Pending cases 31st December 2020 = 15883 (89 cases Criminal Court and 15794 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.
The decrease in the number of incoming and resolved cases, and the ensuing high number of pending cases, results from the restrictions imposed by the pandemic on the functioning of the Courts of Law.

Q094 (2018): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:
- Pending 1st January 2018 = 11887 (61 cases Criminal Court and 11826 cases Court fo Magistrates)
- Incoming cases 2018 = 13817 (19 cases Criminal Court and 13,798 cases Court of Magistrates)
- Resolved cases 2018 = 14168 (8 cases Criminal Court and 14140 cases Court of Magistrates)
- Pending cases 31st December 2018 = 11589 (72 cases Criminal Court and 11517 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.
The decrease int he number of incoming and resolved cases is a phenomenon we are observing over the past years. The discrepancy between the data of 2016 and 2018 makes sense when one looks at the 2017 data that also shows a decrease in the caseloads from 2016. It is to be noted that the incoming caseload in 2018 is actually a bit higher than that of 2017.

Q094 (2016): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).
This definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 3054; Incoming cases = 827; Resolved cases = 1143; Pending cases on the 31st Dec of Ref Year = 2736. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 10571; Incoming cases = 15887; Resolved cases = 15682; Pending cases on the 31st Dec of Ref Year = 10805.

Netherlands

Q094 (General Comment): Classification of severe and minor cases:
Minor offences: mainly traffic offences (speeding tickets, running red lights) and petty theft, vagrancy, littering, etc.
Severe offences: driving while drunk, grand theft, violent crimes, vice, drugs/narcotics, etc.

Q094 (2024): The increase in misdemeanour cases is due to an increase in minor traffic offences, in part due to the activity of so-called 'no cure, no pay'-bureaus.

Q094 (2022): Increase in Category 1 - This is due to a technical change in registration, where it was found that some 14.500 cases were effectively resolved (from a legal standpoint) but had remained ‘open’ in the administration. This has lead to a decrease of the number of pending cases. Increase in Category 2 - These cases are both minor criminal offences and also traffic fine cases (so-called WAHV- or Mulder-cases). The latter group shows the main increase. Possibly the increase is due to numbers being low in 2020 and 2021 as a result of Corona, and increased mobility since then

Q094 (2020): Classification of severe and minor cases:
Minor offences: mainly traffic offences (speeding tickets, running red lights) and petty theft, vagrancy, littering, etc.
Severe offences: driving while drunk, grand theft, violent crimes, vice, drugs/narcotics, etc.
Effects of the pandemic:
No in person hearings happened in the period between 17 March and April 6 2020. At the start of the pandemic, not everyone was able to work remotely due to insufficient available laptops and that many files were still coming in on paper. There were some exceptions for working remotely as well, such as security, some administrative staff (people that compiled paper files, for example), etc.
Some measures were taken: hearing in other buildings, online or hybrid, and hearings in the evenings. The age restriction for judges was upped from 70 years old to 73 years old, more criminal orders were handled by the public prosecution and more cases were handled by one judge instead of more (enkelvoudig versus meervoudig)

Q094 (2016): In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detainment) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detainment cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Poland

Q094 (2024): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts.
Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Q094 (2023): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts.
Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Q094 (2022): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts.
Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).
Cases under the Criminal Procedure Code and the Misdemeanours Code, which are presented as 'other criminal cases', are preliminary or follow-up proceedings.

Q094 (2020): The discrepancies in Table 94. First instance courts: number of criminal law cases - compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of Misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

Q094 (2014): For the 2014 evaluation, changes in the statistical forms made possible the identification of some types of misdemeanor cases (mainly the organizational ones, which were not considered in 2012). Above this, there is a constant growth in the number of incoming cases.

Portugal

Q094 (2024): 2. The data is correct. The number of cases pending for more than two years has indeed increased compared to the previous year.
3. The data is correct. The increase in the number of pending cases as at 31 December 2024 is related to the fact that in 2024 the number of cases closed was lower than the number of cases filed.

Q094 (2022): In our view, the increase in the number of incoming and outgoing cases in 2022 compared to 2020 reflects the effects of the Covid-19 pandemic and the resulting lockdown, which had an impact on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.
3. "Other criminal cases" - cases involving procedural types provided for in criminal law, which do not fall into the "severe criminal cases" and "minor criminal cases" categories. These are, for example, cases relating to "legal accumulation", "interrogation of foreigners", "judicial expulsion", "compulsory internment" and "habeas corpus".

Q094 (2021): The discrepancy should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

Q094 (2020): 94.1 - The decrease in the number of cases completed in the category "Total of criminal law cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation.
94.2 -The decrease in the number of incoming and outgoing cases in the category "Misdemeanour and / or minor criminal cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation. Still, the number of cases pending on January 1, 2020 reduced compared to the number of cases pending on January 1, 2018, since the number of cases completed from 2018 to 2019 was relatively higher than the number of cases entered in those years. 94.3 - The increase in the number of pending cases older than 2 years in the "Other criminal cases" category in 2020 compared to 2018 may be related to reduced court activity in the year 2020 due to the Covid-19 pandemic situation.

Q094 (2018): Regarding the decrease of the numbers comparing to 2016, there were no legislative changes or others that could explain this decrease. Due to increased efficiency of first instance courts, we can notice for the last several cycles a down-word trend in respect of the number of pending cases, namely criminal law cases.

Q094 (2016): There is no specific reason explaining the decrease in the number of incoming and pending criminal cases in comparison with the values of previous cycles. There were no legislative changes or other that could explain this value. However, we can note that cases at first instance in criminal and other areas have been decreasing in the last years. In addition, this decrease may also result from the fact that the number of criminal cases registered by police forces has been decreasing.

Romania

Q094 (General Comment): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q094 (2024): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2. The stock at the beginning of 2024 was higher than that at the beginning of 2023, which is one of the possible explanations for the fact that the stock of year-end files older than 2 years has this increase.

Q094 (2023): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q094 (2020): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased numer of pending cases older than 3 years. In criminal law cases postponements were reccurent in cases involving persons serving a prison senstence, because generaly they have to be brought to every court hearing which was not always possibile due to the curantine measures taken by the prison administrations.

Q094 (2018): The changes brought to the code of criminal procedure may be among the reasons for the augmentation of the total number of criminal law cases pending on January 1st between 2016 and 2018, namely for e.g. the procedure regarding the prosecutor's decision to discontinue the criminal investigation has to be confirmed by a judges/in court, according to the new provisions.

Q094 (2016): In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.
The total number of incoming criminal cases in first instance courts has substantially increased when compared to 2014 data (+41%).
These figures have been confirmed by the CEPEJ National Correspondent.

Q094 (2014): The significant increase in the number of total pending cases on 1st of January within the period 2012 – 2014 is due to the new way of counting the statistical data by the application Statis. The time of reaching a decision is not equivalent to the time of drafting the decision. For the present evaluation, files where a decision is reached but is not drafted yet are not counted.

Slovak Republic

Q094 (General Comment): The statistical data collected by the Ministry of Justice of the Slovak Republic does not allow the categorization of the criminal matters according to the types of criminal offences as defined in explanatory note.

Q094 (2022): Among "Other criminal cases" it is possible to include, for example, motions regarding the expungement of a conviction, motions regarding the imposition of protective measures and the execution of detention, motions related to custody and the execution of a sentence, motions for conditional release, motions related to probation and mediation, requests from domestic and foreign authorities in criminal cases, motions that are decided in preliminary proceedings, etc.
Other discrepancies are reflection either of the submission activity of the prosecutors or productivity of the judicial system (judicial staff) in resolved cases.

Q094 (2020): Sources: Analytical center, Ministry of Justice of the Slovak republic

Q094 (2018): There is a big discrepancy between pending cases on 31st of December 2016 and “Pending cases on 1st of January 2018”. This is caused of two factors: The first one and major is in delivered data in 2016. In the 2017 was the data collection still in paper form and in the old methodology, as we explained already. In the same time the project Audit with the experts from CEPEJ was already influencing the newly growing Analytical center and motivated as to try collect pending cases for 2016 backward. Since there were no electronic tools for collecting data available neither for courts nor for Ministry of Justice; the result were obviously full of mistakes. Analytical center had no chance to make data check, since pending cases were never collected before, so we had to rely on the courts data without possible checkup. After 2017, when was already available electronic tool (AZU) for collecting data from courts with implemented controlling formulas, then the mistakes from previous manual collection have occurred significantly especially in the first instance criminal agenda. The second factor is, that the Clearance rate dropped from 106, 52% in 2016 to the level 101, 81% in 2018.

Q094 (2016): For 2016 data, new methodology was implemented to make the reporting structure consistent with the CEPEJ methodology and leads to better comparison of Slovak Republic (SR) with other countries. The previous methodology was not counting a decision of first instance court as resolved until the case becomes finalised at last instance. This resulted in reporting such case as unresolved despite respective court has already made a decision. This is the nature of reporting of many “unresolved” cases on courts despite court already decided, in fact. New way of reporting extracts the numbers of decided cases in respective court instances from “unresolved” and allocates these numbers to those court instances that made an actual decision in the reference period that is in correspondence with CEPEJ methodology and better comparable with other countries.

Slovenia

Q094 (General Comment): Severe criminal law cases include all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. Minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. Minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws.
The figures in the table include the following cases:
Severe criminal cases:
criminal cases at local and district courts,
criminal cases against juveniles at district courts.
Misdemenour cases:
minor offences in regular court procedure – request for judicial protection,
minor offences in regular court procedure – accusation proposals,
cancellation of validity of the driver's licence according to the legal limit of punitive points
Other cases:
criminal investigations at district courts,
criminal cases against juveniles in preparatory proceedings,
execution of the sanction of prison, execution of criminal sanctions of foreign courts,
criminal investigation actions at local and district courts,
cases of the out-of-hearing senate,
clemency procedures at local and district courts,
legal aid between national courts in criminal matters,
international legal aid in criminal matters,
cases of decisions to permit interventions within human rights and freedoms,
legal aid between courts in minor offences,
international legal aid in minor offences,
search of premises,
setting a task for the good of the community or the local community,
compliance detention,
various criminal matters at local and district courts and in minor offences at local courts.
Regarding criminal investigations at district courts: Slovenia has a system where the state public prosecutor requests a first instance court to perform a criminal investigation (or individual investigatory acts). When this procedure at court is finished, the case is returned to the state prosecutor, who can decide whether to dismiss a case or file an accusatory act at the (same) court. When the accusatory act is filed, a criminal trial (i.e. deliberating on the responsibility and sanctioning of the offender) begins.
Regarding setting a task for the good of the community or the local community: A request for prison sentence or fine to be replaced by a task for the good of the community can be filed after the finality of the main court decision and is decided upon in a separate proceedings.
Regarding compliance detention: In minor offences cases, if the fine is not paid in due time, a compliance detention (to comply with paying the fine) is ordered. The proposal is decided upon by a local court according to the domicile of the offender. Compliance detention

Q094 (2024): Criminal investigation cases (reported under Other criminal cases): 2.435 incoming cases; 2.089 resolved cases in 2024.
Criminal cases against juveniles in preparatory proceedings (reported under Other criminal cases): 607 incoming cases, 631 resolved cases in 2024.
Discrepancies: 3. (Pending cases on 1 Jan. ref. year): The number of "international legal aid in minor offences" increased significantly (by 88%; from 1.215 to 2.288) because some countries have raised the fines for certain offences, which are now being enforced by the Slovenian court based on EU regulations (number of such incoming cases increased by 46%). In addition, the competent Slovenian court is facing a shortage of judicial staff. These are two main reasons for the increase in unresolved cases.

Q094 (2023): Criminal investigation cases (reported under Other criminal cases): 2.266 incoming cases; 2.335 resolved cases in 2023.
Criminal cases against juveniles in preparatory proceedings (reported under Other criminal cases): 593 incoming cases, 458 resolved cases in 2023.
Discrepancy to 2022 data in 3. Other criminal cases (Pending cases on 31 Dec. ref. year): The increase is notable in 1) legal aid between national courts in criminal matters and international legal aid in criminal matters (34% of pending cases) and 2) criminal investigation (15% of pending cases). In 2023 both aforementioned types of cases saw increase in incoming cases and resolved cases, resulting in 87% and 97% CR respectively.

Q094 (2022): In 2022, approx. 25-30% of pending cases and 6-7% of incoming/resolved cases were criminal investigation cases (see general comment).
1. Severe criminal cases - Pending cases older than 2 years – increase by 39%;
3. Other cases - Pending cases older than 2 years – increase by 25%:
Factors contributing to this increase are: increased complexity of cases (cases with multiple offenders, cases with offenders in detention, need for experts, international element), trouble finding and serving court documents to foreign offenders and victims, non-responsiveness of parties, delays due to international legal aid, limitation of operation of courts due to Covid-19 pandemics in 2020 and 2021 and lack of candidates for new judges at district courts.

Q094 (2021): 1. Severe criminal cases - Pending cases on 1 Jan.: increase by 22%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
1. Severe criminal cases - Resolved: increase by 17%
In 2020 first instance courts resolved less cases than usual due to Covid-19 restrictions, hence the increase in resolved cases in 2021.
2. Misdemeanour and / or minor criminal cases - Pending cases older than 2 years from the date the case came to the first instance court: decrease by 34%.
The decrease is due to the more efficient work of courts in resolving older cases.
3. Other criminal cases - Pending cases on 1 Jan. ref. year: increase by 16%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
In 2021, approx. 30% of pending cases and 7% of incoming/resolved cases were criminal investigation cases (see general comment).

Q094 (2020): Until now, at "1. Severe criminal cases" we have reported both criminal investigation and criminal trial cases (see general comment) for the same criminal offence. For 2020, we have excluded data on investigations to report data on criminal trials only, and criminal investigation is reported at 3. Other criminal cases. The main reason is the comparability of data between countries as criminal investigation is not within the juridiction of courts in most countries. Investigation cases, that were previously reported at 1. Severe criminal cases and are now reported under 3. Other cases represent 5-10% of all reported cases.
The number of incoming Severe criminal cases decreased by 1% in 2019 and the number of resolved cases decreased by 2% in 2019. However, in 2020 the number of incoming cases decreased by 1%, and the number of resolved cases decreased by 23%, mostly due to limitations of operations of courts due to the Covid-19 pandemics. Consequently, the number of pending cases has also increased by 22%.
The number of pending Severe criminal cases, older than 2 years increased in 2019 (by 15%) and stayed roughly the same in 2020, while the number of Misdemeanour cases stayed roughly the same in 2019 and increased significantly (by 128%) in 2020. No specific explanation can be given for any of the mentioned changes. This two factors resulted in increase in total number of pending cases older than 2 years.

Q094 (2018): Severe criminal law cases include all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. Minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. Minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws.
Discrepancies: This year, some of the cases, previously reported at Severe or Misdemeanor cases, are reported under new category - Other cases (for details, please see general comment). The metodology for the total number of cases reported did not change, and the changes for total are below 20%.

Q094 (2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).

Q094 (2014): According to 2014 data, the category “severe criminal law cases” includes all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. At first instance, this category encompasses: criminal cases at local and district courts (K); criminal investigations at district courts (Kpr); criminal cases against juveniles at district courts (Km); criminal investigation actions at local and district courts (Kpd); various criminal matters at local and district courts (Kr); clemency procedures at local and district courts (Po); criminal cases against juveniles in preparatory proceedings (Kmp); cases of the out-of-hearing senate (Ks); execution of the sanction of prison (IKZ); execution of criminal sanctions of foreign courts (IKZt); cases of decisions to permit interventions within human rights and freedoms (Pp). The attention should be drawn on the fact that the 2014 data is not comparable to pre-2014 results, because until 2014, only first 3 categories above were reported. In 2015, the reporting method was further improved, and other types of cases were also included in the reporting.
The minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. The minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws. At first instance, this category subsumes: minor offences in regular court procedure – request for judicial protection (PR-zsv); minor offences in regular court procedure – accusation proposals (PR-obp); cancellation of validity of the driver’s licence according to the legal limit of punitive points (EPVD); compliance detention (PRuz). This category does not include: legal aid in minor offences (PomPR); international legal aid in minor offences (PomPRi); search of premises (PRhp); setting a task for the good of the community or the local community (PRnk) and various cases in minor offences (PRr).

Spain

Q094 (2024): The data has been obtained using the same criteria as in previous years and follows the trend published by the General Council of the Judiciary.

Q094 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain’s rates.

Q094 (2022): There are increases of incoming and resolved cases compared to the number of cases in 2020. It should be taken into account that information from 2020 represents the year of the pandemic. The recovery of normal work increased the number of cases, incoming and resolved.

Q094 (2021): The number of incoming severe criminal cases increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved cases.

Q094 (2020): Possibly the pandemic, and the restrictions it entailed, have had an impact on the decrease of the number of resolved cases.

Q094 (2016): The Organic Law 1/2015 eliminated 'faltas' (misdemeanour) of the Criminal Code, qualifying some of them as minor offenses, and others as administrative infractions. Accordingly, we can observe decreases in the numbers of misdemeanour cases which also affects the total of criminal law cases.

Q094 (2014): The Law 41/2015 has amended the Criminal Procedural Law in the sense that those files opened by the police concerning crimes committed by an unknown person will not be submitted to courts but will remain at the police offices at the disposal of the judge and prosecutor, with the exception of those crimes affecting life, sexual integrity, freedom or corruption, in which case the police report will necessarily be referred to the criminal court. As a result, it is expected that the number of incoming cases before the criminal courts will decrease. In addition, the law 1/2015 amended the Penal Code by suppressing the misdemeanors which now will be judged as administrative or civil matters according to their nature or as minor crimes.

Question 097

Austria

Q097 (General Comment): From January 1st, 2014 there are 11 newly found courts for administrative law in Austria, namely 9 regional administrative courts, 1 Federal Administrative Court and 1 Federal Tax Court (all courts of first instances). Furthermore, there is also the Supreme Administrative Court (final instance). With regard to administrative law cases there is no second instance. The statistical evidence of the Federal Ministry of Justice of Austria does not distinguish between the types of second instance cases mentioned under 2.1., 2.2. and 2.3. Data regarding the general categories “litigious cases” (1.) and “non-litigious cases” (2.) is available.
The number of “Other cases” (4.) is included in the category “litigious cases” (1.).

Q097 (2022): Non litigious family matters in the second instance have always been represented within the category of "non-litigious cases".

Q097 (2021): “Civil and commercial litigious cases” – the number of incoming civil litigious cases slightly increased between 2020 and 2021. The number of resolved such cases increased but to a lesser extent than incoming cases. Accordingly, the number of pending civil litigious cases at the end of the year increased. There is no explicit explanation for these variations. It should be recalled that 2020 year was a particular year due to the pandemic. In 2021, the data are back at the level of 2019.

Q097 (2017): In the area of appeal cases concerning other than criminal law cases only the categories of general civil law, labour law and social law are gathered. The administrative cases are NAP in second instance since they are presented in first and final instance.

Q097 (2016): In the area of appeal cases concerning other than criminal law cases only the categories of general civil law, labour law and social law are gathered. The administrative cases are NAP in second instance since they are presented in first and final instance.

Belgium

Q097 (General Comment): Number of second instance cases: cases brought before appelate courts, labour courts and cases on appeal against decisions of justices of the peace and police courts (civil cases).

Q097 (2022): Appellate court (Civil Matters): Cases pending as of 01/01/2022 = 28525; cases pending as of 31/12/2022 = 27375; Cases pending for more than 2 years from the date on which the case is brought before the courts at second instance = 11578. Labor court: cases pending as of 01/01/2022 = 5461; cases pending as of 31/12//2022 = 5294; Cases pending for more than two years from the date on which the case is brought before the second instance courts = 1416. Source: datawarehouse (data extraction date: August,1st,2023).

Q097 (2021): Court of appeal (civil matters): Pending cases on 1/01/2021 = 29 320 ; Pending cases on 31/12/2021 = 28 507 ; Pending cases older than 2 years from the date the case came to the second instance court = 12 133. Bron: datawarehouse (date of data extraction: 01/07/2022).

Q097 (2020): *Cases in the second instance courts , labor courts and cases on appeal against decisions of justices of the peace and police courts (civil matters), at the trial level.
*Court of second instance (civil matters): Cases pending as of 1/01/2020 = 30668; Cases pending as of 12/31/2020 = 29300; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 12391. *Labor Court: Cases pending as of 1/01/2020 = 6033; Cases pending as of 12/31/2020 = 5841; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 1730. Source: datawarehouse (data extraction date: 06/16/2021)
*Civil litigation cases: for 2020, there is a decrease in the number of new cases and an even greater decrease in the number of completed cases due to the pandemic that has affected the operation of the courts

Q097 (2018): Number of cases before courts of appeal, labour courts and cases of appeal against decisions of justices of the peace and police courts, at the first instance level.
Court of Appeal (civil matters): pending cases at 1/01/2018 = 33,018; pending cases at 31/12/2018 = 32,321; pending cases for more than 2 years from the date in which the case is brought before the courts of second instance = 13,507. Labour Court: pending cases at 1/01/2018 = 6236; pending cases at 31/12/2018 = 6201; pending cases for more than 2 years from the date in which the case is brought before the courts of second instance = 1535. Bron: datawarehouse (extraction 1/09/2019)
no data on pending appeals against decisions of the justices of the peace and police courts at the first instance level.
In administrative matters, there is no second instance. The Council of State is the only supreme court.

Q097 (2017): Number of cases before courts of appeal, labour courts and appeals against decisions of justices of the peace and police courts at the first instance level.
Courts of Appeal: Justice in numbers

Q097 (2016): Number of cases before courts of appeal, labour courts and cases of appeals against decisions of justices of the peace and police courts, at first instance.

Bulgaria

Q097 (General Comment): In Bulgaria registry cases are not resolved by the courts. They are under the competence of the Registry agency where is the property register, the commercial register and register of non-profit legal entities, the BULSTAD register and the Register of the Property Relations between spouses.

Q097 (2024): "Administrative law cases": the amount of pending appeal cases (3157) at the end of the year is the sum of the pending cases of all 28 administrative courts in the Republic of Bulgaria. The data show that the highest ratio of pending cases to the cases subject to consideration, as well as the ratio of pending cases at the end of the year to the total number of pending cases from the courts, are demonstrated by Administrative Court-Haskovo with 37% and 6% respectively, Administrative Court-Lovech (34% and 4%), Administrative Court-Ruse (32% and 5%), Administrative Court-Blagoevgrad (25% and 7%). After reviewing the data from these courts in the annual reports for 2024 that are publicly available on their websites, it was found that their pendency is due to the fact that for the large part of the appeal cases, the proceedings have been suspended to wait for the CJEU decision on a preliminary ruling and because most of the cases were submitted in the last quarter of 2024 that led to the objective impossibility of concluding them by the end of the year. The situation should be construed against the background of data on the number of incoming cases and the number of administrative judges (Q46-2), as well as the extremely accessible administrative justice in Bulgaria.

Q097 (2021): As it is impossible to distinguish between litigious and non-litigious cases for the present, for 2021 the following data is available as to the sum of all civil and commercial litigious and non-litigious cases: pending at the beginning 16 469; incoming 41 774, resolved 41 391 and pending at the end of the year 16 852.

Q097 (2020): “Total”: the decreases in the number of pending cases is due to growth in civil and commercial cases in 2019 which continued in 2020, but at a slower pace. As it is impossible to distinguish between litigious and non-litigious cases for the present, for 2020 the following data is available as to the sum of all civil and commercial litigious and non-litigious cases: pending at the beginning 13 612; incoming 43 927, resolved 41 070 and pending at the end of the year 16 469.

Q097 (2019): See General comments

Q097 (2018): NA

Q097 (2016): There is no particular explanation for the downward trend observed between 2014 and 2016 in respect of the number of pending cases on 1 January for the categories "total" and "administrative law cases". All the data provided is correct.

Croatia

Q097 (2024): Some data from this table for 2023 were not reported as they were unavailable at the time of questionnaire completion due to technical issues in the information system. The corrected data for 2023 were submitted together with the 2024 figures.
Regarding the number of unresolved cases older than two years, discrepancies exist because data for 2023 were not available.
Concerning non-litigious land registry cases, as previously mentioned, the 2023 strike and reduced court productivity resulted in increased backlogs, reflected in the higher number of unresolved cases at the end of 2023 and the beginning of 2024. Although first-instance courts resolved more cases in 2023, this led to an increase in pending cases at the appellate level. Since courts were unable to process the incoming caseload, the overall number of pending cases increased.
A similar situation applies to non-litigious business registry cases.

Q097 (2023): The result of a three-month strike is a 71.55% increase in the total number of non-criminal law cases (1+2+3+4) - Pending cases older than two years from the date the case was filed in second instance court. The County Courts had the biggest increase in second-instance civil litigation (the High Commercial Court decreased such cases from 155 to 101, while the County Courts increased them from 1,092 to 1,991 cases).
2.2.1. Non-litigious Land Registry cases - the 2023 civil servants strike resulted in a decreased number of resolved cases and increased number of pending cases on 31 December.

Q097 (2022): Regarding second instance „General civil (and commercial) non-litigious cases", starting with early 2022, all the cases have been classified as „appeal on sentence" type of cases, instead of „enforcement cases", „family law cases", „labour law cases" or any other case type available in the court management system database, as it was in the previous cycles. Because of that, we are unable to differentiate between second instance litigious cases and second instance non-litigious cases (or any of the other types of cases for that matter). For „Other non-litigious cases", the reason for no available data is the same as regarding "General non-litigious cases", as those types of cases that would have been in the category of „Other non-litigious cases" according to the classification by the courts in the previous years, are also categorised as a generic „appeal case". As regards registry cases, there is no specific reason for the decrease in the number of resolved cases, as the number of incoming cases is roughly the same as last year (around 1.700 incoming cases). Regarding administrative cases, there is no specific reason for the decrease in the number of resolved cases, as the number of incoming cases is roughly the same as last year (around 5.500 incoming cases).

Q097 (2019): Due to legal changes, the High Administrative Court of RoC started to receive more cases from 2016. With the same amount of judges, they did not manage to cope well with this income of case, therefore pending cases increased.

Q097 (2018): In category 1. Civil (and commercial) litigious cases there has been a decrease in the number of pending cases at the beginning of the period, received cases, resolved cases and also pending cases at the end of the year. This seems to be the trend for several years now. Although these courts are resolving less cases than in previous period, due to the reduced income, pending cases are still significantly decreased. Reduced number of received civil litigious and commercial cases on second instance do not have reason in for example law changes. Simply because less cases are resolved at first instance, less appeals are lodged to the second instance.
The increased number of pending administrative law cases at the beginning and at the end of the year as well as received cases is due to the extended jurisdiction of the High administrative court following law changes. The latter led to an increased inflow of cases and difficulty for the High administrative court to cope successfully with the income of second instance cases, especially since the number of judges remain the same as before law changes. This comment was provided also for last cycle.
The rest of the categories which have increase or decrease in pending cases is just an effect of the incoming or resolved cases.

Q097 (2017): The increased number of pending administrative law cases at the beginning and at the end of the year is due to the extended jurisdiction of the High administrative court following law changes. The latter led to an increased inflow of cases and difficulty for the High administrative court to cope successfully with the income of second instance cases. This comment in more details was provided also for last cycle.
In this category there is more than 20% increase of pending cases at the beginning of reference year in comparison to the beginning 2016. The reason are land registry cases. Reason for increased number of pending land registry cases is decreased number of resolved cases in relation to the number of incoming cases (87%) during previous year (2016.) which affected results for 2017. In 2017, second instance courts also resolved less than received land registry cases.
The reason for the decreased number of pending business registry cases at the beginning of 2017 in comparison to the beginning of 2016 is the number of resolved cases in relation to the number of incoming cases (104%) during 2016. The lower number of received cases and Clearance rate of 106% lead to the decrease of the number of pending business registry cases at the end of 2017. The reason for the decreased number of pending "other non-litigious cases" at the beginning of 2017 in comparison to the beginning of 2016 is the significant number of resolved cases in relation to the number of incoming cases (185%!!) during 2016. Regarding the increased number of incoming cases of this type, there are in absolute numbers very few cases (154) and although there is an increase of more than 20% in comparison to previous year, we think that there is no significant explanation for this, which would affect the trends in following cycles. As for the decrease in the number of resolved "other non-litigious cases", there is no significant explanation for this, but we think that it will not influence the trend in future cycles.
The reason for the decrease of pending civil and commercial litigious cases older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved significant amount of cases in relation to received cases (122%) with special focus on older cases. This led to a decrease of more than 17% of all pending cases and more than 30% of pending cases older than 2 years.
The reason for the decrease of pending non-litigious cases older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved more cases than received (103%) with special focus on older cases. This led to decrease of more than 7% of all pending cases and more than 30% of pending cases older than 2 years (of which they have few in the beginning).The reason for the decrease of pending "general civil and commercial non-litigious cases" older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved more cases than received (103%) with special focus on older cases. This led to decrease of more than 7% of al pending cases and more than 30% of pending cases older than 2 years (of which they have few in the beginning).The reason of the increase of pending registry cases older than 2 years in this category is entirely due to the increase of the number of pending land registry cases older than two years. The reason is already explained - the increase of pending cases in total is due to th

e difficulty of second instance courts to cope with the income of these cases. Finally, in respect of administrative law cases, due to the decrease of number of pending cases of this type in total, there is also decrease for 8 cases of pending cases older than 2 years (as stated before, we do not think that this is significant change taking into consideration absolute numbers and type of cases).

Q097 (2016): Second instance land registry cases, due to introducing separate case registers for certain type of cases on second instance courts,are now traceable as such in case management system. They have been taken out from Other non-litigious cases, where they were presented in previous cycles. The number of administrative cases, both in incoming and pending cases at the end of period is increasing. This is due to the law changes, which have extend jurisdiction of this court and consequently increase income of cases and unresolved cases at the end of period.

Q097 (2014): It is noteworthy that in 2012 and 2013, the ICMS could not recognize and divide cases into litigious or non-litigious. In 2014, the ICMS was improved as Croatia introduced updated and a very detailed code table, in order to extract more detailed case types from the system. Therefore, now the distinction between all cases in litigious and non-litigious cases as well as other types of cases can be made very accurately. This change of methodology of categorisation affected the difference between pending cases on 31 December 2013 and pending cases on 1 January 2014 which will disappear in the next cycle.

Cyprus

Q097 (General Comment): As of the 1st of July 2023 the Supreme Court and the Supreme Constitutional Court were re - established. Also an Appeal Court was also created. Appeals filed after 2018 were transferred to the Appeal Court. Civil and Criminal appeals filed between 2013-2017 remained at the Supreme Court whereas administrative appeals are brought before the Supreme Constitutional Court.

Q097 (2024): The reference date for the previous cycle was 1st of July 2023 when the Court of Appeal was established, which explains the variatons not necessarily reflecting a real surge in caseload or efficiency.

Q097 (2021): Increase in resolved cases: cases tried together.

Q097 (2020): Reducing delays in the disposition time is part of the reform process. In administrative cases in 2019 a big number of cases were tried together. The cases that had the same subject matter were filed individually but were consolidated and tried together but for statistical purposes they were calculated separately. This is the reason why number of resolved cases in 2020 might appear lower than in 2019. The difference in the pending cases in administrative cases compared with previous year is that in this figure we included the cases filed before the Administrative court of international protection which was set up.
The reason we do not have statistical data on subcategories of cases is that the electronic filing system was not introduced that would enable to have statistical data on such cases.

Q097 (2019): The Administrative law cases include the cases from the administrative court which was established in 2018.

Q097 (2017): appeals filed against decisions of the administrative courts which was established in 2016 should be included in the pending cases on 1.1.2017 as Other cases include family court appeals
Variation between 2016 and 2017 in administrative cases (incoming and resolved): this icludes appeals filed against decisions of the administrative court

Q097 (2016): The Supreme Court is the appeal court.

Czech Republic

Q097 (General Comment): It is noteworthy that the methodology of presentation of data has been changed since the 2014 exercise. Since 2014, administrative cases, business registry cases and insolvency cases (and also some litigious cases) which are still decided by the second instance courts acting as first instance courts, are subsumed within the table of question 91 (which was already the case for the 2008 exercise).

Q097 (2022): Other cases are insolvency and incidency cases.

Q097 (2020): In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies. Civil (and commercial) litigious cases: In general, number of incoming cases is decreasing (mostly because number of first instance cases is decreasing too) and it follows that the number of pending cases is decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.
Other cases: The variations are the result of changes in first instance agenda. This category includes insolvency cases and there were numerous legislative changes in last years. Also, it must be noted that the number of pending cases is relatively small, thus the variance is bigger.

Q097 (2019): In "Other cases" category, insolvency cases are reported.
In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

Q097 (2018): In "Other cases" category, insolvency cases are reported.
In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

Q097 (2017): In "Other cases" category, insolvency cases are reported. In this year the number of resolved insolvency cases greatly exceeded the number of incoming insolvency cases, which led to huge drop in pending cases at the end of the year and discrepancy appeared. The changes are connected to changes in first instance insolvency agenda.

Q097 (2016): Increase in the number of "other cases" in 2015 and 2016 is due to the change of methodology applied to these data.

Q097 (2015): Increases in the number of "other cases" are due to the change of methodology applied to the 2015 data.

Q097 (2014): In 2014, the high increase of insolvency cases is due to numerous cases of personal bankruptcies as well as to an unfavourable economic situation.

Denmark

Q097 (General Comment): It is noteworthy that all appellate cases are considered as “litigious cases” which explains the reply NAP for all the other categories, as well as the fact that the total coincides with the number of civil and commercial litigious cases. The number of “administrative law cases” which are litigious is encompassed in the number of “civil and commercial litigious cases”.
Another important remark concerns cases that are not first instance cases before the two High Courts and which are included in question 97. Cases that begin as first instance at one of the two High Courts are not included in the figures in table 97.
Administrative law cases: 1. What is included in “administrative law cases” and what is the distinguishment between litigious and non-litigious administrative law cases; and what are non-litigious administrative case in Denmark. It is challenging to provide a clear answer for Denmark. Due to the way data is collected within the Danish Court Administration, it is unfortunately not possible to distinguish between the specific types of cases included under administrative law cases. The courts indicate whether a case is of an administrative nature, however, administrative cases occur across almost all categories within civil cases. Consequently, it is difficult to state unequivocally which types of cases they most appropriately belong to. 2. The approximate number of administrative law cases that are litigious and go to court, and their part of the overall “civil litigious cases
In the period from 2023-2025 the number of civil cases in Denmark was 181.064, and out of those, 10.947 was of administrative nature. Furthermore, approximately 6 percent of all civil cases over the past three years have been classified as administrative law cases. Cases concerning forced removal often fall within the scope of administrative law, however, such cases represent only about 2 percent of the total civil caseload. The two other categories with a notable share of administrative law cases are “general civil cases” and cases under “the simplified procedure”. Both of these categories are quite extensive in terms of volume as well as broad in their classification, meaning that administrative law cases constitute only a relatively small proportion within them. 3. The composition of the bodies such as appeal boards and committees Denmark has a well-developed system of specialized complaints boards that serve as administrative appeal bodies for decisions made by public authorities. These boards, such as Ankestyrelsen and the Consumer Complaints Board, provide citizens with accessible and cost-effective avenues to challenge administrative decisions. Denmark has over 80 complaints boards and committees across various sectors. They generally consist of a chairperson – often a judge or legal expert – and a mix of legally trained members and specialists relevant to the board’s area. Membership terms are typically four years. The exact composition varies by board: for example, the Consumer Complaints Board includes a chair (judge), vice-chairs, and representatives of consumer and business interests, while the Patient Complaints Board combines judges and health professionals. Appointments are usually made by ministries or local authorities, often based on nominations from relevant organizations.

Q097 (2024): Administrative law cases: changed from NAP to NA since Denmark does have administrative cases in courts, but they cannot be counted exactly.

Q097 (2016): Pending cases may vary a lot depending on the ratio of resolved cases compared to incoming cases. We can observe a decrease of about 30 % of pending cases ultimo the 2016. This is due to this "residual" nature of pending cases. The decrease in the pending cases between 2014 and 2016 is because in both calendar years 2015 and 2016 the number of resolved cases exceed the number of incoming cases.

Q097 (2014): In the ambit of the 2014 exercise, it has been emphasized that due to an improved business situation, courts on all levels receive fewer cases, i.e. civil cases, enforcement cases, forced sales, insolvency cases. Generally speaking, pending cases are also reduced thereby.

Estonia

Q097 (General Comment): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

Q097 (2024): Overall workload has risen, but output has fallen.

Q097 (2022): "Administrative law cases": there are problems that have been dealt with but no results can be observed yet. Above all there were many vacancies in civil departments and that has had an effect in administrative too.

Q097 (2021): In 2021, a general increase in the case load of circuit courts is observed.

Q097 (2019): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

Q097 (2015): In respect of the civil and commercial non-litigious cases, the increase from 2013 in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Owing to the fact that this court is the largest 1st instance court dealing with 1/3 of all of the cases in Estonia, it had an impact on the case-flow of the second instance courts (only 2 appeal courts competent in civil, criminal and administrative matters).
As to the administrative cases, it is noteworthy that as there are only 2 appeal courts in Estonia competent in civil, criminal and administrative matters, every change in the number of 2nd instance judges influences the statistics of the Courts of appeal. Between 2010 and 2012 there were a few vacant administrative judges' positions in one of the appeal courts which had an impact on the number of pending cases

Q097 (2014): On the occasion of the 2014 exercise, it has been emphasized that there has been an ongoing reform concerning the court budgets and judicial performance indicators. Agreements have to be adopted on the occasion of the budget negotiations between the Ministry of Justice and the courts concerning the efforts that need to be undertaken in court to clear the backlog and accelerate proceedings.
As to the increase of the total of pending other than criminal cases (beginning and end of the year), the reason is that 1st instance courts started the project of clearing backlogs and accelerating proceeding earlier. As a result, the number of incoming cases in 2nd instance courts increased in 2013 and resulted also in an increase of the number of pending cases by the end of the year 2013.
For 2014, non-litigious enforcement cases are included in the category "general civil (and commercial) non-litigious cases".

Finland

Q097 (General Comment): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

Q097 (2024): See comment to Q91.
The trend of a growth of summary civil cases that is seen already at the first instance courts also reaches the second instance courts.

Q097 (2022): In previous years, military court cases of the second instance have been erroneously registered under Other civil cases, so in this statistical year, the before mentioned cases have been registered as criminal cases. Similarly, this question has previously included cases that have come in for consideration in the second instance courts as first instance cases. Since the first instance cases previously had their own procedure, from which it was not easy to determine whether the case concerned criminal or civil case, they were therefore registered in the group "Other cases". In this statistical year, it has been possible to find out whether they belong to criminal or civil cases and thus have been taken into account to the statistics according to the breakdown. In addition, "Other cases" have included cases related to releasing a prisoner serving a life sentence, which are also no longer counted in this group, because these are processed as separate applications and are not civil or criminal matters.

Q097 (2021): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Other cases are: Cases dealt in Court of Appeal as first instance, military court cases, and cases related to releasing a prisoner serving a life sentence [pitkäaikaisvankien vapauttamismenettelyasiat].

Q097 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available
data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

Q097 (2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:
1)Incoming cases 2)Resolved cases
3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts).

Q097 (2018): In 2017, the number of incoming cases has decreased for example due to some procedural changes and the courts have been
able to resolve more pending cases. Accordingly, the number of pending cases at the beginning of 2018 has decreased.

Q097 (2017): In 2016, the number of incoming cases has decreased (for example due to some procedural changes) and the courts have been able to resolve more pending cases. Accordingly, the number of pending cases at the beginning of 2017 has decreased.

Q097 (2016): The number of incoming cases has decreased (for example due to some procedural changes) and the courts have been able to resolve more pending cases.

France

Q097 (General Comment): Civil litigious cases: general litigation cases before the Court of appeal and civil cases from the special minors' chamber (educational assistance).
Special minors' chamber: these are educational assistance cases, handled in the first instance by the juvenile court judge and on appeal by the special minors' chamber. Although this chamber predominantly deals with criminal cases, these are indeed civil cases.
Civil non-litigious cases: non-litigious cases before the courts of appeal, such as divorces and separations by mutual consent, approvals of agreements to change the matrimonial regime, civil status matters (declaratory judgments, corrections and annulments of civil status records, and changes to gender records), adoption requests (both simple and full), and succession matters (vacant or unclaimed successions, sealing of assets, and disputes regarding the sealing process), as well as cases concerning the incapacity of minors (opening of guardianship, appeals against decisions of guardianship bodies, emancipation, authorization of an act or appointment of an ad hoc administrator in legal administration, control of an act in high-risk situations), preventive procedures for companies in difficulty (conciliation procedures and ad hoc mandate), preliminary conciliation attempts before the civil court and the local court, and procedures for amicable settlements in agricultural matters, SCI, and associations.
Other cases: Summary proceedings, requests, and special procedures before the Court of appeal, and the civil party in expropriation cases.
Summary proceedings (référé): these are emergency procedures that allow the judge, while respecting the principle of adversarial proceedings, to issue temporary but swift measures aimed at preserving the applicant’s rights (urgent measures without dispute, conservatory or restoration measures even if contested, pre-litigation expertise, or an uncontested provision payment).
The summary procedure takes place before the trial and does not provide a final resolution of the dispute; the defendant is summoned, and the decision rendered is only provisional.
Requests: this refers to a method of initiating legal proceedings, used for disputes where the claim amount does not exceed €5,000 or for disputes specified by law (e.g., guardianship cases, etc.).
Special procedure: these are specific procedures before the Court of appeal, mainly involving appeals on decisions related to the detention of foreigners and involuntary hospitalisation (86% of decisions in 2024), disputes regarding the amount and collection of lawyer's fees (8%), and claims for compensation due to provisional detention (2%).

Q097 (2023): Source(s) SSER: exploitation of the General Civil Directory
Civil litigious cases: general litigation cases before the Court of Appeal and civil cases of the Special Chamber for Minors (educational assistance).
Special Chamber for Minors: these are cases of educational assistance, dealt with in the first instance by the juvenile judge and on appeal by the Special Chamber for Minors. Although the majority of cases within the competence of this chamber are criminal cases, educational assistance cases are civil cases.
Civil non-litigious cases: non-litigious cases before the courts of appeal, i.e., divorces and legal separations by mutual consent, homologation of agreements for the change of matrimonial regime, cases relating to civil status (declaratory judgment, rectification and annulment of a civil status certificate and modification of the designation of sex), adoption applications (simple and plenary) and inheritance (vacant or unclaimed succession, sealing and contestation of seals) as well as cases of incapacity of a minor (opening of a guardianship, appeal against a decision of a guardianship body, emancipation, authorisation of an act or appointment of an ad hoc administrator in the context of a legal administration, control of an act in high-risk situations), preventive procedures for companies in difficulty (conciliation procedure and ad hoc mandate), prior attempts at conciliation before the first instance court and the local court and amicable settlement procedures in agricultural, SCI and association matters.
Other cases: summary proceedings, petitions, special proceedings before the Court of Appeal and civil parties to expropriations.
Interim measures (“référé”): these are emergency procedures allowing the judge, in respect of the adversarial debate, to order provisional but rapid measures aimed at preserving the rights of the plaintiff (urgent measure without dispute, precautionary or restoration measure even if disputed, expert opinion before litigation on the merits, payment of a provisional payment that is not seriously contestable). The summary proceedings take place before any trial on the merits and do not definitively settle the dispute, the defendant is summoned, and the decision rendered is only provisional in nature;
Applications (“requêtes”): this is a method of referral to the courts, which can be used for disputes for which the amount of the request does not exceed €5000 or for disputes specified by law (e.g. guardianship, etc.);
Special procedures: These are special procedures before the Court of Appeal, mainly appeals against decisions of the liberty and detention judge in matters of detention of foreigners and forced hospitalization (85% of decisions in 2023), disputes concerning the amount and recovery of lawyers' fees (8%) and claims for compensation for pre-trial detention (2%).

Q097 (2022): Sources: Ministry of Justice/SG/SEM/SDSE, General Civil Directory; Council of State.

Following a change in methodology, "litigious civil (and commercial) cases" now include: general litigation cases before the court of appeal and civil cases from the special chamber for minors (educational assistance).

As a result of a change in methodology, "non-litigious civil cases" correspond to non-litigious matters before the courts of appeal, namely: divorces and separations by mutual consent, approvals of agreements regarding changes in matrimonial regimes, matters relating to civil status (declaratory judgment, rectification and annulment of an act related to civil status, and modification of gender designation), adoption requests (simple and full), successions (vacant or unclaimed succession, affixing seals and contestation related to seals), as well as matters concerning minor's incapacity (initiation of guardianship proceedings, appeals against decisions made by guardianship authorities, emancipation, authorization for an act or appointment of an ad hoc administrator within the framework of legal administration, control over an act under risky circumstances), preventive procedures for companies facing difficulties, (conciliation procedure and ad hoc mandate), preliminary conciliation attempts before judicial tribunals and local courts, amicable settlement procedures in agricultural matters, non-trading property company and associations.

Following a change in methodology,"other cases" now encompass: interim measures ("référés"), petitions and specific procedures before the court of appeal as well as claims arising from expropriation. Below is a description of these types of proceedings: 1) Interim Measures ("Référés"): These are procedural steps that allow judges to order swift provisional measures aimed at preserving the rights of applicants (urgent measures without dispute; conservatory or restorative measure even if contested). Although these decisions are rendered without confrontation between parties they nonetheless pertain to disputes involving plaintiffs vs defendants. 2) Special Chamber for Minors: this involves educational assistance cases handled initially by juvenile judges with appeals being heard by this specialized chamber. While predominantly dealing with criminal cases this pertains specifically to civil issues. 3) Specific Procedures: these involve particular procedures before the court of appeal primarily consisting of challenges against rulings made by the "jujes des libertés et de la détention" on detention orders pertaining to foreigners' retention and forced hospitalization (83% -2022); disputes regarding lawyers' fees amount and recovery (9%) ; petitions seeking compensation due to pretrial detention (2%). The lack of horizontal consistency in the table stems from missing data reports for certain specific categories of cases (see comment of Q91).

Q097 (2021): Source Council of State and SDSE
Administrative law cases: regarding the ageing of the stock, the output of the Administrative Courts of Appeal (CAA) fell sharply in 2020 (-10%) because of the COVID-19. When the situation returned to normal, the CAAs gave priority to foreigners' litigation, which accounts for almost 50% of their entries, and the stock therefore aged mechanically.

Q097 (2020): "The health crisis and containment may have played on TAs (completed cases) (by reducing the ability of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to trial). Prior to this, a major lawyers' strike and a transport strike had mainly affected the TAs.
Commentary provided by the highest administrative Court : As a reminder, the measures derogating from the ordinary law of contentious administrative procedure adopted to respond to the situation arising from the health crisis caused by the Covid-19 epidemic were provided for by Ordinance no. 2020-305 of March 25, 2020, and then by Ordinance no. 2020-1402 of November 18, 2020, and Decree no. 2020-1406 of the same day. I - Concerning the rules relating to the organization or holding of hearings 1°) Use of audiovisual or any other means of electronic communication
The two orders of March 25 and November 18, 2020 provided for the possibility of using an audiovisual means of telecommunication for the holding of hearings or any other means of electronic communication.
When this device was used, it was used, in almost all the jurisdictions that had recourse to it, for less than 10% of the cases judged in collegiality during the same period.
The most common configuration used was that in which one or more members of the panel were at a distance and the president, the other members of the panel, and the parties and their counsel were in the courtroom (approximately 75% of the courts that used videoconferencing chose this configuration, and 53% of them used it for less than 10% of the cases heard by the panel). Very few courts have used video-conferencing with remote parties. The reasons for which the courts have used video-conferencing are linked to the constraints linked to the health crisis, in particular the difficulties encountered by lawyers to travel, especially in overseas territories, and the isolation imposed on certain people (judges or lawyers) declared to be in contact or recognized as fragile.
In the case of single-judge hearings, the courts have made a very measured application of the provisions allowing the use of an audiovisual means of telecommunication, since only 6 administrative courts out of 35 have indicated that they have used it.
The administrative courts indicated that they had used videoconferencing, as a single judge, for the processing of emergency proceedings in matters concerning foreigners, particularly in cases where the foreigner was in administrative detention. Finally, 15 administrative courts indicated that they held summary proceedings by videoconference. For almost all of these courts, the summary proceedings judge was in the courtroom and the parties were at a distance, and less than 10% of summary proceedings cases were judged in this configuration.
Travel difficulties were the main reasons why the courts of first instance held summary proceedings by videoconference. The texts applicable during the state of health emergency allowed the use of any means of electronic communication, other than videoconferencing, in case of impossibility to use it. Only a few TAs used this procedure and for less than 10% of the cases in the courts that used it.
Generally speaking, the courts have made a very measured application of the provisions of the orders allowing hearings to be held by videoconference and this use was justified by the constraints and difficulties linked to the health crisis. 2°) The provisions allowing to limit the number of persons attending the hearing were applied by a large number of courts and in

a frequent manner. On the other hand, the provisions allowing the president of the court to decide that the hearing will be held without the presence of the public have been used very little. 3°) The dispensation of the public rapporteur's conclusions has been used very little by the courts. This dispensation was applied because of the vulnerable state of the public rapporteur or to limit the length of the hearings (in these cases the dispensation was granted for cases that did not present any difficulty).
4°) The orders of March and November 2020 allowed the interim relief judge to rule without a hearing, in addition to the cases provided for in article L. 522-3 of the Code of Administrative Justice.
Many courts have indicated that they have dispensed with a hearing. The dispensation of a hearing was most frequently applied in the case of summary proceedings for suspension. In the case of interim relief, this dispensation was applied in a more measured way.
Finally, many jurisdictions did not hold a hearing for summary proceedings other than suspension and liberty.
5°) The possibility for the administrative courts of appeal to rule by order without a hearing on applications for a stay of execution was little used, since only 3 CAA indicated that they had used it.
6°) In matters of DALO-Injunction, the possibility of ruling by order was used by 12 courts and, for almost all of these courts, for more than 60% of the cases judged during the same period.
II - The courts made very little use of the derogation provisions relating to the composition of the trial panels. In fact, no court made use of the possibility of completing a panel of judges with the participation of an honorary magistrate from another court. Only one administrative court requested the participation of a judge from another court (one judge came to assist for a period of three months).
III - The provisions allowing heads of court to appoint advisers to rule by order under the conditions set out in article R. 222-13 of the CJA were hardly used: only two administrative courts applied them. One head of court had appointed one or more advisers but no order was made by this magistrate or these magistrates. Another head of court indicated that the designated magistrate(s) signed more than 200 orders. In total, it appears that the measures provided for have been used very differently depending on the measure taken into account.
Video hearings and the new rules for summary proceedings have opened up possibilities, with provisions that can be seen as having been the medium for experimentation. "

Q097 (2017): As regards administrative law cases, the Council of State report indicates that it is a coincidence to have the same number for incoming and resolved cases.

Germany

Q097 (General Comment): General information on the statistics used as sources for answering the questions in this section: please refer to the general comment Q 91
Horizonal inconsistencies:
The inconsistencies with regard to the pending cases at the end of the year also occur in the statistics published by the Federal Statistical Office. The reason for this is, that courts submit count corrections for the monthly surveys at the end of the year.

Q097 (2024): Civil (and commercial) litigious cases include second instance civil cases at the regional courts and higher regional courts.
"Administrative law cases" include cases at the higher administrative courts and regional social courts.
"Other cases" include cases at the regional labour courts and second instance family matters at the higher regional courts.

Q097 (2023): Civil (and commercial) litigious cases include second instance civil cases at the regional courts and higher regional courts.
The number of incoming cases has decreased significantly compared to 2022 and is now back to the level of before 2019. The increased number of incoming cases in 2019 till 2022 was most likely a result of the flood of lawsuits brought against car manufacturers in connection with the "diesel emission scandal".
"Administrative law cases" include cases at the higher administrative courts and regional social courts.
"Other cases" include cases at the regional labour courts and second instance family matters at the higher regional courts.
"Other cases" - discrepancy between pending cases on 31st Dec. 2022 and 1st Jan. 2023:
A high discrepancy orrurs with regard to second instance labour law cases. The reason for this is that one federal state's data on pending second instance labour law cases is missing in the official statistic.

Q097 (2022): Civil (and commercial) litigious cases include second instance civil cases at the regional courts and higher regional courts.
There was a rise in pending cases (1. January and 31 December) compared to the 2020 cycle as well as a decrease in resolved cases. This is most likely a result of the flood of lawsuits brought against car manufracturers in connection with the "diesel emission scandal". For example, the higher regional court of Stuttgart, where a large car manufracturer has its main offices, has seen a rise in pending cases (1 January) of more than 100% compared to 2020.
"Administrative law cases" include cases at the higher administrative courts and regional social courts.
"Other cases" include cases at the regional labour courts and second instance family matters at the higher regional courts.

Q097 (2021): "Other": family cases at Higher Regional Courts, appeal and complaint proceedings at Regional Labour Courts
Pending civil and commercial litigious cases on 31 Dec: The discrepancy stems from a rise in pending cases at the Higher Regional Courts (approx. 33% compared to 2020). While the number of pending cases at the Higher Regional Courts has risen in all Länder, the discrepancy is especially high in Baden-Württemberg (rise of approx. 88%). The reason for this is most likely the flood of lawsuits brought against car manufracturers in connection with the "diesel emission scandal". The Higher Regional Court of Stuttgart, where a large manufracturer has its main offices, has seen a rise in pending cases of more than 100% compared to 2020.

Q097 (2020): family cases at Higher Regional Courts, appeal and complaint proceedings at Regional Labour Courts

Q097 (2019): The horizontal consistency in the table is not ensured because the data are continuously checked.

Q097 (2015): A substancial number of the Länder was unable to provide information, meaning that any amount cited would not be meaningful in substantive terms.

Q097 (2014): The 2014 data are the same as those that have been provided in 2013. No update was available.

Greece

Q097 (2024): Independent Department for the Collection and Processing of Judicial Statistical Data (JustStat).
Concerning the increased number of incoming and especially resolved civil litigious cases at the appeal level, it should be noted that he implementation of the new judicial map in Greece (Law 5134/2024) introduced structural changes that affected the distribution and classification of civil cases, as jurisdictional adjustments led to the transfer of certain case types to lower courts.

Q097 (2023): The data are provided by the Office for the collection and processing of judicial statistics.
“Civil litigious cases”: in 2022 and because of the partial closure of the courts, cases were arriving for a second-degree trial but not being heard. Cases not heard in 2022 were postponed to 2023. We believe that this, combined with the simultaneous full operation of the courts, resulted in a reduction in the percentage of cases ultimately resolved in the appellate courts and a concomitant increase in Disposition Time.
Concerning the decrease in the number of civil litigious cases pending for more than 2 years, it should be recalled that during the Covid-19 pandemic period, which was declared by the WHO on 11/03/2020, the prevention and management measures for the virus were implemented in Greece on 11 March. These measures also affected the functioning of the courts and civil courts, as most cases, especially civil cases, were suspended. The measures were fully implemented on 15 March 2022, when the functioning of the courts gradually started to normalise. During this period, judicial officers were given the opportunity and time to process cases that had been backlogged during the previous period. This resulted in a reduction in the number of pending cases in civil and criminal courts, which is reflected in the statistics for the year 2023.

Q097 (2022): The data has been provided by the office for the collection and processing of judicial statistics.
It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data, such as the training of staff and the creation of an instructional manual guide with definitions and instructions. These measures were intended to help collecting more reliable data from both small and large courts and prosecution services and eliminate the standard errors in judicial statistics. As our methodology is developing, discrepancies in data can be observed. Besides, as regards “Other cases”, it should be mentioned that some types of cases that were previously included in this category, are now distributed in the other case-categories in the table.

Q097 (2021): The data are from the Statistical Service of the Ministry of Justice.
The data has been collected from the 19 out of 19 Courts of Appeal in Greece.
Business registry cases do not belong anymore to the case of the courts, there is new department of a different Ministry.

Q097 (2020): Due to the pandemic, pending cases have accumulated in the courts of first instance, with the result that the courts of second instance have fewer cases to handle.
The data given for questions 97 and 98 are collected from all second instance courts. However, many fields are answered NA as only few data were collected from the second instance Courts.

Q097 (2019): The Council of State did not provide the Ministry of Justice with data regarding the Administrative law cases

Q097 (2017): Concerning Civil and Commercial litigious cases but also administrative law cases, the numbers are different from those provided in the 2016 questionnaire due to the recent operation of the OSDDY-PP and OSDDY-DD Integrated Management Systems (please see the comments provided for Q91).
Variations in the number of resolved cases are explained by the fact that in 2017 the function of the courts was not affected by the strike of the lawyers, which took place in 2016.

Q097 (2016): Any deviations from the 2015 figures are due to a new way of collecting statistics. In fact, in 2016, a working group was set up to update and simplify the content of the statistical data requested by the judicial services of the country. The working group created tables followed by detailed instructions and training in relation to the requested information. According to the instructions given to the courts, some procedures they handle, in those which there is no participation of a judge, are not included in the data collected. In addition, in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of numbers regarding the cases.

Hungary

Q097 (2024): Other cases: insolvency cases, labour cases.
Discrepancy explanation:
Total: The difference is due to the change explained in the subpoints, which has affected the overall result as well.
1. The percentage difference can be explained by the low numerical value (at the end of 2023 5 cases, at the end of 2024 7 cases).
2.2. (2.2.2. and 2.2.3.), 2.3., 3., 4. We have verified the data, and they correspond to our records.
3. Administrative law cases pending for more than 2 years - There is currently no such case within the court system; therefore, the number is 0.

Q097 (2023): Discrepancy explanation regarding point "2.2. Registry cases" and "2.2.2. Non-litigious business registry":
The change in the data described in point 2.2.2. can also be explained with the same reasons mentioned in question 091 point 4., which also affects the data in point 2.2.
Discrepancy explanation regarding point "3. Administrative law cases":
In administrative law cases the 2022 data exclusively included regional court cases, which had concluded by the end of 2022. Due to jurisdictional changes, the current data displays regional court of appeal cases.

Q097 (2021): As of 1 April 2020, a significant change was introduced concerning the competence of the Administrative Chamber. As a result of this change, all legal remedies sought for in administrative disputes were decided by the Curia after 1 April 2020. Other cases: second instance labour cases and those second instance insolvency cases that are not included in category 2.1.

Q097 (2020): The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31th of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. Regarding administrative cases the re-organization of administrative jurisdiction also could have an effect on the case-flow.

Q097 (2019): No specific reason was pointed out in respect of decreases observed for the period 2018 - 2019 with regard to "4. other cases".

Q097 (2017): With regard to variations observed in the numbers of “registry cases” and “other registry cases”, it is noteworthy that the content of these categories is the same for the last four cycles. As the legislation on civil societies was amended in 2014 this resulted in an increased number of registry cases, but since then the number of incoming cases is decreasing.

Q097 (2016): With regard to the pending cases, it is noteworthy specifying that the decrease of the “backlog” of the courts is an overall trend in the Hungarian judiciary.
As for the other variations observed within the frame of question 97, the “raw” figures in most of the categories can be considered as relatively low figures (e.g. some hundreds in the whole country), so even a not so huge increase or decrease result in a large percentage change.

Q097 (2014): In 2014, in contrast with the 2013 evaluation, some registration cases were also included within the category “civil and commercial non-litigious cases”. The item “other registry cases” includes registration of civil societies. The item “other non-litigious cases” includes court mediation and non-litigious labour cases.
The category “other” encompasses insolvency cases and labour cases.

Ireland

Q097 (General Comment): Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Q097 (2024): Administrative cases are included as Civil (and commercial) litigious.

Q097 (2023): 3. Administrative law cases- We have given the response as NA as we do not have a separate category for Administrative Law cases. They are included in the figure for Civil (and Commercial) litigious cases.

Q097 (2020): Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.
The Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate its work. Procedures were introduced to ensure that justice was administered in public. Judgments were delivered electronically. Waiting times for a hearing were improved, to a certain extent, by a net reduction in the numbers of new cases coming into the list from other jurisdictions. By year end, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

Q097 (2017): The number of resolved civil and commercial litigious cases reflects a significant reduction in disposal of second instance appeals by comparison with that returned in the previous reporting cycle.

Q097 (2016): As concerns the number of resolved "Civil and commercial litigious cases", 2016 data reflects a significant increase in disposal of second instance appeals over that in the previous reporting cycle. Accordingly, the total of resolved cases is affected.

Italy

Q097 (General Comment): · Non-litigious enforcement cases are not in the competence of the Courts of Appeal.
· With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97. In the framework of the National Recovery and Resilience Plan (PNRR) Italy has udertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html The main goal is a general reduction of the disposition time by 40% in the civil sector by June 2026 (all three instances together). More specifically, the targets for reducing the civil backlog in the First Instance Courts are: - Intermediate disposal target to be achieved by 31.12.2024: 95% reduction of civil cases registered (filed) until 31/12/2016 and still pending as of 31/12/2019 (baseline); - Final disposal target to be achieved by 30.06.2026: 90% reduction of civil proceedings registered (filed) from 01/01/2017 to 31/12/2022 and still pending as of 31/12/2022 (baseline). The targets for reducing the civil backlog in the Courts of Appeal are: - Intermediate disposal target to be achieved by 31.12.2024: 95% reduction of civil cases registered (filed) until 31/12/2017 and still pending as of 31/12/2019 (baseline); - Final disposal target to be achieved by 30.06.2026: 90% reduction of civil proceedings registered (filed) from 01/01/2018 to 31/12/2022 and still pending as of 31/12/2022 (baseline). A monitoring system is in place and a detailed dashboard is available at https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx

Q097 (2024): The reduction is due to legislative reforms affecting this category.

Q097 (2022): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has udertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html
The main goal is a general reduction of the disposition time by 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together) .
More specifically a reduction of the civil backlog by 65% in first instance courts and 55% in appeal courts by the end of 2024; by 90% in first instance courts and appeal courts by June 2026. As far as the civil cases, such targets relate exclusively to litigious cases.
A monitoring system is in place and a detailed dashboard is available at https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx

Q097 (2021): There are no "other cases"
Figures in 2020 were hugely affected by the pandemic

Q097 (2020): In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT).

Q097 (2018): -

Q097 (2017): The number of pending “civil and commercial non-litigious cases”, older than 2 years, decreased between 2016 and 2017. Generally speaking, pending cases older than 2 year have priority. However, in this specific case, the important reduction (in %) is mainly due to the fact that the numbers are small.

Q097 (2016): As regards the variations concerning the category "general civil (and commercial) non litigious cases", it should be noted that the Ministry of Justice has recently implemented a data warehouse system that can collect a huge number of data and events pertaining to millions of civil cases. The new DWGC (Data Warehouse for Civil Justice) is now fully operational and it represents a major improvement in terms of statistics and quality. Since 2015, data pertaining to Q.97 is extracted from the above Datawarehouse and it is to be considered more accurate than the figures provided in the past.
It should be noted that in 2014 for many cases it was not possible to distinguish between litigious and non-litigious cases because they were coming together in a bundle. With the data warehouse it is possible to tell whether any given procedure has either litigious or non-litigious nature. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

Q097 (2015): The appeal of administrative case is dealt by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body that ensures the legality of public administration in Italy. The council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law.

Figures referring to the activity of the Council of State (second instance of administrative justice) have been submited to Q.99 rather than Q.97.

Figures on Q.97 (points 1 and 2) have been extracted from a new IT system called “Civil Data warehouse”. This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases.
All cases dealt by the Supreme Court of Cassation has always a litigious nature.

Latvia

Q097 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible.
In accordance with the provisions related to data gathering, all information must be recorded in the Court Information System within 3 days. However, the Court Information System functionality for the statistical reports provides in the System recorded figures at the end of the year. Consequently, submissions received in the previous year but registered the next year are considered as incoming cases for the new year.
Justice statistics do not distinguish between “non-litigious enforcement cases” because such type of cases are not defined in the Civil Code. Accordingly, the reply in their respect is NAP. The “non-litigious land registry cases” are dealt with by the regional courts in second instance and they are within the competence of the first and second (appeal) instance.

Q097 (2024): Pending cases older than 2 years from the date the case came to the second instance court. The increase in the number of pending cases in administrative proceedings (older than 2 years) contributed to the overall growth in this group of cases. It should be noted that the rise in the number of pending administrative cases older than two years cannot be attributed to the court's capacity, but rather to the nature and complexity of these types of cases.

Q097 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. The timely consideration of cases as one of its priorities, also following the guidelines for the consideration of cases approved by the Council of Justice. This has affected the changes in the number of resolved cases and, accordingly, the number of pending cases and pending cases older than 2 years.
The inconsistency in the number of cases can be observed both with the merging of cases and with the separation of individual cases from the overall judicial process.

Q097 (2022): Data on incoming, resolved non-litigious civil cases in appeal court decreased in 2022, but the changes cannot be explained.
It should be mentionned that the statistical system has been improved which affected the 2022 data. Moreover, 2020 and 2021 data have been updated according to the same methodology of presentation of data as for 2022 data. The number of pending cases (pending for more then 2 years) has significantly decreased. The decrease in cases is due to the lifting of restrictions, which were related to limiting the spread of Covid-19. The reduction of pending cases (pending more than 2 years) is related to a interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

Q097 (2021): Comparing to the previous period, the number of pending civil cases on 1 Jan is lower due the restriction measures of the Covid-19 spreading in 2019 and 2020. However indicator of pending administrative law cases on the beginning of year is lower than previous period due the high CR in 2020.
The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending cases.

Q097 (2020): Data on civil (commercial) litigious cases (number of resolved and incoming cases) is lower due to the Covid19 pandemic. On March 14 2020 there was the state of emergency that affected the work of courts. In order to mitigate potential risks of virus, oral proceedings that did not involve serious violations of rights were cancelled. This restriction directly affected the number of resolved cases. Also, there were restrictions on appearance of persons in the court, that affected the number of new claims or request - incoming cases. The first state of emergency lasted till June 2020. The second state of emergency started in November 2020.
Number on civil (commercial) non - litigious cases include the data like in the first instance. Mainly there are cases on undisputed enforcement. Usually, non-litigious cases are resolved in written (not oral) process, and during State of emergency oral processes were not allowed, but there were no restriction on written process. According to this the number of non-litigious cases are higher.
Number on incoming administrative cases are lower. It is connected with restrictions of state emergency situation when representatives from institutions could not check, revise, visit companies (individuals) in the face-to-face meetings.

Q097 (2019): Decrease of pending administrative cases us due to many result cases in previous period
The number of Non-litigious civil cases is very low, that's why percentage isn't good qualifier

Q097 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

Q097 (2017): As regards the decrease from 2016 in administrative law cases pending on 1 Jan, it can be explained as there were much more resolved cases than incoming in previous cycle. As regards the decrease in the total of other than criminal pending cases, it can be explained as there was a change of pending civil law cases in second instance. This might be an issue due to reclassifying the starting moment of a court case. Also, much more resolved cases than incoming cases has decreased the amount of unresolved cases on 31 Dec.

Q097 (2016): The increase in pending civil cases is due to fewer resolved cases in 2015. Decrease in pending Administrative cases is due to more resolved cases in 2015.

Q097 (2014): In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

Lithuania

Q097 (General Comment): In Lithuania, statistical data on case flow and their classification are made according to the specific regulations and are mainly based on the institutes of Civil, Criminal Codes and the codes of Civil and Criminal procedures, as well as the Code of Administrative Offences and the law on Administrative procedure. Therefore figures for some of the types of cases are unavailable because there is no such classification while making statistical reports. In respect of the variations that can be observed between figures provided for the different evaluation cycles and in the light of the above described peculiarity of the statistic system of Lithuania, it is noteworthy that cases the number of which is not available are included in other categories, i.e. “civil litigious”, “civil non-litigious”. Accordingly, the indicated totals are relevant. Second instance courts deal with some non-litigious cases, but their number is insignificant.

Q097 (2023): 3. In 2023, significantly fewer administrative law cases were received:
regarding the legal status of foreigners - 454 cases (in 2022 - 1583)
asylum - 90 cases (in 2022 - 1237)
tax legal relations - 136 cases (in 2022 - 300);
regarding the judgements of debt for the local municipal waste collection and management fee - 75 (in 2022 - 234);
on conditions of execution of sentences and detention - 167 (in 2022 - 262);
complaints of persons serving a prison sentence regarding compensation for inadequate prison conditions - 157 (in 2022 - 230).
In 2023, compared to 2022, the duration of consideration of administrative cases examined by the appellate instance regarding decisions increased by 70 days, but compared to 2021, it decreased by 50 days.
In 2023, the duration of consideration of administrative cases examined by the appellate instance regarding rulings in the Supreme Administrative Court of Lithuania also lengthened - compared to 2022 extended by 7 days, and compared to 2021 - in 5 days. It should be noted that in 2022 (compared to 2021), the significantly shortened duration of hearing cases could be influenced by the fact that in 2022 March 31 by the resolution of the Seimas of the Republic of Lithuania, 3 judges from the Supreme Court of Lithuania and 2 judges from the Court of Appeal of Lithuania were transferred to the Supreme Administrative Court of Lithuania temporarily (for a period of 3 months) due to the extremely increased number of pending legal status and asylum cases related to the influx of foreigners (illegal migrants) in Lithuania. Meanwhile, the longer duration of the hearings in 2023 compared to 2022 could have been influenced by the fact that, after the transfer period, the aforementioned judges returned to work in the courts from which they were temporarily transferred.

Q097 (2022): 3. in 2021 the duration of the review of decisions of administrative cases at the appellate instance was significantly shortened (more than 130 days compared to 2020), this fact led to a smaller balance of unexamined cases at the beginning of 2022. 3.1. The significant change in administrative cases received and examined by the second instance, compared to 2021, was caused by an increase in complaints regarding the decisions made by the court of first instance regarding debt collection of local fees for the collection and management of municipal waste, as well as complaints regarding asylum requests related to illegal migration to Lithuania.
3.2. The duration of the review of decisions by the appeal instance of administrative cases was significantly reduced (120 days compared to 2021 and 253 days compared to 2020), which led to a smaller balance of unexamined cases at the end of 2022.
In 2022, compared to 2021, more complaints about decisions made in courts were examined, as well as accordingly, the ratio of examined complaints and amended or annulled decisions slightly increased.

Q097 (2021): Other cases include appeal cases regarding decisions announced by the district courts in cases of administrative offenses. The number of incoming administrative cases were increased in 2021 due to 1214 cases received in Vilnius Regional Administrative Court and the Regional Administrative Court regarding asylum (due to decisions taken by the Migration Department under the Ministry of Internal Affairs not to consider the request for granting asylum or decisions not to grant asylum). Only 335 such cases were examined.

Q097 (2020): Second instance courts deal with some non-litigious cases, but their number is insignificant.

Q097 (2019): "Other": administrative offence cases (including cases in process of enforcement (execution)).
"Administrative cases" - the data provided encompasses cases dealt with by the Supreme Administrative Court of Lithuania; it is to notice that these figures include apellation cases (on decisions of the court of first Instance) well as cases that are heard in the Supreme Administrative Court of Lithuania as sole instance.
"Pending cases older than two years": the decrease is due to the fact that cases pending for more than 2 years have been resolved.

Q097 (2018): The decrease in "other cases" (4), i.e. administrative offence cases (including cases in process of enforcement (execution), at second instance courts (appeal) in 2017-2018 period was related to the decreased number of resolved administrative offence cases in the first instance courts (see Q091).

Q097 (2017): As regards the category "other cases" which refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution), the observed decreases in their numbers (pending at the beginning of 2017, incoming, resolved, pending at the end of 2017) are the consequence of the entry into force of the new Code of Administrative Offences.

Q097 (2016): The changes in number of cases are mainly related to the increased number of resolved administrative cases in the first instance administrative courts in 2015 and 2016 (the courts were fighting backlogs from previous years) and the renewed processes that were suspended in the second instance court due to the application to the Constitutional Court of the Republic of Lithuania (related to salaries of civil servants, decreased pensions, etc.).

Q097 (2014): The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category “other cases” since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Luxembourg

Q097 (2022): Administrative resolved cases: While the number of cases concluded by the Administrative Court has increased by almost 34%, it turns out that this variation was primarily recorded between 2020 and 2021, and commented upon during the assessment of the 2021 data. Between 2021 and 2022, there is a decrease of -6% in the number of resolved cases.

Administrative pending cases on December 31st reference year: The decline in pending cases between 2020 and 2022 is indeed significant, dropping from 240 to 174 cases. However, when compared to the figures provided in 2021, administrative cases have only decreased by -4%, reducing from `182` to `174` the pending cases before the Administrative Court.

Q097 (2021): The increased number of pending administrative law cases at the beginning of 2021 is a consequence of the increase in the number of pending administrative law cases at the end of 2020. In this respect, it should be recalled that the decrease of the Clearance rate for 2020 was mainly due to the increase in the number of appeals, in particular those relating to the general development plan of the City of Luxembourg. These cases had entered the first instance from January to March 2018, while the related judgments, consolidated by the administrative court, were delivered between May and September 2020. The related appeals, 51 in number, were filed between July and November 2020 and were still under investigation on 31 December 2020 due to the fixed time limit regime of investigation, but also due to the pandemic and the introduction of crisis legislation involving a suspension of appeal timeframes.

Q097 (2020):

Administrative cases - the decrease in the RC for 2020 is primarily due to the increase in the number of appeal motions, particularly those related to the City of Luxembourg's general development plan. These cases were entered in the first instance from January to March 2018, while the related judgments, consolidated by the Administrative Court, were issued between May and September 2020. The related appeals, numbering 51, were filed between July and November 2020 and were still being processed on December 31, 2020, due to the fixed timeframe regime (suspension from July 16 to September 15 - one month for the answer - one month for the reply - one month for the rejoinder), but also due to the pandemic and the implementation of crisis legislation involving a suspension of the appeal deadlines (until June 24, 2020). Thus, in addition to the increase in the number of requests for appeal, their investigation has been postponed, leading to an increase in the number of cases pending as of December 31, 2020. Throughout 2020, the Administrative Court was essentially up to date and disposed of cases as soon as they had been heard. The same is true in 2021.

Q097 (2019): Civil and commercial litigious cases pending at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of Appeal (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

Q097 (2016): It is a fact that the number of appeals before the Court decreased between 2014 and 2016. A key reason is that the number of appellate judgments rendered by the court has decreased significantly. The first reason is that the court had to evacuate a large number of cases as a matter of priority under the so-called accelerated procedure provided for by the law of 18 December 2015 on international protection. For the judicial year 2015/2016, 355 judgments out of a total of 938 judgments (excluding striking off) were rendered in accelerated proceedings and therefore not subject to appeal.

Malta

Q097 (General Comment): In Malta, the civil second instance courts comprise the Civil Court of Appeal in its Inferior and Superior Jurisdiction. To date, whilst we can collect the data relating to the incoming, resolved and pending caseloads of these courts, we cannot easily distinguish between the sub-divisions of case typology outlined above. What we can tell for sure is that all cases filed before the Courts of Appeal are civil and commercial litigious cases (including a minority of administrative law cases) so the figures provided at Category 1 reflect the global total of cases heard at the second instance courts. Non-litigious cases are not filed before these courts (hence NAP answers).

Q097 (2024): Pending cases on 31 December 2024 - Following legislative amendments, the efficiency of this court improved as a result of faster case processing time. These procedural enhancements can be found in Act XXXII of 2021 of the Laws of Malta, Justice Reform (Civil Procedure) Act, available in English at this link: https://legislation.mt/eli/act/2021/32/eng Pending cases for more than 2 years - Most of the cases taking long to resolve relate to cases filed prior to the legislative change. Hence the high ratio of pending cases over 2 years old.

Q097 (2022): The increase in the incoming caseload at 1st Instance has reflected intself in an increase in the incoming caseload at the 2nd Instance across all courts. Moreover, in one particular court, the incoming caseload has increased twofold due to a legal provision that facilitates the filing of specific cases.
The number of resolved cases has increased across all 2nd Instance courts and underscores the efforts of the judiciary to address the burgeoning caseload.

Q097 (2020): The decrease in the Incoming caseload results from the disruption of the pandemic on the court operations.
In the second instance courts, we are still unable to distinguish precisely between the cases that are appealed. Thus, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Q097 (2019): Total other than criminal cases - resolved cases: The data shows an increase in the resolved cseload of the 2nd instance courts and in fact, the pending caseload at the end of the year is less than that registered in 2018. These courts were more efficient in 2019.

Q097 (2017): In Malta, the civil second instance courts comprise the Civil Court of Appeal in its Inferior and Superior Jurisdiction. To date, whilst we can collect the data relating to the incoming, resolved and pending caseloads of these courts, we cannot easily distinguish between the sub-divisions of case typology outlined above. What we can tell for sure is that all cases filed before the Courts of Appeal are civil and commercial litigious cases (including a minority of administrative law cases) so the figures provided at Category 1 reflect the global total of cases heard at the second instance courts. Non-litigious cases are not filed before these courts (hence NAP answers). Concerning the variation between 2016 and 2017 in the pending cases older than 2 years, the reason is due to a different methodology used in 2016 and in 2017.

Q097 (2016): Regarding Civil (and commercial) litigious cases: 2015 was the best year in terms of number of resolved cases, mainly because the judiciary were trying hard to conclude cases that were ready for sentencing. In fact, our efficiency indicators reflected this effort. As regards to the other data, we do not, as yet, have those statistics at hand and hence, the last 3 evaluations were marked as NAP.

Q097 (2014): The discrepancy in the data provided for 2014 as “pending cases on 31st December 2014” results from an internal exercise being carried out by the Court Administration in which cases that have been prescribed, are being cleaned from the system. This exercise is going to be carried out more frequently so that it does not reflect in discrepancies in the data that is published.

Netherlands

Q097 (General Comment): We were able to make an approximation to differentiate between litigious and non litigious cases at second instance. The financial registrations at first instance make a clear distinction between types of cases (that the answer for first instance can be based upon), but for second instances this differentiation does not exist (and thus, the registration is all the samewe have used this approximation).

Q097 (2024): This year, we were able to provide data for 1. Civil litigious cases and 2. Non litigious cases.
-As far as we know, it is possible to have non-litigious cases in second instance.
-We have made an approximation (the best way we are able to at this time), where we arrive at 100% litigious cases and 0% non-litigious cases. Thus, we have filled in 0 for those cases.

Q097 (2021): The number of incoming administrative law cases increased between 2020 and 2021, most probably due to the pandemic. Especially, the number of appeals for tax cases is higher in 2021.

Q097 (2020): It is not possible for us to differentiate between litigious and non-litigious cases at second instance. In short, we can provide this for first instance because the financial registrations makes clear distinction between types of cases (finances differ) that we can base that answer on, but for second instances, this differentiation in finances does not exist and thus, the registration is all the same.

Q097 (2019): .

Q097 (2018): If there is an appeal, cases are litigious in my view. I would tend to enter the value "0", but since the question is being asked, you probably see things differently. So I chose the answer "NA"

Q097 (2017): Administrative law cases, litigeous plus non-litigeous.

Q097 (2016): Administrative law cases, litigeous plus non-litigeous.

Poland

Q097 (General Comment): The category „Other cases” includes appeals and complaints concerning social insurance, minors and others. Starting from 2022, administrative cases dealt with by the Supreme Administrative Court are presented in the frame of question 99 (last instance) and are no more within the scope of Q97.

Q097 (2024): The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.
With regard to the reasons for the increase in the impact of second-instance cases in 2024 compared to 2023, it should first be pointed out that this year was another year of an increase in the impact of civil cases concerning claims from contracts denominated/indexed to the Swiss franc to appellate courts, which translated into an overall increase in the impact of civil and commercial cases in appellate courts. In most courts of appeal, civil and commercial cases are heard in the same division, and therefore the increase in the influence of one category of cases also has a negative impact on the hearing of cases of the other category. While in 2023 95,925 civil and commercial cases were submitted to the courts of appeal, in 2024 the impact of such cases amounted to 121,326 (an increase of 26.4%). It should be emphasized that this increase in influence has continued since 2020. For comparison, in 2019, the total impact of civil and commercial cases on the courts of appeal was 54,959. Thus, in 5 years, the (annual) impact of civil and commercial cases on the courts of appeal has more than doubled.
An analysis of the results of the courts' work in the main category of civil procedural cases ACa confirmed that in 2024 compared to 2023, there was an increase in the impact and settlement of the above-mentioned cases in the courts of appeal, as well as, despite the great judicial effort undertaken, an increase in residuals. In 2024, the impact of category ACa amounted to 53,220 compared to 45,704 in 2023 (i.e. an increase of 16.4%), the settlement amounted to 26,041 compared to 22,729 in 2023 (i.e. an increase of 14.6%), and the remainder at the end of 2024 increased to 75,565 compared to 48,386 at the end of 2023 (i.e. an increase of 56.2%).
It should be noted that in 2024, the courts of appeal received 56,281 cases concerning claims arising from bank agreements denominated or indexed to the Swiss franc with the symbol 049cf (the so-called Swiss franc cases), which was due to an increase in settlements in regional courts of first instance, as well as favorable case law for bank customers formed after the resolution of the Supreme Court of 25 April 2024 in the case no. III CZP 25/22 as well as previous judgments of the Court of Justice of the European Union of 2023. The handling of Swiss franc cases in the courts of appeal amounted to 16,641 and increased by 31.4% compared to 2023, but the improvement in handling was insufficient to control the impact (38,732 cases were received; the degree of control of the influence was 43.0%), which resulted in the accumulation of the remaining Swiss franc cases for the following year. At the same time, it should be added that in 2024, the number of civil judges in the courts of appeal was reduced: the limit of judges on the last day of the statistical period was 277.0 compared to 295.0 in 2023.
In 2024, there was also a sharp increase in the impact of ACz appeal cases to the courts of appeal, which was a consequence of the amendment to the Code of Civil Procedure by the Act of 9 March 2023 amending the Act – Code of Civil Procedure and certain other acts: 41,755 cases were received compared to 25,282 cases in 2023 (an increase of 65.2%), which also resulted in an increase in the workload of judges.
Similarly, in the case of regional courts hearing appeals against district court judgments in the second instance, there was a significant increase in the impact of appeal cases Cz: 49,441 cases were rec

eived compared to 38,696 in 2023 (an increase of 27.8%). The impact of Ca's civil litigation cases amounted to 78,522 in 2024 and increased slightly - by 2.2%. However, the limit of judges as of the last day of the statistical period in the second instance was reduced from 509.6 to 497.1, which had an adverse effect on the number of settlements and resulted in an increase in the remainder of category Ca by 9.2% to 51,605.
With regard to the number of appeal cases, it should be noted that the increase in the impact was not associated with an increase in the number of cases that was adequate to the needs, although an increase in the number of resolved cases should be noticed. These data show the enormous effort put into the judges to minimize the effects of the growing influence, which was impossible to control, with the existing human resources. A larger scale of growth in settlements is already very difficult to achieve with the existing human resources, while the improvement of the staffing is hindered due to the suspension of announcements of vacancies for judicial positions from the end of 2023, due to the activities of the National Council of the Judiciary, formed in accordance with the provisions of the Act of 8 December 2017 amending the Act on the National Council of the Judiciary and certain other acts. The resulting staff shortages and their impact on the results obtained cannot be fully eliminated by supervisory activities.
With regard to appellate cases in regional courts, they were also affected by personnel problems related to the suspension of announcements of vacant judicial positions and the delegation of judges from regional courts to courts of appeal. In part, these deficiencies are made up for by the secondment of district court judges to regional courts.
In addition, both in regional courts and in courts of appeal, there is a need to consult experts in appeal cases. In the Annual Information on the Activities of Courts Operating in the Area of Appeals for 2024 and in letters addressed to the Ministry of Justice, the presidents of the courts pointed to increasing problems with the availability of experts, the quality of the opinions prepared and the lengthening deadlines for preparing opinions, often exceeding one year. In addition, the presidents of the courts of appeal reported problems with staffing in the group of court clerks and clerks, as well as the rotation of assistant staff, which also made it difficult to reduce the residue.
The extension of the time for examining appellate cases and the deterioration in the efficiency of proceedings in both regional courts and courts of appeal was also caused by an amendment to the Code of Civil Procedure, as a result of which from 7 November 2019 the inter-instance proceedings, including the examination of formal deficiencies and their supplementation, are conducted by the court of second instance, and not by the court of first instance, as before.
In appellate cases concerning bankruptcy and restructuring cases (regional courts), the efficiency of their examination was negatively affected by the imperfections of the ICT system of the National Register of Debtors, in which these proceedings are conducted.
Finally, the courts pointed to the increasing degree of complexity of cases, which also did not favor a greater increase in the number of cases handled.

Q097 (2023): The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.
I will explain the differences in the data during the quality control and to specific questions from analysts. The increased inflow and the remaining number of civil and commercial cases (Q97, civil) for subsequent reporting periods is to some extent due to the increased inflow of civil cases concerning claims from banking contracts denominated /indexed to the Swiss franc (cases with the symbol 049 cf) in the second instance of common courts. The number of so-called “franc”cases received significantly exceeds the number of cases settled, which results in an increase in the number of cases remaining to be settled in subsequent statistical periods.

Q097 (2022): According to the available data for civil, commercial and labour and social security cases at second instance for 2022. - taking 2021 as a benchmark: In courts of appeal :
(a) In civil and commercial cases, including in the AGa category in 2022, the number of cases settled actually decreased slightly (by 1.0%), with a total increase in settlements in ACa+AGa cases of 7.5% compared to 2021. Thus, overall in civil and commercial appellate cases, the number of settlements in the appellate courts has increased. Despite the increase in settlements, the impact of ACa+AGa cases (65.6%) was not brought under control, due to its drastic increase of 51.9% compared to 2021. (cases involving franking credits).
- In 2022, there was a slight decrease in the handling of ACz (by 1.9%) and AGz (by 2.4%) complaint cases, which can be explained by a decrease in the impact of these categories of cases by 7.3% and 4.9%, respectively, compared to 2021. The impact of ACz cases was controlled at 100.6% and AGz cases at 101.9%;
Thus, in AGa cases, the reason for the decrease in handling (by only 1%) was a drastic increase in the impact of ACa cases (by 64.5%), while the handling of ACa and AGa cases combined increased, so there is no basis for further explanation. In AGz cases, the decrease in disposals should be linked to the decrease in receipts. The decrease in the handling of cases has not impeded the control of the impact of the cases, so there are no grounds for further explanation. b) In labour and social security cases, the total number of cases disposed of in 2022 decreased (by 17%), of which the number of cases disposed of in the APa category decreased by 9.6%, which was due to a 14.8% decrease in the number of cases received in this category, as 104.9% of the cases received were managed, while in the AUa category, the number of cases disposed of decreased by 18.1% (from 21,360 to 17,500 cases) in relation to 2021, This was partly attributable to the 4.9% decrease in receipts, but above all to the inability to handle a larger number of homogeneous AUa cases, as was the case in 2021 regarding the pension amount of women from the so-called "1953 vintage", which were handled in large numbers in 2021. in connection with new decisions of the pension authority, issued on the basis of the provisions of the Act of 19 June 2020 amending the Act on pensions from the Social Insurance Fund (Journal of Laws of 2020, item 1222) implementing the judgment of the Constitutional Tribunal of 6 March 2019. P 20/16. It should be emphasised that the disposition of this type of cases in 2021 was atypically high (in both appellate and district courts) and significantly higher than in 2020, when it amounted to 12 929 cases in appellate courts. Moreover, in 2021, proceedings were discontinued in 6 923 cases in this category, while in 2022, only 1 193 cases were discontinued. only 1 193 cases of this category were discontinued, which resulted in a decrease in the total number of cases handled in the labour and social security division and the inability to control the impact in 2022. (93,6%); - in 2022, the handling of grievance cases in the AUz cat. decreased by 28.9% (from 3,611 to 2,565), which was also due to the decrease in the inflow of cases in this category (by 27.43%) in relation to 2021, as the inflow in this category of cases was contained. In the APz category, the 16.41% decrease in the number of cases settled in 2022 (from 201 to 168 cases) was also due to a 19.40% decrease in the inflow of cases in this category (from 201 to 162 cases) in relation to 2021.
In reg

ional courts:
(a) in civil appellate cases Ca the number of civil cases settled in 2022.decreased in comparison to 2021 only minimally by 0.01% (by 6 cases), so there are no grounds for further clarification;
- in complaint cases Cz at second instance, the number of cases handled in 2022 decreased by 10.60% (from 37,565 to 33,581) compared to 2021, as a result of a 17.48% decrease in receipts (from 36,190 to 29,863).It should be emphasised that, despite the decrease in settlements, receipts in this category were controlled by 112.4% and the backlog was reduced by 38.49% compared to the end of 2021;(b) in Ga commercial appeal cases, the number of cases disposed of fell by 13.4%, as a result of a 19.8% decrease in receipts. It should be emphasised that despite the decrease in disposals, receipts were controlled by 113.3% and the backlog was reduced by 17.5% compared to the end of 2021.
- in Gz grievance cases, the number of cases handled fell by 13.1%, as a result of a 9.9% decrease in receipts. It should be emphasised that, despite the decrease in disposals, receipts were controlled by 102.2% and the backlog was reduced by 9.3% compared to the end of 2021.
c) in labour and social security cases, the number of cases disposed of in 2022 - in Ua appellate cases, the number of civil cases disposed of in 2022 compared to 2021 increased by 1.5% and requires no explanation, while in Pa category cases, the number of cases disposed of compared to 2021 decreased slightly by 2.5% (from 4,775 to 4,656), which was due to a 3.4% decrease in receipts in this category, while receipts were only slightly (97.9%) unmanaged;
- in grievance cases, the number of cases disposed of in the A&E category fell by 15.67% (from 1,557 to 1,313 cases), as a result of a 19.43% decrease in the number of cases disposed of in this category in relation to 2021, while the impact was contained; in the Uz category, the number of cases disposed of in 2022 decreased only slightly by 6 cases (from 459 to 453 cases), which does not require detailed explanation. In cases, Ga and Gz, Cz and Pz, the decrease in handling should be attributed to a decrease in receipts.The decrease in disposals did not prevent the impact of cases from being brought under control, so there are no grounds for further explanation. With regard to the courts of second instance, it should also be pointed out that the transfer of the duty to conduct inter-institutional proceedings to the courts of second instance has resulted in an increased workload for the judges sitting in these divisions. In addition, the Covid-19 pandemic has reduced the ability to conduct court proceedings efficiently and has resulted in a backlog of judges' dockets, which is increasing due to the increase in influence. This is coupled with a sharp increase in the impact of cases in the appellate courts, including in particular an increase in the impact of franking cases referred to the appellate courts.

Q097 (2021): The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.
* administrative law cases - The figures given to you on the receipt of cases at the Supreme Administrative Court and their settlement were affected primarily by two circumstances, i.e. changes in the organizational structure of the Supreme Administrative Court (NSA) and the related transfer of cases between departments, and, as indicated above, restrictions on court operations due to the declared epidemic state in Poland.
As of January 1, 2021, new additional adjudicatory divisions were established in the Finance Chamber and the General Administrative Chamber. Some cases from Divisions I and II of both chambers were transferred to the newly created Division III. These actions had a significant impact on the way the statistics were read.
According to the data provided to you, in 2020 the NSA completed 15786 cases registered in the "SK" repertory (cassation complaints, complaints for the resumption of proceedings). However, this number includes not only cases completed by issuing a substantive decision, but also cases closed due to their transfer to a new department. There were 3115 such cases in 2020. Given the above, the real efficiency in 2020 was 88%, not 110% as reported. Cases closed in the Finance Chamber of the Supreme Administrative Court in 2020 were, in turn, in large part added to the impact in 2021, for they were re-registered in another judicial department.
The re-registration of the aforementioned cases in the Financial Chamber, as well as the re-registration of cases in the General Administration Chamber for similar reasons (4079 cases) were recorded in the total number of cases received by the NSA in 2021. Hence, 7194 cases (re-registered) would have to be deducted from the total number of 26873, which was given to you in earlier correspondence. Thus, the real flow of new cases to the NSA was 19679.
The data on the completion of cases for 2021 shows that 17111 cases were completed at the NSA. It should be noted that this figure also includes cases closed in the General Administration Chamber due to their transfer to Division III. Such cases, as mentioned, were 4079. Thus, it can be assumed that in 2021 the NSA completed 13032 cases through their substantive settlement. These data, in turn, allow us to assume that the NSA's adjudication efficiency in 2021 was 67%.
Despite the decrease in efficiency in 2021 compared to the previous year, it should be noted that in 2021 the NSA settled more cases than in 2020. On the other hand, undoubtedly, the higher inflow of cases to the NSA was due to the increased number of complaints filed with provincial administrative courts, as discussed in more detail in point 1. The increased inflow of cases to the NSA was also due to a partial blockage in the circulation of documentation between administrative courts of both instances, which occurred especially during the first phase of the pandemic (March-May 2020). During this period, far fewer cases were submitted to the NSA, which consequently translated into an increase in impact in the following months of 2020 and 2021. In turn, referring to issues related to the number of cases handled at the NSA in 2021, one can additionally point to staff shortages resulting from the retirement of some judges and the fact that more than a quarter of full-time positions were unfilled (more than 20% of judicial positions remained unfilled). In addition, the COVID-19 pandemic necessitated the reorganization of the Court's work by providing parties

with the opportunity to attend hearings remotely. For technical reasons, fewer cases may be handled at remote hearings than at land-based hearings.

Q097 (2020): “Other than criminal law” cases: compared to the previous period (2018), decreases in the numbers of "incoming cases" before courts and "resolved cases" result from the COVID19 pandemic. As regards increases in the number of pending cases, they are due to increased amount of unresolved specific categories of cases in civil litigious procedures (e.g.claims under the loan agreement) and civil non-litigious procedures (e.g. division of the property). Administrative law cases : In 2020, the court disposed of 57.70% of all cases within 12 months, and within up to 24 months 78.66%. With regard to cassation complaints, 44.06% of cases were dealt with within 12 months. As far as complaints are concerned, 75.99% are settled within 2 months, while within 12 months the rate is 99.57%. 4. "4.Other cases": From the analysis of annual information for 2020 at the level of district courts and appellate courts in the labour and social security division, the following factors had an impact on the decrease in the degree of control of the impact (and thus the number of cases handled) and the increase in the average duration of proceedings in Ua, Uz and AUa and AUz cases in relation to 2019: - restrictions on court activity in 2020 related to the Covid-19 pandemic, due to the declaration of an epidemic state in the territory of the Republic of Poland from 20 March 2020 and the associated need for quarantine, sick leave, isolation, the need to provide care for children under 8 years of age, remote working, resulting in a reduction in the work of adjudicators, clerks and experts; - Insufficient number of experts on the list of expert witnesses compared to the number of cases requiring an opinion and the need to carry out joint or multiple expert opinions from different specialities, refusal of experts to carry out examinations necessary for their opinion (as a result of the epidemic situation in relation to SARS-CoV-2 infections), - a large number of suspended cases resulting from the regulation of the Act of 19 June 2020 on amending the Act on pensions from the Social Insurance Fund (Journal of Laws of 2020, item 1222), concerning a group of women born in 1953 (in these cases the proceedings were suspended by law as of 10 July 2020 until the pension authority issues a new decision recalculating the benefit of entitled persons, but not earlier than after 6 months from the suspension).

Q097 (2019): The decrease of Clearance Rate for 1. Civil and commercial litigious cases and 4. Other cases in 2019 compared with 2018 is caused by increased value of incoming cases. For 1. Civil and commercial litigious cases: from 141 045 cases in 2018 to 155 341 cases in 2019 (increase of 10%) and for 4. Other cases: from 41 242 cases in 2018 to 44 233 cases in 2019 (increase of 7%). The number of judges hearing in these type of cases in 2019 was at comparable level like in 2018 so the number of cases per one judge had increased automatically. In 2019, 16,844 cassation appeals (3,385 appeals less than in 2018) and 80 appeals for reopening the proceedings were submitted to the Supreme Administrative Court. From the previous period, 27,649 complaints and 28 applications for reopening of proceedings remain to be considered. In total, the Supreme Administrative Court had to consider 44,493 cassation appeals. In 2019, a total of 16,375 cassation complaints were examined. In 3,465 cases, the Supreme Administrative Court allowed the cassation appeal (21.16%), dismissed 11,721 cassation appeals (71.58%), and settled 1,189 in a different way (7.26%). Apart from cassation appeals, in 2019 the Supreme Administrative Court handled 4,665 complaints against decisions (orders) of courts of first instance, of which 715 allowed the appeal (15.36% of all appeals), and in 3,773 cases, the Supreme Administrative Court dismissed the appeal (80.88%), and it handled 177 matters in a different way (3.79%).
Moreover, the Supreme Administrative Court examined 162 complaints about violation of a party's right to hear a case in court proceedings without undue delay, of which 4 were admitted (2.47% of all settlements of this type), 60 were dismissed (37.04%), and 98 were settled in other way (60.49%).
In 2019, the Supreme Administrative Court handled 42.33% of all cases within 12 months, and 80.43% within 24 months. With regard to cassation complaints, 23.54% of the cases were settled within 12 months. In the case of complaints, 91.13% are examined by 2 months, and within 12 months, this ratio is 99.72%.

Q097 (2017): 2.2.2. There is not any specific explanation for observed increase. We can indicate only that mentioned increase is related especially to Register of Pledges.
As regards General civil (and commercial) non-litigious cases, we have validated previous data and we have made some corrections. We also indicate that a number of pending cases on 1 Jan. ref. year have been increased due to higher number of incoming cases in 2016.

Q097 (2016): Within the changes in business registry cases we can observe significant increase in all types of Application for registration (first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of removing from registry).
In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had increased.

Portugal

Q097 (General Comment): Since 2007, statistical data concerning pending cases in 2nd instance judicial courts are collected through the courts information systems. Being a dynamic system, allowing regular corrections and up-dating, this data collection may lead to oscillation data from previous years resulting in variations in pending cases.
In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

Q097 (2024): 97.3 The decrease in figures compared to 2023 is justified by the fact that in 2023 the figures were unusually high. In 2023, Decree-Law No. 74-B/2023 of 28 August came into force, which provided for the specialisation of the central administrative courts and their establishment by Order 281-A/2023 of 13 September. As a result of the creation of these specialised sections, the number of cases filed and concluded in the central administrative courts in 2023 was unusually high, due to internal transfers between the organisational units of these courts. In short, the figures for 2024 are in line with those for the years prior to 2023, which was, for the reasons mentioned above, a year with unusually high figures.
Last February, the number of cases heard by the Lisbon Court of Appeal between 2015 and 2023 was changed as a result of a correction made by the court. Following these corrections, the data for 2023 were changed from those originally submitted to the CEPEJ questionnaire last year. For this reason, the figures for cases pending as of December 31, 2023, do not match the figures for January 1, 2024.

Q097 (2023): In 2023, Decree-Law 74-B/2023 of 28 August came into force, which led to the specialisation of the central administrative courts and their installation by Order 281-A/2023 of 13 September. As a result of the creation of these specialised chambers, 11 745 cases were internally transferred between the organic units of these courts.

Q097 (2022): total: The increase in the number of cases filed in 2022 compared to 2020 reflects, from our point of view, the effects of the Covid 19 pandemic and the consequent lockdown, which had an impact on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.
1.The drop in the number of pending cases in 2022 compared to 2020 is related to the fact that in the period from 2020 to 2022 the number of cases completed was higher than the number of cases received.

Q097 (2021): The decrease in the number of pending cases is related to the fact that in 2020 the number of cases that were completed in the second instance courts was higher than the number of new cases. This downward trend in pending cases has been constant since 2016.

Q097 (2020): The decrease in the number of cases under the category "Civil (and commercial) litigious cases" between 2018 and 2020 is justified by the decrease in court activity in 2020 due to the Covid-19 pandemic situation. The number of cases pending on December 31, 2020 has reduced compared to the number of cases pending on December 31, 2018, since the number of cases completed from 2018 to 2020 was relatively higher than the number of cases entered in those years. The increase in the number of cases completed in Administrative Courts between 2018 and 2019 may be justified by the increase in the number of judicial magistrates working in these courts. Even so, despite this increase in cases completed, there was an increase in the number of cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, considering that the number of cases completed from 2018 to 2019 was still relatively lower than the number of cases entered in those years.

Q097 (2019): This increase of resolved cases can be explained by the increase on the number of judges in Administrative Courts.

Q097 (2018): Regarding the increase in the number of pending administrative law cases comparing to 2016, there were no legislative changes or others that could explain this variation".

Q097 (2016): There is no specific explanation as regards the increase in the number of civil and commercial litigious cases pending on 1 January 2016 between 2015 and 2016. The question 97_3 "Administrative law cases", includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 3.909
The number Incoming cases that correspond only to tax cases is 1.809
The number of Resolved cases that correspond only to tax cases is 1.663
The number of Pending cases on 31 Dec. that correspond only to tax cases is 4.055

Q097 (2015): The question 97_3 "Administrative law cases", includes administrative and tax cases.

Romania

Q097 (General Comment): It is worth specifying that, since 2010, the first table (question no. 91) centralizes all the first instance cases (irrespective of the level of the courts), the second table (question no. 97) centralizes all the second instance cases – appeal (irrespective of the level of the court) and table no. 3 (question no. 99) shows the statistical data on all second appeal cases (last instance cases) from all courts (irrespective of their level).
In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q097 (2022): Due to the large number of magistrates retiring in 2022, the number of solved cases decreased, as a result the stock of files at the end of the year increased, while the number of newly entered cases followed an upward trend compared to the previous reporting cycle.

Q097 (2021): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases, therefore the the stock with old cases increased in some cases.

Q097 (2020): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased numer of pending cases older than 3 years.

Q097 (2019): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q097 (2018): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continous increase since the entry into force of the provisions.

Q097 (2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continous increase since the entry into force of the provisions.

Q097 (2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The general increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed. Accordingly, the number of appeals in the new Civil Procedure Code includes the number of appeals and second appeals from the old Code and shows continuous increase after 2014.

Q097 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The meaningful increases in figures observed between 2012 and 2014 are due to the fact that, in relation to the appeal, beyond the differences recorded in Statis, there was a change of jurisdiction in civil matters. Accordingly, the appeal (apel) became the main instrument to challenge a decision.

Slovak Republic

Q097 (General Comment): The decrease in the number of new cases can be attributed to an improved ability to resolve matters already at first instance, as several procedural steps exist to facilitate reaching a solution before a case proceeds to the second instance. Furthermore, the involvement of notaries and their ability to engage in informal communication with clients results in first-instance courts receiving applications that can be accepted without dispute.

Q097 (2024): Non-litigious cases: The decrease in the number of new cases can be attributed to an improved ability to resolve matters already at first instance, as several procedural steps exist to facilitate reaching a solution before a case proceeds to the second instance. Furthermore, the involvement of notaries and their ability to engage in informal communication with clients results in first-instance courts receiving applications that can be accepted without dispute.

Q097 (2023): Starting 2023 - according to the CEPEJ methodology Administrative cases are reported in Q99

Q097 (2022): The decline in litigious and non-litigious cases has been gradual since 2017. This phenomenon was not analysed in more detail. The decrease may be caused by the impact of the activity of courts of first instance as well as the behaviour of participants in court proceedings - a lower number of appeals.
There is some small amount of non-litigious registry cases, but they can not be monitored separately, they are part of the bigger group.
In August 2021, the Supreme Administrative Court of the Slovak Republic was established as a separate institution and it took over all the administrative law cases of the Supreme Court of the Slovak Republic. The Supreme Administrative Court of the Slovak Republic acts as second instance court in the administrative cases.
Source: https://www.nssud.sk/web_object/stat_2022.pdf

Q097 (2021): Explained in the table.

Q097 (2020): More significant decline of incoming cases and resolved cases as well in the Second instance courts as a result of a pandemic situation. In the category 3. Administrative law cases was only one pending case on 1 January 2020, which was resolved during the year and no case came into the Second instance courts in the year 2020.
The number of non-litigious business registry cases is included in "general civil and commercial non-litigious cases".

Q097 (2019): The decrease in the number of cases (especially incoming and pending on 31 December) was not analysed yet but we can confirm that there were no significant changes in the system or legislation.

Q097 (2018): The discrepancies in the number of pending cases as of 1 January 2018 in comparison with the final numbers as of 31 December 2017 were caused due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing the electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper data collection of previous periods. These differences should not occur in the next year, given the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection

Q097 (2017): As regards the trends of the decrease in all monitored indicators, the decrease in caseload at first instance courts has a secondary impact on the drop in caseload at the courts of appeal. We did not analyse in details the cause of decrease and the detail structure of caseload. The decrease of caseload has the positive effect of raising the CR to 121% and decreasing of total number of pending (unresolved) cases.
The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a “paper” collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.
The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, since 1 July 2016 the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.
In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings appear in this table. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

Q097 (2016): The new structure of data presented by the Ministry of Justice influenced also the second instance. Registry cases are all included in 2.1 and can not be separated by categories.

Q097 (2014): In respect of the variations observed in 2014 with regard to the category “administrative law cases”, it is worth mentioning that the low number of cases makes small absolute variation large in relative terms.

Slovenia

Q097 (General Comment): The distribution of cases for Q97 is the same as for Q91.
Inconsistences noticed are due the Data Warehouse system explained in Q91.

Q097 (2024): Discrepancies:
2.2 and 2.2.2: please note small (absolute) number of cases.

Q097 (2023): Discrepancies to 2022 data: Pending cases on 1 Jan. ref. year – increase by 23% - 35%: in 2022, a slight decrease in number of incoming and resolved cases is observable. Clearance rate was slightly below 100%. In 2022, the number of second instance judges decreased by 7% (mostly due to retirement) which resulted in decreased number of resolved cases. Please note the ratio between pending and incoming/resolved cases is approx. 1:5 (a slight decrease in % of resolved cases will reflect in higher % increase in pending cases).

Q097 (2022): Pending cases on 1 Jan. (all categories) - decrease by approx. 35-50%: In 2021, the number of pending cases decreased by approx. 50% due to effects of Covid-19 pandemics in 2020. In 2022, the number increased again (by approx 20%). For (land) registry cases (2.2. and 2.2.1) please note small (absolute) number of cases.
Incoming cases (2.2 and 2.2.2) – decrease by 21% and 36%: please note small (absolute) number of cases.
Resolved cases (2.2. and 2.2.2) - decrease by 21% and 35%: please note small (absolute) number of cases and low disposition time (number of resolved cases is highly dependant on number of new cases).
Pending cases on 31 Dec. (all categories) – increase by 50% - 90%: in reporting period a slight decrease in number of incoming cases and more significant decrease in number of resolved cases is observable (especially in 2021). Clearance rate was slightly below 100%. Please note the ratio between pending and incoming/resolved cases is approx 1:5 (a slight decrease in % of resolved cases will reflect in higher % increase in pending cases). The decrease in the number of resolved cases in 2021 is due to two factors: 1. impact of Covid-19 pandemics, namely the higher number of judges and court staff on sick leave or quarantined (compared to 2020), and 2. more general human resources issues (retirement of judges, prolonged sick leaves etc.). In 2022, the number of second instance judges decreasd by 7% (mostly due to retirement) which resulted in decreased number of resolved cases.

Q097 (2021): All categories - Pending cases on 1 Jan.: decrease by approx. 50%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As second instance courts deal with the majority of cases without hearing of parties, their functioning was not affected that much. The number of appeals coming from first instance decreased, which resulted in the decrease of pending cases at second instance courts at the beginning of 2021.
Resolved cases: The decrease in the number of resolved cases is due to two factors: 1. impact of Covid-19 pandemics, namely the higher number of judges and court staff on sick leave or quarantined (compared to 2020), and 2. more general human resources issues (retirement of judges, prolonged sick leaves etc.).
Categories 1, 2 and 2.1 - Pending cases on 21 Dec.: increase by approx. 10-30%
Higher courts resolved approx. 10% less cases in 2021, which resulted in a greater increase of pending cases on 31. Dec (Disposition time in higher courts is low – 1-2 months; ratio of Resolved vs. Pending cases is approx. 10:1)
Categories 2.2/2.2.1 - Pending cases on 21 Dec.: increase by approx. 60/90%
Please note the increase in resolved land registry cases in 2021 (Q91) which may result in an increase of appeals, and small (absolute) number of cases at second instance (20-30 pending cases).
Category 2.2.2 - Pending cases on 21 Dec.: decrease by approx. 25%
Please note the small (absolute) number of cases at second instance (less than 5 pending cases).

Q097 (2020): The decrease in pending cases at the beginning and the end of the year is due to the fact that higher courts are sucesfully reducing the number of pending cases. The decrease in incoming and resolved cases is partially due to the national trend observed in general, and paritally due to the limitation of operation of courts due to Covid-19 pandemics.
The discrepancies in categories 2.2.1. Non litigious land registry cases and 2.2.2 Non-litigious business registry cases (and subsequently in 2.2. Registry cases), as well as at Pending cases older than 2 years from the date the case came to the second instance court are due to a small absolute number of cases.

Q097 (2019): No particular explanation can be given for the general decrease of incoming cases (national trend) which resulted in the decrease in the number of incoming and pending cases.
The increase in incoming Non-litigious business registry cases in 2018 resulted in an increased number of pending cases in the beginning of 2019. Please note small (absolute) number of cases.

Q097 (2018): No particular explanation can be given for the general decrease of incoming cases (national trend), as well as for the increase in number of incoming registry cases.

Q097 (2017): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.

Q097 (2016): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.

Q097 (2015): In recent years, the number of incoming non-litigious cases is generally decreasing partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary. Considering the higher number of incoming cases (number of pending cases is approx. 15%-20% of all incoming cases), a slight variation in incoming cases have a considerable effect on the number of pending cases.

Spain

Q097 (General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies. It is noteworthy that the small (probably insignificant) number of Registry cases that arrive to the Second Instance is not distinguished of the Litigious cases. This is why, the total number of cases can be provided.
Regarding "other non-litigious cases", the most correct answer is NA (because we can appeal against certain decisions of 'voluntary jurisdiction' not included in the CEPEJ categories).

Q097 (2024): The data is calculated using the same criteria as in previous years.
When a court identifies inaccuracies in its statistical reporting, it may regularize the data in its Statistical Bulletin by replacing the incorrect figure with one that reflects the actual situation, even if it diverges from previously reported values. Such regularizations are a recognized source of horizontal inconsistencies
In relation to the increase in incoming civil (and commercial) litigious cases, a significant rise in the number of appeals can be observed.

Q097 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain’s rates.

Q097 (2022): 2020 was a year marked by the pandemic, the reduction of work in judicial bodies, despite digitalization, and by mobility restriction measures. The increase in the pace of work in 2022 is logical and it explains the increase in the number of incoming civil (and commercial) litigious cases. The reduced clearance rate has been due to the increase in appeals against judgements in ordinary trials related to floor clauses (cláusulas suelo); clause that a specific financial institution can include in a variable interest mortgage loan contract and that establishes the minimum interest rate that customers will pay.

Q097 (2021): For civil and commercial litigious cases the number of incoming cases increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. This also affected the increases of the number of pending cases at the end of the year.

Q097 (2020): There is an increase in the number of incoming administrative appeal cases in the Autonomous Regions High Courts. It is possible that certain modifications in the Contentious Administrative Jurisdiction, as well as the Judgement of the Constitutional Court in 2015 that eliminated the fees to appeal, have had an impact on the number of incoming cases.

Q097 (2019): "Civil and commercial litigious cases": the increased number of pending cases at the beginning of the year is partly due to the low clearance rate in 2018. In general there is an increase in incoming issues. In civil law many appeals are related to cases of general conditions included in financing contracts with real estate guarantees in which the borrower is a natural person (object of massive cases in Spain since the doctrine of the CJEU).
"Administrative cases": The increase of administrative appeals may probably be due to Aliens (inmigration) cases, which had a strong increase in resolution in 2018.

Q097 (2018): The Court of Justice of the European Union (CJEU) of December 21, 2016 and other previous Judgments have meant a massive interposition of lawsuits based on that doctrine, for the civil challenge of general conditions included in financing contracts with real estate guarantees whose Borrower is a natural person. Measures, referred to in previous assessments, of spatialization of certain judicial bodies have been adopted. In 2018, the appeales to the judgments in matters of individual suitcases against general conditions included in financing contracts with real estate guarantees whose borrower is a natural person have reached the Provincial Courts (second Instance). The small (probably insignificant) number of Registry cases that arrive to the Second Instance is not distinguished of the Litigious cases. This is why the total number of cases can be provided

Q097 (2016): In respect of the increase in the number of incoming civil and commercial litigious cases as well as the increase of the total of incoming cases between 2014 and 2016, it should be mentioned that since March 2015 the fees to bring a case to the court were abolished in case of natural persons. Besides, in July 2016, the Constitutional Court declared the nullity of the fees to appeal.

Q097 (2015): Law 10/2012 governing certain fees in the area of the Administration of Justice could explain (especially in Administrative Law cases) the decrease in the number of incoming administrative cases, and logically the decrease in the number of resolved and pending cases.

Q097 (2014): For the 2014 exercise, the decrease of the number of pending administrative law cases in the beginning and in the end of the year is the result of the decreases observed and explained in fist instance.

Question 098

Austria

Q098 (2024): On the one hand, the table shows that there was a decline in the number of cases completed in 2022 and 2023 compared to previous years, although this only corresponded to a correspondingly lower number of cases in 2022. This ultimately resulted in the increase in the number of pending cases taken over in 2024.
In 2023, however, there was a significant decrease in the number of pending cases taken over compared to previous years. The sharp increase from 2023 to 2024 is therefore somewhat put into perspective when looking at the average of the previous years. By the end of 2024, the number of pending cases had returned to the level of previous years (2020 to 2022). Overall, therefore, there appears to be a fluctuation and not a sustained (negative) trend. We are not aware of any reasons for this fluctuation.

Q098 (2023): 2. Misdemeanour and / or minor criminal cases (Pending cases on 31 Dec. ref. year): One reason is that the number in the year before was comparatively not high. Also, the discrepancy is not that high when you look at the average in the last 6 years, which was about 685. The number of new cases however in 2023 was higher than 2022, still the number or resolved cases only sank a little. Otherwise we have no concrete reasons.

Q098 (2020): "Misdemeanour and / or minor criminal cases": compared to the previous 10 years the pending, incoming and resolved cases in this category in the year 2020 showed a slight decrease. There is no specific explanation for this circumstance.

Q098 (2016): There is significant discrepancy in the number of incomming and resolved misdemeanour cases because the administrative criminal cases of second instance are included in third instance.

Belgium

Q098 (General Comment): “Severe criminal cases”: cases appealed to the Court of Appeal (criminal matters).
“Minor criminal cases”: appeals against decisions of Police courts brought before first instance criminal courts (the latter act as second instance courts in respect of Police courts’ first instance cases).

Youth protection cases: included under “minor criminal cases”.
“Other criminal cases”: since the last cycle, this category includes cases dealt with by the investigation judges (Chambre de mise en accusation). The latter is involved in the judicial investigation oversight, supervises pre-trial detention in particular, and decides on referral to the trial judge.

Q098 (2024): 2024 data on “youth cases” are as follows: 361; 1 585; 1 601; 345; 135; they are included in the table under ”minor criminal cases”.
“Other criminal cases”: cases dealt with by the investigation judges (Chambre de mise en accusation) are not included in the table to avoid double counting the same criminal cases (2024 data: pending on 1 Jan.: 2 718, incoming: 12 813, resolved: 12 497, pending on 31 Dec.: 3 034, pending for more than 2 years: 1 269). Source: data warehouse (date of data extraction: 06/25/2025
There is no specific explanation for the significant increase in the number of minor criminal cases pending for more than two years.

Q098 (2023): Youth cases: pending on 1 January 2023: 363; incoming cases: 1 578; resolved cases: 1 583; pending cases on 31 December 2023: 358; pending cases older than 2 years: 130.
“Other criminal cases”: data of the Investigation Court (Chambre de mise en accusation): pending on 1 January 2023: 2515; incoming cases: 12462; resolved cases: 12259, pending on 31 December 2023: 2718; pending cases for more than 2 years: 1149. Source: datawarehouse (data extraction date: 14/07/2024). These figures are not included in the table, so as not to count the same cases twice (consistency with Q 94).
There is no particular explanation for the significant increase in the number of minor criminal cases pending for more than two years.

Q098 (2022): Court of Appeal (criminal matters): Totals: Pending cases on 1/01/2022 = 6610; pending cases on 31/12/2022 = 6677; Cases pending for more than 2 years from the date when the case is brought before the courts of second instance = 1436. Severe criminal cases (involving criminal and social offences): Pending cases on 1/01/2022 = 6304; pending cases on 31/12 /2022 = 6311; Cases pending for more than two years from the date when the case is brought before the courts of second instance = 1307. Cases related to juvenile protection: Pending cases on 1/01/2022 = 306 ;pending on 31/12/2022 = 366 ;Cases pending for more than 2 years from the date when the case is brought before the courts of second instance = 129. Source: datawarehouse(data extraction date :l/l8 /20l22). Other criminal cases = data concerning the Chamber of indictments (pre-trial stage).

Q098 (2021): Protectional cases - youth: these cases have been included in point 2 "Minor criminal cases". Here are the figures: pending cases on 1/01/2021 = 337; pending cases on 31/12/2021 = 306; Pending cases older than 2 years from the date the case came to the second instance court = 124. Bron: data warehouse (data extraction date: 01/07/2022).
The category “3. Other criminal cases” corresponds to the cases dealt with by the Investigation Chamber (Chambre des mises en accusation).

Q098 (2020): "Second instance Courts (Criminal Matters): * Totals: Cases pending as of 1/01/2020 = 9434; Cases pending as of 12/31/2020 = 9317; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 2616. * Serious offenses (involves correctional and indictment division cases): Cases pending as of 1/01/2020 = 9095; Cases pending as of 12/31/2020 = 8981; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 2499.
* Minor offences: youth cases are included in the figures shown in the table (1,374 new cases and 1,377 completed cases respectively). Also noteworthy are the youth cases: Cases pending on 1/01/2020 = 339; Cases pending on 31/12/2020 = 336; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 117.
Source: datawarehouse (data extraction date: 16/06/2021)
*For 2020, there is a decrease in the number of new cases and in the number of completed cases due to the pandemic that affected court operations."

Q098 (2016): The category "Severe criminal cases" concerns appeals to the courts of appeal against the judgements of the courts of first instance ruling in criminal matters. The category "Misdemeanour and / or minor criminal cases" refers to appeals to the courts of first instance against decisions of police courts in criminal matters.

Bulgaria

Q098 (2022): "Total criminal cases" include all criminal cases ofsecond instance - criminal cases of a general nature and criminal cases of a private nature (common offences and offences subject to private prosecution), cases of release from penal responsibility with imposing of administrative punishment in accordance with Art. 78a of the Criminal Code, private criminal cases, interrogations, and administrative-criminal cases.

Q098 (2020): The specified sum does not include proceedings for which no penalties are imposed (pre-trial proceedings, enforcement proceedings). These proceedings are within the competence of other bodies in the Republic of Bulgaria.

Q098 (2018): NA

Croatia

Q098 (General Comment): Due to the peculiarity of the Croatian legal system explained within the frame of question 94, the category “severe criminal cases” subsumes criminal cases under the jurisdiction of the 2nd instance county courts, while the category “misdemeanours and/or minor criminal cases” encompasses cases under the jurisdiction of the 2nd instance misdemeanour courts and the High Misdemeanour Court. Croatian legislation distinguishes misdemeanours and criminal offences. Misdemeanour Act prescribes that misdemeanours and misdemeanour legal sanctions can be proscribed solely for those behaviours that violate or threaten public order, social discipline and social values guaranteed and protected by the Constitution of the Republic of Croatia, international law and the laws whose protection is not possible without misdemeanour legal sanction, and their protection is not achieved with criminal coercion. The above shows that misdemeanours are certain behaviours that deserve sanction, but which by its severity and consequences do not deserve criminal liability.
Since the Criminal code does not strictly classify the categories of severe and minor criminal offences, we are not able to classify as misdemeanour/minor all offences for which it is not possible to pronounce a sentence of deprivation of liberty, and classify as severe offences all offences punishable by a deprivation of liberty
According to this, in the category “severe criminal cases” there are criminal cases under the jurisdiction of the 2nd instance county courts, while in the category “misdemeanours and/or minor criminal cases” there are cases under the jurisdiction of the 2nd instance misdemeanour courts and High Misdemeanour Court.

Q098 (2023): The increase in the number of criminal law cases in second instance courts (appeal) is due to the County Courts not resolving more cases than they received in either 2022 or 2023. This has resulted in an increase in the number of pending cases, with a clearance rate of 91% in 2022 and 89% in 2023. The strike has resulted in an increase in pending cases that have been in the second instance court for more than two years.

Q098 (2021): In category "Other cases" are included cases of execution of imprisonment sanctions on county courts in second instance.

Q098 (2018): Starting from 1 June 2013, when the Act on Amendments to the Misdemeanors Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanor cases had been reduced up to the point where there was no more justification for keeping specialized courts for these types of cases. This led also to continuous decrease of second instance misdemeanor cases, which is also the case in this reporting cycle.
Category "Other cases" - category introduced in this cycle: in case of Croatia, cases calculated here are cases of execution of imprisonment sanctions on county courts in second instance.

Q098 (2016): Starting from 1 June 2013, when the Act on Amendments to the Misdemeanours Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases displayed in this table continuously and significantly had been reduced. The number of resolved cases reduced as well, but due to a significant decrease in inflows, the number of unresolved cases reduced by the end of the period.

Q098 (2014): According to 2014 data and pursuant to the Act on the Amendments of Misdemeanour Act which entered into force in 2013 (OG 39/13), possession of drugs for personal usage is no longer a criminal act but a misdemeanour act. That provision enabled disburdening of the county courts. Furthermore, municipal courts became competent for criminal act of unauthorized production and trafficking of drugs (which was previously in the jurisdiction of county courts and made a share of 40-50% of all cases dealt with by the county courts).

Cyprus

Q098 (General Comment): As of the 1st of July 2023 the Supreme Court and the Supreme Constitutional Court were re - established. Also an Appeal Court was also created. Appeals filed after 2018 were transferred to the Appeal Court. Civil and Criminal appeals filed between 2013-2017 remained at the Supreme Court whereas administrative appeals are brought before the Supreme Constitutional Court.

Q098 (2024): The reference date for the previous cycle was 1st of July 2023 when the Court of Appeal was established, which explains the variatons not necessarily reflecting a real surge in caseload or efficiency.

Q098 (2023): On July 2023 an Appeal Court was established and any appeals filed after 2018 are tried by the Appeal court whereas any cases filed between 2013 -2017 (backlog) are dealt by the Supreme Court. The Supreme court acts no as a third tier last instance court only for legal issues.

Q098 (2020): with regard to criminal appeals less were filed.

Q098 (2016): There was an increase in the cases pending between 2014 and 2016. With regard to the increase of number of cases resolved this was due to the creation of the administrative court and therefore the Supreme court did no longer had to deal with first instance administrative cases.

Czech Republic

Q098 (General Comment): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases".
The data provided involves appeals and complaints (corrective measure against a resolution). Instead of "Pending cases older than 2 years from the date the case came to the second instance court" "Pending cases older than 1 year from the date the case came to the second instance court" are provided.

Q098 (2021): The number of pending cases older than 2 years is very low in second instance and thus it follows that there is a big variance in the data between years.

Denmark

Q098 (General Comment): All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. We can not differentiate pending cases depending on their age. There might be cases though that would not fulfil the criteria of a severe case. About one third of the cases may be smaller or bigger issues from the cases in the district courts that are appealed to one of the two High Courts before proceeding at the district courts and then finally settled in the district court. It is not possible to see if it's an issue from a severe case in the district or a case that is not severe. Then the whole case may afterward be appealed to one of the two High Courts when the district courts have come to a final judgment.
The lower number of cases in 2023 is due to a large increase in case processing time for the second instance courts. The increase contrasts with the first instance courts as well as the highest instance courts where the case processing time has also increased, but to a much lesser extent.

Q098 (2024): All criminal cases at the second instance courts are considered severe.

Q098 (2023): All criminal cases at the second instance courts are considered severe.
The lower number of cases is due to a large increase in case processing time for the second instance courts. The increase contrasts with the first instance courts as well as the highest instance courts where the case processing time has also increased, but to a much lesser extent.

Q098 (2022): All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. Due to periods of lock downs because of the situation with covid-19, the courts have still a lot of pending cases.

Q098 (2020): 2020 was an unusual year because of the Covid-19 related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it.

Q098 (2016): All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. We can not differentiate pending cases after how old they are.

Estonia

Q098 (General Comment): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database. Other criminal cases: The enforcement and pretrial cases do not exist in the second instance.

Q098 (2024): The number of criminal cases has increased

Q098 (2023): Other cases are matters of preliminary proceedings and enforcement proceedings.

Q098 (2022): In recent years, there has been a (wide-ranging) generational change among judges in Estonia, which has led to a temporary drop in performance. especially in the district courts.

Q098 (2020): The pandemic has affected the courts activity in criminal matters in general. The criminal procedure law was not as flexible when judges had to work online. The complete revision of the criminal procedure law is ongoing and will come into force next year.

Q098 (2016): Discrepancies are due to the numbers being quite small. Number of incoming cases depends on the crimes being committed and the number of resolved cases depends on.
Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below :
Severe criminal cases : Pending cases on 1 Jan. ref. year : 71
Incoming cases : 745
Resolved cases : 762
Pending cases on 31 Dec. ref. year: 54
Pending cases older than 2 years from the date the case came to the first instance court : 0
Misdemeanour and / or minor criminal cases :
Pending cases on 1 Jan. ref. year : 9
Incoming cases : 208
Resolved cases : 214
Pending cases on 31 Dec. ref. year: 3
Pending cases older than 2 years from the date the case came to the first instance court : 0

Q098 (2014): The variations observed over the years 2010, 2012 and 2014 are most likely due to the fact that the Ministry of Justice and the biggest court in Estonia (Harju County court) had an agreement setting the target for eliminating backlogs.

Finland

Q098 (General Comment): The cases are not statistically catecorised in severe criminal cases and misdemeanour and / or minor cases in Finland.

Q098 (2021): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

Q098 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available
data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

France

Q098 (General Comment): Cases are not categorised by type of offenses but by court chamber (criminal, investigation, sentence enforcement), which prevents us from providing the number of criminal cases by type of offense.
In terms of horizontal consistency, discrepancies may be noted due to difficulties in recording cases as a result of the change in digital criminal applications within the appeal courts. This is a transitional situation due to an improvement in digital tools.

Q098 (2024): Source(s): SSER, frame-survey of prosecution services. Differences between the number of pending cases on 31 Dec. 2023 and the number of pending cases on 1 Jan. 2024 may be observed due to the difficulties in recording cases resulting from the change of criminal applications within the courts of appeal.

Q098 (2023): Source(s): SSER, Public Prosecutor's Executives Survey.

Q098 (2022): Please note that for the year 2022, data regarding the criminal appeals chambers are not available. Consequently, it is not possible to provide the total volume of criminal cases at second instance. Furthermore, cases are not categorized by type of offense but by chamber (criminal, investigative, enforcement).

Q098 (2021): Source SDSE

Q098 (2020): "The health crisis and containment may have played on TAs (completed cases) (by reducing the ability of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to trial). Prior to this, a major lawyers' strike and transportation strike had mostly affected TAs.
"

Germany

Q098 (General Comment): General information on the statistics used as sources for answering the questions in this section: please refer to the general comment Q 91
Horizonal inconsistencies:
The inconsistencies with regard to the pending cases at the end of the year also occur in the statistics published by the Federal Statistical Office. The reason for this is, that courts submit count corrections for the monthly surveys at the end of the year.

Q098 (2024): “Severe criminal cases” include criminal proceedings according to the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” includes regulatory fine proceedings before criminal courts.
"Other" includes complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act With regard to these cases, only the number of incoming cases is recorded.

Q098 (2023): “Severe criminal cases” include criminal proceedings according to the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” includes regulatory fine proceedings before criminal courts.
"Other" includes complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act With regard to these cases, only the number of incoming cases is recorded.

Q098 (2022): “Severe criminal cases” include criminal proceedings according to the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” includes regulatory fine proceedings before criminal courts.
"Other" includes complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act With regard to these cases, only the number of incoming cases is recorded. Discrepancies in comparison with the last cycle:
The decrease in resolved severe criminal cases can mostly be attributed to second instance cases at the regional courts. No special reason could be identified for this development.
The decrease in pending minor criminal cases on 1 January is caused by the fact, the number of pending cases on 1 January 2020 higher than usual. No specific reason could be identified for this deviation or for the deviation of "other than criminal cases".

Q098 (2021): "Other": complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act
With regard to these cases, only the number of incoming cases is recorded. Pending minor criminal cases on 1 Jan: The number of incoming cases was lower in 2020 than in 2019 and the number of resolved cases higher, resulting in a lower number of pending cases at the end of 2020. A reason for this development could not be identified.

Q098 (2020): complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act

Q098 (2016): The category “severe criminal cases" (line 2) includes criminal proceedings in accordance with the Criminal Code (Strafgesetzbuch, StGB) and ancillary criminal laws. The category “minor criminal cases” (line 3) includes regulatory fine proceedings before the criminal courts.

Q098 (2014): According to 2014 data, the category “severe criminal cases” included criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” subsumed regulatory fine proceedings before criminal courts.
The information provided in the frame of the 2014 evaluation refers to 2013 data (the 2014 data is not available).

Greece

Q098 (2024): Independent Department for the Collection and Processing of Judicial Statistical Data (JustStat)

Q098 (2023): The data are provided by the Office for the collection and processing of judicial statistics.
The observed variations in the figures should be construed in the light of the pandemic context. In the year 2022, courts were, even for part of the year, under a restricted regime due to the measures implemented in Greece to contain the Covid-19 pandemic. This gave the judges the opportunity, alongside new cases, to deal with cases that had already been heard. At the same time, however, due to the courts not being fully operational, the number of cases to be pending increased at the end of 2022, which were transferred for adjudication in 2023, when the courts were fully operational and consequently the flow of judgments was limited. Moreover, it should be considered that there were 3 consecutive elections in Greece in 2023, which resulted in the suspension of the courts for about 3 months in total.

Q098 (2022): The data has been provided by the office for the collection and processing of judicial statistics.
It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data. The content of the categories of criminal cases in the table are the same as for the previous evaluation cycle, but the services now monitor and record these cases better so discrepancies in data can be observed. This is especially the case for the Misdemeanour and / or minor criminal cases.

Q098 (2021): The data are from the Statistical Service of the Ministry of Justice. The courts function in cooperation with the prosecutions offices. For example, postponed cases get to the prosecutor offices and then to the courts, in repeat 2-3 times, during the period (year). The definition of the pending cases included postponed cases or the cases for which the trial date has been setting out of the refence year or hasn't been determined during the year. The data has been collected from 19 out of 19 Courts of Appeal in Greece.

Q098 (2020): Due to the pandemic, pending cases have accumulated in the courts of first instance, with the result that the courts of second instance have fewer cases to handle.
The data given for questions 97 and 98 are collected from all second instance courts. However, many fields are answered NA as only few data were collected from the second instance Courts.

Q098 (2018): To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

Q098 (2016): Filling in the requested information regarding the criminal procedure is not possible at the moment. To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which is expected to be completed by November 2018, an integrated information system will be implemented, which will include individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data. For 2016 the available data regarding the criminal procedure are as follows: Courts of First Instance: Criminal Cases Discussed: 473.457, Convictions/Acquittals: 206.311, Postponements: 262.433, Courts of Appeal: Criminal Cases Discussed: 59.643, Convictions/Acquittals: 24.995, Postponements: 33.601

Hungary

Q098 (2024): Discrepancy explanation:
Total: The difference is due to the change explained in the subpoints, which has affected the overall result as well.
1. The percentage difference can be explained by the low numerical value. At the end of 2024, there were 6 cases, while a year earlier there were 4 cases.
2. The percentage difference can be explained by the low numerical value. At the beginning of 2024, there were 13 pending cases, which is 38.1% fewer compared to 2023 (21 cases)

Q098 (2021): As it was mentioned at the first instance, the introduction of new types of misdemeanours resulted in a higher number of incoming cases. As a result of the increase of incoming cases the number of resolved cases was also higher.

Q098 (2014): The increases over the period 2010-2014 regarding misdemeanour and/or minor criminal cases, is due to the constant increase of incoming and resolved first instance cases starting from 2010, which led to the increase in the number of second instance incoming cases.

Ireland

Q098 (General Comment): Except for the Supreme Court, criminal cases are generally counted by offence rather than case due to the various ICT systems used. This is due to data collection/ ICT systems that are in use by the Court Service.

Q098 (2023): It is difficult to identify the precise reasons for an increase in incoming criminal cases in the appellate courts in 2023 due to the wide range of factors that may have been at play. For incoming criminal cases, these may include, but are not limited to, an increase in business in the first instance courts, the resumption of regular court activity following the Covid-19 pandemic, the appointment of 24 additional judges throughout 2023, additional Gardai resources, a potential increase in decisions to prosecute by the DPP, and the growing population of the state.

Q098 (2022): In 2020, the year in which the covid pandemic had its greatest effect on court business, the number of criminal appeals particularly in minor criminal cases was much lower than usual.

Q098 (2020): Reduced misdemeanour/minor cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie. Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.
The Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate its work. Procedures were introduced to ensure that justice was administered in public. Judgments were delivered electronically. Waiting times for a hearing were improved, to a certain extent, by a net reduction in the numbers of new cases coming into the list from other jurisdictions. By year end, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.
Offences are counted here rather than number of cases. There were 260 appeals in respect of 1,405 offences lodged in the Court of Appeal (Criminal) in 2020. The Court disposed of 367 appeals in respect of 1,719 offences.

Q098 (2018): With regard to the category "resolved cases", the figures reflect a continuing increase in disposal of second instance appeals disposed of over that in the previous reporting cycle (2016 data) due to the establishment of the Court of Appeal.

Q098 (2016): Data on resolved cases reflect a significant increase in disposal of second instance appeals due to the establishment of the Court of Appeal. Concerning the number of incoming severe criminal cases, 2016 data reflects the receipt by the Court of Appeal of a substantial number of pending appeals following its establishment.

Q098 (2014): The increase of 161% between 2012 and 2014 in the number of incoming cases and the increase of 101% in the number of resolved cases are due to a change in the unit of measurement for criminal cases from a defendant related unit to an offence related unit.

Italy

Q098 (General Comment): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has udertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogeing/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html The main goal in the criminal sector is a general reduction of the disposition time by 25% by June 2026 (all three instances together). A monitoring system is in place and a detailed dashboard is available at https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx

Q098 (2023): In Italy there is no formal definition of “minor criminal cases”. For the purposes of this exercise are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices which have been appealed (to Tribunal).

Q098 (2022): In the framework of the National Recovery and Resilience Plan (PNRR) Italy has udertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html
The main goal is a general reduction of the disposition time by 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together) .
More specifically a reduction of the civil backlog by 65% in first instance courts and 55% in appeal courts by the end of 2024; by 90% in first instance courts and appeal courts by June 2026. As far as the civil cases, such targets relate exclusively to litigious cases.
A monitoring system is in place and a detailed dashboard is available at https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx

Q098 (2021): Figures in 2020 were hugely affected by the pandemic

Q098 (2018): -

Q098 (2016): With regard to second instance criminal cases, in 2014-2015 a new case management system was introduced. This has negatively affected the statistics for those two years. Statistics for 2016 are definitely more robust and consistent. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

Latvia

Q098 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible.

Q098 (2024): Other criminal cases include enforcement proceedings that are subject to appellate review.
Over the period from 2022 to 2024, second-instance courts in Latvia have encountered increasing challenges in the adjudication of criminal cases. A notable rise in the backlog of cases has been observed both at the beginning and at the end of the reporting period. Furthermore, there has been a growing number of cases that remain unresolved for more than two years, indicating systemic delays in the judicial process.
The most critical situation is evident in the Riga Regional Court — the largest regional court in Latvia — where the difficulties are particularly pronounced. These challenges are primarily attributed to a reduction in the number of judges and a significant increase in the volume of cases referred from first-instance courts.

Q098 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. Decrease of incoming cases of misdemeanour and / or minor criminal cases is mainly due to the changes in the legal acts, in the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming and resolved of misdemeanour and / or minor criminal cases significantly.
Severe Criminal cases and other criminal cases: the increase in the number of pending cases could be related that in the courts the court hearings in -person were restored, lifting the restrictions of Covid, when cases were mostly adjudicated in written procedure. The inconsistency in the number of cases can be observed both with the merging of cases and with the separation of individual cases from the overall judicial process.

Q098 (2022): Decrease of incoming and resolved cases is mainly related to the impact of decrease of misdemeanour and / or minor criminal cases. In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming and resolved of misdemeanour and / or minor criminal cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. As the number of cases in the courts of first instance decreases, the number of cases in the regional courts also decreases. This is the main reason for decrease of incoming and resolved misdemeanour and / or minor criminal cases. Of course, there is also a decrease in the number of serious criminal cases, which is related to the overall decrease in criminal cases in the courts of first instance.
The number of pending cases on 31.Dec. has increased due to a limited capacity of the largest appeal court (Rigas apgabaltiesa (The Riga Regional court)): the number of judges in the Board of criminal cases has decreased and some serious criminal cases were completed. The Riga Regional Court is the largest appeal court in Latvia. This court has the largest amount of work and the workload of the judge compared to other appeal courts.
The number of pending cases (pending for more then 2 years) has significantly decreased. The decrease in cases is explained:
- due to the lifting of restrictions, which were related to limiting the spread of Covid-19;
- due to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

Q098 (2021): In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly in the first instance courts. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases in the first instance courts and in appeal courts as well.
The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

Q098 (2020): In 2020 there was changes in Administrative Procedure Law, that might affect the amount of resolved cases. Furthermore, number of misdemeanour and / or minor cases are higher in the appeal courts because in last years the Constitutional court has declared several norms on administrative infringements are not incompatible with the Constitution of Latvia. This led to an increase of incoming administrative cases.

Q098 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

Q098 (2014): In 2014, the statistics of the Supreme Court Criminal Chamber were the following: pending cases on 01.01.2014: 139; incoming cases: 19; resolved cases: 73; pending cases on 31.12.2014: 0.
Due to a court reform, the Chamber of Criminal Cases of the Supreme Court has been liquidated as from 1 January 2015. All cases, which were not resolved on 31 December 2014, were transferred to regional courts.

Lithuania

Q098 (General Comment): There is no separate statistical data allowing to distinguish between severe/minor/and other criminal cases. Neither the court information system is applied to this, nor the courts have obligation to provide the information on the seriousness of the crime. In the court information system offenses are described through the indication of an article (it does not show the severeness of a crime by itself).

Luxembourg

Q098 (2024): The 20% increase in the number of appeals against decisions made in first instance by the police courts (which correspond to new cases in second instance at the district court level) corresponds to an increase of 9 appeals between 2023 and 2024. Given that the absolute numbers are low, they are very sensitive to variations. The number of incoming cases depends on the appeals filed, over which the court has no influence, and which in turn depends, among other things, on the number of decisions made at the first instance level.

The observed increase in the number of incoming cases on appeal before the district courts could be explained by a change in the financial stakes for individuals judged in first instance by the justices of the peace. By the law of 21 September 2023 (https://legilux.public.lu/eli/etat/leg/loi/2023/09/21/a679/jo) amending the law of 14 February 1955 concerning the regulation of traffic on all public roads (https://legilux.public.lu/eli/etat/leg/loi/1955/02/14/n3/jo), the maximum fines in cases brought before the justices of the peace were changed from 250€ to 1 000€ (Art. 7 of the law of 14 February 1955). Indeed, the increase in the amount of fines, as well as the possibility of combining several offenses, can lead to significant penalties. This situation is likely to encourage more individuals to contest decisions rendered in first instance.

Q098 (2018): Concernant le nombre d'affaire résolues en matière d'affaire pénales grave, une baisse des recours introduits à la Cour d'appel est observée depuis ces dernières années, en conséquence les affaires terminées ont diminué en 2018. Concernant le nombre d'affaire résolues en matière d'affaire pénales mineures, le chiffre plus élevé des affaires d'infractions mineures s'explique par le fait qu'en 2017, 59 recours avaient été introduits sur des jugements du tribunal de police et que ces recours ont été traités pour partie en 2018 seulement.

Malta

Q098 (2024): The efficiency of these courts in 2023 was very high and hence there was a reduction in the pending caseload. Throughout 2024, there was a registered decrease in the number of resolved cases

Q098 (2022): There was a registered increase in incoming cases across all courts.

Q098 (2021): During 2021, the criminal courts were still largely effected by Covid restrictions. Given that these particular courts did not introduce video-conferencing, it was not possible to counteract the increasing incoming caseload with an equally increasing resolved caseload. As a result of this imbalance, the efficiency parameters of the criminal courts suffered. Having said this, following the removal of the pandemic restrictions, sincere efforts have been made in order to restore the efficiency of the criminal courts to the former levels.

Q098 (2020): The above data reflects the aggregate scores of the Criminal Court of Appeal in its Superior and Inferior Jurisdiction. The pandemic restrictions effected the caseload of the Court.

Q098 (2018): Given that in the Maltese legal system, the definition of severe/ minor-dismeneanor cases is not fully consistent with the definition built by CEPEJ, the data for these types of cases for Malta, is going to be presented within this section: For severe cases: Pending caseload at 1st January 2018 = 32; Incoming cases = 6; Resolved cases = 14; Pending cases on the 31st December = 21. Minor/ misdemeanour criminal cases: 1st January 2018 = 1266; Incoming cases = 445; Resolved cases = 644; Pending cases on the 31st December = 1018.

Q098 (2016): There was an increase in the pending caseload of the Court of Criminal Appeal, Inferior Jurisdiction.
In the Maltese legal system, the definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 26; Incoming cases = 15; Resolved cases = 10; Pending cases on the 31st Dec of Ref Year = 32. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 1214; Incoming cases = 629; Resolved cases = 485; Pending cases on the 31st Dec of Ref Year = 1358.

Netherlands

Q098 (2014): The reason for the horizontal inconsistency in 2014 is that the figures from the 4 columns of the table are not retrieved at the same time. The number of pending cases on Jan 1st is determined one year before the other 3 columns can be filled. One year later it is possible to determine the number of incoming cases, the number of resolved cases and the number of pending cases on Dec 31st. The definition of ‘pending’ together with dynamic changes in the registration system mean that the number of pending cases on Jan 1st will have changed. To ensure horizontal consistency, all the 4 columns should be determined after the years’ end which would imply to overrule a previously determined and official (i.e. published) number of pending cases on Jan 1st.

Poland

Q098 (General Comment): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code. The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours. Mainly these are cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code, e.g: complaints against the discontinuation of the proceedings, complaints against the application or extension of pre-trial detention, complaints against the ordering the execution of a substitute prison sentence, complaints against a failure to grant parole.

Q098 (2022): Serious criminal cases include all offences under the Penal Code, the Fiscal Penal Code and offences under other laws. Misdemeanours are cases conducted under the Misdemeanours Code.
The category "Other cases" includes other cases conducted in the criminal courts that are not directly related to serious criminal cases or misdemeanours (mainly cases conducted under the Criminal Procedure Code and the Misdemeanours Code).

Q098 (2021): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the cevere criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Q098 (2020): Variations in the number of criminal law cases in 2020 compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of severe criminal cases (p. 1) and misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release, the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

Portugal

Q098 (General Comment): When courts handle appeal cases it is not possible to separate appeals that had in their origin a criminal case or a misdemeanor case.

Q098 (2024): The data for 2024 is correct. Last February, the number of cases heard by the Lisbon Court of Appeal between 2015 and 2023 was amended as a result of a correction made by the court. Following these corrections, the data for 2023 were amended, meaning that the number of cases pending in 2023 were corrected compared to those submitted to the CEPEJ questionnaire last year. As such, the differences between the data for 2023 and 2024 will now be smaller. For reference, the figures in the first column (Pending cases on 1 Jan. ref. year) for 2023 are now 3070 and those in the fourth column (Pending cases on 31 Dec. ref. year) are now 2917.

Q098 (2016): There is no specific reason explaining the increase in the number of pending criminal cases on 31 December 2016 in comparison with the values of the previous cycle. There were no legislative changes or other that could explain this change.

Romania

Q098 (General Comment): There is no classification of severe and less severe offences in the Romanian statistics.

Q098 (2016): In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

Q098 (2014): The significant increase of the total of criminal cases in respect of all the enumerated categories (pending, incoming and resolved cases) in 2014 is due to the entry into force of the new Codes and the changes of jurisdiction.

Slovak Republic

Q098 (2022): In the line "Total" of the table in Q 98 are data for all court registers in the criminal appeal agenda. Among the category “Other criminal cases” are included for example cases in which the appeals court decides on jurisdictional disputes, objections of bias, on complaints for inaction and other complaints filed after the filing of the indictment, etc.
Sources: Analytical center, Ministry of Justice of the Slovak Republic.

Q098 (2020): Sources: Analytical center, Ministry of Justice of the Slovak republic

Q098 (2016): The 2016 data are based on the new methodology which may cause inconsistency comparing to previous cycles. The 2014 data are based on the methodology that covered only two main criminal court registers, while the 2016 data are based on the methodology that covers more than two criminal court registers. This makes the basic and key difference.

Slovenia

Q098 (General Comment): For explanation on severe criminal cases and minor offences please see comment to Q94.Figures for severe criminal law cases at the second instance include: appeals in criminal cases (Kp),Figures for minor offences cases at the highest instance include: appeals in minor offences in regular court procedure – request for judicial protection (PRp-obp), appeals in minor offences in regular court procedure – accusation proposals (PRp-zsv), apppeals in procedures for cancellation of validity of the driver's licence according to the legal limit of punitive points (EPVDp).
Figures for other cases at the highest instance include: appeals in cases for setting a task for the good of the community or the local community (PRnkp),
- appeals in substitution of imprisonment cases (Prnzp)
- appeals in compliance detention cases (PRuzp),
- various criminal and misdemnour cases in higher courts (cases not fitting in the categories above) (Kr, Prr).
For general explanation on types of cases, see Q94.

Q098 (2024): Discrepancies: 3. please note small (absolute) number of cases.

Q098 (2022): Discrepancies (to 2020 data) – 2. Misdemeanour and / or minor criminal cases (also reflected in Total):
An increase is due to two factors: 1) Until 2020, the appeal in minor offences in regular court procedures – request for judicial protection was limited (depending on the criteria – sanction) by the Minor Offences Act. At the end of 2020 the Constitutional court established that the aforementioned limitation for appeal was unconstitutional, which lead to the increase in the number of appeals in 2021 and 2022; 2) the higher court, competent for the coastal region received multiple cases of fishermen regarding border-crossing issues (in relation to the Arbitration under the arbitration agreement between the government of the Republic of Croatia and the Government of the Republic of Slovenia; PCA CASE NO. 2012-04). Pending cases older than 2 years: plase note small (absolute) number of cases.

Q098 (2021): All categories - Pending cases on 1 Jan.: decrease by approx. 10-70%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As second instance courts deal with the majority of cases without hearing of parties, their functioning was not as affected that much. The number of appeals coming from first instance decreased, which resulted in the decrease of pending cases at second instance courts at the beginning of 2021.
2. Misdemeanour and / or minor criminal cases – Incoming/Resolved cases: increase by approx. 150/90%, Pending cases on 21 Dec.: increase by approx. 1400% (this also reflected in Total)
The increase in incoming cases at second instance in 2021 is mostly due to two factors: 1) according to the Minor Offences Act, the appeal in minor offences in regular court procedures – request for judicial protection was limited (depending on the criteria - sanction). At the end of 2020 the Constitutional court established that the aforementioned limitation for appeal was unconstitutional, which lead to the increase in the number of appeals in 2021; 2) In 2021, the higher court, competent for the coastal region received multiple cases of fishermen regarding border-crossing issues (in relation to the Arbitration under the arbitration agreement between the government of the Republic of Croatia and the Government of the Republic of Slovenia; PCA CASE NO. 2012-04). Despite the efforts (see the number of resolved cases), the number of pending cases at the end of the year increased (Disposition time in higher courts is low – less than 1 month; ratio of Resolved vs. Pending cases is approx. 33:1).

Q098 (2020): The decrease in pending cases at the beginning and the end of the year is due to the fact that higher courts are sucesfully reducing the number of pending cases. the decrease in incoming and resolved cases is due to the limitation of operation of courts due to Covid-19 pandemics
The discrepancies at Pending cases older than 2 years from the date the case came to the second instance court are due to a small absolute number of cases.

Q098 (2018): Discrepancies: This year, some of the cases, previously reported at Severe or Misdemeanor cases, are reported under new category - Other cases (for details, please see general comment). The metodology for the total number of cases reported did not change, and the changes for total are below 20%.

Q098 (2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).

Q098 (2014): According to 2014 data, the figures for “severe criminal law cases” at second instance includes: criminal cases (Kp) and various criminal cases (Kr). In this respect, it should be highlighted that the 2014 data is not comparable to pre-2014 results, because until 2014, only first category was reported. In 2015, the reporting method was further improved, and other types of cases were also included in the reporting.
The figures for “minor offences cases” at second instance included: minor offences in regular court procedure – request for judicial protection (PRp-zsv); minor offences in regular court procedure – accusation proposals (PRp-obp); cancellation of validity of the drivers license according to the legal limit of punitive points (EPVDp); compliance detention (PRuzp); setting a task for the good of the community or the local community (PRnkp); various cases in minor offences (PRr).

Spain

Q098 (General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

Q098 (2023): .

Q098 (2022): 2020 was a year marked by the pandemic, the reduction of work in judicial bodies, despite digitalization, and by mobility restriction measures. The increase in the pace of work in 2022 is logical and it explains the increase of incoming and resolved cases compared to 2020.

Q098 (2021): The number of incoming and pending cases for both severe and minor criminal case categories increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved minor criminal cases.

Q098 (2020): The reduction in criminal appeals during 2020 may be an effect of the pandemic.

Q098 (2016): The number of pending severe criminal cases decreased due to the decrease in the number of incoming cases. The decreases observed in respect of the numbers of Misdemeanour cases can be due to the elimination of "Faltas" (Misdemeanour cases) by the Organic Law 1/2015. Some of theme were transformed in minor offences, but other disappeared or were transformed in administrative infractions.

Question 099

Austria

Q099 (2024): Administrative Law Cases: The number of 3187 pending administrative cases on 1 January ref. year corresponds to 3026 procedures adopted from previous years and 161 procedures completed in previous years and reopened in the reference year.

Q099 (2023): Administrative Law Cases: The number of 3185 pending administrative cases on 1 January ref. year corresponds to 2985 procedures adopted from previous years and 200 procedures completed in previous years and reopened in the reference year.
1. Civil (and commercial) litigious cases: The numbers are lower because more cases have been closed (obviously), other reasons as to why more cases have been able to get closed in 2023 are not known to the competent department.

Q099 (2022): Administrative Law Cases: The number of 3547 pending administrative cases on 1 January ref. year corresponds to 3392 procedures adopted from previous years and 155 procedures completed in previous years and reopened in the reference year.

Q099 (2021): Discrepancy between number of pending administrative law cases on 31 December 2020 and number for pending administrative cases on 1 January 2021: 3043 procedures adopted from previous years and 139 procedures completed in previous years and reopend in the reference year. "Administrative law cases": The COVID-19 pandemic posed significant and new challenges to international and government institutions worldwide, including the Supreme Administrative Court. Social distancing necessary to combat the pandemic required profound changes in the service of the Supreme Administrative Court to guarantee its functioning. In addition to internal organisational measures such as the possibility of remote work and new electronic communication tools, changes to the legal framework were necessary to enable the passing of resolutions via circular letter without physical contact between the members of the judicial body. These legal changes became effective in the course of 2020 and 2021. The continuing high level of new cases in asylum and aliens law is due to the numerous applications for international protection filed in Austria from 2015 onwards. The increase in staff at both the Federal Office for Immigration and Asylum and the Federal Administrative Court has led to an increase in the number of cases dealt with by these authorities and thus also in the number of cases brought before the Supreme Administrative Court, which has now been at a relatively high level for several years.

Q099 (2020): Discrepancy between number of pending administrative cases on 31 December 2019 and number fo pending administrative cases on 1 January 2020: the number of 3 064 pending administrative cases on 1 January 2020 corresponds to 2762 procedures adopted from previous years and 302 procedures completed in previous years and reopend in the reference year.
Pending administrative law cases older than 2 years: the observed increase is a consequence of the high number of cases in the field of asylum and aliens.

Q099 (2019): The reason for the increased number of incoming administrative cases and accordingly the increase in the number of pending administrative cases is related to the high number of cases in the field of asylum and aliens law characterizing the period 2016 - 2019.

Q099 (2018): The reasons for this increase of the incoming administrative cases is related to the high number of cases in the field of asylum and aliens law.

Q099 (2017): To 3.:
Because of the model of business cases installed at the Supreme Administrative Court pending cases at the begin of a reporting year have to be analysed by calculation. Incoming cases are substracted from the sum of resolved cases and of pending cases at the end of the reporting year. New applications within the same case cause a reopening of the concerned cases. Thus the number of pending cases changes. Therefore a completly consistent image of figures of pending cases from the end of previous year and those from the begin of the current year is not feasible.

Q099 (2016): The big variation is due to the fact that this cycle the administrative cases were included.
The administrative courts were established January 1st 2014. After their establishment the data of the administrative courts is introduced this cycle for the first time.

Belgium

Q099 (General Comment): The category of “administrative law cases” includes certain civil and social cases before the Court of Cassation, all tax cases before the Court of Cassation, and cassation cases before the Council of State.

Q099 (2024): The same methodology as in the last cycle is followed concerning the category of “administrative law cases,” which includes certain civil and social cases before the Court of Cassation, all tax cases before the Court of Cassation, and cassation cases before the Council of State. Concerning resolved administrative cases, for the Council of State the total of 505 resolved cases includes final judgments and orders of non-admission (342 + 163). There is no particular explanation regarding the observed variations in the number of cases.

Q099 (2023): Same methodology as last cycle.
Of the cases completed under “3. Administrative cases” (total 729 = 305 + 424), as far as the Council of State is concerned, it should be pointed out that the figure of 424 includes final judgments and non-admission orders (224 + 200).
No particular factor should be noted in the increase in administrative cases pending for more than 2 years.

Q099 (2022): The category "2.3 Other non-litigious cases" contains cases G (applications for legal assistance) brought before/dealt with by the Court of Cassation.
The category "4. Other cases" contains cases D (disciplinary matters) brought before/dealt with by the Court of Cassation.
For “administrative cases”, a new methodology has been adapted to comply with CEPEJ's definition for “an administrative case” (i.e., disputes between citizens and any public authority at local, regional or national level). Under previous cycles only cases dealt with by the Council of State were counted under point ”3.Administrative cases". For 2022, the category "3. Administrative cases" includes: 1) cases dealt with by the Council of State; 2) administrative cases dealt with by the Court of Cassation, namely a part of the C cases (civil cases): a considerable proportion of S cases - social affairs and all F cases - tax cases.
The number of resolved administrative cases before the Council of State (total 763 = 353 + 410) includes final judgments and orders refusing leave to appeal (189+221).

Q099 (2021): “Civil (and commercial) litigious cases”: in 2021, the Court of cassation managed to adopt a higher number of final decisions compared to 2020 (973 final decisions in 2021 compared to 853 in 2020). This is largely due to a series of 72 similar cases in which final decisions were delivered in 2021, as well as to the endeavours to increase the number of final decisions in tax matters (+30 final decisions compared to 2020). The number of incoming civil (and commercial) litigious cases in 2021 is more or less comparable to the one in 2020. In the long term, an upward general trend is to be noticed. However, more specific evolutions have been observed within this case category: in 2021, compared to 2020, the number of incoming civil cases (including commercial and administrative cases), as well as the number of incoming social cases has slightly decreased, while the number of incoming tax cases has increased. The latter is increasing from year to year.
The category “2.3 Other non-litigious cases” encompasses cases related to requests for judicial assistance introduced before and dealt with by the Court of cassation in 2021.
The category “4. Other cases”, concerns disciplinary cases brought before and resolved by the Court of cassation in 2021. Incoming disciplinary cases, as well as resolved disciplinary cases are higher in 2021 compared to 2020 (+ 15 incoming cases; + 11 final judgments). Given that the Court processes a small number of disciplinary cases each year, it is not possible to draw relevant conclusions based on the observed variations.
“3. Administrative law cases”: data communicated by the State Council; in respect of the number of resolved cases, there were 170 final decisions and 255 non-admission orders.

Q099 (2020): In the category '1. contentious civil (and commercial) cases' are included the C, F and S cases (civil; fiscal and social cases) that were filed/processed before the Court of Cassation in 2020.
The category '4. other cases' contains the D cases (disciplinary cases) filed before/processed by the Court of Cassation.
It should be noted that the Court of Cassation is also competent to decide on applications for legal aid. The category 3 ""administrative cases"" was provided by the highest adminsitartive Court.
(source Cour de Cassation)
With regard to the category ""administrative cases"" (Council of State), for completed cases: it should be noted that the figure of 479 covers 177 final judgments and 302 orders of non-admission. (source Council of State). It should be noted that the lack of horizontal coherence is due to the fact that the number of judgments does not necessarily correspond to the number of closed cases. For example, a judgment that closes two cases is recorded as a single judgment.
In 2020, the number of new administrative cases increased compared to 2019. However, due to the exceptional situation caused by COVID, the State Council could not keep up with the flow of cases and even though the number of completed cases increased compared to 2019, the number of pending cases at the end of 2020 increased. "

Q099 (2019): Civil, social and fiscal affairs at the supreme Court. A dministrative cases are the cases 'in cassation' at the Council of State.

Q099 (2018): Civil, social and tax cases at the Court of Cassation
Administrative affairs = cases "in cassation" at the Council of State

Q099 (2017): civil and commercial cases: cases in roles C, S and F at the Court of Cassation
administrative cases: cases before the Council of State "in cassation": Out= 221 judgments and 214 non-admission orders

Q099 (2016): Civil, social and fiscal cases at the Court of Cassation
Administrative cases ="cassation" cases in the State Council
The decrease in administrative cases is due to a reduction in referrals to the Council of State for this type of case.

Q099 (2014): 2014: The civil and commercial cases include cases of roles C (private and public law), F (tax law) and S (employment law) of the Court of cassation.
Administrative cases fall within the decisions of the Council of State in cassation.

Bulgaria

Q099 (General Comment): The data on the supreme courts are provided by the Supreme Court of Cassation and the Supreme Administrative Court on the basis of the information extracted from the case management systems implemented in these courts. The software of the Supreme Court of Cassation for extraction of statistical data is made according to a methodology developed in the Supreme Court of Cassation, as the codes for the respective type of cases are formed by a working group of judges in the Supreme Court of Cassation. This software, which allows the SCC to extract the statistics needed to answer Question 99, is different from the product used for other courts.
Since 2020, the Unified Court Information System (UIS) has been gradually introduced in all courts, developed within the project “Creating a Model for Optimizing the Court Card of Bulgarian Courts and Prosecutor's Offices and Developing a Unified Court Information System” with the financial support of Operational Program "Good Governance" 2014-2020.

Q099 (2024): The significant decrease in administrative cases pending for more than two years is due to the upward trend in cases resolved by the Supreme Administrative Court, which we have observed since 2022.

Q099 (2023): "Civil litigious cases pending for more than 2 years": the observed increase of more than 20% is due to: an increase in the number of interpretative cases, necessitating the suspension of court proceedings pending interpretative decisions; suspension of court proceedings due to preliminary ruling requests to the CJEU; suspension of court proceedings pending CJEU rulings; sending a case to a lower instance and delayed proceedings there; - the factual and legal complexity of the cases.
The increase in the number of administrative cases pending for more than 2 years by 38% between 2022 and 2023 (from 101 to 139) is because all of these 38 cases are suspended until the Supreme Court pronounces interpretative decisions.

Q099 (2022): "Civil litigious cases" - the reasons for the higher number of pending cases at the beginning of 2022 compared to 2021 are twofold: the large increase in case filings in 2021 and the critical staffing of the court, leading to a high backlog at the end of 2021. 1. The number of pending cases on 1 January 2022 is 845 more than on 1 January 2021, as the number of cases filed in 2021 is 1105 more than in 2020. As a result of the amendments to the Civil Procedure Law, access to cassation appeals has been expanded from the beginning of 2020 in cases related to consumer disputes, which in turn determined the increase in the number of cassation cases in the Civil Division and the Commercial Division. 2. In 2021 the Court is not sufficiently staffed due to the delay in the competitions for the appointment of judges in the Supreme Court of Cassation, as well as due to the retirement of judges in 2021 - 3 judges in the Civil Division and 1 judge in the Commercial Division.
"Administrative cases"/SAC/:Regarding the increase in the number of pending cases at the end of the reporting period (2022) and the higher number of cases initiated, compared to the number of cases completed, is explained, on the one hand, by the unevenness of the initiated cases by matter in the different divisions of the SAC, and, on the other hand - by the complexity and volume of the cases handled by some divisions (e.g. tax, customs, cases under the Management of Resources from the European Funds under Shared Management Act , public procurement, elections, etc.); the need for in-depth knowledge of European law, including requests for preliminary rulings to the Court of Justice of the European Union (CJEU). The problem with the pending cases till issuance of interpretative decisions or rulings of CJEU continues to be relevant, as all such cases are suspended and that respectively results in delays in their consideration and further strains the schedule. In particular, an analysis of the factually and legally complex tax cases shows that the one-month time limit for court decisions is not optimal. The complexity of this type of cases and the need for direct application of Community law suggest another reasonable time-limit for the panel to issue its ruling. Furthermore, it should be stressed that in parallel with the judicial activity during the year under review, General meetings of First and Second Chambers of the SAC on interpretative cases for unification of the case law were held on a monthly basis. Joint meetings of the SCC and the SAC on joint interpretative cases were also conducted regularly. On the other hand, the decrease in the number of initiated cases during the reporting period is also due to undertaken legislative changes concerning jurisdiction. Last but not the least, in 2022, there was still a high incidence of COVID-19 among the judges and staff of the SAC, which further led to delay in the administration of justice of the court.

Q099 (2021): There are also some other non-litigious cases that are not included in the data. However, their number is insignificant. Concerning the category "Civil and commercial litigious cases": the reasons for the difference between 2020 and 2021 are twofold: the large increase in caseloads in 2021 and the critical staffing of the Supreme court of cassation. 1. There are 836 pending cases as of December 31, 2021 more compared to those at the end of 2020, as the cases received in 2021 were 1105 more than those who entered in 2020. As a result of the amendments to the Civil Procedure Law, access to cassation appeals was expanded from the beginning of 2020 in cases related to consumer disputes, which in turn caused an increase in the number of cassation cases in the Civil College/Chamber and the Commercial College/Chamber. 2. The court in 2021 is not sufficiently staffed due to delays in the competitions for the appointment of judges in the Supreme Court, as well as due to the retirement of judges in 2021 - in the Civil College/Chamber - 3 judges, and in the Commercial College/Chamber - 1 judge.

Q099 (2020): The number of pending administrative cases decreased meaningfully because of reorganization of work in the Supreme Administrative Court (SAC). By issuing an internal order The Chairman/President of the SAC increased the workload of each judge to achieve these results.
The difference of two cases in the horizontal calculation/consistensy (indicated by the SCC 3863 cases instead of 3865- Pending cases on 31 Dec. ref. year) is due to two cases found in 2020, which were completed in the SCC in a previous period (before 2020), but were not correctly filled in then with all the details needed by the software to report the cases as completed. The adjustment was made in 2020, which actually reduces the number of cases for consideration by two, and the number of completed cases does not increase because the cases were completed in a previous period - before 2020.

Q099 (2019): There are some non-litigious cases that are not included in the data but their number is insignificant.

Q099 (2018): There are also some other non-litigious cases that are not included in the data. However their number is insignificant.
The number of pending administrative cases older than 2 years decreased meaningfully because of reorganization of work in the Supreme Administrative Court (SAC). By issuing an internal order The Chairman/President of the SAC increased the workload of each judge to achieve these results.

Q099 (2017): The answer for 2. Non litigious cases (2.1+2.2+2.3) is NAP for previous cycles as well.

Q099 (2016): The increase in the number of pending administrative law cases (in the beginning and at the end of the year) is explained by the fact that data has been provided by different sources for 2014 and 2016.

Croatia

Q099 (2024): Considering that the Supreme Court has achieved very positive results in recent years (resolution rates ranging from 115% to 150%), the positive trend continued in 2024. Consequently, the number of unresolved cases has decreased. The incoming caseload in 2024 increased compared to 2023, as the inflow was reduced in 2023 due to the strike. Thus, in terms of incoming cases, the Supreme Court returned to the average levels observed over the past three years.

Q099 (2023): For several years, the Supreme Court has seen a decrease in the number of pending cases at the beginning and end of the year, as well as a decrease in the number of Pending cases older than 2 years from the date the case came to the Supreme Court.

Q099 (2017): Regarding the answers in this question, cases dealt with by the Supreme Court of the Republic of Croatia, as the highest instance court in the RoC, have been presented. We are unable to show separately the required categories. The Supreme Court of the RoC is in the process of preparing the implementation of the ICMS, which will in future enable the expression of cases by types. Source for this data is published data by the Supreme Court of the RoC for year 2017 on their website.

Q099 (2016): Due to a large influx of revision proceedings and a slower solving of cases in 2014 and 2015, at the beginning of 2016 the number of pending cases continues to increase. However in 2016 the Supreme Court of the Republic od Croatia significantly resolved more cases than in previous cycle and the number of pending cases had decreased compared with 2015 althought not when compared with 2014.

Q099 (2015): In the table 99. cases dealt by the Supreme Court of the Republic of Croatia, as the highest most instance court, have been presented. We are unable to show separately the required categories. The Supreme Court is in the process of preparing the implementation of the ICMS, which will in future enable the expression of cases by types.

Q099 (2014): After the new standardization of the audit, the Supreme Court has started to be less up-to-date since the number of received cases is far beyond the number of cases which the existing judges and advisors at the Supreme Court may solve. In resolving the cases at the Supreme Court, advantage is given to urgent cases (determined by laws) and to old cases.

Cyprus

Q099 (General Comment): On 1st of July 2023 an Appeal Court was established therefore a third tier system was created. The re established Supreme Court and Supreme Constitutional Court are now the the highest Courts. It is possible for a non litigious case to be brought before the Supreme Court however this is very rare.
Following a reference from the Court of Appeal, the Supreme Court adjudicates on appeals against decisions of first instance civil and criminal courts, including courts of specialised jurisdiction, on points of utmost public interest or of general public importance or on the consistency of law on conflicting or contrasting decisions of the Court of Appeal.
With the leave of the Court, the Supreme Court decides, at third and last instance, on applications filed, by the Attorney-General or by a party, provided that civil or criminal appeal proceedings on points of law preceded in the court below.
The Supreme constitutional Court deals with references of the President of the Republic on the constitutionality of Law. It also hears cases involving constitutional issues and acts as a third and last tier in administrative matters.

Q099 (2024): Civil and commercial litigious cases: The variations could be explained by the following:
- New jurisdictions were exercised by the supreme courts
- More cases were tried - the reference date for the previous cycle was 1st of July when the SC and the SCC were established
Administrative cases: in April 2024 250 administrative cases and 10 cases on cases of administrative court of international protection were transferred to the Supreme Constitutional Court and they were considered as pending at the start of the year.

Q099 (2023): The numbers in the table represent the cases pending on the 1st of July.

Q099 (2018): Cyprus only has a two tier system. The Court of Appeal is also the Supreme Court, therefore the relevant data could be found in the section on second instance cases.

Q099 (2016): The supreme court is the appeal court

Czech Republic

Q099 (General Comment): 4. Other cases: change in methodology in 2023 (to comply with the CEPEJ methodology), namely insolvency cases (and incidency cases) were moved to 1. Civil (and commercial) litigious cases.

Q099 (2023): 2. Non litigious cases (2.1+2.2+2.3) and 2.1. General civil (and commercial) non-litigious cases - the number of cases is relatively small. And small number of cases means higher variance and thus the discrepancies can easily appear.
4. Other cases - Change in methodolgy, namely insolvency cases (and incidency cases) were moved to 1. Civil (and commercial) litigious cases.

Q099 (2022): Administrative cases: The Supreme court is overburdened and has trouble resolving its cases thus the number of pending cases grow quite quickly. It is connected to growth in the number of administrative first-instance cases in previous years and growing tendency to file an appeal to the Supreme Administrative Court.
Other cases: Includes insolvency cases. The changes are the result of changes in second-instance agenda.

Q099 (2021): Other cases: This category includes appeals in last (third) instance of insolvency cases and incidence disputes.

Q099 (2020): Civil (and commercial) litigious cases: After several years of steady growth in the incoming cases, the incoming cases started to decrease in 2018. This is mainly due to legislative changes and drop in first and second-instance agenda in previous years. Thanks to this decrease the Supreme court was able to resolve part of its backlog and thus pending cases significantly decreased.
Civil (and commercial) non litigious cases: The variations should be put into perspective due to small absolute values.
Administrative cases: The Supreme court is overburdened and encounter difficulties to resolve its cases thus the number of pending cases grow quite quickly. It is connected to grow in number of administrative first-instance cases and growing tendency to fill an appeal to Supreme Administrative Court.
Other cases: This category includes appeals in last (third) instance of insolvency cases and incidence disputes. The changes are the result of changes in second-instance agenda. Also, it must be noted that the number of pending cases is relatively small, thus the variance is bigger.

Q099 (2019): Court was overburdened last year (there was much higher number of incoming cases than it managed to resolve), so there is a big increase in the number of pending Administrative cases.

Q099 (2018): The category “other” includes appeals in last (third) instance of insolvency cases and incidence disputes.

Q099 (2017): The category “other” includes appeals in last (third) instance of insolvency cases and incidence disputes. This whole agenda is relatively new (since 2008) and it takes quite a long time to resolve a case (several years). Since the agenda is new, it took several years before the number of first-instance incoming cases stopped growing and reach somehow stable level. Of course, the number of appeals (second instance) and incoming case second instance cases started to grow as well, but later. For simplicity, it can be said that Supreme Court deals with appeals in final (third instance). It follows that the number of final instance cases in this agenda also started to grow and again, later than the number of incoming cases in second instance. Thus the number of incoming cases in this agenda (insolvency cases and incidence disputes) is currently growing. The court seems to be struggling to deal with this growth in number of incoming cases, yet it is difficult to understand the reasons behind it, as the growth does not seem to be very high in absolute numbers.

Q099 (2016): In 2016 the administrative cases were added and for that reason all numbers show variation. Previously the number of administrative cases on this instance was NA.

Denmark

Q099 (General Comment): The number of incoming cases corresponds only to the number of admissible cases (excluding cases declared inadmissible which number is not available)
Administrative law cases: 1. What is included in “administrative law cases” and what is the distinguishment between litigious and non-litigious administrative law cases; and what are non-litigious administrative case in Denmark. It is challenging to provide a clear answer for Denmark. Due to the way data is collected within the Danish Court Administration, it is unfortunately not possible to distinguish between the specific types of cases included under administrative law cases. The courts indicate whether a case is of an administrative nature, however, administrative cases occur across almost all categories within civil cases. Consequently, it is difficult to state unequivocally which types of cases they most appropriately belong to. 2. The approximate number of administrative law cases that are litigious and go to court, and their part of the overall “civil litigious cases
In the period from 2023-2025 the number of civil cases in Denmark was 181.064, and out of those, 10.947 was of administrative nature. Furthermore, approximately 6 percent of all civil cases over the past three years have been classified as administrative law cases. Cases concerning forced removal often fall within the scope of administrative law, however, such cases represent only about 2 percent of the total civil caseload. The two other categories with a notable share of administrative law cases are “general civil cases” and cases under “the simplified procedure”. Both of these categories are quite extensive in terms of volume as well as broad in their classification, meaning that administrative law cases constitute only a relatively small proportion within them. 3. The composition of the bodies such as appeal boards and committees Denmark has a well-developed system of specialized complaints boards that serve as administrative appeal bodies for decisions made by public authorities. These boards, such as Ankestyrelsen and the Consumer Complaints Board, provide citizens with accessible and cost-effective avenues to challenge administrative decisions. Denmark has over 80 complaints boards and committees across various sectors. They generally consist of a chairperson – often a judge or legal expert – and a mix of legally trained members and specialists relevant to the board’s area. Membership terms are typically four years. The exact composition varies by board: for example, the Consumer Complaints Board includes a chair (judge), vice-chairs, and representatives of consumer and business interests, while the Patient Complaints Board combines judges and health professionals. Appointments are usually made by ministries or local authorities, often based on nominations from relevant organizations.

Q099 (2024): The nature of Supreme Court cases means that case flow numbers may vary drastically year to year.
Total of other than criminal law cases (1+2+3+4) + 1. Civil (and commercial) litigious cases: Faulty reporting on 2023 data. The 2023 was updated on 24/11/2025 by the CEPEJ Secretariate.
Supreme Court has experienced a substantial rise in civil appeals the last few years
Administrative law cases: changed from NAP to NA since Denmark does have administrative cases in courts, but they cannot be counted exactly.

Q099 (2023): The higher number of cases in 2023 is due to the comparison of 2021, where there was lower activity due to COVID-19. Furthermore, we have filtered a certain type of case from the data. The original number of 615 was due to the right for civilians to file a case online, which one citizen has done close to 400 times in 2023. The court is obliged to count and consider every case, however this has affected the data in a misleading way regarding incoming cases. The current figures are from the official statistics from 2023, where the misleading cases are also filtered out for a more fair picture of the number of actual cases in 2023.
The number of cases can be found in our key data from 2023 on our website www.domstol.dk

Q099 (2021): There is no special reason explaining the increase in the number of incoming cases. It should be recalled that 2020 was a special year because of the lockdown. The Supreme court depends on the two High Courts to receive cases and they send a few more cases to the Supreme court in a year without lockdown compared with 2020.

Q099 (2019): resolved and incoming cases have not markedly changed. So it is pending cases that varies. But pending cases are residual numbers and will typically vary from year to year.

Q099 (2018): In the Danish context, non-litigious cases do not make sense. Pending cases may vary as it is residual in nature and is depending on the number of incoming and resolved cases and the ratio between those two.
it is also important, when we talk discrepancy, that there is a year between previous and present year (2016 - 2018). 2017 is missing, so data - in particular pending cases - may vary.

Q099 (2017): Pending cases primo and ultimo 2017 for the Supreme Court is found based on pending cases ultimo 2016, received cases in 2017 and resolved cases in 2017. Put differently, pending cases are now generated based on pending ultimo 2016 and cases in 2017.

Q099 (2016): In the Danish context, non-litigious cases do not make sense. Pending cases may vary as it is residual in nature and is depending on the number of incoming and resolved cases and the ratio between those two.

Q099 (2015): The number of incoming cases ("other than criminal cases") dropped between 2010 and 2015. Since the instance reform in 2007, the Supreme Court is now almost only a third instance court (instead of being partly a second instance court and partly a third instance court). Indeed, first instance pending cases at the two High Courts in 2007 have gradually already been appealed or finalised.

Q099 (2014): In the frame of the 2014 exercise, the attention was drawn on the fact that the number of incoming and resolved cases before the Supreme Court was still falling, since the reform of 1st January 2007. Before 2007, many cases started in one of the two High Courts and could be appealed directly to the Supreme Court as second instance. Since 2007, almost all cases start at the lowest level and consequently, much fewer cases are appealed to the Supreme Court. This effect of still fewer cases appealed to the Supreme Court following the reform could still be seen from 2012 to 2014.

Estonia

Q099 (General Comment): It is noteworthy that the discrepancies that can be observed between the number of pending cases indicated for December of one year and the number of pending cases communicated for January of the next year, are due to the fact that the statistic system is alive and courts are entitled to modify and up-date data at any time.
Moreover, differences in the horizontal consistency may be explained by the fact that during the proceedings some cases are joined and some are disjoined.

Q099 (2024): Total of other than criminal law cases (1+2+3+4) Pending cases on 1 Jan. ref. year - The query was made at a different time, which explains the smaller number.
3. Administrative law cases - Overall increase in workload

Q099 (2016): The number of pending cases has increased because the number of cases where the Supreme Court has decided to open proceedings in the Supreme Court has increased.

Finland

Q099 (General Comment): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

Q099 (2024): Other cases include information on insurance matters, land rights matters, application matters, and pardon matters.
The Supreme Court received a smaller amount of cases but still solved a similar amount of cases which lead to the decrease of pending cases.

Q099 (2022): Administrative law cases: In the Supreme Administrative Court, there has been exceptionally high number of cases concerning international protection since 2017 and now as the number of incoming cases of this case category has decreased, the numbers have settled. This also corresponds to the decrease in the number of resolved cases, because the synergistic benefits of large number of cases with common features have decreased and the extra personnel resources reserved for clearing the backlog have been given up. Other factors that could have influenced the development are the increased court fees starting from 2016, as well as the change in the role of the Supreme Administrative Court in 2020, when the leave to appeal system became the main rule in appeals (previously it was an exception that was widely applied to different groups of cases from the possibility of direct appeal).

Q099 (2021): The number of incoming administrative cases has been on the decline for the last years.
Variations observed in respect of "civil and commercial litigious cases" are due to yearly fluctuations.

Q099 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

Q099 (2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:
1)Incoming cases 2)Resolved cases
3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

Q099 (2018): The total of incoming other than criminal cases decreased slightly in 2018 compared to 2017. The number of administrative law cases decreased slighty in 2018 but is still high. The general increase is mostly a consequence of the asylum crisis and the fact that cases from the administrative courts have reached the highest instance in 2017 and 2018.

Q099 (2017): The total of incoming other than criminal cases increased for the period 2016-2017. This increase is mostly due to the increase in the number of administrative law cases as a consequence of the asylum crisis and the fact that cases from the administrative courts have reached the highest instance in 2017 (which was not the case in 2016).

Q099 (2016): Courts were able to resolve more cases because the number of incoming cases decreased. The Supreme Administrative court got more resourses and personnel due to the asylum crisis, but cases from the administrative courts have still not reached the highest instance.

Q099 (2014): In respect of the variations observed between 2012 and 2014 data, it is noteworthy that the statistics system has changed. Data is not received any more from the Central Statistical Office of Finland. Instead, the Ministry of Justice receives information directly from processing systems. This method of compilation of statistics does not quite support answering the question, as the information is run periodically and not daily. As a result, some discrepancies occur. As the system does not provide the numbers for 1 January 2014, it is necessary to calculate them separately from the correct data obtained on a later date.

France

Q099 (General Comment): In non-litigious civil matters, an appeal to the Court of Cassation is possible, yet the statistics provided by the Court do not allow for their specific identification. Consequently, these non-litigious civil cases are grouped together with litigious civil cases.

Q099 (2024): "Other cases": QPC, requests for opinions, and other applications filed as the main matter.
"Civil litigious cases pending for more than 2 years": the numbers are small and affect the percentage changes. For administrative justice, the discrepancies noted between the number of pending cases on Dec. 31, 2023, and Jan. 1, 2024, are explained by updates to the Council of State's databases.

Q099 (2022): The category 'other' encompasses additional requests, such as advisory requests, priority questions of constitutionality, and petitions concerning the appointment of experts or mediators.

Source: Council of State / Court of Cassation

Q099 (2021): source SDSE and Council of State

Q099 (2020): "The health crisis and containment may have played on TAs (completed cases) (by reducing the ability of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to trial). Prior to this, a major lawyers' strike and a transport strike had mainly affected the TAs.
Commentary provided by the Conseil d'Etat: As a reminder, the measures derogating from the ordinary law of contentious administrative procedure adopted to respond to the situation arising from the health crisis caused by the Covid-19 epidemic were provided for by Ordinance no. 2020-305 of March 25, 2020, and then by Ordinance no. 2020-1402 of November 18, 2020, and Decree no. 2020-1406 of the same day. I - Concerning the rules relating to the organization or holding of hearings 1°) Use of audiovisual or any other means of electronic communication
The two orders of March 25 and November 18, 2020 provided for the possibility of using an audiovisual means of telecommunication for the holding of hearings or any other means of electronic communication.
When this device was used, it was used, in almost all the jurisdictions that had recourse to it, for less than 10% of the cases judged in collegiality during the same period.
The most common configuration used was that in which one or more members of the panel were at a distance and the president, the other members of the panel, and the parties and their counsel were in the courtroom (approximately 75% of the courts that used videoconferencing chose this configuration, and 53% of them used it for less than 10% of the cases heard by the panel). Very few courts have used video-conferencing with remote parties. The reasons for which the courts have used video-conferencing are linked to the constraints linked to the health crisis, in particular the difficulties encountered by lawyers to travel, especially in overseas territories, and the isolation imposed on certain people (judges or lawyers) declared to be in contact or recognized as fragile.
In the case of single-judge hearings, the courts have made a very measured application of the provisions allowing the use of an audiovisual means of telecommunication, since only 6 administrative courts out of 35 have indicated that they have used it.
The administrative courts indicated that they had used videoconferencing, as a single judge, for the processing of emergency proceedings in matters concerning foreigners, particularly in cases where the foreigner was in administrative detention. Finally, 15 administrative courts indicated that they held summary proceedings by videoconference. For almost all of these courts, the summary proceedings judge was in the courtroom and the parties were at a distance, and less than 10% of summary proceedings cases were judged in this configuration.
Travel difficulties were the main reasons why the courts of first instance held summary proceedings by videoconference. The texts applicable during the state of health emergency allowed the use of any means of electronic communication, other than videoconferencing, in case of impossibility to use it. Only a few TAs used this procedure and for less than 10% of the cases in the courts that used it.
Generally speaking, the courts have made a very measured application of the provisions of the orders allowing hearings to be held by videoconference and this use was justified by the constraints and difficulties linked to the health crisis. 2°) The provisions allowing to limit the number of persons attending the hearing were applied by a large number of courts and in a frequent man

ner. On the other hand, the provisions allowing the president of the court to decide that the hearing will be held without the presence of the public have been used very little. 3°) The dispensation of the public rapporteur's conclusions has been used very little by the courts. This dispensation was applied because of the vulnerable state of the public rapporteur or to limit the length of the hearings (in these cases the dispensation was granted for cases that did not present any difficulty).
4°) The orders of March and November 2020 allowed the interim relief judge to rule without a hearing, in addition to the cases provided for in article L. 522-3 of the Code of Administrative Justice.
Many courts have indicated that they have dispensed with a hearing. The dispensation of a hearing was most frequently applied in the case of summary proceedings for suspension. In the case of interim relief, this dispensation was applied in a more measured way.
Finally, many jurisdictions did not hold a hearing for summary proceedings other than suspension and liberty.
5°) The possibility for the administrative courts of appeal to rule by order without a hearing on applications for a stay of execution was little used, since only 3 CAA indicated that they had used it.
6°) In matters of DALO-Injunction, the possibility of ruling by order was used by 12 courts and, for almost all of these courts, for more than 60% of the cases judged during the same period.
II - The courts made very little use of the derogation provisions relating to the composition of the trial panels. In fact, no court made use of the possibility of completing a panel of judges with the participation of an honorary magistrate from another court. Only one administrative court requested the participation of a judge from another court (one judge came to assist for a period of three months).
III - The provisions allowing heads of court to appoint advisers to rule by order under the conditions set out in article R. 222-13 of the CJA were hardly used: only two administrative courts applied them. One head of court had appointed one or more advisers but no order was made by this magistrate or these magistrates. Another head of court indicated that the designated magistrate(s) signed more than 200 orders. In total, it appears that the measures provided for have been used very differently depending on the measure taken into account.
Video hearings and the new rules for summary proceedings have opened up possibilities, with provisions that can be seen as having been the medium for experimentation. "

Q099 (2014): 2014: The statistics of the Court of Cassation are not based on the same information system as the ones of courts of first instance and appeal courts. If discontinued cases of the category non-litigious cases may be subject to an appeal, it is not possible to identify them, they are included in the figure given for civil litigious cases. Thus, the total figure is the one retained.

Germany

Q099 (General Comment): The annual statistic of the Federal Court of Justice does not differentiate between litigious and non-litigious cases.

Q099 (2024): The annual statistic of the Federal Court of Justice does not differentiate between litigious and non-litigious cases. The caseflow of all litigious and non-litigious other than criminal cases (including family matters) at the Federal Court of Justice 2024 was as follows: 6455 cases pending on 1 Jan.; 4761 incoming cases; 5867 resolved cases; 5304 cases pending on 31 Dec.
The total of other than criminal law cases is the total of administrative law cases (no. 3), other cases (no. 4) and the cases at the Federal Court of Justice mentioned above.
Administrative law cases include cases at the Federal Administrative Court, Federal Social Court and Federal Finance Court
Other Cases represent labour law cases at the Federal Labour Court.
Discrepancy of pending cases on 31 Dec compared to 2023: The dicrepancy is due to the fact that there were more resolved than incoming cases. The annual report of the Federal Labour Court does not mention any specific reason for this development.

Q099 (2023): The annual statistic of the Federal Court of Justice does not differentiate between litigious and non-litigious cases. The case-flow of all litigious and non-litigious other than criminal cases (including family matters) at the Federal Court of Justice 2023 was as follows:
5886 cases pending on 1 Jan.; 5897 incoming cases; 5328 resolved cases; 6455 cases pending on 31 Dec.
The total of other than criminal law cases is the total of administrative law cases (no. 3), other cases (no. 4) and the cases at the Federal Court of Justice mentioned above.
Administrative law cases include cases at the Federal Administrative Court, Federal Social Court and Federal Finance Court
Other Cases represent labour law cases at the Federal Labour Court.

Q099 (2022): The annual statistic of the Federal Court of Justice does not differentiate between litigious and non-litigious cases. The case-flow of all litigious and non-litigious other than criminal cases (including family matters) at the Federal Court of Justice 2022 was as follows:
5275 cases pending on 1 Jan.; 6624 incoming cases; 6013 resolved cases; 5886 cases pending on 31 Dec.
The total of other than criminal law cases is the total of administrative law cases (no. 3), other cases (no. 4) and the cases at the Federal Court of Justice mentioned above.
Adminstrative law cases include cases at the Federal Administrative Court, Federal Social Court and Federal Finance Court
Discrepancy of "other cases":
Other Cases represent labour law cases at the Federal Labour Court. The annual report of the Federal Labour Cort does not provide an explanation for the general decrease in cases.

Q099 (2021): The statistics of the Federal Court of Justice do not differentiate between litigious and non-litigious cases. The data given under Nr. 1 represents all appeal cases in civil matters at the Federal Court of Justice (including family matters).
"Other Cases": Data represents labour law cases at the Federal Labour Court.
The annual report of the Federal Labour Court doesn't provide an explanation for the decrease in incoming cases and resolved cases. According to press reports, the decrease in incoming cases might be due to the good economic situation prior to the pandemic (less dismissal cases). The decrease in resolved cases might be due to a rising number of cases, in which an involvement of the European Court of Justice is necessary.

Q099 (2015): The data provided date from 2014. At present, no data are available for 2015.
It is not possible to distinguish between litigious civil cases, respectively commercial cases, and those that are non-litigious. Accordingly, number 1 of the answer to question 99 includes all appeals on points of law brought in the civil matters before the Federal Court of Justice (Senates for civil matters including family law matters). However, the number of proceedings dealt with and concluded by litigious rulings in 2014 amounts to 600.

Q099 (2014): The 2014 data are the same as those that have been provided in 2013. No update was available.

Greece

Q099 (General Comment): After relevant communication with the IT department of the Supreme Court, it was clarified to us that "Due to changes in the OSDYPP of the Supreme Court, it is no longer possible to calculate Pending cases older than 2 years.

Q099 (2024): Independent Department for the Collection and Processing of Judicial Statistical Data (JustStat)
Starting from 2024, cases dealt with by the Court of Audit are also included within the category "administrative law cases" together with cases dealt with by the Council of State.

Q099 (2023): For the reference year (2023) the data on the total of non-criminal cases dealt with by the Supreme court :2 728 pending at the beginning of 2023, 2 399 incoming, 1 915 resolved and 3 212 pending at the end of 2023,103 pending older than 2 years from the date the case came to the Supreme Court.

Q099 (2022): It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data, such as the training of staff and the creation of an instructional manual guide with definitions and instructions. These measures were intended to help collecting more reliable data from both small and large courts and prosecution services and eliminate the standard errors in judicial statistics. As our methodology is developing, discrepancies in data can be observed. Besides, as regards “Other cases”, it should be mentioned that some types of cases that were previously included in this category, are now distributed in the other case-categories in the table.

Q099 (2021): The fact is that Supreme Court couldn’t split the number of civil cases on each category provided in the table. The correct numbers for Categories 1+2 are the following: 2300 pending cases on 1 Jan. ref. year, 2 644 incoming cases, 2 262 resolved cases and 2 682 Pending cases on 31 Dec. ref. year.

Q099 (2020): No data were collected from Supreme Courts regarding incoming and resolved cases. Therefore, we were unable to provide the relevant evaluable data.

Q099 (2018): “the discrepancy between the number of the resolved cases of 2017 and of 2018 for administrative law cases is due to the combination of the following factors:
-in 2018 a number of difficult cases, that had to do with the system of social insurance, was about to be completed
-lawyers become familiar with the filters regarding the cassation and its strict prerequisites, which lead to less rejections of cases as inadmissible and subsequently to a higher number of cases being discussed as far as their real facts are concerned.
-for the abovementioned reason the fast procedure provided for by the relevant code of procedure is not so often implemented
-there are still vacant places of councellors of state, i.e. of the highest rank.”

Q099 (2017): "Administrative law cases": the number of incoming cases decreased in mainly two sections of the Council of State (i.e. section b for tax issues (-239 cases) and section d for general issues (-692)).

Q099 (2016): Previous data concerning the total did not include administrative law cases.

Hungary

Q099 (2024): Other cases: insolvency cases, labour cases
Discrepancy explanation concerning point 1. (civil litigious cases) and 2. (non-litigious cases):
The reason for the discrepancy between the data in the report and the data submitted in the previous year is not caused by a change in the legal environment, but rather the caseload in 2024, over which the Supreme Court has no influence.
Discrepancy explanation concerning point 3. (administrative law cases):
The differences indicated under Point 3 are explained solely by the changing nature and variability of the number of cases received. Unlike in previous years, there were no changes in legislation that would have affected the aforementioned data.

Q099 (2023): Discrepancy explanation concerning point 1. (civil litigious cases) and 2. (non-litigious cases)
The discrepancies reported by the CEPEJ in the context of the questionnaire for the EU Justice Scoreboard can be explained as follows.
Firstly, it should be noted that the procedural rules affecting the caseload have not changed in 2023, and consequently the explanation for the 2022 divergencies remains valid. (The decrease in the number of the so-called general civil litigious and non-litigious cases is due to several reasons. The most significant of these is the year-on-year decrease in the number of legal actions filed under the new Code of Civil Procedure, which entered into force on 1 January 2018. This is due, among others, to the increased role of diversionary procedures in the resolution of private disputes, such as mediation and the tripling of the threshold below which a property claim can be enforced by means of the issuing of a payment order by a notary public, i.e. in the framework of an out-of-court non-litigious procedure.)
This leads to the further conclusion that the decline in the number of new cases on a national level has led to an acceleration of case completions at all court levels, with the result that the number of completed cases is higher than that of newly received cases. The inevitable consequence of the foregoing is the trend of a fall in the number of cases pending at the end of the year. This explains why the number of 877 civil (and commercial) court proceedings pending on 1 January 2022 fell to 653 at the end of the same year, the latter figure being the starting number on 1 January 2023. (In the year 2022, the Curia received 1 846 new cases and completed 2 070 cases.) The same trend continued in the year 2023. (In 2023, the Curia received 1 772 new cases and completed 1 872 cases, as a result of which the number of pending cases decreased to 553 by the end of that year.)
Secondly, the vast majority of the cases under point 2.1, which make up the bulk of the data on non litigious proceedings [93 percent (359:385)], are cases concerning the designation of a court, typically referred to the Curia for the exclusion of a court. In this group of cases, the caseload is completely unpredictable and may, in some cases, be significantly different from the reference period due to the large number of proceedings initiated by a litigant.
For cases under point 2.2 and within subpoints 2.2.2, 2.2.3 and likewise for cases under 2.3, the caseload is extremely low (the Curia cannot even hear a case under subpoint 2.2.1) due to the rules of jurisdiction applicable to the Curia as the country's supreme judicial forum. The cases falling under the above categories represent – in respect of the newly received cases – only 10 percent (39:385) of all non-litigious cases. Given the small number of cases received, the minimal numerical discrepancy entails a relatively large percentage difference. In reality, therefore, there is no significant change in the caseload behind the relatively large percentage difference. In concrete terms, this means that in 2023 there were only 13 fewer cases in these case groups compared to the previous year. When assessing these figures, it should be noted that less than 2 percent of the 2 170 cases (Source: Curia Yearbook 2023) dealt with by the Civil Chamber of the Curia, not counting the 147 labour cases also dealt with by the Civil Chamber, are cases under points 2.2 and 2.3.
Discrepancy explanation concerning point 3. (administrative law cases):
The scoreboard, based on 2023 data, showed that the

number of cases pending, received and terminated on 1 January 2023 and the number of cases pending on 31 December 2023 decreased compared to the data provided in the previous year. The reason is that, in 2022, the performance of the adjudicative function of the Curia and its activity in the field of creating uniformed case law was affected by a legislative change. In 2021, the Curia was given competence to hear appeals, as a court of second instance, in administrative disputes, making the Curia a general court of second instance with jurisdiction over administrative cases throughout Hungary. In addition, the Curia also continued to act as a court of cassation. By the Autumn of 2021, the Curia had become the most overloaded court in the country. With the aim of reducing the Curia's caseload, the Parliament enacted Act no. CXXXIV of 2021, which provided that the regional appellate courts should be included in the second instance adjudication of administrative cases. As a result of the legislative change, effective from 1 March 2022, the Regional Appellate Court of Budapest, which has an Administrative Chamber, is to act as a general court of second instance in administrative cases. As the Curia has not transferred any of its pending administrative cases, the reduction of its caseload has been carried out gradually, in a so-called ascending order. The reduction of the caseload due to the legislative change was first shown in the data for 2023.

Q099 (2022): The justification for the changes is related to the fact that in the year 2021, the Curia's remedial powers – due to a law amendment effective from April 1, 2020 – extended to the second instance adjudication of legal disputes in public administrative cases, thus the Curia became the general court of second instance with nationwide jurisdiction in administrative matters. In addition, the Curia continued to operate as a review court, if the conditions for review as specified in the Act on Administrative Procedures were fulfilled in the given case. By the autumn of 2021, the Curia faced the highest workload throughout the country.
To stop the above trend, which has become critical, the legislator adopted Act CXXXIV of 2021 in which the legislator provided for that the level of regional courts of appeal should be involved in the second instance adjudication of administrative case. As a result of the amendment, effective as of 1 March 2022, the levels of judicial forums hearing administrative cases have changed. High courts having an administrative chamber will be general courts of first instance in administrative matters. The Curia has original jurisdiction in exceptional cases set out by law. Regional courts of appeal having an administrative chamber will be general courts of second instance. Thus, the abovementioned Act has provided for that it falls within the responsibilities of regional courts of appeal to hear cases at the ordinary appeal stage, and it has also provided for exclusive geographical jurisdiction, which means that the Act has reinstituted the second instance (appellate) jurisdiction of Budapest Capital Regional Court of Appeal in administrative matters.
The decrease in the number of the so-called general civil litigious and non-litigious cases can be traced back to several reasons. The most significant of these is that under the scope of the new Civil Procedure Code, which entered into force on January 1, 2018, the number of lawsuits is decreasing every year. Among other things, this is related to the fact that litigation diversion procedures, such as mediation, play a greater role than before in the settlement of private law disputes, and the value limit below which a property claim can be enforced with a payment order before a notary, i.e., in an out-of-court, non-litigation procedure, has tripled. As a result of all this, the timeliness indicators of the lower courts have improved continuously in recent years, which means that the number of protracted, more difficult decisions that can be challenged before the Curia as the highest court is decreasing.
The number of completions is basically determined by the volume of cases received, and although they show a decrease compared to the previous year, they significantly exceed the number of cases received, even though the number of judges handling such cases has decreased due to retirement.
We do not consider it justified to examine the reduction in the number of received and completed cases in so-called general civil (and commercial) non-litigious cases by itself. In relation to the case groups indicated for the so-called general civil (and commercial) non-litigious cases, the number of cases received and completed changes continuously every year, which make up a fraction of all cases received by the Curia. Comparing the 2022 data with the 2020 data, it can be seen that in the indicated case group, fewer such cases were received in 2020 than in the current year, so the number of civil non-litigious cases received in 2021 was different from the average. Taking into accou

nt the general rules of statistics, the highlighting of some data may result in inadequate conclusions.
Our data collection methodology has not changed from the previous cycles. It is therefore recommended that we keep the data as it is, otherwise, the data provided will not be comparable with those of previous years.

Q099 (2021): Other cases: insolvency cases, review procedures in labour cases, uniformity complaints
Administrative Chamber
As of 1 April 2020, a significant change was introduced concerning the competence of the Administrative Chamber. As a result of this change, all legal remedies sought for in administrative disputes were decided by the Curia after 1 April 2020. This caused a significant increase in the caseload which was substantially higher than any number of incoming cases in the previous years, regarding the year 2021 as a whole. The change in the competences had an impact for the whole year 2021, due to which administrative legal remedy cases accounted for almost half of the total number of incoming cases at the Curia. Because of the change, the number of administrative judges was increased, and the increased judicial staff managed to resolve the surplus in a timely manner.
Civil Chamber
In comparison to 2020 data, the increase in the number of incoming civil and commercial litigious (line 1) can be explained by the fact that the incoming appeal (second instance) cases were higher by almost 40%. Regarding the appeal cases, the Curia experienced a temporary fallback in 2020; however, as the pandemic situation got better, lower courts could resolve more cases. So, the increase experienced in 2021 is explained by the low base value in 2020, as well as by the improvement in the COVID-19 pandemic situation.
The increase in the number of incoming general civil non-litigious cases (line 2.2.1) can be explained by the increase of cases initiated for the designation of the competent court to two and a half times. Despite the fact that the Civil Division of the Civil Chamber had resolved two times more cases than in the previous year, still there was a significant number of 'designation cases' remained pending.
2.1. Civil and commercial non-litigious cases referred to the Curia through an appeal or a petition for review, cases concerning recusal of judges, cases concerning the designation of the competent court, cases concerning an objection filed because of allegedly excessive duration of the proceedings.
2.2. This is an aggregate of the numbers reported under lines 2.2.1, 2.2.2, and 2.2.3.
2.2.2. Business registry cases referred to the Curia through an appeal or a petition for review.
2.2.3. Review proceedings concerning the registry of civil organizations and other non-profit organizations.
2.3. Review proceedings initiated in non-litigious labour cases, as well as non-litigious proceedings related to labour litigation, initiated for the designation of the competent court.

Q099 (2020): The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31th of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. Regarding administrative cases the re-organization of administrative jurisdiction also could have an effect on the case-flow.

Q099 (2017): The number of incoming cases decreased in most of the observed categories at the Supreme Court. This also resulted in a decrease in the number of resolved cases thus the number of pending cases increased.

Q099 (2016): Generally, the increase in the number of incoming cases at the Kúria (Hungarian Supreme Court) for 2016 is the result of the increasing use of extraordinary remedies by the parties. As the number of incoming cases increased, it resulted in an increase in the other categories as well.

Q099 (2014): In 2014, in contrast with the 2013 evaluation, some registration cases were also included within the category "civil and commercial non-litigious cases". The item "other registry cases" includes registration of civil societies. The item "other non-litigious cases" includes court mediation and non-litigious labour cases.
The category "other" encompasses insolvency cases and labour cases.
On the occasion of the 2014 exercise, it has been stressed that one of the main aims of the judicial reform of January 1, 2012 was that the President of the Supreme Court (Kúria) and the Supreme Court itself should focus more on the quality of judicial work. As the President of the Supreme Court was released from the burden of the central administration of the court system, the Kúria was able to reduce its backlog as well as to focus more on the consistency of the national jurisdiction.

Ireland

Q099 (General Comment): Administrative law cases are included in the number of Civil (and commercial) litigious cases.
For pending cases, the Court Service record resolved cases as cases where an order is made. As there may be more than one order made in respect any case this can cause difficulty in accurately calculating figures for pending cases.

Q099 (2024): The increase in resolved cases in 2024 reflects a return to typical levels following the temporary reduction in 2023, which was impacted by the Supreme Court's involvement in reference to the Court by the President of Ireland of the Judicial Appointments Commission Bill 2023 under Article 26 of the Irish Constitution.
Civil and commercial litigious cases: Statistics for civil proceedings are recorded by cases received and cases resolved throughout the year. While some cases are formally discontinued either by order of the court or by formal notification (for example by filing a notice of discontinuance to the court, the majority of civil cases are settled between the parties, with or without court approval or are not pursued further by the plaintiff without notification by the plaintiff to the court. Most cases do not proceed to trial. It is therefore not possible to provide accurate figures for pending cases in most instances. While in previous cycles we provided the figure for pending civil and criminal cases in the Supreme Court this is no longer provided to ensure consistency with the other court jurisdictions.
The new case management system (UCMS) became operational in 2023 in the Central Office of the High Court. UCMS is being extended to all court offices and over the coming years the Courts Service will work to consolidate data processing and reporting for all case types in each jurisdiction.

Q099 (2023): Other cases in this instance are the appointments of Commissioners for Oaths and Notaries Public

Q099 (2022): There was an increase in 2022 over 2020.

Q099 (2020): Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Both the Supreme Court and Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate their continued work. Procedures were introduced to ensure that justice was administered in public. Both jurisdictions delivered their judgments electronically. Waiting times for a hearing in both Courts were improved, to a certain extent, by a net reduction in the numbers of new cases coming into their lists from other jurisdictions. By year end in both Courts, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

Q099 (2019): There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into next year.

Q099 (2018): There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into 2019.

Q099 (2017): Since the establishment of the Court of Appeal in 2014, the number of pending cases at third instance has fallen. However, the number of incoming cases at third instance has slightly increased between 2016 (164) and 2017 (190).

Q099 (2016): The reduced number of incoming and resolved cases reflects the consequences of the establishment of the new Court of Appeal which came into operation in October 2014.

Q099 (2015): The reduction in the number of incoming cases to the Supreme Court substantially reflects the change in the jurisdiction of the Supreme Court from that of a second instance appeal court to an appeal court which is primarily third instance in nature

Q099 (2014): 2014: Variation: The significant increase in the number of resolved civil (and commercial) litigious cases between 2012 and 2014 reflects a significant exercise undertaken by the Supreme Court in reviewing its caseload in preparation for the establishment in 2014 of the new Court of Appeal (which has assumed the previous second instance jurisdiction of the Supreme Court), which resulted in the striking out or withdrawal of a significant number of appeals then pending before the Supreme Court.

Italy

Q099 (General Comment): · With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97. · In Italy, non-litigious enforcement cases are not heard by the highest instance court. The latter only hears litigious enforcement cases.

Q099 (2024): "Other cases" refers to residual cases dealt by the Supreme Court, such as cases regarding the competence or jurisdiction of the courts and correction of material errors.

Q099 (2023): In 2023, a reduction in the backlog of administrative cases has been achieved, as required by the targets of the Recovery Fund.

Q099 (2022): Within the framework of the National Plan for Recovery and Resilience (PNRR), Italy has taken a number of measures to reduce both disposition times and backlogs. The main objective is an overall reduction of 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together). More information on the reform is available at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html.
A monitoring system is also in place and a detailed dashboard is available at https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx.

Q099 (2021): "Other cases" represent residual cases, such as those concerning the competence or jurisdiction of the courts, or those concerning the correction of the so-called material errors committed by the Supreme Court.

Q099 (2019): Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

Q099 (2018): The increase of the incoming civil litigious cases is ascribed to proceedings related to immigration matters. There is no specific explanation for the increase of resolved administrative cases. Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

Q099 (2017): The category "other cases" at Q.99 (Supreme Court) represents residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. The 25% variation (in terms of number of resolved cases) has no particular explanation. Please also note that this category do not exist at first and second instance.

Q099 (2016): "Other cases" represent residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. In respect of this category, the numbers are small and the observed variations should be put into perspective.

Q099 (2014): · In the frame of the 2014 exercise, it has been indicated that figures subsumed within the category "other" represent really residual cases (such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc.).
· As to the increases observed in respect of the "total of other than criminal law cases" with regard to all the items (pending, incoming, resolved cases), it is noteworthy that in 2014 for the first time "administrative law cases" dealt with by the Council of State were considered. If looking only to "civil (and commercial) litigious cases", the differences are not that big. In general terms the Supreme Court of Cassation resolves fewer cases than incoming cases.

Latvia

Q099 (2024): On 1 January of the reference year, a decrease of 22% in pending administrative law cases was observed. This is related to the fact that in 2023, the Supreme court placed increased focus on reducing the backlog of cases, including temporarily reallocating one senator's position to administrative cases. However, in 2024, the reallocation of the judicial position was cancelled, and by the end of 2024, the case backlog returned to its previous level.

Q099 (2023): The number of cases is as indicated. The Supreme Court has set the timely consideration of cases as one of its priorities, also following the guidelines for the consideration of cases approved by the Council of Justice. This has affected the changes in the number of resolved cases and, accordingly, the number of pending cases.
The number of remaining administrative cases is affected by the decrease in the number of incoming cases, as well as measures to improve the speed of processing cases.

Q099 (2022): Number of incoming cases have diminished in general, therefore all indicators have been affected. For small numbers of cases, the indicator shows an impact although in general there is none.

Q099 (2021): Total number of incoming administrative cases and civil cases has decreased significantly; taken measures to handle backlog of administrative cases has resulted in increased turnover, this has resulted in falling numbers of pending cases. To handle backlog of administrative cases, two additional posts of judges were created for the years 2021 and 2022.
For some type of listed cases the total numbers are so small, that even 2-3 cases give discrepancy ratio of 100 % or even more.

Q099 (2020): There has been gradual decrease of incoming cases: civil cases 1336 (2018), 1164 (2019), 1127 (2020) and administrative cases 850 (2018), 844 (2019), 826 (2020). There has been increase of examined cases per judge of the Administrative chamber (+4) and there was additional judge from the Civil chamber allocated to deal with administrative cases (February-September 2019) and substitute judge working at the Supreme Court (September-December 2020). As result the clearance rate for administrative cases in 2019 was 113% and in 2020 was 114%.
The clearance rate for civil cases (Civil chamber) was 120% which is explained by decrease of incoming cases and high number of examined cases per judge (97 cases). Decrease of non-litigious land registry cases is explained, first, by decrease of total numbers of transaction, for example according to the statistics published by the State Cadastre, total number of transaction of land with buildings was 21619 in 2019 and 18616 in 2020. And, second, because majority of land registry cases of previous years concerned aspects of transformation of property rights (privatization and restitution) and economic activity before economic crises of 2008/2009 which are solved by now. Starting from 2019 the Supreme Court uses the same categories of cases as it is used in the first and second instance courts. Therefore previously used category „other cases" disappears.

Q099 (2019): Starting from 2019 the Supreme Court has changed system of classification of cases under different categories for civil cases. During this change we encountered problem of reclassification of cases registered during previous years. This reclassification had as objective to introduce the detailed classification used for first and second instance courts. Statistics for the reference year 2019 encompasses results from both categories. Since 2015 number of unresolved administrative cases increased. During year 2018 additional recourses were allocated to the Administrative department (chamber) of the Supreme Court, including additional judges. As the result, number of resolved cases in 2019 increased. For next coming two years there are two additional judges envisaged for the Administrative department.
Other non-litigious cases (2.3) are specific enforcement procedures which are regarded as uncontested for our civil procedure. These have been received via the specific procedure of a protest submitted by the Prosecutors General Office. The number became available as the result of introduction of the detailed classification regime.

Q099 (2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

Q099 (2017): Supreme court has provided data for questions 1 & 2. As regards the decrease of Civil (and commercial) litigious cases, there was a major performance raise in 2016. Also, the Supreme court has only recently begun to collect statistics on their work performance and thus there was and still are some NA answers for CEPEJ questionnaire

Q099 (2016): Supreme court had accumulated too many unresolved cases and 1/3 of those ar older than 2 years so they have have made some changes and acheaved progess.

Q099 (2015): An explanation for the rather large difference in case count for general civil and commercial non-litigious cases are changes in civil proceedings - while in 2014 undisputed compulsory execution cases were also heared by Supreme Court, in 2015 it was tasked with hearing decisions from Land registry, sworn baillifs and notaries only.

Lithuania

Q099 (General Comment): Other cases - jurisdictional cases and administrative offences cases.

Q099 (2024): We apologize, it was mistakenly marked "NA" when it should have been "NAP".

Q099 (2023): jurisdictional cases and administrative offences cases.

Q099 (2022): The Supreme Court of Lithuania hears only those cassation requests that have been selected as meeting the requirements of the law by a special panel of three judges of the Civil Cases Division. Only those cases that are significant in terms of the interpretation and application of equal law come before this court. The judges of the Supreme Court of Lithuania can devote more time and attention to the most important cases in the state. In addition, this ensures the promptness of the court process.
in the Supreme Court of Lithuania in 2022 the duration of civil cases was shortened by 2 days, but the longer duration of cases was also influenced by the fact that not all the posts of judges were filled in this court.

Q099 (2020): In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year. However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.
The decrease in the number of resolved civil and commercial litigious cases and accordingly the increase in the number for pending cases at the end of 2020 are due to the reduction in the number of judicial posts and the lengthy appointment by Parliament procedures for vacancies.

Q099 (2019): Other cases - jurisdictional cases and administrative offences cases.
Over the last five years, there has been an almost consistent decline in cases, including cassation appeals. In 2019, as compared to 2015, 20 percent less civil cassation appeals were filed and 17 percent fewer civil cassation cases were accepted, 43 percent fewer civil cassation cases were examined. In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year.
However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.

Q099 (2018): The number of civil (and commercial) litigious cases (1.) of the cassation instance court (Supreme Court) pending at the end of the year decreased due to the general decrease of resolved cases at first instance. In 2018 the number of civil cases resolved at first instance courts decreased by 10.89% compared to 2017 and was 15.03 % lower than in 2016. This led to the slightly lower inflow and larger number of resolved cases, therefore, to the decreased number of pending cases at the end of the year.

Q099 (2016): NA was changed to NAP only for calculation purpose -situation hasn't changed.

Q099 (2014): In the frame of the 2014 exercise, it has been indicated that the Supreme Court of Lithuania received 1369 appeals (cassation) in criminal cases and 2794 appeals (cassation) in civil cases. 677 appeals in criminal cases and 2038 in civil cases were returned to the complainants.
2014: Different category of cases as in Q91, 97 and 99 exist in Lithuania, but they are all under the category 1. Civil (and commercial) litigious cases and it is not possible at this point to distinguish them from other cases.
The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category “other cases” since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Luxembourg

Q099 (General Comment): Given the small size of Luxembourg, the number of cases handled by the Supreme Court is, in absolute terms, limited. Therefore, even the smallest variation in absolute numbers is likely to produce a significant effect in statistical or percentage terms, without necessarily implying a substantial or structural impact on the Court's activity.

There is no possibility of appeal by way of cassation against the decisions of the Administrative Court of Appeal.

Q099 (2024): Civil and Commercial Cases: The increase in pending cases at the beginning of the year compared to the beginning of the previous year can be explained by the difference between incoming cases in 2023 and the decisions rendered in 2023.

While the number of incoming cases decreased by 25% between 2023 and 2024, it should be noted that in 2023 there had been an increase in incoming cases compared to previous years. The commentary provided in previous years remains valid. The number of incoming cases depends on the appeals filed, over which the Court has no influence, and which in turn depends, among other things, on the number of decisions made at other instances. Legislation has not changed since the previous reference period.

Q099 (2023): While the number of new cases rose by 37% between 2022 and 2023, it should be noted that in 2022 there was a drop in new cases compared with previous years. In 2020, new cases amounted to 108 and even 116 in 2019. The number of new cases depends on the number of appeals lodged over which the Court has no influence and which depends, among other things, on the number of decisions taken on the level of other instances. The legislation has not changed since the previous reference period. At the Court of Cassation, the same magistrates deal with criminal and non-criminal cases. In 2023, there was an increase in the number of resolved criminal cases (in particular applications for judicial review of decisions of the Council Chamber, which are not included in the figures provided). This increase in resolved criminal cases means that the magistrates of the Court of Cassation have had less time to deal with non-criminal cases. In addition, during 2023, there were certain fluctuations in the composition of the Court of Cassation, resulting in the partial/temporary unavailability of certain magistrates, which may have had an impact on the number of resolved cases.
The increase in pending cases is explained by the increase in new cases in 2023 and the decrease in decisions taken in 2022 and 2023.

Q099 (2022): In civil (and commercial) litigious cases, it should be noted that for incoming cases, although the relative variation of -29.63% in figures between 2020 and 2022 is significant, compared to 2021, the number has decreased from 82 to 76 cases, representing an -11% change. The comment provided last year remains relevant. The number of incoming cases depends on appeals filed over which the Court has no influence and is, among other factors, a function of decisions made at other levels. The legislation has not changed since the previous reference period.

Furthermore, the decrease in pending cases as of December 31st can be attributed to the decrease in incoming cases in 2022 since the number of decisions made remained stable between 2020 and 2022.

Q099 (2021): The number of incoming cases depends on the appeals lodged which the Court has no influence on and which is, among other things, a function of the number of decisions taken at the level of the other instances. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decreased number of incoming cases before the Court of Cassation. The legislation has not changed since the previous reference period.

Q099 (2019): Pending cases at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of cassation (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

Q099 (2018): Comparing 2016 to 2018, the increase in pending cases at the end of the period is 40.73%. However, there was already a clear increase in cases pending at the end of the period between 2016 and 2017, which is largely explained by a larger number of new cases in 2017. Between 2017 and 2018, the variation in cases pending at the end of the period is + 5%, which does not seem excessive, especially taking into account the low numbers.

Q099 (2017): Q99: total and civil and commercial litigation cases: the slight increase in the number of incoming cases in 2017 and the relatively stable number of resolved cases explain the increase in the number of pending cases at the end of 2017 to 109 .

Q099 (2014): 2014: several categories are in NAP because the Court of Cassation has no jurisdiction over these categories.

Malta

Q099 (2017): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

Q099 (2016): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

Netherlands

Q099 (General Comment): The number of resolved cases presented in the table includes both cases that are resolved with the decision of a judge and cases that were not resolved with the decision of a judge. These are: Cases in which the appeal in cassation has been withdrawn or annulled, cases that have been administratively resolved by the clerk, cases in which the processing of the appeal in cassation has been suspended, and cases that have been discharged upon objection. The number of cases not resolved by the decision of a judge has also been included in the comment for clarification. Before 2024, these numbers were not included in the number of resolved cases, but they were included in the number of pending cases on Dec 31. 2 – Non-litigious cases: in theory, it might possible these cases get to the Supreme Court, but the numbers are not specified for the courts.
3 – Administrative law cases: please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is no third instance court for other administrative cases in the Netherlands, so these are not included in the numbers given. 4 – Other cases: There might be other cases in separate courts, but these numbers are not nationally available.

Q099 (2024): We have included cases that were not resolved with the decision of a judge, see the general comment for an explanation of what types of conclusions these are. It is important to note that these numbers were not included last year, so numbers this year may not be perfectly comparable to last year (we have added the numbers here below as well). 1: Civil cases, number of cases that are not resolved with the decision of a judge: 17 3: Administrative cases, number of cases that are not resolved with the decision of a judge: 324

Q099 (2023): See also the General comment regarding potential discrepancies in the formula for horizontal consistency. 1: Civil cases, number of cases that are not resolved with the decision of a judge: 31
3: Administrative cases, number of cases that are not resolved with the decision of a judge: 384.

Q099 (2021): The formula for pending cases on 31 December might not work satisfactory – there will be a gap between pending cases at the ent of the year and the number of pending cases at the beginning of the year + incoming cases -/- resolved cases. The gap is caused by cases that are labelled ‘outflow other’. These are cases that do not get resolved because of administrative reasons (for instance, the appeals is filed to late, or mandatory court fees have not been paid and there is no dispensation).
2 – Non-litigious cases: in theory, it might possible these cases get to the Supreme Court, but the numbers are not specified for the courts.
3 – Administrative law cases: please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is not third instance court for other administrative cases in the Netherlands, so these are not included in the numbers given. 4 – Other cases: There might be other cases in separate courts, but these numbers are not nationally available. Regarding discrepancy: There are always factors that might influence the number of cases the SC handles in a year. There are no published numbers identifying the various types of cases the tax chamber handles. As mentioned before, we can provide a more general explanation for an increase in SC cases and/or disposition time. For example, delays or catch up in lower courts (increasing/lowering the number of incoming cases), new laws or changes in law that the SC must answer, cases may become more complex due to increasing complexity of laws and differences (and thus, cases may take longer), or cases that are connected are grouped to deal with in clusters (meaning more cases for a longer time). While a specific cause cannot be clearly pinpointed, all these factors might influence the numbers.

Q099 (2020): With regard to 2. Non litigious cases: In theory, it is possible these cases get to the Supreme Court, but these cases are not specified in available numbers for the courts.
With regard to 3. Administrative law cases: Please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is no third instance court for other administrative cases in the Netherlands, so these are not represented in this number.
With regard to 4. Other cases: There might be other cases in separate courts (Kamers), but these numbers are not available nationally.
With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers.

Q099 (2019): Reason for discrepancies: discrepancies seem higher, as absolute values are lower. When asked, the High Court explains that there is always an eb and flow of cases due to several factors.

Q099 (2018): Cases handled by the High Court are 'litigious' by nature (= cases are settled at first instance if one party remains inactive)

Q099 (2017): the answer to this question is still not available.

Q099 (2016): A the moment the Supreme Court has not the data available to answer this question. The National Correspondent is consulting the Supreme Court to improve this situation.

Poland

Q099 (General Comment): While the Supreme Court considers non-contentious cases, there is no inclusion of this category of cases in the internal statistics. Accordingly, the reply is NA. Starting from 2022, administrative cases dealt with by the Supreme Administrative Court are presented in the frame of question 99 (last instance) and are no more within the scope of Q97.

Q099 (2024): *other cases = Statistics of the Extraordinary Review and Public Affairs Chamber (which deals with the Public law cases, inter alia cases originated from the extraordinary complaints or appeals against resolutions of the National Council of the Judiciary, competition and consumer protection cases, cases concerning the regulation of energy, telecommunications and postal services, rail transport, as well as the regulation of the water and sewage market, complaints concerning the excessive length of proceedings or cases concerning the retirement of a judge of the Supreme Court, etc.)
Statistics of the Professional Liability Chamber (which deals with the disciplinary cases or cases of lifting of the judicial and prosecutor immunity).
Compared to previous years, in the year under review (2024), the number of concluded proceedings in the Supreme Court increased. This is particularly visible in the Civil Chamber, where a total of 7,766 cases were resolved in 2024 (in 2023 – 6,308 cases, in 2022 – 5,785 cases). More cases than in 2023 were also resolved in the Labor and Social Security Chamber (in 2024 – 2,707, in 2023 – 2,580). The upward trend is also visible in the Criminal Chamber of the Supreme Court, where 4,374 cases were resolved in 2024. In 2023, this number amounted to 4,254 cases (an increase of 3%). Despite the positive change consisting in the increase in the number of resolved cases, this did not always result in a reduction of the judicial backlog.
In the case of the Civil Chamber of the Supreme Court, in which, despite a 23% increase in the percentage of cases resolved, the number of cases remaining to be resolved from the previous period decreased slightly. At the end of 2023, it amounted to 7,230 cases, and at the end of 2024 – 7,162 cases. This trend results from the very high inflow of new cases to the Civil Chamber, which has been continuing since 2022 (in 2024 – 6,316 cases, in 2023 – 6,424 cases, in 2022 – 6,951 cases), which, given the vacancy of 1/3 of adjudicating positions, cannot be effectively eliminated even with the maximum effort of the judges adjudicating in this Chamber.
The number of cases that were not resolved in the reporting period increased slightly in the case of the Labor and Social Insurance Chamber. It amounted to 2,213 at the end of 2024, while at the end of 2023 it was 2,165. However, it should be noted that this Chamber, like the Civil Chamber, is affected by the greatest staff shortages, and the inflow of cases to the Labor and Social Insurance Chamber was slightly higher in 2024 than in 2023 (a total of 71 cases, i.e. an increase of 2.6%).
The number of backlogged cases also increased in the case of the Criminal Chamber. While in 2023 the backlogged caseload was 1,415 cases, at the end of 2024 this number amounted to 1,504 cases. In this case too, this was related to the increase in the number of cases filed with the Criminal Chamber (4,463 cases in 2024 compared to 4,234 cases in 2023). It is worth emphasizing, however, that the increase in backlogged cases does not apply to cassation appeals heard in the Criminal Chamber, which is the core of its adjudicative activity. The issue of the inflow of cases and their resolution is very specific in the case of the Chamber of Extraordinary Control and Public Affairs. While in 2023 a total of 5,151 cases were filed with this Chamber, in 2024 it was only 1,561 cases. However, this discrepancy results from the fact that 2023 was the year in which elections to the Sejm of the Republic of Poland and the Senate of the Republic of Poland were held, as well as a nationwide referendum. In connection with the above, as in the case of previous years in which elections or a referendum were held, the vast majority of cases filed with the Chamber of Extraordinary Control and Public Affairs concerned referendum and election protests (in 2023, 3,576). Deducting this category of cases, it should be stated that the inflow from 2024 was at a lower level than in 2023, when it was 1,795 cases. The number of resolved cases was also lower. In 2024, it was at the level of 1,352 cases, and in 2023 – 1,606 cases (after deducting 3,545 resolved election cases).
The year 2024 was the second full year of operation of the Professional Liability Chamber of the Supreme Court, which was established on 15 July 2022. In the reporting year, 680 rulings were issued in the Professional Liability Chamber, which is slightly less than in 2023 (716 rulings).

Q099 (2023): Other cases" include the statistics of the Extraordinary Review and Public Affairs Chamber and Professional Liability Chamber of the Supreme Court.
Statistics of the Extraordinary Review and Public Affairs Chamber (which deals with the Public law cases, inter alia cases originated from the extraordinary complaints or appeals against resolutions of the National Council of the Judiciary, competition and consumer protection cases, cases concerning the regulation of energy, telecommunications and postal services, rail transport, as well as the regulation of the water and sewage market, complaints concerning the excessive length of proceedings or cases concerning the retirement of a judge of the Supreme Court, etc.).
Statistics of the Professional Liability Chamber (which deals with the disciplinary cases or cases of lifting of the judicial and prosecutor immunity).
Compared to previous years, the number of cases pending as of 31 December of the reference year has increased, but it should be noted that the overall number of cases filed with the Supreme Court has increased significantly.
The Supreme Court still does not have all the positions provided for by law filled, which, combined with the growing inflow of cases from year to year, results in an increase in cases to be heard.
However, it should be noted that - even taking into account the above problems - the number of cases handled by the Supreme Court is growing from year to year:
6,308 cases were handled in the Civil Chamber (compared to 5,785 cases handled in 2022);
2,580 cases were handled in the Labor and Social Security Chamber (compared to 2,286 cases handled in 2022).
4,254 cases were handled in the Criminal Chamber (compared to 4,161 cases handled in 2022).
In the Chamber of Extraordinary Control and Public Affairs, 5,151 cases were resolved (compared to 1,617 cases resolved in 2022).
However, it should be noted that such a significant increase is dictated by the consideration of electoral cases by this Chamber in connection with the elections to the Sejm and Senate of the Republic of Poland held in the autumn of 2023. The receipt of such cases in 2023 alone is 3,576 compared to 11 cases received in 2022.

Q099 (2022): Compared to previous years, the number of pending cases on 31 December of the reference year has increased, but it should be noted that the number of incoming cases has increased significantly.
In the Civil Chamber, for example, the number of incoming cases doubled compared to the cases received in 2020 (4360 incoming cases in 2020, while 8176 incoming cases in 2023).
Another factor that significantly affects the statistics of case recognition is the new measure introduced by the amendment to the Supreme Court Act of 9 June 2022, which entered into force on 15 July 2022 - the motion to examine the fulfilment of the requirements of independence and impartiality of a Supreme Court judge, taking into account the circumstances of his or her appointment and his or her post-appointment. Article 29(6) of the Supreme Court Act, which provides an additional procedural guarantee for the parties, on the other hand affects the length of the proceedings before the Supreme Court. It can be noted that this measure is widely used by the parties, which can be particularly observed in disciplinary proceedings. Furthermore, it has an impact on other Chambers of the Supreme Court, including the Civil Chamber.
It should also be noted that the Supreme Court has not had all of its legally stipulated Supreme Court judge positions filled for years (as at 31 December 2021, 90 of the 125 positions stipulated in Section 2 of the Supreme Court Rules were filled), which, combined with the increasing number of incoming cases each year, has resulted in an increasing number of pending cases.
Even taking the abovementioned problems into account, it should be noted that the number of cases decided by the Supreme Court is increasing year-on-year.
In the Civil Chamber, 5785 resolved cases (compered to 4926 resolved cases in 2021);
In the Extraordinary Review and Public Affairs Chamber, 1617 resolved cases (compered to 1120 resolved cases in 2021);
In the Criminal Chamber, 4161 resolved cases (compered to 4003 resolved cases in 2021);
Only the Labour and Social Security Law Chamber has recorded a slight decrease in the number of resolved cases - 2286 in 2022 (compered to 2299 resolved cases in 2021).
*3 administrative law cases: in 2022,the lifting of restrictions on court activity due to the declared epidemic state in Poland has increased the number of cases handled by the Supreme Administrative Court.

Q099 (2021): *1. They include cases conducted in the Civil Chamber, the Labor and Social Insurance Chamber Chamber and the Chamber for Extraordinary Control and Public Affairs, including those with the reference NSNc
*4)The data includes cases conducted in the Chamber for Extraordinary Control and Public Affairs with the references
NSK, NSKP, NZP, NZ, NSW, NSP NKRS, NWW, and NO signatures. These are cases that fall under the jurisdiction of the Extraordinary Control and Public Affairs Chamber mainly in the field of public law public, i.e., other than extraordinary complaints in both civil and criminal cases (which have been assigned to civil and criminal cases shown in boxes 99 and 100, respectively),
For example, cases in the field of telecommunications regulation, energy, competition protection, but also appeals against resolutions of the National Judicial Council.
*4)Other cases are also disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court.
In the case statistics of the Chamber Civil, Labor and Social Security Chamber, as well as in the statistics of civil cases (extraordinary complaints) of the Extraordinary Control and Public Affairs Chamber, there was an increased receipt in 2021 compared to 2020.This was an increase so significant that the statistics of cases handled declined compared to 2020.It should be assumed that - similar to previous years previous years, the general reason for the less favorable statistics are further organizational changes within the Supreme Court and the impact of the dispute over judicial reform on the efficiency of the work of Supreme Court judges. In addition, following the assumption of the post of President of the Civil Chamber of the Supreme Court by prof. Joanna Misztal-Konecka, there has been a review of the observance of the order in which cases are received in their allocation to individual judges. The Office Instruction was then modified in the part concerning the system of case numbers. Some cases were then assigned new case numbers, which could lead to an artificial overestimation of the number of cases with an unchanged rate of their handling.

Q099 (2020): *Civil cases :- litigious cases heard by the civil chamber and the labour and social insurance chamber: Civil Chamber - pending cases on 1 Jan - 2596, incoming cases - 4360, resolved cases - 5518, pending cases on 31th Dec - 1438; Labour and social insurance chamber - pending cases on 1 Jan - 2161, incoming cases - 1535, resolved cases - 1938, pending cases on 31th Dec - 1758; *Other cases: - cases pertaining to public law, decided by the Chamber for Extraordinary Control and Public Issues and disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court: the Chamber for Extraordinary Control and Public Issues - pending cases on 1 Jan - 149, incoming cases - 6696, resolved cases - 6710, pending cases on 31th Dec - 135; the Disciplinary Chamber of the Supreme Court: pending cases on 1 Jan - 105, incoming cases - 312, resolved cases - 395, pending cases on 31th Dec - 22; Other cases: *These increases must be explained by the election year, in which the Chamber of Extraordinary Control and Public Affairs dealt with numerous protests. This has resulted in a substantial increase in the dynamics of cases in this Chamber.
Discrepancies - Administrative law cases - see data in Q97 and general comment to that question.

Q099 (2019): 1. Civil cases = civil cases + labour and social security cases;
4. Other cases = public law cases + disciplinary cases;
3. Data from Supreme Administrative Court; “1. Civil and commercial litigious cases”: Pending cases on 1 Jan. ref. year : 2586 (civil cases) + 2010 (labour and social security cases); Incoming cases :5105 (civil cases) + 2480 (labour and social security cases); Resolved cases: 5095 (civil cases) + 2329 (labour law and social security cases); Pending cases on 31 Dec. ref. year: 2596 (civil cases) + 2161 (labour and social security cases);
“4.Other cases”: Pending cases on 1 Jan. ref year: 117 (disciplinary cases) + 215 (public law cases); Incoming cases: 269 (disciplinary cases) + 894 (public law cases); Resolved cases: 281 (disciplinary cases) + 955 (public law cases); Pending cases on 31 Dec. ref. year: 105 (disciplinary cases) + 154 (public law cases).
Public law cases and disciplinary cases were not entered in the table in 2018. Public law cases in 2018: Pending cases on 1 Jan. ref. Year – no data; Incoming cases – 293; Resolved cases – 81; Pending cases 31th December – 212; Disciplinary cases in 2018 : In 2018 the Disciplinary Chamber of the Supreme Court received a total of 161 cases, of which 52 to the First Department and 109 to the Second Department. In the First Department, in 2018, 11 cases were resolved. In the Department of the Second Disciplinary Chamber, 17 cases were considered and completed in terms of content, and 16 cases formally (data from the Supreme Court activity report for 2018).

Q099 (2016): In 2014 the Administrative Supreme court cases were not included and they are reintroduced in this cycle. In regard to administrative law cases we kindly indicate that administrative cases are excluded from the jurisdiction of the common courts. Administrative cases are proceeded by the Voivodship Administrative Courts and Supreme Administrative Court, which are only competent to proceeded such cases.

Portugal

Q099 (General Comment): In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

Q099 (2024): 99.3 - We confirm the decrease in the number of cases pending before the Supreme Administrative Court (STA) in 2024 compared to 2023. In 2023, new legislation redistributed powers between the Central Administrative Courts and the Tax Litigation Section of the STA.
In fact, until 2023, the Tax Litigation Section of the STA had jurisdiction to hear appeals against decisions on the merits of tax courts. However, in 2023, following the entry into force of Decree-Law No. 74-B/2023 of 28 August, the scope of jurisdiction of the aforementioned Section of the STA was restricted, with that Section now only hearing appeals against decisions on the merits of tax courts (based exclusively on matters of law, whenever the value of the case exceeds the jurisdiction of the central administrative courts and the value of the award exceeds half the jurisdiction of the court to which the appeal is made). Since 2023, fewer cases have been filed with the Tax Litigation Section of the STA as a result of this legislative amendment, and there may have been a tendency for judges to focus on resolving pending cases from then on, which would explain the decline in pending cases in 2024.

Q099 (2022): 1 - 1st column
The increase in the number of pending cases on January 1, 2022 compared to January 1, 2020 is related to the fact that in the period from 2020 to 2021 the number of incoming cases was higher than the number of outgoing cases. In our view, this behavior reflects the effects of the Covid-19 pandemic and the resulting lockdown, which had an impact on the functioning of the courts in 2020 and 2021, considering that in certain periods face-to-face services were interrupted or conditioned.
3 - 1st column
The decrease in the number of cases pending on January 1, 2022 compared to January 1, 2020 is related to the fact that in the period 2020 to 2021 the number of cases closed was higher than the number of cases admitted.

Q099 (2021): The increase in the number of cases pending on 1 January 2021 is related to the fact that in 2020 the number of cases brought was slightly higher than the number of cases completed. There is no specific explanation for these values.

Q099 (2020): There was an increase in the number of cases pending from 2018 to 2020 at the Supreme Court of Justice, considering that the number of cases that ended from 2018 to 2020 was relatively lower than the number of cases brought in those years. The rise in the number of pending cases in the year 2020 is also partly explained by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation.

Q099 (2019): 99 (total) - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.
99.1 - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.

Q099 (2018): Regarding the slight decrease in the number of pending civil and commercial litigious cases at the beginning of the year 2018, comparing to 2016, there were no legislative changes or others that could explain this decrease

Q099 (2017): Q99.1 - The decrease in the number of pending civil and commercial litigious cases on 31 december 2017 is explained by the fact that the number of resolved cases in 2017 was superior to the number of incoming cases in the same year. There were no legislative changes or other that can explain this decrease.

Q099 (2016): In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases.
Since 2015, administrative law cases are included in the total which explains the significant increase of cases.
The question 99.3 “Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 783
The number Incoming cases that correspond only to tax cases is 1.039
The number of Resolved cases that correspond only to tax cases is 946
The number of Pending cases on 31 Dec. that correspond only to tax cases is 876

Q099 (2015): The question 99.3 “Administrative law cases”, includes administrative and tax cases.

Romania

Q099 (2023): Concerning variations in the category 'pending for more than 2 years', they cannot be considered as consequences of any socio-legal phenomenon ocurring in 2023.

Q099 (2022): There are no explanations for the discrepances, anyway for volumes of cases in the order of hundreds no conclusions can be drawn regarding statistical trends.

Q099 (2021): The increase in Pending cases older than 2 years for administrative cases could be explained both by the significant increase in 2017 of the number of incoming cases of this type and by the limited capacity for resolving cases during the pandemic crises (from 30038 in 2019 to 26800 in 2020); therefore, the effect shall be seen in terms of statistics after 3 years in the number of pending cases (according to our statistical application the pending cases are registered in the category cases pending for more than 3 years).

Q099 (2019): In 2017 there was a significant increase in the number of incoming administrative cases explained by the modifications in terms of procedure, namely amendments regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system). Since 2017 and the described peak, the number of incoming administrative cases is decreasing.

Q099 (2018): The differences compared to the previous cycle are due to changes brought by the Constitutional Court's decisions to the interpretation given by the High Court of Cassastion and Justice to the legislation regarding the increasing number of incoming civil litigious cases and the decreasing number of civil litigious cases pending for more than 2 years.

Q099 (2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. The increase in the number of incoming administrative cases may be explained by the modifications in terms of procedure, namely modifications regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system); moreover, there should be mentioned that the number of second appeals in this question, refers to both the second appeals judged by the supreme court (High Court of Cassation and Justice) and by the courts of appeals, aspect that is valid even for the previous cycles.

Q099 (2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. As result of the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal Consequently the number of cases in Supreme court shows significant decrease in all categories.

Q099 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators and offers data with greater value for 2014. This partly explains the considerable increase of the number of pending administrative cases on 1st January between 2012 and 2014. Besides, the number of incoming cases in 2013 was higher than in 2014.

Slovak Republic

Q099 (General Comment): The collected statistical data for the Supreme Court do not distinguish the litigious and non-litigious cases. In the civil and commercial matters the Supreme court decides primarily on the applications for appellate review on legal questions. In the commercial cases it decides also in the appellate procedure against the decisions of the Regional courts as the courts of first instance. The fluctuation in the number of cases can be attributed to the judicial reform, as new administrative courts were established. Consequently, the judicial system is in the process of stabilization, which may have affected both the timing of the filing of applications to the courts and their processing.

Q099 (2024): 3. Administrative law cases: The fluctuation in the number of cases can be attributed to the judicial reform, as new administrative courts were established. Consequently, the judicial system is in the process of stabilization, which may have affected both the timing of the filing of applications to the courts and their processing.

Q099 (2023): As of 2023, administrative law cases treated by the Supreme Administrative Court are reported in Q99, as required by the CEPEJ methodology of data presentation.

Q099 (2022): The collected statistical data for the Supreme Court do not distinguish the litigious and non-litigious cases. Information delivered by the Supreme Court of the Slovak Republic available on internet https://www.nsud.sk/data/att/f59/688231.22d3e0.pdf. The new Supreme Administrative Court of the Slovak Republic took over the Administrative law cases from the Supreme Court .
Data for new Supreme Administrative Court of the Slovak Republic are not mentioned in the table, since the table is only for the Supreme Court of the Slovak Republic.
The data for new Supreme Administrative Court of the Slovak Republic in 2022 were:
Pending cases on 1 Jan. ref. year - 2106
Incoming cases - 2015
Resolved cases - 1889
Pending cases on 31 Dec. ref. year - 2232
Pending cases older than 2 years from the date the case came to the Supreme Court - 103
Source: https://www.nssud.sk/web_object/stat_2022.pdf

Q099 (2021): As to the number of administrative law cases, in August 2021, the Supreme Administrative Court of the Slovak Republic was established as a separate institution and it took over all the administrative law cases of the Supreme Court of the Slovak Republic. Therefore, the above-mentioned figures of the administrative law cases cover only the period from January to July 2021.

Q099 (2020): Decline of incoming cases and resolved cases as well in the Supreme court as a result of a pandemic situation.

Q099 (2019): No cases in the category other cases
Line 1: A significant drop in the number of cases for 2019 compared to 2018 has been caused by a massive decrease of incoming cases of a certain plaintiff - Pohotovosť s. r. o., a legal person which back then overwhelmed the Supreme Court´s Civil and Commercial law divisions with thousands of appeals and caused an abnormal caseload. Therefore, the indicators for 2019 should be considered as regular average numbers. Compared to e.g. 2018 and previous years which were rather exceptional.

Q099 (2018): The decrease in numbers of both incoming and resolved other than criminal cases may be explained by two important issues. First of all this is the complex change of the Civil and Administrative court procedure by introducing the new procedural rules which came into force since 1 July 2016. The other reason is the decrease of the caseload at the lower courts which naturally influence the number of cases at the Supreme court level.

Q099 (2017): The decrease in numbers of both incoming and resolved cases must be understood in connection with the data for previous years. As we explained in previous cycles (data 2014, 2015, 2016), at the level of the Supreme Court of the Slovak Republic there was the enormous increase of incoming (and resolved) cases related to consumer protection in civil and enforcement procedure. We recorded in previous years thousands of recurring submissions of several private loans' companies. These submissions started to be processed quicker and subsequently, its number dropped. The similar explanation is relevant also for the administrative cases.
As regards the variations, some inconsistencies in data between the old and new system persist, and they can be explained as the transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in this table.

Q099 (2016): The enormous increase of the incoming cases is related to consumer protection in civil and enforcement procedure.

Slovenia

Q099 (General Comment): The Supreme court has Criminal, Civil, Commercial, Labour and Social and Administrative department, The categories 1., 2.1 and 2.2.1 include corresponding cases from Civil, Commercial and Labour and Social departments registers. Category 3. includes registers of the Administrative department. The distribution of cases for Q99 is the same as for Q91.
Inconsistences noticed are due the Data Warehouse system explained in Q91.
The reported data includes cases concerning extraordinary legal remedies (the Supreme Court in its capacity ass the court of final instance) and cases subject to the separate procedure for manifest inadmissibility.

Q099 (2024): Discrepancies: please note small (absolute) number of cases.

Q099 (2022): Total of other than criminal law cases/1. Civil (and commercial) litigious cases - Pending cases on 1 Jan. - decrease: A trend of decrease of pending cases is observable.
Total of other than criminal law cases/1. Civil (and commercial) litigious cases/3. Administrative cases - Pending cases older than 2 years - decrease: Please note the small (absolute) number of cases at the Supreme Court instance.
2. Non litigious cases (all discrepancies): Please note the small (absolute) number of cases at the Supreme Court instance.
2.2 Registry cases (all discrepancies): Please note the small (absolute) number of cases at the Supreme Court instance.

Q099 (2021): 1. Civil (and commercial) litigious cases - Pending cases on 1 Jan.: decrease by approx. 40%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As the Supreme Court deals with the majority of cases without hearing of parties, its functioning was not affected as much and it managed to resolve more cases than it had received.
2. Non litigious cases (2.1+2.2+2.3); 2.1 General civil (and commercial) non-litigious cases; 2.2 Registry cases; 2.2.1 Non litigious land registry casesPlease note the small (absolute) number of cases at the Supreme Court instance.

Q099 (2020): Please note, the procedure of manifested inadmissibility cases are included in figures above.
The decrease in the number of (all) pending cases is due to the efficient work of the court in 2019 and 2020. Discrepancies in sub categories (form 1. through 3) are due to a small absolute number of cases).

Q099 (2019): The differences are due to a small (absolute) number of cases in some legal areas. The decrease in pending cases at the end of 2019 is due to more efficient work of the Supreme court (changes in criteria for manifested inadmissibility in 2017).

Q099 (2018): Administrative cases - in 2017, the procedure of manifested inadmissibility was introduced in aministrative cases, reducing the number of incoming (as well as resolved and pending) cases. As for other categories and Total, the difference is due to more efficient work of the Supreme court and due to aforementioned reason.
Please note, the procedure of manifested inadmissibility cases are included in figures above.

Q099 (2017): Administrative cases: the higher number of pending administrative law cases older than two years is partially a result of higher workload of the court. Partially this is the consequence of the fact that some older cases are waiting on the decision of the Constitutional court regarding laws in question (mainly taxes and public access to information issues).

Q099 (2015): Differences in pending, incoming and resolved cases Non litigious and administrative cases are mainly due to the small absolute number of cases and the nature of the cases (most complicated cases).

Q099 (2014): 2014: Variations: The numbers in that almost all categories for 2014 deviates more than +/- 20% from the 2012 data. This is due to a small (absolute) number of cases but also because the number of judges is smaller when compared to first and second instance and a single absence due to prolonged illness has a significant impact on the solving of some types of cases. We also believe that changes in economy (financial crisis), as well as in legislation, had impact on the overall statistics, but since cases at the Supreme Court level are "filtered" through courts of first and second instance, a direct connection cannot be established.

Spain

Q099 (2024): The data are calculated using the same criteria as in previous years.

Q099 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain’s rates.

Q099 (2022): 2020 was a year marked by the pandemic, the reduction of work in judicial bodies, despite digitalization, and by mobility restriction measures. The increase in the pace of work in 2022 is logical and it explains the increase of incoming and resolved cases compared to 2020.

Q099 (2021): The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the entry of more cases, as well as to greater efficiency and increased number of resolved cases. The comparison is with 2020, the year in which the pandemic forced mobility restrictions.

Q099 (2020): In administrative law cases, judgements based on the unified doctrine related Tax on the Retail Sales of Certain Hydrocarbons facilitated the resolution of cases in previous years and partly caused the good clearance rate of the Supreme Court Administrative Room in 2019. However, there were fewer of these cases in 2020, so the number of resolved cases decreased.

Q099 (2019): In respect of administrative law cases, the very positive clearance rate in 2018, added to the trend that continues being positive in 2019, explains the decrease in pending cases.

Q099 (2018): The Administrative Procedural Law allows the inadmissibility of the cassation appeal by resolution of a lower level than Civil Procedural Law. This explains partially the different clearance rate between this two rooms.
In relation to the good resolution rate in Administrative is due in part to this cause: In previous years, a Judgement of the Court of Justice of the European Union declared Spanish law contrary to Community law authorizing the tax on retail sales of certain hydrocarbons. This fact meant the massive presentation of claims for the patrimonial responsibility of the State for the undue payment of the so-called "sanitary cent". Once the Supreme Court established jurisprudence, many of these cases were resolved more quickly.

Q099 (2017): The cause of the raise of administrative cases (pending at the beginning of 2017 and resolved) in the Supreme Court is the reform of the cassation appeal by the Final Disposition Third of the Organic Law 7/2015, and, on the other hand, a new organisation of the Third Courtroom.

Q099 (2016): As concerns the variations observed between 2014 and 2016 regarding the categories "total of other than criminal law cases"; "civil and commercial litigious cases"; "administrative law cases", it should be noted that:
- the increase in the number of cases in civil matters is due to the increase in conflicts of competence entered and resolved as well as the increase in the number of resolutions of appeals for unification of doctrine.
- the high increase in administrative matters is due to the massive presentation of claims for the State's patrimonial responsibility for the undue payment of the called "sanitary cent", because of the Judgement of the Court of Justice of the European Union that declared contrary to the Community law the Spanish law that authorized the Tax on Retail Sales of Certain Hydrocarbons.

Q099 (2015): Regarding administrative cases in 2015, there was a significant flow of incoming cases related with tax on retail sales of certain hydrocarbons. But before that, since 2011, the incoming administrative cases dropped due to the Law of courts' fees.

Q099 (2014): For the 2014 exercise, the decreases observed in respect of the number of pending administrative law cases in the beginning of the year and the number of resolved administrative law cases, are the result of the decreases observed and explained in fist instance.
The increase in the number of pending civil and commercial litigious cases on 31 December between 2012 and 2014 is due to the economic crisis which resulted in the increase of the number of cases in the civil jurisdiction.

Question 100

Austria

Q100 (2024): The total figure includes data on administrative criminal cases before the Supreme Administrative Court.
The change in the number of pending administrative offence proceedings that are more than two years old compared to the previous year can be explained by the positive decline in lengthy proceedings.

Q100 (2023): The total figure includes data on administrative criminal cases before the Supreme Administrative Court.
1. Severe criminal cases: Same answer as in Q 99. The amount is lower, because less cases have been pending and therefore small changes have more impact relatively.

Q100 (2022): The total figure includes data on administrative criminal cases before the Supreme Administrative Court.

Q100 (2021): The total figure includes data on administrative criminal cases before the Supreme Administrative Court.

Q100 (2020): The total figure includes data on administrative criminal cases before the Supreme Administrative Court.

Q100 (2016): The big variation is due to the fact that this cycle the administrative cases were included.
The administrative courts were established January 1st 2014. After their establishment the data of the administrative courts is introduced this cycle for the first time.

Belgium

Q100 (General Comment): The total corresponds to criminal law cases (P register) of the Court of Cassation.
Source: Hof van Cassatie van België - Cour de cassation de Belgique - Kassationshof von Belgien
Justitiepaleis - Poelaertplein 1 - 1000 Brussel
Palais de Justice – Place Poelaert 1 – 1000 Brussels

Q100 (2021): Remarks on the evolution of criminal cases:
While the number of incoming criminal cases brought before the Court of Cassation each year remained relatively stable between 2016 and 2020, this number increased sharply in 2021, with 345 additional units compared to 2020. This is an increase of 25.50% in one year. At present, it is not clear whether this increase is a one-off and attributable to rather occasional circumstances or whether it is the harbinger of a period of significant growth in the number of criminal cases. It goes without saying that this sudden development will have to be monitored closely in the years to come.
Of necessity, the Court of Cassation has succeeded in significantly increasing the number of final judgments handed down in criminal cases in 2021 compared to 2020 (+237 units). This is an increase of 17.27%. However, these efforts could not prevent the criminal caseload at the end of 2021 from increasing for the first time in years, especially with 89 units compared to the criminal caseload at the end of 2020.

Q100 (2016): Cases on the 'p' list of the Court of Cassation
the downward trend in the input of criminal cases is due to the tightening of access conditions: stricter time limits, obligation to serve notice of appeal, compulsory intervention by a lawyer trained in the cassation technique, abolition of immediate appeal against interlocutory judgments, abolition of the Court of Cassation's review of pre-trial detention, except for the first confirmation of the arrest warrant. To all this it must be added the introduction of a rapid and non-adversarial procedure allowing appeals that are not substantiated or manifestly inadmissible or unfounded to be refused.

Bulgaria

Q100 (General Comment): The software of the Supreme Court of Cassation for extracting statistics is different from the product used for other courts. The division of criminal cases according to the criteria set out in Question 100 was made on the basis of the definitions of the CEPEJ.
In the category “other criminal cases” are included: cases with charges on corpus delicti which doesn’t have independently application; cases on Chapter XXXIII Criminal Procedure Code (re-opening of criminal cases); private cassation proceedings (change of local jurisdiction, jurisdiction disputes, proceedings on returning of cassation claim/protest etc.); procedures regarding execution of judicial acts that are entered into force; proceedings regarding administration and/or movement of cases etc.

Q100 (2024): 1. In the category “Other criminal cases” are included: cases with charges on corpus delicti which doesn’t have independently application; cases on Chapter XXXIII Criminal Procedure Code (re-opening of criminal cases); private cassation proceedings (change of local jurisdiction, jurisdiction disputes, proceedings on returning of cassation claim/protest etc.); procedures regarding execution of judicial acts that are entered into force; proceedings regarding administration and/or movement of cases etc.
2. In comparison the data from 2024 with those from 2023 it is ascertain that there is more than 20% difference in seven of the indicators which are marked at the chart with a comment.
With indicator “Pending cases on 1 January for the referent year – Misdemeanour and/or minor criminal cases” it is marked the highest increase as a percentage (72.22%). The numbers in this indicator are small, respectively also the difference as an absolute amount is small, but it recalculates in a big percentage difference. In the particular case this difference is due to slightly increase number during 2023 of the incoming cases qualified as ”Misdemeanour and/or minor criminal cases” representing the natural dynamic of the incomings during the years.
With indicator “Pending cases on 1 January for the referent year – Other criminal cases” there is difference of 10 cases but because of the low level of this indicator it recalculates in a big percentage difference (27.78%).
The same circumstance is valid regarding the indicator “Incoming cases – Misdemeanour and/or minor criminal cases” – a slightly decrease of number of the incoming cases from this type during the referent year converts in difference of -23.40%.
The rest four indicators, where there is difference more than 20%, refers to the pending cases for all types to 31.12.2024 – “Pending cases on 31 December of the referent year – Severe criminal cases” (-36.41%), “Pending cases on 31 December of the referent year – Misdemeanour and/or minor criminal cases” (-38.71%), “Pending cases on 31 December of the referent year – Other criminal cases” (-45.65%) and “Pending cases on 31 December of the referent year – Total of criminal cases” (-38.10%). The differences are due to, on one hand of the slightly decrease of the incoming of all types of cases and on the other hand, of the increase number of the magistrates at the Criminal College at the Supreme Court of Cassation that to 31.12.2023 is 28, and to 31.12.2024 is 30, which increased the number of decided cases of all categories.

Q100 (2023): 1. In the category “Other criminal cases” are included: cases with charges on corpus delicti which doesn’t have independently application; cases on Chapter XXXIII Criminal Procedure Code (re-opening of criminal cases); private cassation proceedings (change of local jurisdiction, jurisdiction disputes, proceedings on returning of cassation claim/protest etc.); procedures regarding execution of judicial acts that are entered into force; proceedings regarding administration and/or movement of cases etc.
2. A comparison of the 2023 data with the 2022 data reveals a greater than 20% difference for seven of the indicators noted in the table with comments. For four of the seven indicators ("Pending Cases on January 1 – Misdemeanour and/or Minor Criminal Cases," "Incoming Cases – Misdemeanour and/or Minor Criminal Cases", "Pending Cases on December 31 – Misdemeanour and/or Minor Criminal Cases" and "Pending Cases on December 31 – Other Criminal Cases"), the obvious reason is that the numbers in all indicators are small, accordingly the differences are small in absolute value, and do not reflect a significant change in the performance of the Criminal Division of the Supreme Court of Cassation, but translate into a large percentage difference. For example, in the indicator "Pending Cases on December 31 – Misdemeanour and/or Minor Criminal Cases" a difference of 13 counts translates into a 72.22% difference.
There is also a significant difference in the indicators "Incoming cases – Other criminal cases" and "Resolved cases – Other criminal cases" in absolute value. It is due to the 15.87% increase in the total number of the filings in the Criminal Division in 2023 compared to 2022. This increase is greatest in cases for crimes classified as "Other" – 24.85%, which, in turn, leads to an increase in the number of cases decided in this category.
The increase in the number of cases filed for crimes classified as "Other" is due to the natural dynamics of the filings over the years, which is unpredictable within a narrow range. In the indicator "Pending cases older than 2 years from the date the case came to the Supreme Court" a large increase is reported – by 125%, but since the numbers are small (4 counts for 2022 and 9 counts for 2023), the reasons for this increase are not systematic, but rather related to the specifics of the each one of the cases. In 4 of the cases, judgments were rendered in early 2024, 1 case was suspended due to the illness of the defendant, and 2 cases could not proceed due to failure to receive information from a country in South America regarding the death of the defendant. The specific circumstances set out above indicate that the lengthy pendency of a substantial proportion of the cases referred to in this indicator is due to objective reasons.

Q100 (2022): 1. In the category “Other criminal cases” are included: cases with charges on corpus delicti which doesn’t have independently application; cases on Chapter XXXIII Criminal Procedure Code (re-opening of criminal cases); private cassation proceedings (change of local jurisdiction, jurisdiction disputes, proceedings on returning of cassation claim/protest etc.); procedures regarding execution of judicial acts that are entered into force; proceedings regarding administration and/or movement of cases etc.
2. A comparison of the 2022 data with the 2021 data reveals a greater than 20% difference for five of the indicators noted in the table with comments. For four of the five indicators, the obvious reason is that the numbers for all indicators are small, so the differences are small in absolute value and do not reflect a significant change in the performance of the Criminal Division of the Supreme Court of Cassation, but are recalculated into a large percentage difference.
For example in one indicator – "Pending cases older than 2 years from the date the case came to the Supreme Court", a difference of 1 case is converted into a 20% difference. Only the indicator – "Incoming cases – Severe criminal cases" has a significant difference in absolute value. It is due to the reduction by 10% in the total number of admissions to the Criminal Division of the Supreme Court of Cassation in 2022 compared to 2021. This decrease is entirely in severe criminal cases – 23.15%, while in cases for minor crimes and in other cases the number almost does not change and even increases slightly (by 5.88% and 4.96%, respectively). The decrease is due to the natural dynamics of admissions over the years, which is unpredictable within a narrow range.

Q100 (2021): Explanation related to all differences reported under item 2 "Misdemeanors and/or minor criminal cases" (31.8%, 22.73%, -20.69%) and item 3 "Other criminal cases" (-45 % and 54.55%.):the reasons for the differences in percentages for the above types of cases compared to 2020 are mathematical. The figures for all the listed indicators for the reference years 2020 and 2021 are small, respectively, and the differences are small as an absolute value and do not reflect a significant change in the work on criminal cases in the Supreme Court of Cassation, but are recalculated in a large percentage difference. A more detailed mathematical explanation is obtained if each of these indicators is calculated, what percentage it represents in relation to the total number of cases for examination for the corresponding year, received by the Criminal Board of the Supreme Court. In 2020, there were 1 328 cases for consideration, while in 2021 - 1 407 cases. Taking into account the total number of cases for consideration in 2020 and 2021, the difference for which an explanation is due varies in absolute value from 0.76% to -1.79%. It is too small to be an indication of a significant change in the work of the Supreme Court of Cassation in criminal cases.

Q100 (2018): The “Other cases” group are: cases where the punishment for a committed crime depends on the punishment for other crime, that is established in the main text of the Criminal Code – it could be an offence of more severe or lightly punishment; cases on procedures related to the main case; cases on claims for re-establishment of criminal case; cases on jurisdiction disputes; cases on interpretation of a judicial act; cases on rehabilitation; cases that were instituted on a private appeal, etc. Some cases which were previously counted in misdemeanour/minor are now indicated under “other” which explains the decrease in the number of misdemeanour/minor criminal cases in respect of all categories – pending, incoming and resolved cases.

Q100 (2016): Comment on question 100
Till 2015 only the Supreme Court of Cassation was hearing the requests for resumption of criminal cases. In 2015 the Criminal Procedure Code was amended with the Law For Amendment and Supplementation of Criminal Procedure Code /SG, 42/2015/.
According to the amendment the request for resumption of the criminal case grounded on art. 422, par. 1, p. 5 of the Criminal Procedure Code shall be heard by the respective court of appeal, when the judgments under art. 419 of the Criminal Procedure Code were decreed by a regional or district court, except of the new verdicts.
As a result of the legislative amendment, a significant part of the requests under Chapter Thirty-three of Criminal Procedure Code are heard by the courts of appeal in the state.
The above led to reduction in the number of cases related to the resumption of criminal cases heard by the Supreme Court of Cassation. This is also the reason for the presence of more than 20% deviation from the total number of criminal cases heard by the Supreme Court of Cassation during 2016 than those from previous years.

Q100 (2014): In the annual report of the Supreme Court of Cassation in 2012 (criminal division) the cases pending at the end of the reporting period were 260. In the report for 2013 the pending cases at the beginning of the period were 602 and the pending cases at the end of the reporting period were 671. Under Table 1 of the report for 2012, there is a note that the pending cases which are not included in the number of adjourned and private proceedings were filed in December 2012 at the registry of the Supreme Court of Cassation and are scheduled for consideration in January and February 2013. As a result, the total number of pending cases in 2014 appears much higher than in 2012.

Croatia

Q100 (2024): Due to the Supreme Court’s consistently high productivity, there was a notable reduction in the number of unresolved cases during 2023, which continued further into 2024.

Q100 (2022): The Supreme Court of the Republic of Croatia distinguishes only if the case is civil or criminal, but does not classify case types in specific categories beyond that classification. The main classification in the Case management system is based on the instance of the procedure in the sense that there are some instances when the Supreme Court acts as a second instance appelate court. When the criminal procedure is regarding a very serious criminal offense (charges for which the jail sentence is more than 10 years), the County courts act as a first instance court, and all appeals are decided upon by the Supreme Court as a second instance court. In that sense, the classification of cases of the Supreme Court in the Case management system distinguishes only those cases which are from the position of the second instance or from the position of the third instance court. Since the recently established High Criminal Court of the Republic of Croatia has overtaken the role of the appelate court for the County courts in aforementioned instances, the Supreme Court has retained only the competency of a third instance court in criminal cases, but the cases are still distinguished in the same classification as before.

Q100 (2021): There has been a decrease of incoming criminal law cases between 2020 and 2021 following the establishment of the High Criminal Court on 1st of January 2021, which took over part of the previous Supreme Court’s jurisdiction.

Q100 (2018): The table shows cases under the jurisdiction of the Supreme Court of the epublic of Croatia, as the highest judicial authority in the Republic of Croatia.

Q100 (2016): The table shows cases under the jurisdiction of the Supreme Court of the Republic of Croatia, as the highest judicial authority in the Republic of Croatia. We are not able to present the data separately for “Severe criminal cases” and “Misdemeanour and/or minor criminal cases” due to the fact that the implementation of the Integrated Case Management System at the Supreme Court of the Republic of Croatia is underway. It will enable the track record of the cases by type.
The significant decrease of the number of pending cases at the beggining of 2016 in the Supreme Court is due to the fact that since beginning of 2014 this court continuously solves more cases than it receives and also because in 2015 there was a further reduction in inflow of cases.

Q100 (2014): For 2014, the table shows cases under the jurisdiction of the Supreme Court, as the highest judicial authority in the Republic of Croatia. Data on “severe criminal cases” and “misdemeanour and/or minor criminal cases” could not be presented separately due to the fact that the implementation of the Integrated Case Management System at the Supreme Court of the Republic of Croatia is underway. It will enable the track record of the cases by type.
When comparing 2012, 2013 and 2014 data, it can be noticed a trend of decrease of the total number of incoming criminal cases, which is a result of legislative amendments, suspension of extraordinary legal remedy (request for extraordinary mitigation of penalty), as well as the decrease of the number of cases in which the decision about an appeal to investigative imprisonment needs to be decided on.

Cyprus

Q100 (General Comment): .

Q100 (2023): The supreme court has jurisdiction to hear criminal cases at a third level. There were no incoming or pending cases on the 1st of July 2023.

Q100 (2020): The Supreme Court is also the appeal court

Q100 (2018): Cyprus only has a two tier system. The Court of Appeal is also the Supreme Court, therefore the relevant data could be found in the section on second instance cases.

Q100 (2016): The supreme court is the appeal court

Czech Republic

Q100 (General Comment): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

Q100 (2020): Total of criminal cases: The variations should be put into perspective due to small absolute values.

Q100 (2018): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

Denmark

Q100 (General Comment): The higher number of cases in 2023 is due to the comparison of 2021, where there was lower activity due to COVID-19.

Q100 (2024): All criminal cases at the highest instance court are considered severe. The nature of Supreme Court cases means that case flow numbers may vary drastically year to year.

Q100 (2023): The higher number of cases in 2023 is due to the comparison of 2021, where there was lower activity due to COVID-19.

Q100 (2018): Data are from the yearly report 2018 from the Supreme Court,
http://www.hoejesteret.dk/hoejesteret/embedsregnskab/Documents/Årsberetning2018.pdf

Q100 (2016): Based on the data the Danish Court Administration got, it is not possible to show pending criminal cases.

Q100 (2014): For 2014, the number of pending criminal cases was not available.
The number of received criminal cases has fallen all the years since 2010, except from 2014 where it went up with 7 cases and the same number of criminal cases were received as in 2012. It is worth mentioning that the Danish Court Administration differentiates between cases that are fully appealed and cases in respect of which a specific point is appealed (i.e. should the person being charged stay in custody while the case is on-going). The number of cases fully appealed has varied between 27 and 14 over the period 2010-2012-2013-2014 (in 2013 and 2014 there were 14 received cases). Completed “full cases” have varied between 32 and 12 cases (in 2014 there were 12 completed criminal cases). The rest of the cases were related to specific questions.
Therefore, and due to the instance reform as well, the Supreme Court has over the years dealt with fewer and fewer cases.

Estonia

Q100 (General Comment): The Supreme Court is the court of cassation, therefore only those cases are heard which have been given leave to appeal (i.e. that have been declared admissible for proceedings in the Supreme Court). The data presented shows the number of cases which have been actually heard by the Supreme Court and not the number of appeals. The Supreme Court is not required to give reasons in its ruling on the admissibility of the appeals.

Q100 (2024): Total of criminal law cases (1+2+3) and 1. Severe criminal cases Pending cases on 31 Dec. ref. year - Overall increase in workload

Q100 (2023): The Supreme court data only includes severe criminal cases.

Q100 (2021): The Supreme Court did not provide a specific explanation with regard to the decrease in the number of resolved criminal cases, but if we look the overall reasons, they are Covid-19 related.

Q100 (2020): The pandemic has affected the courts activity in criminal matters in general. The criminal procedure law was not as flexible when judges had to work online. the complete revision of the criminal procedure law is ongoing and will come into force next year.

Q100 (2016): Numbers are quite small. No special reason for discrepancies. Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below :
Severe criminal cases : Pending cases on 1 Jan. ref. year : 18
Incoming cases : 82
Resolved cases : 73
Pending cases on 31 Dec. ref. year: 27
Pending cases older than 2 years from the date the case came to the first instance court : NA
Misdemeanour and / or minor criminal cases :
Pending cases on 1 Jan. ref. year : 6
Incoming cases : 26
Resolved cases : 29
Pending cases on 31 Dec. ref. year: 3
Pending cases older than 2 years from the date the case came to the first instance court : NA

Q100 (2014): The variations observed in 2014 are not of importance, since the numbers are small.

Finland

Q100 (2021): Variations observed in respect of criminal cases are due to yearly fluctuations.

Q100 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available
data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

France

Q100 (General Comment): The total number of resolved cases corresponds to judgments of cassation, cassation without referral and dismissal of the appeal. The other judgments handed down by the criminal chamber of the Court of Cassation are not counted. It is not possible to distinguish the litigation of the Court of Cassation by type of offence. The item "severe criminal cases" includes all appeals before the Court of cassation. It should be noted that the appeals mainly concern crimes and offences. The share of minor criminal cases is residual. The data are taken from the annual activity report of the Court of Cassation.

Q100 (2024):
“Severe criminal cases / Minor criminal cases”: in the absence of statistical means to distinguish between appeals in cases that may or may not result in a prison sentence, appeals concerning the activity of the police court, which deals with petty offenses, have been classified under the category of minor offenses;
“Other criminal cases”: QPC, requests for opinions, and other petitions filed as main actions.
“Total number of criminal cases”: this number includes all criminal cases submitted to the Court of cassation.

Q100 (2023): No other data are available

Q100 (2022): The statistical system does not allow for distinguishing between appeals related to severe and minor offenses. The number of pending cases includes the enforcement litigation which was not taken into consideration for the previous years (2020 and 2021). The category "other criminal cases" encompasses requests for opinions, priority questions of constitutionality, and principal petitions.
Source: Court of Cassation.

Q100 (2021): Source SDSE

Q100 (2020): The health crisis and the lockdown may have had an impact on TAs (completed cases) (by reducing the capacity of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to court). Prior to this, a major lawyers' strike and a transport strike had mainly influenced TAs.

Germany

Q100 (General Comment): In alignment with the categorisation of cases in questions 94 and 98, “severe criminal cases” include criminal proceedings according to the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” includes regulatory fine proceedings before criminal courts. In the annual statistic of the Federal Court of Justice, criminal proceedings according to criminal laws and regulatory fine proceedings are not reported separately.

Q100 (2024): The annual statistic of the Federal Court of Justice does not differentiate between "severe criminal cases" and "minor criminal cases". The total number of cases represents the number of appeals, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels of the Federal Court of Justice (including antitrust panel).

Q100 (2023): The annual statistic of the Federal Court of Justice does not differentiate between "severe criminal cases" and "minor criminal cases". The total number of cases represents the number of appeals, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels of the Federal Court of Justice (including antitrust panel).

Q100 (2022): The annual statistic of the Federal Court of Justice does not differentiate between "severe criminal cases" and "minor criminal cases". The total number of cases represents the number of appeals, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels of the Federal Court of Justice (including antitrust panel).

Q100 (2021): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases represents the number of appeals, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).
There were more incoming cases in 2021 than 2020 and also more pending cases at the beginning of the year 2021 than 2020. As a result, the number of pending criminal cases on 31 December 2021 increased. No special reason could be identified for this development. The annual report of the Federal Court of Justice doesn't provide any information on this matter.

Q100 (2020): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

Q100 (2018): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

Q100 (2016): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

Q100 (2014): The 2014 data reflects an overview of the case workflow processed by the Senates for Criminal Matters of the Federal Court of Justice (statistics for the year 2014). For 2014, it was not possible to distinguish between categories of “severe criminal cases” and “minor criminal cases”. The total number of criminal proceedings concerns appeals on points of law, including matters submitted to the Federal Court of Justice for its review of the principle of the matter and misdemeanour cases pursuant to the Act on Regulatory Offences. It also includes misdemeanours pursuant to the Act on Restraints of Competition that are pending before the Senates for Criminal Matters of the Federal Court of Justice (including the Senate for Anti-Trust Matters).
It is noteworthy that as there were only very few “minor criminal cases” in the previous cycles, the figures remain comparable for the last three evaluations.

Greece

Q100 (General Comment): After relevant communication with the IT department of the Supreme Court, it was clarified to us that "Due to changes in the OSDYPP of the Supreme Court, it is no longer possible to calculate Pending cases older than 2 years.

Q100 (2024): Independent Department for the Collection and Processing of Judicial Statistical Data (JustStat)

Q100 (2022): It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data. The content of the categories of criminal cases in the table are the same as for the previous evaluation cycle, but the services now monitor and record these cases better so discrepancies in data can be observed. This is especially the case for the Misdemeanour and / or minor criminal cases.

Q100 (2021): There are no Other criminal cases at the level of the Supreme Court, these proceedings appear only at First instance and Appeals courts and prosecutors' offices, therefore category 3. should be NAP.

Q100 (2020): There were no data collected for this question.

Q100 (2016): With regard to the category "pending cases on 1 January 2016", the abnormality of the figures is due to the fact that the postponed cases because of the abstention of the lawyers in 2015 were not considered as pending to the backlog of the court.
In 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of the number of resolved criminal law cases. Accordingly, the number of pending criminal law cases increased.

Hungary

Q100 (2021): In case of severe criminal cases, the fallback of the clearance rate can be explained on one hand by the pandemic situation; on the other hand, by the fact that in years 2020 and 2021, almost 50% of the judges of the Criminal Chamber retired. The vacant judicial positions were already filled. The increase in the number of motions for review can be explained by an increased activity of defendants and their defence counsels. Any objective reason for that increased activity cannot be established.

Ireland

Q100 (General Comment): For pending cases, the Court Service record resolved cases as cases where an order is made. As there may be more than one order made in respect any case this can cause difficulty in accurately calculating figures for pending cases.

Q100 (2024): We are not in a position to explain the reasons behind such increase, given the wide range of factors that may have been at play. For incoming criminal cases, these may include, but are not limited to, an increase in business in the first instance courts, additional Gardai resources, a potential increase in decisions to prosecute by the DPP, and the growing population of the state
While in previous cycles we provided the figure for pending civil and criminal cases in the Supreme Court this is no longer provided to ensure consistency with the other court jurisdictions.
In criminal matters, cases are counted by offence, not by case/defendant. Resolved cases are recorded as cases where an order is made. As there may be more than one penalty imposed in respect of an offence and a separate order made in respect of each penalty, the figures for resolved cases can appear to be higher than those for incoming cases and can cause challenges in calculating pending case figures.
While in previous cycles we provided the figure for pending civil and criminal cases in the Supreme Court this is no longer provided to ensure consistency with the other court jurisdictions. The new case management system (UCMS) became operational in 2023 in the Central Office of the High Court. UCMS is being extended to all court offices and over the coming years the Courts Service will work to consolidate data processing and reporting for all case types in each jurisdiction.

Q100 (2022): The number of cases pending in the Supreme Court has decreased between 2020 and 2022.

Q100 (2020): Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Both the Supreme Court and Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate their continued work. Procedures were introduced to ensure that justice was administered in public. Both jurisdictions delivered their judgments electronically. Waiting times for a hearing in both Courts were improved, to a certain extent, by a net reduction in the numbers of new cases coming into their lists from other jurisdictions. By year end in both Courts, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

Q100 (2018): The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

Q100 (2016): The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

Italy

Q100 (General Comment): "Minor criminal cases" represent cases against justice of peace's decisions and cases against first and second instance judges' decisions, regarding minor offences that are punished with fines. "Other cases" may relate to procedures pending in first or second istances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" may also relate to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detenction) of the imprisonment), or to the correction of material errors on Highest Court's sentences.

Q100 (2024): "Other cases" may relate to procedures pending in first or second istances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances). "Other cases" may also relate to decisions regarding the execution of imposed punishments (for example regarding the end or a change -home detenction- of the imprisonment), or the correction of material errors on Highest Court's sentences.

Q100 (2022): Within the framework of the National Plan for Recovery and Resilience (PNRR), Italy has taken a number of measures to reduce both disposition times and backlogs. The main objective is an overall reduction of 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together). More information on the reform is available at https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html.
A monitoring system is also in place and a detailed dashboard is available at https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx.

Q100 (2021): * Most discrepancies between 2021 and 2021 data are due to the fact that in 2020 the activity of the courts was hugely affected by the pandemic.
**Moreover, small number often lead to large percentage variations.

Q100 (2020): 2."minor criminal cases" represent cases against justice of peace's decisions and cases against first and second instance judges' decisions, regarding minor offences that are punished with fines. 3. "Other cases" Can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detention) of the imprisonment), or can be related to the correction of material errors on Highest Court's sentences.

Q100 (2018): Following the introduction of the new item "other" at Q100, the Supreme Court has revised and ameliorated their classification of cases. The misdemeanour category now includes not only the proceedings coming from the justice of peace offices but also all those minor offences which are punished with fines. "Other cases" (point 3) can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detection) of the imprisonment), or related to the correction of material errors on Highest Court's sentences.

Q100 (2016): In respect of minor criminal cases, the numbers are small and the observed variations should be put into perspective.

Latvia

Q100 (2023): The pending cases on 01.01.2023. corresponds to the data on 31.12.2022. The Supreme Court has set the timely consideration of cases as one of its priorities, also following the guidelines for the consideration of cases approved by the Council of Justice. This has affected the changes in the number of resolved cases and, accordingly, the number of pending cases.

Q100 (2022): Several judges have retired and new judges have started to work at the Supreme Court. This has made an impact on the case flow. Year 2021 the case flow was slow. Year 2022 the number of resolved cases allowed to diminish the backlog.

Q100 (2021): Total number of pending cases has significantly increased. Measures to handle this problem have been adopted and are under implementation. There are amendments to the Criminal Procedure Law adopted (https://likumi.lv/ta/id/336542-grozijumi-kriminalprocesa-likuma , in force since 3.11.2022.) to transfer competence to review specific agreement process cases to the regional courts. Some internal case management arrangements have been put into action.

Q100 (2020): During last two years 3 out of 8 judges (after increase of number of judges – 9 judges) have retired. Some additional time was needed to replace them (competition and appointment). There was significant decrease of examined cases in 2020 (clearance rate was 102% in 2019 and 95% in 2020) and increase of received cases in 2019: 734 (2018), 764 (2019) and 686 (2020).

Q100 (2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

Lithuania

Q100 (2022): In the Supreme Court of Lithuania, not all the posts of judges were filled, which led to a longer duration of hearing cases.

Q100 (2020): general decrease of number of cases

Q100 (2016): The number of admitted cassation claims decreased in 2015 and in 2016 was almost the same as in 2015. Besides, the number of resolved cases increased in 2015 due to the aim to comply with the timeliness.

Luxembourg

Q100 (General Comment): Given the small size of Luxembourg, the number of cases handled by the Supreme Court is, in absolute terms, limited. Therefore, even the smallest variation in absolute numbers is likely to produce a significant effect in statistical or percentage terms, without necessarily implying a substantial or structural impact on the Court’s activity.

The Court of Cassation conducts a review of legality, independent of the severity of the offense. Pending cases are now detailed separately between criminal and civil/commercial matters, providing this additional information for the first time.

Q100 (2024): The increase in pending cases at the beginning of the year compared to the beginning of the previous year can be explained by the difference between incoming cases in 2023 and the decisions rendered in 2023.

Resolved Cases: Two factors can explain the 31% increase in resolved cases at the Court of Cassation. On the one hand, the number of judges at the Court of Cassation increased by one in 2023 (see question 46). Following certain changes in the Court’s composition, including retirements, this new composition in 2024 made it possible to render a higher number of decisions. On the other hand, there was an increase in decisions dismissing appeals for failure to prosecute, concerning cases in which a party filed an appeal but did not submit a brief, allowing these cases to be resolved more quickly.

Pending Cases on 31 December of the Reference Year: The number of pending cases decreased by 25%, which corresponds in absolute terms to a difference of 8 pending cases. This is explained by the fact that more cases were resolved than incoming cases were filed in 2024.

Q100 (2023): The number of new cases depends on the number of appeals lodged over which the Court has no influence and which depends, among other things, on the number of decisions taken by other instances. The legislation has not changed since the previous reference period.
The number of pending cases has increased by 23%, which in absolute terms corresponds to a difference of 6 pending cases, with pending cases increasing from 26 to 32, due to a higher number of new cases than completed cases. Comment 2022: Pending cases at 1 January refer to data provided in 2021. This decrease was explained as follows: ‘The decrease in pending cases can be explained by the decrease in new cases in 2020, since the number of decisions taken remained stable between 2018 and 2020’.

Q100 (2022): Pending cases as of 1st January refer to the data provided in 2021. This decrease had been explained as follows: 'The decrease in pending cases can be attributed to the decrease in incoming cases in 2020, as the number of decisions made remained stable between 2018 and 2020.

Q100 (2020): "The number of new cases depends on the appeals filed, on which the Court has no influence, and which is, among other things, a function of the number of decisions taken by the other courts. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decrease of new cases at the Court of Cassation. The legislation has not changed since the previous reference period.
The decrease in pending cases can be explained by the decrease in new cases in 2020, since the number of decisions taken remained stable between 2018 and 2020.
"

Malta

Q100 (2018): NA

Netherlands

Q100 (General Comment): No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch Supreme Court.
The number of resolved cases presented in the table includes both cases that are resolved with the decision of a judge and cases that were not resolved with the decision of a judge. These are: Cases in which the appeal in cassation has been withdrawn or annulled, cases that have been administratively resolved by the clerk, cases in which the processing of the appeal in cassation has been suspended, and cases that have been discharged upon objection. The number of cases not resolved by the decision of a judge has also been included in the comment for clarification. Before 2024, these numbers were not included in the number of resolved cases, but they were included in the number of pending cases on Dec 31.

Q100 (2024): We have included cases that were not resolved with the decision of a judge, see the general comment for an explanation of what types of conclusions these are. It is important to note that these numbers were not included last year, so numbers this year may not be perfectly comparable to last year (we have added the numbers here below as well). Number of cases that are not resolved by the decision of a judge: 142.

Q100 (2021): No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch SC.
Pending cases at the end of the year are not equal to the number of pending cases at the beginning of the year + incoming cases - solved cases

Q100 (2020): In the numbers and accounts that are kept by the Dutch Supreme Court, no distinction is made between severe criminal cases and misdemeanours and/or minor criminal cases.
With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers. The gap of 213 is caused by cases that are labeled as ‘outflow other’ (in Dutch: uitstroom overig). These are cases that do not get resolved because of administrative reasons (for instance: the appeal is filed too late, or mandatory court fees have not been paid and there is no dispensation).

Poland

Q100 (General Comment): The Supreme Court does not divide its statistics into categories corresponding to those defined and used by the CEPEJ.

Q100 (2020): The dynamics of the movement of cases of 2020 in the work of the Criminal Chamber of the Supreme Court was due to changes of a personnel nature. In addition, some of the disciplinary cases of advocates were submitted for consideration to the Criminal Chamber on the basis of decisions of the First President of the Supreme Court made in the period until May 2020 or decisions of the President of the Supreme Court directing the work of the Criminal Chamber at a later date, as the Disciplinary Court of the Polish Bar Association refers files of disciplinary cases with cassation appeals to the Criminal Chamber, recognizing that the Disciplinary Chamber should refrain from examining them. At the same time, the above-standard involvement in the work of judges, assistants and all other employees of the Criminal Chamber allowed for an increase in the number of cases dealt with.

Q100 (2018): Number of incoming cases has increased due to implemented law changes in Code of Criminal Procedure. On 15 April 2016 entered into force regulations about complaints against appellate court judgments. Parties may complain to the Supreme Court of the Republic of Poland against an appellate court judgment revoking a judgment of the court of the first instance and referring the case for reconsideration. In the first period of functioning of mentioned regulations there were not many incoming cases. The situation changed in 2018. We have observed that many cases incoming on the base of regulations implemented in 2016. Moreover, in 2018 were carried on some organisational changes e.g. Military Chamber of Supreme Court has been closed and all cases were moved to Criminal Chamber.

Portugal

Q100 (General Comment): The communicated data reflects the case-flow of criminal cases before the highest instance courts. “Misdemeanor cases” are never taken to high instance courts.

Q100 (2020): The increase in the number of criminal cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, at the Supreme Court is justified by the fact that the number of cases completed from 2018 to 2019 was relatively lower than the number of cases entered in those years.

Q100 (2016): In Portugal, misdemeanour/minor criminal cases may not be dealt in the Supreme Court of Justice.

Romania

Q100 (2022): according to the application for statistics

Q100 (2021): according to the application for statistics

Q100 (2018): The increase in the total of criminal law cases incoming between 2016 and 2018 can be explained by the retrail / re-examination of a high important number of cases (to be noted that none of these cases were new) according to the Constitutional Court's decision that brought changes to the interpretation given by the High Court of Cassation and Justice in the matter of judicial organisation.

Q100 (2016): The jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal Consequently the number of cases in Supreme court shows significant decrease in all categories.
In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

Q100 (2014): The significant decrease between 2012 and 2014 of the total of criminal cases in respect of the following categories – incoming, resolved and pending on 31st December, is due to the entry into force of the new Codes and the changes of jurisdiction.

Slovak Republic

Q100 (General Comment): The collected statistical data does not distinguish between the two types of criminal offences.

Q100 (2022): Information delivered by Supreme Court of the Slovak Republic available on internet https://www.nsud.sk/data/att/f59/688231.22d3e0.pdf

Q100 (2018): The decrease in incoming and resolved cases is influenced by the decrease of the caseload at the lower courts

Q100 (2016): During 2015 there were more pending cases created

Slovenia

Q100 (General Comment): For explanation on severe criminal cases and minor offences please see comment to Q94.
Figures for severe criminal law cases at the highest instance include:
- Kp – appeals in criminal cases,
- Ips – requests for protection of legality in criminal cases, against a decision ordering or prolonging a detention, extraordinary mitigation of punishment,
- I Kr – other criminal cases – delegations, jurisdiction disputes, prolongation of detention, other.
Figures for minor offences cases at the highest instance include:
- IV Ips – requests for protection of legality in minor offences cases.

Q100 (2024): Discrepancies: please note small (absolute) number of cases.

Q100 (2022): Total of criminal law cases/ 1. Severe criminal cases - Pending cases on 1 Jan/ Pending cases on 31 Dec – decrease by approx. 30-40%: In last 5 years, number of incoming and resolved cases was relatively stable. Clearance rate has been above 100% since 2020. In 2021, the number of resolved cases increased (by 15%; clearance rate 111%), hence the decrease in pending cases.
2. Misdemeanour and / or minor criminal cases (all discrepancies): Plese note the small (absolute) number of cases.

Q100 (2021): Discrepancies: Please note the small (absolute) number of cases at the Supreme Court instance.

Q100 (2020): The discrepancies are due to a small absolute number of cases.

Q100 (2018): Discrepancies are due to small (absolute) of cases which fluctuate between years.
For distinction see general comment.

Q100 (2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).

Q100 (2014): According to 2012 and 2014 data, figures for “severe criminal law cases” at the highest instance include: appeals in criminal cases (Kp); requests for protection of legality in criminal cases (I Ips); requests for protection of legality against a decision ordering or prolonging a detention (XI Ips); extraordinary mitigation of punishment (IX Ips); other criminal cases – delegations, jurisdiction disputes (I Kr); other criminal cases – prolongation of detention (II Kr); other criminal cases (III Kr). Figures for “minor offences cases” at the highest instance include requests for protection of legality in minor offences cases (IV Ips).

Spain

Q100 (General Comment): The Criminal Procedure Law was amended by Law 41/2015, and thus the scope of the cassation appeal that reach the Supreme Court in Criminal Matters was broadened. The objective of the Law was to try to homogenize the doctrine in criminal matters, since previously, in cases that had not criteria of Supreme Court, the criteria of the Provincial Courts could be different.

Q100 (2024): The data are calculated using the same criteria as in previous years.
When a court identifies inaccuracies in its statistical reporting, it may regularize the data in its Statistical Bulletin by replacing the incorrect figure with one that reflects the actual situation, even if it diverges from previously reported values. Such regularizations are a recognized source of horizontal inconsistencies

Q100 (2023): During the first semester of 2023, Spain experienced various strikes by different groups of civil servants within the judicial and justice administration that undoubtedly had a significant impact on the CR and DT Spain's rates.

Q100 (2021): In 2021, the recovery of greater activity (after the restrictions of the pandemic) has been able to contribute to greater efficiency and increased number of resolved cases.

Q100 (2020): Considering the broadening the scope of the cassation appeal that reach the Supreme Court, the number of cases has been increasing. Already in 2018, the final pending cases were higher than the initial. In 2019, those incoming also increased. All this resulted in significant increase in the number of pending cases at the end of 2020.

Q100 (2014): The number of total criminal pending cases on 31 December has decreased of 30% between 2012 and 2014. It has to be noted that both in 2013 and 2014, the Supreme Court has resolved more cases than the number of incoming cases.

Indicator 4: Public prosecution services - Case flow

Table 4.1.1a: Public prosecution services: Case flow in 2024
Absolute values (Q107 and Q109)

States	Public prosecution services: Total number of first instance criminal cases in 2024											Figures provided include traffic offence cases
	1. Pending cases on 1 Jan.	2. Incoming/ received cases	3. Processed cases (3.1+3.2+3.3+3.4)	3.1. Discontinued during the reference year (3.1.1+3.1.2+3.1.3+ 3.1.4.)	*3.1.1 Discontinued by the public prosecutor because the offender could not be identified*	*3.1.2 Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation*	*3.1.3 Discontinued by the public prosecutor for reasons of opportunity*	*3.1.4 Discontinued for other reasons*	3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor	3.4. Cases brought to court	4. Pending cases on 31 Dec.

The structure and organization of public prosecution services differ considerably among states resulting in different internal classifications of cases. For that reason, analysis based on data collected for this question should consider specific national legal framework and peculiarities related to the functioning of each state prosecution system. For example, if they include or not the suspended cases or if they count by case, perpetrator or by crime. Details are provided in the comments of the question 107.

The structure and organization of public prosecution services differ considerably among states resulting in different internal classifications of cases. For that reason, analysis based on data collected for this question should consider specific national legal framework and peculiarities related to the functioning of each state prosecution system. For example, if they include or not the suspended cases or if they count by case, perpetrator or by crime. Details are provided in the comments of the question 107.

The structure and organization of public prosecution services differ considerably among states resulting in different internal classifications of cases. For that reason, analysis based on data collected for this question should consider specific national legal framework and peculiarities related to the functioning of each state prosecution system. For example, if they include or not the suspended cases or if they count by case, perpetrator or by crime. Details are provided in the comments of the question 107.

Greece: In 2022, measures have been taken to improve the system for collecting statistical data. Consequently, comparisons with previous cycles should be made with care.

Spain: the figure provided is an estimation, and it includes only the salaries of prosecutors.

Indicator 4: Public prosecution services - Case flow

Comments provided by the national correspondents

organised by country

Question 107. Public prosecutors: Total number of 1st instance criminal cases.

Question 107-1. If the guilty plea procedure exists, how many cases were concluded by this procedure?

Question 109. Do the figures provided in Q107 include traffic offence cases?

Question 013. Annual (approved and implemented) public budget allocated to the public prosecution services, in €.

Austria

Q107 (General Comment): “3.1.3 Discontinued by the public prosecutor for reasons of opportunity”: discontinued investigations for reasons of opportunity are only counted by persons against which the investigation was discontinued. In one case, more than one person can be accused and the investigation can be discontinued for reasons of opportunity against more than one accused person. Therefore, the person-count was not delivered because it is inconsistent with the case-count (3.1.1, 3.1.2 and 3.1.4). The number of cases in which an investigation was discontinued for reasons of opportunity is included in the number provided for 3.1.1 and 3.1.2 but cannot be evaluated separately with the standard statistic tools of the Federal Ministry of Justice of Austria.
The provided number of cases discontinued for other reasons (3.1.4) contains cases discontinued because the offender is fugitive or an investigation may not be instituted or continued by law (e.g. because of diplomatic immunity of the offender), also cases (investigations) that were not instituted in the first place because the of a lack of an initial suspicion and all other cases that were discontinued but can not be allocated to one of the above mentioned reasons or the other reasons under 3.1.
Under 3.3, closed cases against unidentified offenders were counted which were discontinued because of another reason than not identifying the offender in the end (mostly cases in which at least one formerly unidentified offender could be identified and therefore the case against the unidentified offender(s) is closed and another (new) case against the known offender(s) is opened).
Following a change in Question 107, starting from 2022, cases previously reported as "closed for other reasons" are included in "discontinued for other reasons".

Q107 (2020): The Austrian code of criminal procedure knows measures that the public prosecutor can take in cases of minor criminal offences (“Diversion”). Comparable measures have to be taken by the public prosecutor under certain circumstances under the addictive drug act (“Suchtmittelgesetz”). Until 2019, the last-mentioned cases were counted as files “discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation” (3.1.2). Since 2020, these cases are now counted as “concluded by a penalty or a measure imposed or negotiated by the public prosecutor” (3.2). These changes explain the higher number of cases under 3.1.2. Cases brought to court declined mainly because in 2020 there were far less incoming cases (-13 % compared to 2018).
The number of persons against which an investigation was discontinued by the public prosecutor for reasons of opportunity in 2020 is 9 672.

Q107-1 (General Comment): There is no guilty plea procedure in Austria.

Q109 (General Comment): The courts only deal with damages to property and negligent bodily injuries caused by traffic accidents in civil and criminal proceedings; offences which do not lead to damages or injuries are punished by administrative bodies (e.g. speeding, having worn-out tires, drunk-driving).
Q013 (General Comment): In Austria the budget for courts cannot be separated from the budget of the prosecution services. With regard to the sub-category “annual public budget allocated to training of public prosecution services” an answer is not possible because the costs for trainings for judges, public prosecutors, judicial officers (“Rechtspfleger”) and other staff working within courts or public prosecution services are summarized in one figure.

Q013 (2024): In Austria the budget for courts cannot be separated from the budget of the prosecution services. With regard to the sub-category “annual public budget allocated to training of public prosecution services” an answer is not possible because the costs for trainings for judges, public prosecutors, judicial officers (“Rechtspfleger”) and other staff working within courts or public prosecution services are summarized in one figure.

Belgium

Q107 (General Comment): Data concerning the investigation and prosecution of criminal cases by the prosecutors' offices at the courts of first instance (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.
The data concern only criminal offences committed by persons of legal age. For “juvenile cases”, only data for incoming cases are available (no data available for resolved cases). Statistics on juvenile courts are currently being developed. Cases where the perpetrator is unknown are also included. The unit of account is a criminal case: a case may involve none, one or more defendants and/or one or more offences. Since the reform of the judicial landscape entered into force on 1 April 2014, Belgium has 15 first instance public prosecutors' offices (14 public prosecutors' offices + the Federal prosecutor's office). Data of the Federal prosecutor's office (FPO) are not included in the figures. The FPO prosecutes a limited list of offences set out in articles 144ter et seq of the Judicial Code. This list includes the following offences: crimes and offences against State security; threats of attack or theft of nuclear material; trafficking and organised trafficking in human beings; illegal arms trafficking; criminal conspiracy and criminal organisation; terrorism; offences related to these offences; offences which, to a large extent, concern several jurisdictions or which have an international dimension, in particular those of organised crime. Given the specific matters dealt with by the FPO and the low figures, the FPO data are not included in the figures provided. The FP0 data can be consulted separately on the Public Prosecutor's website: https://www.om-mp.be/stat/corr/jstat2022/n/home.html .
Prior to 2022, “cases discontinued for other reasons” referred only to cases in which it was possible to determine from the database that they had been discontinued but the reason was not entered or was not correctly recorded. When the reason is correctly recorded, the case is then classified under headings 3.1.1, 3.1.2 or 3.1.3. As a result, the heading “discontinued for other reasons” concerned “unknown reasons” and not “special’ reasons”. Since 2022, following the deletion of a sub-category in Q107, cases previously reported in line 3.3. “Cases closed by the prosecutor for other reasons” are added to cases in line “3.1.4. Discontinued for other reasons”.

Q107 (2024): Source: Annual statistics from the Public Prosecutor's Office – Investigation and prosecution of criminal cases by prosecution offices attached to first instance courts (http://www.om-mp.be/stat): tables 1, 6, 9, and 11.
Useful information for interpreting the data: of the 74 526 cases in section “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor” (see table 9), 23 827 cases were closed following probation, 25 370 cases were closed following a chain settlement: administrative processing, 6 318 cases were closed following another chain settlement, 16 746 cases were closed following payment of a sum of money, 2 265 cases were closed following successful mediation and measures.
The 124 792 cases in section 3.1.4 “Discontinued for other reasons” include: 6 611 cases in which the suspect is the subject of a report. Once the suspect has been identified, the case may be reopened; 43 397 cases that were referred to another authority for disposition. A case referred for disposition is considered as a closed case for the public prosecutor's office that made this decision. The recipient of this case will open a new case and start the judicial investigation; 74 242 cases joined to another case. When one or more cases are joined to a parent case, all subsequent decisions are recorded at the parent case level. The “daughter case” receives the joinder decision; 542 cases closed following processing without criminal prosecution for unknown reasons/error.

Q107 (2023): “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor”: of the 60 912 cases, 20 658 cases were terminated following probation; 22 410 cases were closed following a chain settlement - administrative processing; 3 836 cases were closed following another chain settlement; 11 766 cases were closed following payment of a sum of money; 2 242 cases were closed following a successful mediation procedure and measures.
“3.1.4 Discontinued for other reasons”: out of 126 624 cases, 6 372 cases in which the suspect is the subject of an alert. Once the suspect has been discovered, the case can be reopened; 43 955 cases that have been referred for disposal to another authority. A case that has been sent for disposal is a closed case for the public prosecutor who took the decision. The authority that receives this case will open a new case and start the judicial investigation; 76 235 cases were joined to another case. If one or more cases are joined to a “mother-case”, all subsequent decisions are recorded in the “mother -case”. The daughter case receives the decision of joining; 62 cases were closed without prosecution for unknown/erroneous reasons.
“3.3 Cases brought to court”: in order to count these cases (34 166 cases), all cases closed by direct summons (18 825 cases) and all cases placed under judicial investigation (15 341 cases) are taken into account. In fact, all these cases are also considered as cases closed by the public prosecutor's office in the annual statistics of the Public Prosecutor's Office (see table 9).
See: Annual statistics of the public prosecution offices - Investigation and prosecution of criminal cases by the criminal prosecution departments of the first instance courts (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.

Q107 (2022): Annual statistics of the Public Prosecutor's Office - Investigation and prosecution of criminal cases by the criminal prosecutors' offices at the courts of first instance (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.

More precisely, in respect of cases "3.2. Concluded with a sanction", out of the 65 486 cases, 20 799 cases were closed following praetorian probation, 24 881 cases were closed following an administrative settlement chain process, 2 130 cases were closed following another settlement chain process, 15 025 cases were closed following a payment of money, 2 651 cases were closed due to successful mediation procedure.

Out of the 126 753 cases "discontinued for other reasons" there were: 6 697 cases where the suspect is the subject of an alert (once a suspect is identified, the case may be reopened); 45 327 cases referred to another instance (such cases are closed for the prosecutor making this decision, while they are incoming cases for the recipient); 74 526 cases that were joined with others; 203 cases settled following processing without criminal prosecutions for unknown reasons/error.

As concerns the 36 068 cases brought to court, were taken into account all cases closed by direct citation (21 679) and all cases that take place under judicial instruction(14 389).

The decreases observed in respect of cases "concluded by a penalty" and "brought to court", have been explained by the decrease in the number of Covid-19 files following the relaxation of Corona measures. Such cases were solved mainly through payment or direct summons.

Q107 (2021): Annual statistics of the Public Prosecution services - Search and prosecution of criminal cases by the public prosecutor's offices at the courts of first instance (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.
The figures in the table have been extracted from the database of the College of General public prosecutors, which is fed by the records of the correctional sections of the public prosecutors' offices at the courts of first instance (MaCH system).
The unit of account is a criminal case: a case can have none, one or more defendants and/or one or more offences.
For point 3.4: In order to count the number of cases brought to courts (55 585 cases), we counted on the one hand all the cases that were closed as a result of a direct summons (41 324 cases) and on the other hand all the cases that were closed as a result of a first fixation before the council chamber in the framework of the settlement of the proceedings (14 261 cases). Indeed, all these cases are also counted as cases closed by the prosecution in the annual statistics of the Public Prosecution services (see table 9).
Additional information on point 3.2:
Of the 100 567 cases closed by a sanction or a measure imposed or negotiated by the King prosecutor (see table 9), 55 167 cases were closed following the payment of a penal transaction; 23 743 cases were closed following an administrative sanction; 19 169 cases were closed as a result of pre-trial probation; 2 446 cases were closed following a successful mediation procedure and measures; 42 cases were closed after referral to the head of the corps.

Q107 (2020): "The figures in the table have been extracted from the Data Bank of the College of Public Prosecutors, which is fed by the records of the correctional sections of the Public Prosecutor's Offices at the first instance courts (MaCH system). The data presented below correspond to the status of the database as of January 9, 2021. Useful notes for the interpretation of the data:
Of the 88,614 cases that ended with a sanction or a measure imposed or negotiated by the public prosecutor
- 48,205 cases were closed following the payment of a penal transaction, - 22,091 cases were closed following an administrative sanction
- 15.969 cases were closed as a result of pre-trial probation,
- 2.308 cases were closed following a successful criminal mediation procedure, - 41 cases were closed after referral to the head of the corps.
Of the 122,581 cases closed by the public prosecutor for other reasons. These are :
- 6,249 cases in which the suspect is the subject of an alert. Once the suspect has been discovered, the case can be reopened.
- 40,748 cases that were referred for disposition. A case that has been sent for disposal is a closed case for the prosecutor's office (its division) that made the decision. The recipient of this case will open a new case and start the judicial investigation.
- 75,584 cases were joined. If one or more cases are joined to a parent case, all subsequent decisions are registered in the parent case. The daughter case receives the joinder decision.
In order to count the number of cases brought before the courts (47,274 cases), in contrast to previous years, we counted on the one hand all cases that were closed as a result of a direct summons (33,105 cases) and on the other hand all cases that were closed as a result of a first determination before the council chamber within the framework of the settlement of the proceedings (14,169 cases). In fact, all these cases are also counted as cases closed by the public prosecutor's office in the annual statistics of the public prosecutor's office.
In the previous questionnaires we only counted direct summonses from the Public Prosecutor's Office to the correctional chambers (31,737 cases in 2020), summonses via accelerated procedure (1,159 cases in 2020) and correctionalizations (78 cases in 2020) and referrals to the correctional chambers of the courts following a first fixation before the council chamber within the framework of the settlement of the procedure (7,592 cases in 2020). A part of these referrals relates to cases that were initiated as a result of a civil action. Therefore, these cases were not initiated by the prosecution.
The numbers of incoming, processed and pending cases have all increased for the same reason. Indeed, in 2020, the health crisis due to the outbreak of COVID-19 began. The government took measures to combat this crisis, including several periods of containment. The Public Prosecutor's Office was responsible for taking criminal action against non-compliance with these measures, which explains the sharp increase in the number of new cases and the fact that, at the same time, the flow of other types of cases did not decrease in the same proportions.
Pending cases are cases that are being processed at a given time. If the inflow increases significantly, the number of pending cases will increase accordingly and reach a higher level.
The increase in the "terminated with penalty" and "brought to court" headings is also related to the health crisis. The primary response to a COVID-19 non-compliance violation was a settlement (recorded under "terminated by penalty"). In the case of non-payment of the settlement, repeat offenses, or serious violations of these measures, the criminal policy was to bring the case to court, given the importance of compliance with these measures. About half of the increase in court cases is due to the new methodology. The other half is explained by citations in health crisis cases, as explained above.

Q107-1 (General Comment): The guilty plea procedure was introduced by the law of February 5, 2016 (Article 216 of the Code of Criminal Investigation), which entered into force on February 29, 2016.
According to Article 216 of the CIC, §1, al.1 "For acts that do not appear to be of a nature to be punishable by a main imprisonment of more than five years, the public prosecutor may, either ex officio or at the request of the suspect or defendant or his/her lawyer, propose the application of the "procedure of prior acknowledgement of guilt" defined in this article, if the suspect or defendant admits to being guilty of the acts attributed to him/her". There are no national statistics available due to the lack of uniform coding rules.

Q109 (General Comment): The data do not include traffic offences, cases handled by the labor auditorates, or appeals against police decisions handled by the prosecutor's offices attached to teh first instance criminal courts.

Q109 (2021): The data do not include traffic law cases, cases handled by the labor auditorates, or appeals against police decisions handled by the correctional prosecutor's office.

Q013 (General Comment): Training budget for the public prosecutor's offices: the vast majority of training courses are open to both, judges and public prosecutors, as well as to non-judge and non-prosecutor staff. It is therefore very difficult to distinguish the training budget for the public prosecutor's offices. Only the total training budget (for judges and public prosecutors) is available.

Q013 (2023): 2023 Budget for training: total planned expenditure for courts and public prosecution services: EUR 2,573,900.00; total implemented budget for courts and public prosecution services: EUR 2,315,435.95'.

Q013 (2021): Approved budget (total €721 493 690): this budget represents the total budget allocated to the Court of Cassation, all ordinary courts except administrative courts, and the public prosecution services. It is not possible to isolate the approved budget of the Public Prosecutor's Office from the aforementioned total amount. Implemented budget (total €243 867 402): this total includes the operating costs of the public prosecution services (including staff costs, equipment) but excludes the budget for training.

Bulgaria

Q107 (General Comment): The following clarification is made on the specific indicators in the table:
“1. 1.Pending cases on 1 Jan. ref. year” – This refers to pre-trial proceedings pending with the prosecutor on 1 January of the reference year, where the investigation has been completed by an investigating body and sent to the prosecutor. PTP not closed by an investigating authority are not included under this indicator.
“2. Incoming/received cases” – Report the pre-trial proceedings for which an investigation by an investigative body was completed during the reference year and sent to the prosecutor for adjudication. The Prosecutor's Office reports as closed PTP cases with an investigation completed by an investigative body, not cases adjudicated by a prosecutor.
“3. Processed cases” – For this indicator, the number indicated for PTP represents the number of PTPs disposed by a prosecutor. This number is formed as the sum of the number of cases decided by the PTP prosecutor (either by an act of referral to court or by an act of discontinuance of pre-trial proceedings) and the number of pre-trial proceedings decided by the prosecutor by an act of suspension or referral to another prosecutor's office. Cases suspended and sent to the prosecutor's office are counted as decided by the prosecutor's office, but provisionally, not on the merits. The prosecutor's act of suspending PTP does not constitute a decision on the merits, as it does not put an end to the criminal proceedings and the work on them is only suspended temporarily, i.e. they are not investigated by the investigating authority.
With regard to the PTPs discontinued by the Prosecutor referred to under indicator “3.1. Discontinued during the reference year” the figure is formed by the sum of the data submitted under indicator “3.1.2. Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation”, including pre-trial proceedings terminated because the act was not committed or did not constitute a crime, as well as PTPs terminated due to statute of limitations; and the data submitted under indicator "3.1.4. Discontinued for other reasons”, reporting on PTPs discontinued/suspended and PTPs sent to the jurisdiction/sent by competence during the reporting period. The data on cases discontinued due to perpetrator of the crime not being identified are reported in indicator 3.1.4. This indicator (3.1.4.) reflects the total number of discontinued/suspended cases, without distinguishing between those discontinued due to failure to identify the perpetrator and those discontinued against a known perpetrator on other grounds. It should be borne in mind that PTPs suspended by limitation and PTPs sent to the competent prosecutor's office (by the sending prosecutor's office) are counted as PTPs resolved, so their number is included under the indicator 'Processed cases (3.1+3.2+3.3)', but not under the indicator 'Incoming/received cases '.
Indicators “3.1.1. Discontinued by the public prosecutor because the offender could not be identified”, “3.1.3. Discontinued by the public prosecutor for reasons of opportunity” and 3.2. “Concluded by a penalty or a measure imposed or negotiated by the public prosecutor” are not applicable to prosecutors' rulings according to the CCP, and therefore no data are presented.
“3.3. Cases brought to court” – This indicator takes into account the number of pre-trial proceedings brought to court with a prosecutor's report during the reference year.
In the official statistical reporting of the PRB, a criminal case is reported as brought to cour

t if at least one prosecutorial act has been submitted to the court – an indictment; a proposal for an agreement under Article 381 of the Penal Procedure Code; a proposal for exemption from criminal liability and imposition of an administrative penalty under Article 78a of the Criminal Code, and a proposal for an agreement under Article 375a(1) of the Penal Procedure Code. However, more than one prosecutorial act may be submitted to the court in relation to a single pre-trial proceeding (e.g. an agreement in relation to one person and an indictment in relation to the other defendants). The prosecutorial acts submitted give rise to court cases in which prosecutors participate in court hearings, including when a proposal has been submitted to settle the case by agreement. A case is also opened in court, in which the prosecutor, the defendant and his defence counsel appear, and the court issues a judicial act. It should be noted that the official statistics of the PRB do not explicitly collect data on the number of pre-trial proceedings in which an indictment has been filed (the acts are counted, not the cases). Since there can only be one indictment per pre-trial proceeding, we have assumed that the number of pre-trial proceedings with an indictment is equal to the number of indictments. However, the official statistics of the PRB do not explicitly collect data on the number of pre-trial proceedings brought before the court with proposals for agreements under Article 381 of the Penal Procedure Code, proposals for exemption from criminal liability and imposition of administrative penalties under Article 78a of the Criminal Code, and proposals for agreements under Article 375a(1) of the Penal Procedure Code. In order to obtain this data, the number of pre-trial proceedings in which an indictment has been filed is subtracted from the total number of pre-trial proceedings brought before the court. Cases resolved by agreement or proposal under Article 78a of the Criminal Code can be indicated as a total number, without being able to distinguish them by type of prosecutorial act. “4. Pending cases on 31 Dec. ref. year” – This refers to PTPs remaining with the prosecutor for resolution as of 31 December of the reference year, where the investigation has been concluded by an investigating authority and sent to the prosecutor. The indicator does not include PTPs pending prosecution by an investigating authority as of 31 December.
Regarding the cases sent by competence, the mathematical calculation for collecting the values is not applicable for the two prosecutor's offices - one that sent it by competence (according to the rules of local, functional or special competence), for which the case was decided “discontinued case for other reasons“ and the other, which accepted it within its competence, if at the end of the year the same case remained pending, the latter is included in the above data.

Q107 (2024): The official statistics of the PORB also report and aggregate data on other indicators of pre-trial work that cannot be identified or do not match the indicators in the Questionnaire, therefore the following clarification is made:
According to the reporting system introduced in the PORB, pretrial proceedings are reported as: Monitored, Closed (with investigation completed by investigating authority) and Resolved (by a prosecutor).
Supervised pre-trial proceedings include: the newly initiated PTPs during the reporting period, in this case 2024 (89 145 PTPs), the PTPs pending by an investigating authority at the end of the previous reporting period (57 495 PTPs), the PTPs pending by a prosecutor at the end of the previous reporting period (4 163 PTPs), the PTPs received under the jurisdiction during the reporting period, the PTPs returned by the court as well as by a prosecutor (incl. PTPs decided in previous periods but returned during the reporting period), PTPs reopened during the reporting period, PTPs merged (joined) and PTPs split.
For statistical reporting purposes in the PORB (and not pursuant to the CCP), a pretrial proceeding is reported as resolved when any of the following prosecutor's decisions are made: a decree to send the PTP to the competent jurisdiction, a decree to suspend the PTP, a decree of discontinuance, a prosecutor's act to bring the case to court – indictment, a proposal for a settlement under Article 381 CCP, a proposal under Article 375 CCP, in conjunction with Article 78a CCP, for exemption from criminal responsibility with the imposition of an administrative penalty, and a proposal for a settlement under Article 375a(1) CCP.
The statistical analysis distinguishes between the total number of cases decided in which one of the above-mentioned prosecutor's acts was handed down and the cases decided on the merits. Cases decided on the merits are only those decided by a decision to discontinue the criminal proceedings or by a prosecutor's act to bring the case to court, which concludes the pre-trial phase. PTPs decided by a decision to suspend and refer are not included as they do not end the pre-trial phase/criminal proceedings. PTPs sent to the jurisdiction are reported by the sending prosecutor's office as monitored PTPs and resolved PTPs, but are not reported as PTPs closed by the investigating authority. PTPs discontinued due to the expiry of the statutory limitation period (under Article 24(1)(3) CCP) shall be counted as PTPs observed and decided, but shall not be counted in the number of PTPs discontinued as they were already counted as such when they were discontinued. Suspended PTPs in previous periods are not counted in the total number of PTPs observed during the reference period, except in cases where the suspended PTP is resumed, where it is included in the number of PTPs observed and according to its current status at the end of the period.

Q107 (2023): The data in the table, are derived from the official statistical reporting of the PTB for 2023, according to the indicators and order defined by the Guideline on the organization of information activities in the PTB, approved by order of the Attorney General, as follows point by point:
1) in the indicator "Pending cases as of January 1 of the reference year", the pending pre-trial proceedings (PTP) by a prosecutor as of January 1 of 2023 are reported
2) the indicator "Incoming/received cases" reports the closed PTPs by an investigating authority.
3) the "Processed cases" indicator reports PTPs processed of by a prosecutor and is the sum of data from the three indicators (3.1+3.2+3.3), with PTP disposition types reflected. This number is formed as the sum of the number of PTP decided by a prosecutor on the merits (by an act to bring the case to court or by an act to terminate the pre-trial proceedings), and the number of pre-trial proceedings that the prosecutor decided by an act to suspend them or to send them to another prosecutor's office.
3.1) The indicator "Discontinued during the reference year" takes into account the discontinued PTP, including those due to prescription, the suspended PTP and the PTP sent to the jurisdiction and is the sum of the data from the following four indicators.
(3.1.1 + 3.1.2 + 3.1.3 + 3.1.4), reflecting the types of terminations:
3.1.1) in indicator "Discontinued by the public prosecutor because the offender could not be identified", no data is shown as it is not applicable.
3.1.2) in indicator "Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation", PTP terminations are reported, including those due to statute of limitations.
3.1.3) in the indicator "Discontinued by the public prosecutor for reasons of opportunity" – no data is provided as it is not applicable.
3.1.4) in indicator "Discontinued for other reasons" – PTPs terminated are reported, as well as PTPs sent to another prosecutor's office for jurisdiction. These cases are considered closed/resolved for the respective prosecutor's office, albeit without a final decision on the merits.
3.2) in indicator "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor" – not applicable. No data is provided.
3.3) in indicator "Cases brought to court", PTP filed in court are reported.
4) In the indicator "Cases pending on December 31 of the reference year", the PTP pending by the prosecutor as of December 31, 2023 are reported.
The official statistics of the PORB also report and aggregate data on other indicators of pre-trial work that cannot be identified or do not match the indicators in the Questionnaire, therefore the following clarification is made:
According to the reporting system introduced in the PRB, pretrial proceedings (PTP) are reported as: Monitored, Closed (with investigation completed by investigating authority) and Resolved (by a prosecutor).
Supervised pre-trial proceedings include: the newly initiated PTPs during the reporting period, in this case 2023 (89 580 PTPs), the PTPs pending by an investigating authority at the end of the previous reporting period (57 495 PTPs), the PTPs pending by a prosecutor at the end of the previous reporting period (4 208 PTPs), the PTPs received under the jurisdiction
ical reporting purposes in the PTP (and not pursuant to the CCP), a pretrial proceeding is reported as resolved when any of the following prosecutor's decisions are made: a decree to send the PTP to the competent jurisdiction, a decree to suspend the PTP, a decree of discontinuance, a prosecutor's act to bring the case to court – indictment, a proposal for a settlement under Article 381 CCP, a proposal under Article 375 CCP, in conjunction with Article 78a CCP, for exemption from criminal responsibility with the imposition of an administrative penalty, and a proposal for a settlement under Article 375a(1) CCP.
The statistical analysis distinguishes between the total number of cases decided in which one of the above-mentioned prosecutor's acts was handed down and the cases decided on the merits. Cases decided on the merits are only those decided by a decision to discontinue the criminal proceedings or by a prosecutor's act to bring the case to court, which concludes the pre-trial phase. PTPs decided by a decision to suspend and refer are not included as they do not end the pre-trial phase/criminal proceedings. PTPs sent to the jurisdiction are reported by the sending prosecutor's office as monitored PTPs and resolved PTPs, but are not reported as PTPs closed by the investigating authority. PTPs discontinued due to the expiry of the statutory limitation period (under Article 24(1)(3) CCP) shall be counted as PTPs observed and decided, but shall not be counted in the number of PTPs discontinued as they were already counted as such when they were discontinued. Suspended PTPs in previous periods are not counted in the total number of PTPs observed during the reference period, except in cases where the suspended PTP is resumed, where it is included in the number of PTPs observed and according to its current status at the end of the period.

Q107 (2022): “1. Pending cases on 1 January of the reference year” – pre-trial proceedings (PTP) pending with the prosecutor as of 1 January of the reference year (4 205) for which the investigation has been completed by an investigative body and sent to the prosecutor (PTPs closed by an investigating authority (47 969) are not included). “2. Received/Incoming cases” – PTP in which an investigation by an investigative body was completed during the reference year and sent to the prosecutor for adjudication. In the Prosecutor's Office the term closed PTP refers to cases with a completed investigation by an investigative body, not cases resolved by a prosecutor “3. Processed cases” – the figure of 161,905 PTP is the sum of the number of PTP decided on merits by the prosecutor (by act of bringing the cases to court or by act of termination the pre-trial proceedings), and the number of pre-trial proceedings decided by the prosecutor by act of suspending them or sending by competence during the reporting period to another prosecutor's office. Cases suspended and sent by competence are reported as resolved by the prosecution, but temporarily, not on the merits. The prosecutor's act of suspension of PTP does not constitute a decision on the merits, as it does not put an end to the criminal proceedings and the work on them is only temporarily suspended, i.e. they are not investigated by the investigating authority. "3.1. The number of PTPs discontinued during the reference year" is 133 466, the figure being formed by the sum of the data submitted under indicator "3.1.2. Terminated by the prosecutor due to the lack of an established offence or a specific legal situation" (98 306), including pre-trial proceedings terminated because the act was not committed or did not constitute an offence, pursuant to Art. 243(1), in conjunction with Art. 1(1) of the CPC, (31 302) and PTPs terminated due to the statute of limitations (67 004), and the data submitted under indicator "3.1.4 Discontinued for other reasons" (35 160), taking into account the suspended PTPs and the pre-trial proceedings sent by competence during the reporting period Indicators "3.1.1 Discontinued by the public prosecutor because the offender could not be identified", "3.1.3 Discontinued by the public prosecutor for reasons of opportunity" and 3.2. "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor" are not applicable to the decisions of prosecutors according to the CCP, as indicated in the Questionnaire. “3.3. Cases brought to court" – PTP brought to court with a prosecutor's report in the reference year – 28 439. “4. Pending cases on 31 December" – PTP pending with the prosecutor on 31 December of the reference year (4 208), where the investigation has been completed by an investigating authority and sent to the prosecutor. The indicator does not include PTPs pending with an investigating authority, which total 52 423 as of 31 December 2022.

Q107 (2021): 3.1. Discontinued during the reference year (3.1.1+3.1.2+3.1.3+3.1.4.)
The number of discontinued cases in the reference year (in the case of 2021) is 101626. This number includes all discontinued criminal proceedings by the prosecutor in the year on the basis of Art. 24 of the Criminal Procedure Code, including those terminated due to the expiration of the statute of limitations on the basis of Art. 24, para. 1, item 3 of the Criminal Procedure Code (criminal liability is extinguished due to the expiration of the statute of limitations).
The number of cases terminated on statute of limitations grounds is a fact of objective reality, which does not depend on the prosecution. This number is a function of the number of the pending pre-trial proceedings, incl. suspended (predominantly due to failure to establish the perpetrator of the crime during the investigation), as well as the specific crime on which the case is being prosecuted, as the absolute statute of limitations for seeking criminal liability is different and depends on the amount of the penalty provided for in the Criminal Code for the relevant crime (according to Art. 81 of the Criminal Code).
The increase in the number of dismissed cases for 2021 compared to those dismissed in 2020 is mainly due to the greater number of dismissed cases by the prosecutor on the grounds of absolute statute of limitations for prosecution, which obliges the prosecutor to dismiss the case on the basis of Art. 24, para. 1, item 3 of the Criminal Procedure Code. This conclusion is supported by the statistical data for the two years - in 2021, the dismissed cases, on grounds other than the statute of limitations, are relatively similar: 32,400 for 2021 compared to 32,002 for 2020. However, those dismissed on statute of limitations grounds in 2021 are 69,226, and in 2020 - 42565. It can be seen that in 2021 the terminated pre-trial proceedings were significantly more than in the previous year. There is no evidence that this increase is due to any special or extraordinary circumstance that occurred in 2021. Each year the number of cases dismissed on statute of limitations grounds is different and this is due to the above reasons.

Q107 (2020): Question 107:
1)"Pending cases on 1 Jan. ref. year" the unresolved pre-trial proceedings (PTPs) by a prosecutor as of 1 January of the reference year are reported.
2)“Incoming/received cases” are reported the closed PTPs (analogous to the previous questionnaires);
3)“Processed cases” are reported the decided PTPs by a prosecutor and is the total value of the data from four indicators (3.1 + 3.2 + 3.3 + 3.4), with reflected types of decisions under the PTPs;
3.1.)“Discontinued during the reference year” the terminated PTPs (including those by prescription) are reported and is the total value of the data from the next four indicators (3.1.1 + 3.1.2 + 3.1.3 + 3.1.4.), with reflected types of terminations;
3.1.1)"Discontinued by the public prosecutor because the offender could not be identified" indicates NAP (similar to the previous questionnaire);
3.1.2 "Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation" are reported the terminated PTPs, incl. those by prescription (similar to the previous questionnaires);
3.1.3)"Discontinued by the public prosecutor for reasons of opportunity " the NAP is indicated (analogous to the previous questionnaires); 3.1.4) the indicator "Discontinued for other reasons" indicates NAP (similar to the previous questionnaire);
3.2)"Concluded by a penalty or a measure imposed or negotiated by the public prosecutor " is indicated NAP (analogous to the previous questionnaires);
3.3)“Cases closed by the public prosecutor for other reasons” the suspended PTPs are reported, as well as the PTPs sent by competence (for the respective prosecutor's office, although these cases are essentially unresolved they are closed). It is not obligatory for the prosecutor's office, which sent the case within its competence, to conduct a full investigation. If a ground for the competence of another prosecutor's office is established under the rules of local, functional or special competence, the case shall be sent to the respective prosecutor's office for continuation of the investigation. The grounds for determining the competence are exhaustively specified in the CPC (Chapter Four, Section II of the CPC, Article 35 et seq. Of the CPC, Article 195 of the CPC, Articles 396-398 of the CPC, Article 411a of the CPC);
3.4) in the indicator “Cases brought to court” the submitted PDs in the court are reported (analogous to the previous questionnaires);
4) in the indicator “Pending cases on 31 Dec. ref. year” the unresolved PDs by a prosecutor as of December 31of the reference year are reported;
Concerning the increase in the number of processed cases between 2018 and 2020, the number of "cases closed by the prosecutor for other reasons", taken into consideration for this cycle, makes the differnce.

Q107-1 (General Comment): The indicator "Before the main trial" takes into account the agreements submitted to the court by the prosecutor on the basis of Article 381 CCP and on the basis of Article 375a(1) CCP (the latter was introduced by the Law on the Internal Revenue Code, promulgated, SG No. 48 of 2023), while the indicator "During the main trial" gives a value, which is the sum of the number of agreements under Article 384 CCP (with a person or for any of the offences) concluded by the prosecutors in the trial phase (after an indictment has been filed), by the number of proceedings under the summary trial procedure under Article 371, item 2 CCP (under Chapter Twenty-Eight CCP, under Article 373(3), in conjunction with Article 372(4), in conjunction with Article 371(2) CCP), in which convictions have been handed down (similar to the previous questionnaires), and by the number of agreements under Article 375a(3) CCP, in conjunction with Article 78a CCP, concluded by prosecutors in the judicial phase (after an indictment has been filed or after the submission of orders for exemption from criminal liability with the imposition of an administrative penalty).
Thus, of the 10 571 plea procedures during the trial, 8 049 were agreements concluded under Article 384 CCP, 906 were agreements concluded under Article 375a(3) CCP, and 1 616 were summary proceedings under Article 373(3) in conjunction with Article 372(4) in conjunction with Article 371(2) CCP.
In the indicator "Total number of guilty plea procedures" the aggregate of the above two indicators is indicated.

Q107-1 (2023): The indicator "Before the main trial" takes into account the agreements submitted to the court by the prosecutor on the basis of Article 381 CCP and on the basis of Article 375a(1) CCP (the latter was introduced by the Law on the Internal Revenue Code, promulgated, SG No. 48 of 2023), while the indicator "During the main trial" gives a value, which is the sum of the number of agreements under Article 384 CCP (with a person or for any of the offences) concluded by the prosecutors in the trial phase (after an indictment has been filed), by the number of proceedings under the summary trial procedure under Article 371, item 2 CCP (under Chapter Twenty-Eight CCP, under Article 373(3), in conjunction with Article 372(4), in conjunction with Article 371(2) CCP), in which convictions have been handed down (similar to the previous questionnaires), and by the number of agreements under Article 375a(3) CCP, in conjunction with Article 78a CCP, concluded by prosecutors in the judicial phase (after the submission of orders for exemption from criminal liability with the imposition of an administrative penalty).
Thus, of the 10 691 plea procedures during the trial, 8 589 were agreements concluded under Article 384 CCP, 472 were agreements concluded under Article 375a(3) CCP, and 1 630 were summary proceedings under Article 373(3) in conjunction with Article 372(4) in conjunction with Article 371(2) CCP.
In the indicator "Total number of guilty plea proceedings" the aggregate of the above two indicators is indicated.

Q107-1 (2022): - in the "Total number of guilty plea procedures" indicator, the total value of the following two indicators is indicated;
- in the indicator "Before the main trial" the agreements submitted to the court by the prosecutor on the basis of Art. 381 et seq. of the Criminal Procedure Code.
- in the indicator "During the main trial" a value is indicated, which is the sum of the number of agreements under Art. 384 of the Criminal Procedure Code (with a person or for any of the crimes), concluded by the prosecutors in a court phase (after the indictment has been filed), as well as the number of procedures under reduced court investigation under Art. 371, item 2 of the Criminal Procedure Code (under Chapter Twenty-Seven of the Criminal Procedure Code, pursuant to Art. 373, paragraph 3, article 372, paragraph 4, article 371, item 2 of the Criminal Procedure Code), under which convictions and acquittals have been handed down (analogous to the previous questionnaires). Out of 10 541 procedures for admission of guilt during the trial, 9 113 were the agreements concluded under Art. 384 of the Criminal Procedure Code.

Q107-1 (2020): Question 107–1:
– the indicator "Total number of guilty plea procedures" indicates the total value of the next two indicators;
– in the indicator "Before the main trial" the agreements submitted by a prosecutor to the court are taken into account (analogous to the previous questionnaires);
– in the indicator “During the main trial” a value is indicated, which is the sum of the number of agreements under Article 384 of the Criminal Procedure Code (with a person or for any of the crimes), concluded by the prosecutors in a court phase (after an indictment has been filed), as well as by the number of procedures under the abbreviated court investigation under Article 371, item 2 of the CPC (under Chapter Twenty-eight of the CPC, pursuant to Article 373, para. 3, supra Article 372, para. 4, supra Article 371, item 2 CPC), under which there have been convictions and acquittals (similar to the previous questionnaires).

Q109 (2024): The figures in the table in question 107 include criminal cases for traffic offences which constitute a public crime under the Bulgarian Criminal Code.
Q109 (2022): Only the cases for violations that constitute a crime of a general nature under the Bulgarian Criminal Code are included.
Q109 (2021): Statistical reporting of the PORB. The data are derived from the statistical reporting of the PORB, according to indicators and order, approved by the Prosecutor General with the Instruction for the organization of the information activity in the PORB.

Q013 (General Comment): The Prosecutor's Office prepares a consolidated budget for all units, namely district, regional, military-regional, appellate, military-appellate prosecutor's offices, the administration of the European delegated prosecutors, training and rest bases and submits it to the Supreme Judicial Council (SJC). Pursuant to Article 361 of the Judicial System Act, the budget of the PRB includes all revenues from the activity, maintenance costs, relations with the central budget and other budgets.
The budget procedure is carried out in two stages. First stage - preparation of a medium-term forecast for a period of three years. Second stage - preparation of a draft budget for the relevant year and updated budget forecasts for the next two years. The Minister of Justice proposes a draft budget for the judiciary and submits it for discussion in the Plenum of the SJC. The draft budget of the judiciary is accompanied by estimates for the next two years. The Council of Ministers submits to the National Assembly the draft law on the state budget of the Republic of Bulgaria for the relevant year together with the draft annual budget of the judiciary, proposed by the plenary session of the SJC, with a detailed justification. When adopting the state budget, the National Assembly listens to a report of the plenary session of the SJC, presented by its representative. The National Assembly adopts the budget of the judicial power, allocated to the SJC, the Inspectorate of the SJC, the bodies of the judicial power, including PRB and the National Institute of Justice (NIJ).
The Plenum of the SJC organizes the execution of the budget of the judiciary through the Inspectorate of the SJC, the Supreme Court of Cassation, the Supreme Administrative Court, the courts, the Prosecutor General and the National Institute of Justice. The PRB is a second-level budget manager and all units of the PRB system are third-level budget managers. For third-level managers, the budget manager is the relevant manager.
1. Preparation and presentation of a draft budget for the current budget year. The Law on the State Budget of the Republic of Bulgaria adopts the budget of the judiciary, including the Prosecutor's Office of the Republic of Bulgaria. By decree of the Council of Ministers, the main parameters and Guidelines for the implementation of the budget are given.
2. Budget adjustments. Currently, during the calendar year, the Prosecutor General submits proposals for updating to the Budget and Finance Committee of the SJC

Q013 (2024): The specific indicators in the table are explained as follows:
For the total annual public budget allocated to the prosecution service, the column ‘Approved budget’ shows the budget of the Prosecutor's Office of the Republic of Bulgaria as finally approved by the SJC on 31 December 2024, which is updated and amended during the budget year by decisions of the Plenary Session of the SJC.
For the total annual public budget allocated to the prosecution service, the column ‘Executed budget’ shows the amount corresponding to the actual reported expenditure at cash level as at 31 December 2024.
In section 13.1 Annual public budget allocated for training of the prosecution services, the column ‘Approved budget’ shows the approved budget for all structural units of the Prosecutor's Office for training in 2024. In section 13.1 Annual public budget allocated for training of the prosecution services, in the column ‘Executed budget’, the amount corresponding to the actual reported, actual expenses for training at cash level as at 31 December 2024 is indicated. The difference between the approved/planned and implemented/spent funds for training in 2024 is due to savings achieved at the level of actual expenditure at lower rates than that forecast. The amounts indicated are in EUR.

Q013 (2023): Q 13 – There are objective reasons for the high growth in the approved (and respectively implemented) training budget in 2023 compared to 2022. On the one hand, there was higher activity of magistrates in organizing and participating in external trainings (organized by other institutions, forums, etc. with participation fees) after the lifting of the COVID 19 quarantine.
On the other hand the in-person trainings in the learning facilities and training centers of the Prosecutor's Office of the Republic of Bulgaria were minimized or not conducted during the coronavirus period according to the internal training calendar. In addition, by Decision under Protocol No. 8/10.03.2022, p. 3 of the Plenum of the Supreme Judicial Council a positive opinion was expressed that the Prosecutors' Training Base - Recreational Facility "Izgrev" in the town of Byala, assigned to be managed by the Prosecutor General of the Republic of Bulgaria, should be provided for temporary use by evacuating representatives of the judiciary in the Republic of Ukraine and their family members and/or Bulgarian citizens and Bulgarians with Ukrainian citizenship living in Ukraine, including in the event of evacuation. In 2022, due to the accommodation of refugees from Ukraine, the base in Byala could not be used for conducting trainings/seminars, which is also the reason for the higher increase in funds for training magistrates planned for 2023 after the base is emptied of refugees.

Q013 (2022): Supreme Judicial Council: The implemented budget differs from the approved due to unspent funds for major repairs, acquisition of long-lasting tangible and intangible assets, as well as current repairs due to unfinished procedures under the Law on Public Procurement (LPP).
The Prosecutor's Office:
The difference between the approved and the executed budget lies in the fact that the approved budget corresponds to the budget of the Judiciary, including the Prosecutor's Office of the Republic of Bulgaria, adopted by the State Budget Act for 2022 – SBRBA (as of 01.01.2022), while the executed budget corresponds to the actual expenditures as of 31.12.2022 – at the cash level.
Specifically, at the beginning of 2022, funds for training amounting to BGN 23 800 are planned. (EUR 12 169). The information is based on summary draft budgets for all structural units in PORB for 2022, prepared at the end of January 2022. At the end of the reference year (as at 31.12.2022), approximately BGN 14,129 had actually been spent at cash level (EUR 7 224). The lower implementation is to some extent due to both organisational (most of the training organised and delivered was conducted online) and financial reasons (in 2022, the SBARB was adopted later – on 4 March 2022).
A comparison of data for several consecutive years – 2020, 2021 and 2022 – shows an increase in the planned training funds for the respective years (given the increase in the cost of posting and services) and a decrease in the actual spent ones in relation to the restrictive measures introduced during the coronavirus pandemic and conducting online trainings instead of face-to-face ones, resulting in a decrease in spending.

Q013 (2021): The implemented budget differs from approvals due to unspent funds for major repairs, acquisition of durable tangible assets and current repairs due to unfinished procedures under the Public Procurement Law and restrictive measures related to COVID-19.
The source of the data for the approved and implemented budget, including for the Trainings in the Prosecutor's Office of the Republic of Bulgaria, is the Annual Financial Report of the Public Prosecutor's Office for 2021.
As to the annual public budget allocated to training of public prosecutors, it should be recalled that the significant reduction in 2020 of this budgetary component was the result of the declared in March 2020 extraordinary epidemic situation in Bulgaria, as well as the restrictive measures related to the spread of COVID-19.

Q013 (2020): The significant differences in the approved and implemented budget for 2020 compared to 2018 for the prosecution are due to the reasons set out in the remarks on question 6, namely - increase in funds for remunerations by 10% in 2019 and in 2020, increase the amount of the minimum wage, which is the basis for determining payments under contracts. There is also an increase in the compensations under the JSA and LC by EUR 786,870 compared to 2018, as well as the planned and paid funds for apparel. For detailed information - see question 6.
The implemented budget differs from the approved one due to unspent funds for major repairs, acquisition of tangible fixed assets and current repairs due to unfinished procedures under the Public Procurement Act and restrictive measures related to COVID 19.
The source of the data for approved and implemented budget, including for Trainings in the Prosecutor's Office of the Republic of Bulgaria is the Annual Financial Report of the Prosecutor's Office of the Republic of Bulgaria for 2020.
The probability of a significant reduction of the utilized budget for training of prosecutors is the declared in March 2020 extraordinary epidemic situation in Bulgaria, which continues to this day, as well as the restrictive measures related to the spread of COVID-19.

Croatia

Q107 (General Comment): Discontinued for other reasons: cases can be discontinued for reasons such as circumstances which exclude guilt, the fact that there is no reasonable suspicion that the suspect committed particular criminal offence, in the case when criminal complaint is not credible. The reason for discontinue the case can be if the data in the criminal complaint indicate the conclusion that the complaint is not credible.
Cases closed by the public prosecutor for other reasons: cases can be closed for reasons such as the existence of circumstances that preclude the guilt of the defendant or there is no evidence that the defendant committed the offence. Other reasons: If the data in the criminal complaint indicate the conclusion that the application is not credible.

Q107 (2024): The calculation of the vertical discrepancy in the table results in the following: (56,550 + 42,187) - 41,035 = 57,702. The total number of pending cases as of December 31 is 61,969, reflecting a 9.59% increase in discrepancy compared to the previous reporting period.
It is important to highlight that the data requested in the questionnaire are not fully aligned with the statistical reporting framework employed by the State Attorney’s Office. This discrepancy is evident in sections 3.1.1 and 3.1.2, where the responses were marked as NA (not available), and in section 3.2, marked as NAP (not applicable). Section 3.1.3 includes data on decisions not to initiate proceedings under the principle of opportunity, but only in relation to juvenile offenders, as these are the only such cases recorded separately in statistical reports. For other offenders, only the overall number of dismissals is provided, without distinguishing whether they were based on the principle of expediency.
The questionnaire instructions clarify that when several NA and NAP responses are present—as is the case here—the standard requirement for vertical and horizontal consistency of the data in the table does not apply. Part of the observed discrepancy can be attributed to the increase in pending cases by the end of the year, which rose to 61,969 from 56,550 in the previous year.
The rise in case numbers can be attributed, among other things, to vacant positions for deputy prosecutors and legal advisors, which has led to an above-average workload for the remaining staff, as well as a higher number of hearings and court sessions. Additionally, question 107 in category 3.2 did not initially include plea agreements, although these were later entered under question 107-1.

Q107 (2022): Data source: Report of the Attorney General of the Republic of Croatia on the work of state attorneys' offices in 2022.
*3.1. the total number of cases are completed with the adoption of a decision on the dismissal of the criminal report or a decision on the suspension of the investigation, however statistical data are not reccorded according to the categories requested in the table (15,414).
**3.1.3. the data includes only juvenile offenders, as data in relation to other offenders is not available in the aforementioned Report.
For 2022, the data in section 3.1 (Discontinued during the reference year) also include data from section 3.1.4 (Discontinued for other reasons), which for 2021 were presented in section 3.3. (cases closed by public prosecutor for other reasons).
It is necessary to take into account the statistical specifics of the presentation of individual decisions, because the questionnaire asks for data in a way that is not harmonized with the statistical presentation of the work of the state attorney's office. This is why there are certain statistical deviations because the data is not compared in the annual report of the State Attorney's Office of the Republic of Croatia. Besides, due to the overloading of certain state attorney's offices, specifically for the Municipal Criminal State Attorney's Office in Zagreb, 1,060 cases were delegated to other state attorney's offices, which statistically for the Zagreb Municipal Criminal State Attorney's Office is shown as a transfer of cases and also included in the number of cases resolved by the state attorney's office to another method (that is, for 2022 in section 3.1.4, which is included in the total in section 3.1). So, in fact, the increase in the number of cases discontinued during the reference year is an increase that occurred due to the statistical method of presentation, and not a real increase.

Q107 (2021): Source of information: Report of the Chief State Attorney of the Republic of Croatia on the work of State Attorney's offices in 2021
3.1. the total number of cases completed by adopting a decision rejecting criminal charges or a decision terminating the investigation is presented, however, statistical data are not kept by categories requested in the table
3.1.3. There was 523 discontinued cases by the public prosecutor for reasons of opportunity (data covers juvenile perpetrators only because data in relation to other perpetrators is not available).

Q107 (2020): Reason for decreased number of incoming cases same as for the courts - pandemic of COVID-19.
Discontinued cases decreased - same as for the courts (COVID-19), please see comment in Q091.
For the category 3.1. Discontinued during the reference year (3.1.1+3.1.2+3.1.3+3.1.4.), PP is not able to differ categories 3.1.1., 3.1.2 and 3.1.4.

Q107-1 (General Comment): In criminal proceedings, the defendant is granted the right to plead guilty (for all or a number of the counts of the charge) and reach agreement on the sanction. If the defendant pleads guilty and no agreement on the sanction is reached, the panel shall confirm the indictment and a trial must be scheduled. The parties may negotiate on the conditions of pleading guilty and agreeing on a sanction. During these negotiations, the defendant shall have a defence counsel. If the president of the panel is served with a confirmed indictment to which the accused has pleaded guilty, the proposing of evidence for the trial shall be limited only to the evidence which concerns the decision on criminal-law sanctions. Where the accused pleads guilty to all counts of the charge, the president of the panel shall instruct him/her that he/she may immediately state his/her position on all the circumstances that incriminate him/her and present all the facts in his/her favour, after which the accused shall be interrogated. The guilty plea does not exempt the court from its duty to present other evidence as well. If the confession of the accused at the trial is complete and in accordance with the evidence already gathered, the court shall, in the course of evidentiary proceedings, present only those pieces of evidence that relate to the decision on punishment or other sanction. The State Attorney’s Office keeps only a track record on the judgments rendered by the court in the guilty plea procedure and no distinction can be made between the number of guilty plea procedures “before the court case” and their number “during the court case”.

Q107-1 (2024): In response to question 107-1 (guilty plea procedure), information on judgments based on plea agreements was provided only under the "Before the main trial" section. The "During the main trial" section was marked as NAP (not applicable), as our legal system does not recognize a formal procedure for plea agreements during the trial. The reason for the increase relates to more frequent use of guilty plea procedures in 2024. The emphasis on utilizing such procedures stems from their ability to expedite court proceedings, enhance overall efficiency, and significantly reduce expenditures from the national budget."
Q107-1 (2023): Regarding question 107-1 (guilty plea procedure), data on judgments based on the parties' agreement were entered only in the column "Before the main trial," while the column "During the main trial" was entered as NAP (not applicable) because our country lacks a formal institute for communication during the discussion.
The stated discrepancy percentage of 21.77% can be attributed to the strike.

Q107-1 (2022): Data source: Report of the Attorney General of the Republic of Croatia on the work of state attorneys' offices in 2022.
* The data refer to cases under the jurisdiction of county state attorneys' offices and the Office for the Suppression of Corruption and Organized Crime
**The data refer to cases under the jurisdiction of the municipal state attorney's offices, with a note that certain severe criminal cases are also under their jurisdiction, however, statistical data are presented in total for all criminal offenses under the jurisdiction of the municipal state attorney's offices without separating them into "lighter" and "serious" crimes.
The number of agreements from municipal jurisdiction was 318 in 2022, and 242 in 2021, which represents a true increase of 31%. There is no particular reason for this increase, as it is a number that varies depending on the specifics of each reporting period (for example, it was 190 in 2018, 2019 -315, 2020 -266, 2021 -242 and 2022 -318). In fact, it is about the decisions of the court that should accept the agreement proposal submitted jointly by the state attorney's office and the defence. The State Attorney's Office strives to increase the number of agreements concluded every year in order to shorten court proceedings and relieve the work of the State Attorney's Office and the court, which is why the number of judgments based on the parties' agreement is monitored and analysed. However, the state attorney's office tries to maintain an appropriate criminal policy and insists on compensation for damages for victims, which is why the state attorney's office's proposals for agreements are not acceptable for defence in conditions of slow trials due to the significant workload of the courts, and realistically the number of agreements is not high. For this reason, data on the number of verdicts based on agreements in the annual report of the State Attorney's Office of the Republic of Croatia are considered in relation to the total number of convictions. In 2022, agreements from municipal jurisdiction accounted for 2.19% of the total number of convictions from municipal jurisdiction, which is only a slight increase of 0.62% compared to 2021, when agreements accounted for 1.68% of the total number of convictions % which actually does not represent a significant difference and is therefore not commented on.

Q107-1 (2021): Source of information: Report of the Chief State Attorney of the Republic of Croatia on the work of State Attorney's offices in 2021
Data under Severe criminal cases refers to cases under the jurisdiction of county state attorney's offices and the Office for the Suppression of corruption and organised crime
Data under Misdemeanour and / or minor criminal cases refers to cases under the jurisdiction of municipal state attorney's offices, noting that certain severe criminal cases are also within their jurisdiction, however, statistical data are presented in total for all criminal offences under the jurisdiction of municipal state attorney's offices, without separating them into “lighter” and “more serious” criminal offences.

Q109 (2024): In question 109, the answer "yes" was submitted, indicating that the data in question 107 includes only criminal violations against traffic safety.
Specifically, evaluating the Croatian version of Directive 2015/413 of March 11, 2015, it was discovered that "road traffic offense cases" were rendered as traffic violations

Q109 (2023): In question 109, the answer "yes" was submitted, indicating that the data in question 107 exclusively covers criminal violations against traffic safety.
Specifically, evaluating the Croatian version of Directive 2015/413 of March 11, 2015, it was discovered that "road traffic offense cases" were rendered as traffic violations.

Q109 (2022): The data includes cases of criminal offenses committed in traffic.

Q013 (2024): The increase compared to the previous period is due to the implementation of mandatory consultations and seminars for judicial officials, as well as the rise in training fees and associated costs related to the training (such as accommodation, travel, etc.).
Q013 (2023): In the previous period, there were more on-line educations, and therefore in the observed period there was an increase in planned and executed funds.
Q013 (2022): The stated amount differs from the previously submitted data because of an increase in the base for civil servants and state employees, as well as an increase in the amount for holiday pay, Christmas bonus, and children's gift.

Q013 (2021): Between 2020 and 2021 there was a significant increase in the budget approved and implemented for the training of public prosecution services because during the Covid pandemic in 2020 trainings were not held.

Q013 (2020): There is a significant increasing of the total annual budget allocated to the public prosecution services due to the increasing of salaries of the public prosecutors.
The annual public budget allocated to training of public prosecution services is lower than in 2019 due to the fact that in 2019 the Judicial Academy conducted professional training of judicial officials and advisors and a foreign language education program for judicial officials, while in 2020 due to the COVID pandemic these trainings were not held.

Cyprus

Q013 (2024): The judicial training school is completely independent from the Academy of the Law office. The Academy had been set up in 2022 but started to plan and organize seminars in 2024.
Q013 (2023): In 2022 there was an increase in the budget due to specific copensations awarded only in that year.

Q013 (2022): There was a major restructuring of the posts in the public prosecution service as a number of new posts were created. At the same time, there was an increase in the salaries of the counsels working at the Attorney General's Office.
In the previous cycle, there were not many trainings as a result of covid.

Q013 (2021): In 2021 there was a massive increase in the compensation paid in action of 10 million, representing compensation awarded in actions against the state.
Less training seminars have been held in person due to covid.
Q013 (2020): In 2020, there was a significant increase in the salaries of the prosecutors of the office of the Attorney General.

Czech Republic

Q107 (2024): Four years ago, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + .Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

Q107 (2023): Three years ago, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + .Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.
There is no specific reason identified for the 53% increase in cases discontinued during the reference year, as these figures can vary annually.

Q107 (2022): Two years ago, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + .Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

Q107 (2021): In 2019, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. Q107-1 (2024): Total number of guilty plea procedures: After the change in legislation in 2020, there was a huge increase in the number of guilty pleas. It seems that the number is now again decreasing. It could be just a random fluctuation though.

Q107-1 (2022): There was a legislative change, which make several changes regarding the guilty pleas - it is easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes. As a result, the number of guilty pleas is rapidly rising.
Q107-1 (2021): There was a legislative change which make several changes regarding the guilty pleas - it easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes. As a result the number of guilty pleas is rapidly rising.
Q107-1 (2020): There was a legislative change which make it easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes.
Q013 (General Comment): It is noteworthy that before 2014, the implemented budget was provided instead of the approved one.
Q013 (2024): More money was planned for training, but the priority remains to make full use primarily of the services provided by the Judicial Academy.
Q013 (2022): There can be movement between the different categories of the budget during the year according to the current needs.
Desirable increasing of budget to training.
Q013 (2021): There can be movement between the different categories of the budget during the year according to the current needs. Moreover, there is also influence of exchange rate. The difference between approved and implemented budget allocated to training is mostly caused by pandemic situation.
Q013 (2020): There can be movement between the different categories of the budget during the year according to the current needs. Moreover, there is also influence of exchange rate.

Denmark

Q107 (General Comment): The number of processed cases includes both cases dismissed by the police and cases dismissed by the public prosecutor. All prosecutors are subject to a recruitment procedure conducted by The Director of Public Prosecutions' Office on behalf of the Ministry of Justice. A prosecutor can serve within The Local Prosecution Service based in one of the 15 the police districts or within The Central Prosecution Service with one of the Regional State Prosecutors' offices or with The Director of Public Prosecutions' Office.

Q107 (2024): In some cases indictment and subsequent discontinuation occurs within the same year. In such instances, a single case will both occur in both point 3.2 and 3.3. However, the case will only occur once when computing the total. Thus, the sum of 3.1-3.3 might not be the same as the total in 3.
The reason for the discrepancy in closed/finished cases relative to incoming cases is that processed cases include cases that the prosecution service has responsibility for, but that both the police and prosecution service conducts work on – depending on the case. We cannot always distinguish closed/finished cases between the police and prosecution service as they are often archived in police departments regardless of who processed the case.
One case accounts for one crime for each person involved in the crime. If two crimes were committed by three people, there would be six counts of crimes (=cases). Reports of crime might also grow in number of counts as it progresses through the chain of criminal proceedings. The 'owner' of the case is the department that last worked on it.
The term "Reasons of opportunity" entails cases discontinued according to section 721, subsection 1, no. 3-4 of The Danish Administration of Justice Act, which is applied in cases where it is assed that legal costs and processing time are disproportionate in relation to the significance of the case and its potential sentence.
It is correct that there has been an increase of approximately 83% when comparing 2024 to 2023. However, it is important to emphasize that these number cover individual offences rather than court cases they fall under. When comparing the number of court cases, where one or more offences have been discontinued due to reason of opportunity, we only see an ~18% increase. The reason behind this being that in 2024 a number of court cases, with a large number of individual offences, were settled with discontinuation. For instance; in 2024 five court cases had over 100 offences discontinued due to reason of opportunity – while another case had over 500 offences.
Throughout 2024, there has been an increased effort in reducing the backlog of pending indictments, by prioritizing the processing of existing cases in court. Due to this prioritization, there has been a ~40% decrease in the number of pending indictments when comparing the beginning and end of 2024. However, this has also meant fewer resources allocated to initiating new prosecutions. The natural consequence being an increase in the number of pending charges.

Q107 (2023): The reason for the discrepancy in closed/finished cases relative to incoming cases is that processed cases include cases that the prosecution service has responsibility for, but that both the police and prosecution service conduct work on – depending on the case. We cannot always distinguish closed/finished cases between the police and prosecution service as they are often archived in police departments regardless of who processed the case.
One case accounts for one crime for each person involved in the crime. If two crimes were committed by three people, there would be six counts of crimes (=cases). Reports of crime might also grow in number of counts as it progresses through the chain of criminal proceedings. The 'owner' of the case is the department that last worked on it.
It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not divided in such subsectors.
From 2021 to 2023 we have had an increased effort in lowering the amount of pending cases. This can partly explain the surge of processed cases.

Q107 (2022): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not divided in such subsectors.
Regarding point 3.1.3 in question 107, it is not possible to account for one specific reason behind the increased number of discontinued cases for reasons of opportunity. However, during 2021 and 2022 we have had an increased effort in lowering the amount of pending cases. This can partly explain the surge of discontinued cases in 3.1.3.
Regarding the increase in incoming cases, it should be noted, that the police is responsible for charging possible perpetrators and hence the number of incoming cases received by the prosecution service. An explanation of the increase in number of incoming cases should therefore be directed to the police. With that being said, the number of incoming cases varies from year to year and the amount in 2021 was lower than the previous years.

Q107 (2021): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not devided in such subsectors.
Regarding point 3.1.3 in question 107, it is not possible to account for one specific reason behind the increased number of discontinued cases for reasons of opportunity. However, during 2021 we have had an increased effort in lowering the amount of pending cases. This can partly explain the surge of discontinued cases in 3.1.3.

Q107 (2020): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not devided in such subsectors. The data source used in points 1 and 4 (data that do not include post-registration of charges) are different from the data source used in points 2 and 3 (data that includes post-registration of charges). Hence, data does not fit the formula: (pending at the beginning of the year + incoming) – resolved = pending at the end of the year) due to post-registrations of further charges. The number of incoming charges has decreased considerably between 2018 and 2020. This is due to a change in the way we measure the number of incoming charges. The new way of measure incoming cases more correctly than the previous way of measuring as the new way contains all incoming charges and not all processed charges as the previous way did. The number of incoming cases in 2018 is 245.687 when using the new way of measuring.

Q107-1 (General Comment): The guilty plea procedure including a main trial will always be concluded during the main trial, as it is a court decision whether or not a person can be convicted in court. Cases with accepted fines are not included in the answer above, as it is not part of a trial. Plea guilty procedure can only take place during the main trial.

Q107-1 (2024): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In Denmark, a guilty plea procedure is concluded in a court hearing, not in a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must ensure that the conditions for proceeding the case as a guilty plea procedure are present.

Q107-1 (2023): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2023, the number of complexes are 3,909. There has been an increase in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded in a court hearing, not in a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must ensure that the conditions for proceeding the case as a guilty plea procedure are present.

Q107-1 (2022): Comments Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2022, the number of complexes are 3.526. There has been an increase in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded by a court hearing, not a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must in a court hearing ensure that the conditions for proceeding the case as a guilty plea procedure are present.
The answer regarding whether the case was concluded before/during the main trial differs from last year´s answer, as guilty plea procedures are correctly concluded before the main trial, as the confession must subsequently be validated by a judge. The data is registered through a case-filing tool, POLSAS. POLSAS is first and foremost a case-filing tool, which may be subject to human entry error. Furthermore, the number of guilty plea procedures can fluctuate on a yearly basis for a variety of reasons. We cannot conclude anything of substance regarding the decrease without a manual investigation.

Q107-1 (2021): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2021, the number of complexes are 2997. There has been a decrease in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded by a court hearing, not a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must in a court hearing ensure that the conditions for proceeding the case as a guilty plea procedure are present. The answer regarding whether the case was concluded before/during the main trial differs from last year´s answer, as guilty plea procedures are correctly concluded before the main trial, as the confession must subsequently be validated by a judge. The data is registrered through a case-filing tool, POLSAS. POLSAS is first and foremost a case-filing tool, which may be subject to human entry-error. Furthermore, the number of guilty plea procedures can fluctuate on a yearly basis for a variety of reasons. We cannot conclude anything of substance regarding the decrease without a manual investigation.

Q107-1 (2020): The discrepancy is due to the method of calculation. In 2018 the answer covers the number of complexes of cases, and the answer in 2020 covers the number of counts (measured by charges per person). In 2020 the number om number of complexes are 3.449.
Q013 (General Comment): The implemented budget corresponds to the observed expenditures during the reference year. There has moreover been a strengthening of criminal case processing in recent years, especially compared to 2021 with a wish to reduce case processing times and case backlogs in criminal case processing, which has led to an increase in re-source consumption on case processing and prosecution activities

Q013 (2024): In 2024, there was a balance between budget and consumption. Compared to 2023, consumption has increased by approximately 5 percent. This can primarily be attributed to a continued strong focus on strengthening criminal case processing with a view to reducing case processing times and case backlogs in criminal case processing.

Q013 (2023): The explanation of the difference between the implemented budget and the budget that has been formally approved by the Parliament is that the implemented budget corresponds to the observed expenditures during the reference year. There has moreover been a strengthening of criminal case processing in 2023 compared to 2021 with a wish to reduce case processing times and case backlogs in criminal case processing, which has led to an increase in resource consumption on case processing and prosecution activities.

Q013 (2020): The increasing expenses compared to previous years are partly due to an increased effort to reduce case processing times and case stocks in the criminal case chain. In 2019, further expenses were incurred in connection with the implementation of several commissions of inquiry set up by the government

Estonia

Q107 (General Comment): The number of incoming cases is given by registered crimes while the number of cases resolved is given by the number of persons in respect of whom a procedural decision has been made.
Q107 (2022): The general trend shows a decrease in registered crimes.

Q107 (2020): The number of incoming cases is given by registered crimes. the number of cases resolved is given by the number of persons in respect of whom a procedural decision has been made.
Q109 (2020): Only the ones that are classified as criminal offences.

Q013 (2023): Ministry of Justice does not have data on budget allocated to training.

Q013 (2020): Annual public budget allocated to training of public prosecution services: due to COVID-19 restrictions, there were less trainings.

Finland

Q107 (2024): Regarding section 3.1.2, there has been a change in our statistic model. The previous statistic model was inaccurate and did not respond this section reliably. The figures previously included in this section are now included in section 3.1.4.
Q107 (2023): 3.1.4 In earlier reply there was a mistake in figures:In earlier answer the 3.1.4 included only motions to dismiss and restrictions of pretrial investigations; now the numbers include also other technical decisions (5205, "closed by other reasons"). 3.2 The absolute amounts in these transfers of are so small, that even a change to just a few cases causes discrepencies. The drop of the number of cases from 9 to 4 is within normal variation.

Q107 (2022): 3.2 Notice cases of summary fines are not included. The number of summary fines in 2022 was 34426.

Q107 (2021): 3.2 Notice cases of summary fines are not included. The number of summary fines in 2021: 34 306.
3.3: Consist of internal transfers of cases between prosecution districts, joining of cases and technical decisions.

Q107 (2020): Comments: 3.2 Notice cases of summary fines are not included. The number of summary fines: 38433.
The decrease in the number of cases “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor” is due to a change in the law. The law on certain type of fine (rangaistusmääräysmenettely) was abolished in 2016 and replaced with the law on fines and summary penalty fee (laki sakon ja rikesakon määräämisestä (754/2010). According to this law, the police can order the summary penal fee. This page, in Finnish, shows figures of the amount in euros of these summary fines imposed by prosecutors (2nd graph) and by the police (3rd graph).
https://www.oikeusrekisterikeskus.fi/fi/index/tietopalvelu/tilastotjaavoindata/sakot.html
3.1.4 Discontinued for other reasons and 3.3. Cases closed by the public prosecutor for other reasons: The prosecutor must waive prosecution if: (1) the prerequisites for the bringing of charges provided in section 6, subsection 1 are not met; (2) the prosecutor waives prosecution on the basis of section 6, subsection 2; (3) the injured party has not requested that charges be brought or another special prerequisite provided in law for the bringing of charges referred to in section 2, subsection 2 is not met and the nature of the case requires that a separate decision be made. The prosecutor may waive prosecution if: (1) if no sentence more severe than a fine is to be anticipated for the offence and the offence, with consideration to its detrimental effects or the degree of culpability of the offender manifested in it, is to be deemed petty as a whole; and (2) if the suspect had not reached the age of eighteen at the time of the commission of the suspected offence and no sentence more severe than a fine or imprisonment for at most six months is to be anticipated for this offence and it is to be deemed to be more the result of lack of understanding or thoughtlessness than of heedlessness of the prohibitions and commands of the law. In addition, the prosecutor may waive prosecution, unless an important public or private interest requires otherwise if: 1) if criminal proceedings and punishment are to be deemed unreasonable or inappropriate in view of a settlement reached by the suspect in the offence and the injured party, the other action of the suspect in the offence to prevent or remove the effects of the offence, the personal circumstances of the suspect in the offence, the other consequences of the act to him or her, the welfare and health care measures undertaken and the other circumstances; (2) under the provisions on joint punishment or on the consideration of previous punishments in sentencing, the suspected offence would not have an essential effect on the total punishment; or (3) the expenses in continuing to consider the case would be in manifest disproportion to the nature of the case and to the sanction possibly to be expected in it. Also, If charges are being considered for two or more offences for which the same person is suspected and if he or she has contributed to the clarification of one or more of the suspected offences, the prosecutor may decide not to bring charges for all of the suspected offences. However, charges shall be brought if required by an important public or private interest.

Q107-1 (General Comment): The possibility of plea bargaining was introduced to the Finnish legal system in the beginning of year 2015. The aim of the reform was to allocate the resources of the national authorities in a more effective way and to speed up both the pre-trial phase of the criminal process and the court proceedings. A defendant can agree to plead guilty to a particular charge in exchange for a more lenient sentence. The prosecutor may also decide not to prosecute for one or for several of the suspected crimes. Plea bargaining can be used if the injured party has no demands in the matter and if he/she agrees to plea bargaining. Plea bargaining can be used when a person is suspected of a crime carrying a maximum sentence of six years' imprisonment. It cannot be used for crimes like homicide, causing bodily injury and sex offences or when the injured party is a child. Plea bargain is also applicable for white-collar crimes.

Q107-1 (2022): Data on guilty plea procedure is not comprehensive. The procedure is registered in information systems only in a few cases. The usage of the procedure is likely much more broad than indicated, but there is no data available to confirm this.
Q107-1 (2020): The known number of guilty plea procedures is 80. However, the number could be higher as the use of this procedure is not systematically reported, especially when it takes place during the main trial.
Q013 (2024): The budget excess is due to a surprising and large overshoot in ICT expenditures in 2024.
The direct training costs were 465 242 euros. The wage costs (indirect costs) for the training days were 521 243 euros.

Q013 (2023): Budget excess is due to increase in prosecutor personel resources. Reason for this was to control the amount of pending cases and shorten case processing time. Training budget contains only direct costs but training implementation also contain indirect costs such as travel expenses. Overall, the trend of training participation has been on the increase.
Training costs have increased strongly: year 2021 they were 393 000 euro, year 2022: 749 000 euro and year 2023: 933 000 euro. Also number of training participants has increased: 475 (2021), 484 (2022), 783 (2023) as were the training days: 1189 (2021), 1555 (2022) and 1821 (2023).

Q013 (2022): Annual public budget allocated to training of public prosecution services: in 2022 the total amount used for training was 715 813 euro. This comprises of: 374 587 euro for salaries related to trainings (+ plus pensions etc. payments), 173 843 euro of travel expenses, 57 925 euro for purchasing different course and conference services, and 109 458 euro (excluding VAT) used for training by the Office of the Prosecutor General. In 2020 the expenses were historically low and in 2022 the expenses were closer to the annual average. In 2022, there were about 50 % more training days than in 2020. More people also participated in the trainings. In addition, the travel costs for trainings increased in 2022. The exact reasons for the low figures in 2020 are no clear, but it can be assumed that the Covid pandemic had an impact.

Q013 (2021): Annual public budget allocated to training of public prosecution services: in 2021 the total amount used for training was 407 595 euro. This comprises of: 261 683 euro for salaries related to trainings (+ plus pensions etc payments); 29 328 euro of travel expenses (excluding VAT), 73 230 euro for purchasing different course and conference services, and 43 354 euro used for training by the Office of the Prosecutor General.
The annual public budget allocated to training of public prosecution services increased only slightly since the particular year of the pandemic. In fact, in 2021, the Prosecution Authority had a recommendation on remote work in force and also most of the trainings were organized remotely.

Q013 (2020): Annual public budget allocated to training of public prosecution services: in 2020 the total amount used for training was 379 043 euro. This comprises of: 208 000 euro for salaries related to trainings (+ plus pensions etc payments); 38 673 euro of travel expenses (excluding VAT), 83 062 euro for purchasing different course and conference services, and 49 300 euro used for training by the Office of the Prosecutor General. It is noteworthy that the travel expenses decreased approximately 170.000. This was due to, amongst others, covid-19 situation which led to holding the training remotely.

France

Q107 (General Comment): The complexity and diversity of criminal data do not allow for estimates of pending cases to be produced.
The data concern cases recorded regardless of the number of offenses or individuals involved. However, if the same case involving multiple individuals is subject to several different courses of action (for example, different treatment of minors and adults or dismissal and prosecution in the same case), then the number of actions taken is counted.
The data concern adults, minors, and legal entities.

Q107 (2024): Source: SSER, statistical file Cassiopée

Q107 (2023): “3.1.2 Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation” and “3.1.3 Discontinued by the public prosecutor for reasons of opportunity”: data used are based on extractions from “Cassiopée”. However, the introduction of the PPN has led to the gradual integration into the applications over the period 2022-2024 of cases that were not previously recorded in the applications. As a result, the number of criminal cases at first instance has increased artificially in 2023 as a result of the integration of unrecorded cases (small X). It should be noted that there is an effect from 2022, which is less strong but already present. Source(s) : SSER, Cassiopée statistical file

Q107 (2021): source SDSE

Q107-1 (General Comment): Appearance on prior recognition of guilt (CRPC) is a simplified prosecution procedure. The public prosecutor can propose to any adult offender who acknowledges the facts attributed to them to serve one or more of the penalties they face. This procedure applies to offenses (délits) except for exceptions provided by law (see Article 495-7 of the Code of Criminal Procedure). In case of acceptance of the proposed penalties, the public prosecutor refers the case to the judge to approve the accepted penalties. The approval order has the effect of a conviction judgment. It is recorded in the National Criminal Record.
The CRPC is considered a full hearing (the judge wears a robe, and renders an "order" accepting the sentence — though not a judgment). The penalty imposed will carry the same weight as if it had been imposed during a "regular" hearing. However, if the individual refuses the penalty during this process, the prosecutor will redirect the case to a regular criminal trial. If the CRPC is successful, it will be considered the "main judicial procedure." However, if it fails, the individual will be presented before the criminal court, meaning the CRPC can be seen as a procedure that happens "before the main trial" In this sense, during a CRPC, the individual is not subject to "formal prosecution" before the court, but rather summoned before the prosecutor who offers them a penalty, which may or may not be accepted, and later approved or not by a judge.

Q107-1 (2024): These figures correspond only to the CRPC: Appearance on prior recognition of guilt.
It is a simplified prosecution procedure. The public prosecutor can propose to any adult offender who acknowledges the facts attributed to them to serve one or more of the penalties they face. This procedure applies to offenses (délits) except for exceptions provided by law (see Article 495-7 of the Code of Criminal Procedure). In case of acceptance of the proposed penalties, the public prosecutor refers the case to the judge to approve the accepted penalties. The approval order has the effect of a conviction judgment. It is recorded in the National Criminal Record.

Q107-1 (2021):
source SDSE
Increase in the number of guilty plea procedures: 2020 was marked by a significant drop in activity (caused by the lawyers' strike movement initiated in the second half of 2019 and which continued at the beginning of 2020, then by the slowdown in court activity under the effect of the COVID-19 pandemic and successive lockdowns of the population) and 2021 by a return to normal activity in the courts. It is also necessary to take into account the impact of the law n° 2019-222 of 23 March 2019 on the nature of cases under the CRPC procedure.

Q109 (2022): The positive reply concerns criminal offences and fines.

Q109 (2021): source SDSE

Q013 (2024): For 2024, and in accordance with the CEPEJ methodology, the credits allocated to the National School for the Judiciary have not been included in “13.1 Annual public budget allocated to training of public prosecution services.

Q013 (2021): As in the previous year, as it is not possible to distinguish between data related to courts and data related to the public prosecution services, an 80/20 ratio has been applied to the data from the LFI 2021 of P166 and the annual performance report 2021 of P 166.
Source DSJ

Germany

Q107 (General Comment): Once per year, the Federal Statistical Office compiles and publishes the public prosecution statistic. Statistical ordinances define the scope and rules of data collection for these statistics. The public prosecution offices collect the data and submit it to the statistical offices of the federal states, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the statistical ordinance provides two different kinds of data collection sheets: The "procedural survey" that collects data on the specifics of the investigation proceedings carried out by the public prosecution and the "monthly survey" that collects data on the caseload and other workload of the public prosecution offices. The figures entered here do not include investigations against persons unknown. The public prosecution statistic only shows the number of charges filed against unknown perpetrators. Information on the further treatment of those charges is not available. This is because the monthly survey distinguishes between "caseload of investigation proceedings covered by the procedural surveys" and "other workload". Charges against persons unknown fall into the category “other workload”. The number of resolved and pending cases is only collected with regard to the first category (proceedings covered by the procedural surveys). If a suspect is identified in cases with an unknown perpetrator, the case receives a new file-number and then appears in the category "covered by the procedural surveys".

Q107 (2024): "Other reasons" include: referral to private action, referral to administrative authority as regulatory offence, referral to a different public prosecutor's office, joining with another case, referral to the European Public Prosecutor's Office
3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("nonprosecution subject to imposition of conditions and directions") These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.
Horizontal inconsistencies in the table:
The inconsistency with regard to the pending cases at the end of the year also occurs in the official statistic published by the Federal Statistical Office. The reason for this are count corrections of the monthly collected data at the end of the year.

Q107 (2023): 3.1.4: Cases from former line 3.3 "closed by the public prosecutor for other reasons" are now included here. In the previous evaluation cycle, those cases were included in the total of processed cases (3.) but were not displayed under "discontinued cases".
"Other reasons" include: referral to private action, referral to administrative authority as regulatory offence, referral to a different public prosecutor's office, joining with another case, referral to the European Public Prosecutor's Office
3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.

Q107 (2022): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.
3.1.4 Discrepancy in comparison to the 2020-2022 cycle: The number of cases discontinued for other reasons was consideralbly higher in the public prosecution statistic 2020 and in previous years. This was due to a programming issue in one of the federal states. Many of the cases that were registered in this category should have actually been registered within the category "discontinued for reasons of opportunity". The issue was noticed and fixed at the end of 2020.

Q107 (2021): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("Non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.
3.1.4 The number of cases discontinued for other reasons in the public prosecution statistic 2020 (and previous years) was considerably higher due to a programming issue in one of the Länder. Many of the cases that were registered in this category should have actually been registered within the category "discontinued for reasons of opportunity". The issue was noticed and fixed at the end of 2020.

Q107 (2020): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("Non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.

Q013 (General Comment): It is noteworthy that all data concerning the budget should be construed in the light of the federal structure of the justice system in Germany. Variations are often due to the fact that the federal states' budget plans and budget statistics can differ from one another relatively widely. Accordingly, the federal states' answers in this section are inconstistent.

Q013 (2024): Roughly half of the federal states cannot provide seperate information on the budget allocated to the public prosecution services.
Q013 (2023): In roughly half of the federal states, the budget of the courts cannot be separated from budget of the public prosecution. A few federal states that can make this distinction, can, however, not separate the training budget of the public prosecution services from the training budget of the whole judiciary.
Of the 16 federal states - 7 could not provide any data
- 9 have figures available
The Federal Ministry of Justice can provide budget information for the Federal Public Prosecutor's office.
Q013 (2022): In the majority of the federal states, the budget of the courts cannot be separated from budget of the public prosecution. A few federal states that can make this distinction, can, however, not separate the training budget of the public prosecution services from the training budget of the whole judiciary.
Of the 16 federal states - 7 could not provide any data
- 8 have figures available
One federal state has not yet replied. The Federal Ministry of Justice can provide budget information for the Federal Public Prosecutor's office.
Q013 (2021): In the majority of the Länder, the budget of the courts cannot be separated from budget of the public prosecution. A few Länder that can make this distinction, can, however, not separate the training budget of the public prosecution services from the training budget of the whole judiciary.
Q013 (2020): The budget of the courts cannot be separatd from budget of the public prosecution.

Greece

Q107 (General Comment): The data in the table are presented by case file (and not, for example, on the number of offenders). Vertical consistency in the table is not ensured because the data are continuously updated/corrected and because of unknown offender cases that are referred either to the investigating magistrate (when they are felonies) or to a preliminary procedure (when they are misdemeanors) have not yet been completed. All cases that are referred to the investigator are returned to the public prosecutor, whether the perpetrator is identified or not. Cases where the perpetrator could not be identified are considered as resolved, while the rest (where the perpetrator is identified) follow further criminal proceedings and are either solved within the reporting period or are considered pending in the next time period. More precisely, cases where the offender could not be identified are placed in the "unknown perpetrator file". Cases placed in the "unknown perpetrator file" are suspended with a decision of the prosecutor and such decisions are counted as “ 3.1.1 Discontinued by the public prosecutor because the offender could not be identified”.

Q107 (2024): Source: Independent Department for the Collection and Processing of Judicial Statistical Data (JustStat).
The observed increase in the number of cases discontinued for reasons of opportunity (+42%) and the number of cases referred to court (+30%) can be attributed to the reforms of the public prosecutor's office introduced in 2024. More specifically, under Law 5090/2024 prosecutors were given greater discretion to close cases when it is not in the public interest or when the offense is of low severity. This was applied more actively to misdemeanors, especially in cases with limited evidence or with conciliatory intentions.
At the same time, the prosecution of crimes of domestic violence, organized crime, and corruption was strengthened, resulting in an increase in the number of cases brought to court for trial.

Q107 (2023): The data are provided by the Office for the collection and processing of judicial statistics.
Decreases in the number of cases dismissed for reasons of opportunity and cases concluded by a penalty: during the implementation of the restrictive measures to deal with the Covid 19 pandemic, police activity was greatly increased with constant patrols which resulted in a rapid increase in arrests and consequently in criminal prosecutions for selected offences, such as violation of the drug law (supplying drugs even for personal use is strictly illegal in Greece). With the expiry of the restraining orders, arrests and criminal convictions decreased.

Q107 (2022): It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting and calculating statistical data. As the methodology is developing, discrepancies in data can be observed.
Q107 (2021): The definition of the pending cases includes postponed cases or the cases the trial date has been setting out of the refence year or hasn’t been determined during the year. The fact is that the theoretical pending cases resulted from pending cases on 1st of January + Incoming cases (cases are related to reference + previous years). However, pending cases on 31 Dec. are only the cases that have not been determined, or cases that have been determined after the reference year. All of the pending cases on 31 of Dec. are related only to the reference year.
Considering that this is the first year where offices calculate their pending cases, and some of them do not have electronical systems to monitor their data, in the next years we will get better and more accurate statistics.

Q107 (2020): No data available for this query.

Q107-1 (General Comment): The accused who is usually a temporary prisoner but whose case is pending before the investigating judge, requests, either through his/her counsel or himself/herself (through an ex officio counsel) the criminal negotiation of his/her case. This request is forwarded to the Prosecutor's Office of Appeal to which copies of the relevant file are sent. Depending on the case, the appeal prosecutor will either recommend that the case be successful or unsuccessful. In the first case, if the case succeeds, a trial date is set at which the defendant appears before the court (Court of Appeal) and is given the proposed sentence. If he or she agrees, the procedure is completed and in most cases the defendant is released and the time spent in temporary custody is taken into account. If the defendant does not agree with the sentence proposed, the defendant withdraws his/her request for criminal negotiation, the proceedings are considered as not having taken place, and the defendant's criminal treatment continues from the point of the request for criminal negotiation.

Q107-1 (2024): Source: Independent Department for the Collection and Processing of Judicial Statistical Data (JustStat)
The violations of restrictive measures that led to mass registrations and quick guilty pleas in 2021–2022 no longer exist, resulting in a natural decrease in related cases. However, additional factors in 2024 contributed to this trend, including reforms of the prosecution service under Law 5090/2024, stricter criteria for accepting guilty pleas, increased use of the principle of opportunity, and the expansion of alternative dispute resolution mechanisms. More specifically, the new Criminal Code introduced stricter criteria for accepting guilty pleas, especially in cases involving social disapproval or domestic violence. The strengthening of the opportunity principle has led to more cases being shelved rather than confessions being accepted. The promotion of criminal mediation and out-of-court settlements has reduced the need for formal guilty plea procedures.

Q107-1 (2023): The data are provided by the Office for the collection and processing of judicial statistics.
The observed decreases in the number of guilty plea procedures between 2022 and 2023 are due to specific offenses related to violations of containment measures implemented in 2021 and 2022 to address the pandemic. For example, while gatherings were banned at that time, social events e.g. weddings were held in some areas of the country. In these cases, the guests (who may have exceeded, for example, 100) were brought before, for example, the public prosecutor who, in application of Article 48 of the Code of Criminal Procedure, terminated the criminal prosecution by means of a reasoned order after imposing on the accused the obligation to pay a donation to the Greek State.

Q107-1 (2022): This year, we modified the request by asking the information from the courts. We believe that this is reason for the variations observed.

Q107-1 (2020): No data available for this query.

Q109 (2024): The new Penal Code, which came into effect on May 1, 2024, with Law 5090/2024, introduced significant stiffening of penalties for cases of traffic accidents and dangerous driving. The new Article 290A defines 'dangerous driving' as any behavior that seriously endangers life or health, such as: Excessive speed, Driving under the influence of alcohol or drugs, Ignoring traffic signals, Aggressive or careless driving. Some violations now incur, in addition to a monetary fine, prison sentences ranging from 1 to 5 years.

Q013 (General Comment): The public prosecution services budget can not be separated from the courts budget.

Q013 (2023): There is no possibility of separating the budgeted expenses on the one hand and some individual categories of expenses (in terms of execution) on the other, between the prosecutor's offices and other courts of the country.

Q013 (2022): As explained in question 6, there is no possibility of separating budgeted expenditures on the one hand and some sub-categories of expenditures (in terms of execution) on the other, between the public prosecutor's offices and other courts in the country.

Q013 (2021): Not available, cannot be separated.

Q013 (2020): There is no separate budget for Public Prosecutions included in the special code 1017-201-00000000 .Impossible to fill.

Hungary

Q107 (2024): Discrepancy explanation:
Overall, it can be concluded that from 2023 to 2024, there was a significant increase in both the number of offences (+20.2%) and the number of offenders (number of offences per offender) (+40.6%).
Since the number of procedural decisions recorded takes into account the individual offences and, if there are multiple perpetrators of an offence, the procedural decisions recorded for the perpetrators, the number of procedural decisions recorded by the prosecution service has increased exponentially (+45.7%).
The most significant changes in the individual data can be attributed to the following: With regard to question 3.1.2, the increase (110.64%) – beyond the average increase detailed above – can be attributed to two cases. 1) In case no. 926/2021 of the Szigetszentmiklós District Prosecution Office, procedural decision M036 was recorded in 4,381 cases (It cannot be established that the suspect committed the crime [Section 398 (2) a) of the Criminal Procedure Code]).
In the case of several thousand counts of “serial fraud”, the proceedings were terminated in respect of all acts with regard to eight perpetrators, while the other perpetrators were subject to indictment.
2) In case no. 25/2024 of the Budapest XIV-XVI District Prosecution Office, procedural decision M036 was recorded in 1,734 cases (It cannot be established that the suspect committed the crime [Section 398 (2) a) of the Criminal Procedure Code]).
In the case of 868 counts of "serial fraud," the proceedings were terminated in respect of all acts committed with regard to two perpetrators, while the other perpetrators were subject to indictment.
In contrast, in 2023, even the case with the most procedural decisions on this legal basis contained only 76 such procedural decisions. With regard to question 3.1.1, although the decrease appears significant, such "fluctuations" may occur due to the low number of cases. It can be stated that the vast majority of procedural decisions in this category (investigation/proceedings suspended due to the perpetrator being unknown/statute of limitations) are made by the investigating authority, so it is difficult to draw conclusions from the data provided by the prosecution service about changes in the legal system.
In general, the prosecution service has no influence on the number of cases in a given year in which sufficient evidence is obtained to bring charges (point 3.3) or in which proceedings are terminated for any reason (points 3.1, 3.1.1, 3.1.2. and 3.1.4.). Depending on the assessment of evidence in specific cases, changes in statistical data from year to year may occur (decreases or increases).

Q107 (2023): 3.1.4 Cases discontinued for other reasons - The reason for the increase is the growth in the number of cases recorded under provision IV of Section 398 (2) c) of the Criminal Procedure Code (Termination of liability to punishment for other reasons specified by law).

Q107 (2022): The data source - in accordance with the previous data provision - is The Statistical Subsystem of Completed Criminal Proceedings of the Unified Investigation Authority and Prosecution Service Criminal Statistics System (hereinafter ENyÜBS-BBS). In the ENyÜBS-BBS subsystem, the data is recorded when the investigating authorities or the Prosecution Service have made a procedural decision giving reasons for the provision of statistical data in connection with the crime (e.g.: dismissal of the criminal complaint, termination, suspension, accusation/indictment), relating to which statistical data was provided. Considering the time of data recording, the ENyÜBS-BBS subsystem is, therefore, of a so-called follow-up nature, so it does not show how many crimes occurred in the year under review, but it shows how many legal decisions were made in connection with such acts and in how many cases statistical data was provided in this context (in a registrative manner). As a result, the above also means that it may occur there is an ongoing criminal proceeding that is not included in the ENyÜBS database yet. For the questions "Pending cases on 1 Jan. ref. year" and "Pending cases on 31 December ref.year" in the table, please note that no data is collected on the number of pending cases – on a given day – into the records of the Prosecution Service. Set of data: ENyÜBS-BBS: number of criminal procedure decisions
Unit of recording: criminal procedure decision
Selection date: May 30, 2023.

Q107 (2021): As to 'Pending cases on 1 Jan. ref. year' and 'Pending cases on 31 Dec. ref. year', please note that the number of pending cases at a given day is not recorded in the database operated by the prosecution service. As to 'Processed cases' (3.), please note that the database of the prosecution service records the number of cases where one or more procedural acts were performed by the prosecution service; besides that, it records the number of procedural acts regarding each type of act.

Q107 (2020): 3.1.4 Discontinued for other reasons:
If the Special Part of the Penal Code regulates the conduct of the accused after the commencement of the proceedings as a ground for termination of criminal liability.
3.3. Cases closed by the public prosecutor for other reasons:At the stage of preparation of the prosecution, Section 221 / A (7) of the Criminal Procedure Act provides that if the mediation proceedings are successful and the application of Section 29 (1) of the Criminal Code is appropriate, the prosecutor shall terminate the proceedings.

Q107-1 (2024): Discrepancy explanation:
Based solely on data analysis, it can be stated that the number of defendants affected by final court decisions decreased by 3.8% in 2024 compared to the previous year (2,156 defendants). Thus, as can be seen from the other data sets, there has been a general decrease in the number of defendants.
If we examine the ratios of the two legal institutions (acceptance of confessions made at preparatory hearings; acceptance of confessions made at first instance trials), a kind of restructuring can be observed.
In 2023, compared to all defendants affected by final judgments, the acceptance of confessions made at the preparatory hearing by the court accounted for 21.4%, while the acceptance of confessions made at the first instance trials by the court accounted for 2.2% of the cases. The same figures for 2024 were 21.9% and 1.7%, respectively. It can therefore be concluded from the above that although the number of defendants decreased in both data sets, proportionally more defendants made confessions and had them accepted by the court during the preparatory proceedings than during the first instance trial.
Thus, it can be concluded that, looking solely at the ratios, proportionally more defendants made confessions during the preparatory proceedings, which were accepted by the court, and this presumably led to a decrease in the number of defendants who made confessions during the first-instance trial.
In general, the prosecution service has no influence on how many defendants make confessions during court proceedings in a given year, or at what stage of the proceedings they do so.

Q107-1 (2022): The guilty plea procedure as such does not exist in the Hungarian legal system; however, the new Code of Criminal
Proceedings has introduced the so-called plea agreement, which is, in essence, a similar instrument.
Q107-1 (2021): The guilty plea procedure as such does not exist in the Hungarian legal system; however, the new Code of Criminal Proceedings has introduced the so-called plea agreement, which is, in essence, a similar instrument.

Q107-1 (2020): This procedure exists only from 1 July 2018, following the entry into force of the Act XC of 2017 on the new criminal procedure law. In the event that the prosecution can prove the guilt of the accused beyond a reasonable doubt and there is no opportunity to explain what happened in an acceptable manner, the accused will do his best to admit the act and avoid a lengthy trial.
Q013 (2024): When evaluating the data, the change in the euro/forint exchange rate must be taken into account in all cases, as a decrease/increase in the exchange rate may result in a significant change in the figures given in euros, while there is no significant change in the forint figures.
Q013 (2022): Act XC of 2021 on Hungary's central budget for 2022.
The draft act for implemented state budget of 2022 has not yet been adopted by the Parliament.

Q013 (2021): Statistical data on the human resources of the prosecution service of Hungary;
Data from the 'Persona' electronic human resources database of the prosecution service;
Act CLXIV of 2011 on the status of the General Prosecutor, prosecutors and other employees of the prosecution service, as well as on the career of prosecutors (hereinafter: 'Act on Prosecutors').
Q013 (2020): Q 13 Act LXXI of 2019 on Hungary's central budget for 2020
The act for implemented state budget of 2020 is before the Parliament (T / 17188. of law proposal ON THE IMPLEMENTATION OF Act LXXI OF 2019 ON HUNGARY'S CENTRAL BUDGET FOR THE YEAR 2020) but not yet adapted.

Ireland

Q107 (General Comment): As many of our cases are prosecuted by State Solicitors we don't have any data on the status of a case between the time the direction is issued and when we receive the final outcome; this is for matters on indictment. For summary cases outside of Dublin, we rarely even if ever hear back on the outcome as these directions are passed on to the police by the State Solicitor and the police execute the direction to prosecute without reference to the State Solicitor. This may change in the future if outcome data is exchange using the Criminal Justice Operational Hub. Summary cases outside of Dublin would make up a significant proportion of the files given in our figures.
As per the instructions provided, cases are counted per prosecution file which could include more than one suspect and multiple charges preferred. Therefore, the figure give for 'Discontinued' in 107.3.1 is the number of distinct files where a suspect was directed for 'no prosecution'; in some of these files, other suspects on the file may have been prosecuted in the courts.

Q107 (2024): Discontinued by the public prosecutor because the offender could not be identified' files should never have been sent into the ODPP as a direction cannot be issued if there is no suspect to direct upon. The fall should be considered positive on this basis.
In relation to Q107-3.3.2, it must be noted that prosecutors do not negotiate or plea bargain in this jurisdiction. This information is therefore not available.

Q107 (2023): 3.1.4- In 2023, the remaining 3,490 files in the 'discontinued' figure are files where all the suspects were directed for 'no prosecution'. It is not possible to break them down into 107.3.1.2 and 107.3.1.3 as they don't map to the picklist of reasons for not prosecuting that are selected by our Directing Officers.
Discontinued by the public prosecutor because the offender could not be identified' files should never have been sent into the ODPP as a direction cannot issue if there is no suspect to direct upon. The fall should be considered positive on this basis.

Q107 (2021): There has been a significant increase in files received by the office in the last number of years - this is partially due to the increase in complexity of offences and investigations.
These figures were compiled by the Office of the Director of Public Prosecutions and will be included in the Annual Report 2021 which is published annually on the Office of the Director of Public Prosecutions website. Caution should be exercised when comparing these statistics with statistics published by other organisations such as the Courts Service or An Garda Síochána. The statistics published here are based on our own classification and categorisation systems and may in some cases not be in line with the classification systems of other organisations.
Q.3.4: indictable offences

Q107-1 (2024): There is no 'guilty plea procedure' in Ireland, as defined by the explanatory note. We have a procedure for guilty pleas but not as envisaged by the question. Also, our system does not collect data on guilty pleas in accordance with the timing of entry as requested. Data on pleas is based on the year that the file is opened, as opposed to the year the plea is entered. This information is published in the Office's Annual Report:https://www.dppireland.ie/app/uploads/2024/05/AR-2022-eng-copy.pdf
Q107-1 (2023): There is no 'guilty plea procedure' in Ireland, as defined by the explanatory notes. We have a procedure for guilty pleas but not as envisaged by the question. Also, our system does not collect data on guilty pleas in accordance with the timing of entry as requested. Data on pleas is based on the year that the file is opened, as opposed to the year the plea is entered. This information is published in the Office's Annual Report
Q107-1 (2022): Data is collected in the Office of Director Public Prosecutions but is not available in the format specifically set out in the explanatory notes.
Q109 (General Comment): In the vast majority of cases involving traffic offences, the police service (An Garda Síochána) will prefer charges without reference to the Office of the Director of Public Prosecutions. Only in the more serious of such cases, including causing death by dangerous driving, will the Office of the DPP receive files for a decision whether to prosecute or not. Any such traffic offence cases received by the Office of the DPP and decided upon would normally be included in the figures.

Q109 (2023): In the vast majority of cases involving traffic offences, the police service (An Garda Síochána) will prefer charges without reference to the Office of the Director of Public Prosecutions. Only in the more serious of such cases, including causing death by dangerous driving, will the Office of the DPP receive files for a decision whether to prosecute or not. Any such traffic offence cases received by the Office of the DPP and decided upon would normally be included in the figures.

Q109 (2022): There was no discrepancy in the replies provided.

Q013 (2024): The total annual budget is for:
- The salaries and expenses of the Director and her staff;
- Fees to counsel engaged by the Director to prosecute cases in the various courts;
- Costs awarded against the State arising out of Judicial Review and other legal proceedings;
- The cost of the local State Solicitor Service.

The increase in expenditure for training is due to increased staff numbers.

Q013 (2023): The shortfall in expenditure on approved budget can be attributed to a shortfall on salaries which was due to the slower than expected recruitment of staff and an IT shortfall which was due to infrastructure which did not proceed as quickly as expected.
The increase in the implemented budget for training is due to a number of factors. There was a significant increase in new staff to the Office over 2023 which led to a rise in the number of training courses availed of by staff. In addition, there was an increased demand for the Office's sponsorship of third level educational courses which the Office wanted to respond positively to as it is committed to being a learning organisation

Q013 (2020): Parliament approved a budget of €44.813M for the public prosecution service for 2020. Expenditure by the prosecution service in 2020 amounted to €44.248M. The unspent amount of approved funding was surrendered at the end of the year in accordance with national public expenditure rules.
The annual budget for training is allocated by the prosecution service from within total funds allocated to it annually by Parliament. In 2020 expenditure on training initiatives amounted to €201K. This was down somewhat on previous years because of restrictions in place due to COVID-19.

Italy

Q107 (2023): "Discontinued for other reasons" includes e.g. the transfer of the case by competence to another office or another register, the joining with another case.
An increase in cases "Discontinued by the public prosecutor for reasons of opportunity" and "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor" has been recorded due to due to Legislative Decree 150/2022 which aims to reduce the load on the courts by facilitating the definition by dismissal in the case of tenuousness or irrelevance of the fact.

Q107 (2022): We do not know the reasons for these discrepancies. However, the figures are correct.

Q107-1 (General Comment): In the Italian judicial system, it is not the public prosecutor but the judge who determines the plea bargain, following the request of the public prosecutor or the defendant before the trial, or even during the trial, or in opposition to a conviction by decree.
Q107-1 (2024): In the Italian judicial system, it is not the public prosecutor but the judge who determines the plea bargain, following the request of the public prosecutor or the defendant before the trial, or even during the trial, or in opposition to a conviction by decree.

Q013 (General Comment): Starting from 2023, the final balance is automatically processed by the Init application of the Ragioneria Generale dello Stato on the basis of the individual accounting records made by all the operators of the paying judicial offices on the national territory, therefore the data is devoid of the correction and integration entries that were previously made by the central administration to correct any significant errors found. This explains the higher value compared to the previous year.

Q013 (2023): Starting from 2023, the final balance is automatically generated by the INIT application of the Ragioneria Generale dello Stato, based on the individual accounting records entered by all the operators of the paying judicial offices on the national territory. As a result, the data no longer includes the correction and integration entries previously made by the central administration to address significant errors. This change explains the higher value compared to the previous year.

Q013 (2022): The increase in the budget for training is due to the fact that in 2020 the training was mainly delivered online (less expensive) due to the pandemic.
Q013 (2021): Difference in the implemented budget might be due to spending shifts from one financial year to another.

Q013 (2020): In general, the budget for training has drastically decreased in 2020 because the majority of the training was provided online rather than in person. This holds for both courts and prosecution offices. The reason why this trend is not evident at Q.6 (item 6) is due to the presence of administrative justice whose investments in terms of training were massive.

Latvia

Q107 (General Comment): Information obtained from the ProIS (Prosecution Information System), that is a 'living' system (input of data is not 'freezed' at the end of the year). Vertical consistency cannot be ensured because there is a number of cases that have been added to "cases discontinued for other reasons" and others that have been returned to the investigative authorities to continue the investigation.

Q107 (2024): Increase in Cases Brought to Court (Section 3.3):
In 2024, prosecutors took over 4,057 criminal proceedings involving particularly significant offenses. Compared to 2022, this represents a 40.3% increase. This rise is partly due to the reclassification of certain crimes as high-priority, such as violations of international and national sanctions, illegal border crossings, human smuggling, and facilitating unlawful residence in Latvia. Additionally, the number of cases submitted for prosecution involving these offenses increased significantly—from 454 in 2023 to 975 in 2024—reflecting both improved investigative efforts and enhanced prosecutorial oversight.
Decrease in Cases Concluded by Prosecutorial Penalty or Measure (Section 3.2):
Contrary to previous years, where a growing number of cases were concluded within the prosecution, 2024 saw a notable decline. This shift is primarily due to amendments to the Criminal Law (effective July 4, 2024), which changed sentencing policies for certain categories of offenses—especially those involving violence or committed under the influence of alcohol or drugs in traffic incidents. These amendments removed alternative penalties such as community service and fines, leaving only probation supervision as an option. As a result, for offenses committed between July 4 and December 31, 2024, prosecutors could not conclude proceedings without referring the cases to court. This led to a significant increase in cases brought to court and a decrease in those resolved by prosecutorial penalty.

Q107 (2023): Comment on 3.1. : (3.1.+3.2.+3.3.+4.) does not equal to 3, therefore it should be noted that the difference lies in 3.1. since some cases match and are included in both – 3.1.2. (discontinued due to statute of limitation) and 3.1.3. (discontinued for reasons of opportunity).
3.1.3. point - last year's "non-rehabilitating circumstances of a person" covered by the law, defined in articles 415 and 415.1 of the Criminal Code (conditional release from liability) was included in 3.1.3.point, but for 2023 data, these data are included in 3.2. point (because cases are still considered completed with a sanction (last year, paragraph 3.2 contained only the prosecutor's instructions on punishment)).

Q107 (2022): Information obtained from the ProIS (Prosecution Information System) data downloaded in February 2023. The same data is used in drawing up the Annual Report of the Prosecution Office submitted to the Parliament. The difference from the number of pending cases on 31 December previous period reported in last CEPEJ questionnaire may be explained that the ProIS is a 'living' system (input of data is not 'freezed' at the end of the year), therefore some cases may be marked in the system as 'pending' between August 2022 and February 2023. One of the reasons for the increase of the number in comparison with the year 2020 may be the structural reforms carried out in the prosecution office, as of 1 November 2021 first instance prosecution offices prosecute all types of criminal offences that were previously prosecuted by prosecution offices of the Judicial Regions. Thus, not only the number/numerical volume of 1st instance prosecutors' cases (criminal proceedings taken under supervision) increased, but also their legal complexity which has impacted the workload backlog. -107. 3.1. Discontinued during the reference year (3.1.1.-3.1.4.) In consistency with the decrease in total number of incoming/received cases, a decrease can also be observed in the number of all of the discontinued cases.
- 3.1.3. Discontinued by the public prosecutor for reasons of opportunity: includes discontinued on the basis of the following grounds set forth in Article 380 of the Criminal Procedure Law: termination of criminal proceedings on the basis of circumstances that exclude criminal proceedings (several subcategories listed in Article 377), termination of criminal proceedings by releasing a person from criminal liability (Parts 1 and 2 of Article 379), including conditional release from liability (Article 415), and termination of criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime.
The remaining reason of opportunity mentioned in Article 380, namely Article 421 'Prosecutor's penal order' – number of cases discontinued on this basis is included in 107.3.2.: Concluded by a penalty or a measure imposed or negotiated by the public prosecutor.
- 3.1.4. Discontinued for other reasons: includes 675 cases in which criminal proceedings were suspended, 5 cases where the criminal proceedings have been terminated by conditionally releasing from criminal liability for a serious crime, plus 41 case sent on the basis of the jurisdiction (including – abroad).
- 107. 3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor – the answer for the increase in number lies within the proposed strategical goal of the prosecution office – to complete the criminal proceedings in the prosecution office whenever possible. This has led to the significant increase in the total value of number in Q 107. 3.2. and decrease in numbers in Q 107. 3.3.
- 107. 4. Pending cases on 31 Dec. ref. year: explanation given for Q 107. 1.1. applies to this number as well.

Q107 (2021): Cases brought to court: 6061 cases with the total number of criminal offenses - 11008.
Number of incoming cases in 2021 was 11 529. This includes cases received: for initiation of criminal prosecution; after the division of cases or during the phase of investigation; in accordance with urgent procedures; from the court for the elimination of violations/deficiencies; taken over for investigation; restored previously terminated or suspended cases.
The vertical consistency cannot be ensured because in 2021 there were 370 cases that were added to other cases and 82 cases were returned to the investigative authorities to continue the investigation. These cases are not included in the subcategories of Q107. 3.1.2. Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation - according to Article 380 of the Criminal Procedure Law these preconditions (stated in Article 377, Clauses 1, 2 and 10 of the Criminal Procedure Law) are exonerating circumstances. Data for the year 2020 included also other clauses of Article 377 that contain circumstances that do not exonerate persons, which explains the remarkable difference in numbers. Accordingly, 3.1.3. has increased by the number of relevant cases (that also constitute reasons of opportunity).
3.1.4. Discontinued for other reasons: the cases included in this category are, for example, the cases in which the prosecutor took a decision to terminate criminal proceedings by conditionally releasing from criminal liability a person who has been accused of committing a serious crime and who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than the criminal offence committed by the relevant person himself / herself (Paragraph prim of Section 415 of the Criminal Procedure Law). The information compiled in the information system of the Prosecution Office shows that in 2021, prosecutors took 9 decisions to terminate criminal proceedings based on the aforementioned Paragraph. Besides, for 2021, there are 675 cases in which criminal proceedings were suspended included in this category.
Just like for the year 2020, 365 cases in which the prosecutor took a decision to terminate the criminal proceedings by conditionally releasing a person from criminal liability for the commission of a criminal offense or a less serious crime were included in the category “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor". This, along with the recommendation included in the Operational Strategy of the Prosecution Office 2022-2027- on the completion of the criminal proceedings in the Prosecution Office where possible, also explains the increase in the latter category. 3.3. Cases closed by the public prosecutor for other reasons: the cases included in this category are, for example, the cases in which the Prosecutor General has made a decision to terminate criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than a criminal offence committed by such person himself / herself. In 2021, Prosecutor General has not terminated any criminal proceedings based on Article 410 of the Criminal Procedure Law. For 2021, in this category there are 285 cases included that were sent on the basis of the jurisdiction (including – abroad).
4 Pending cases on 31 Dec. ref year: The number has increased mainly due to the COVID-19 pandemic (that affected the timely execution of procedural/in

vestigative actions).
3.4. In 2021 there has been a significant decrease of the number of initiated criminal proceedings (-17%), furthermore the number of criminal proceedings completed in the prosecutor's office has increased (+26%).

Q107 (2020): Cases brought to court
8088 cases with the total number of criminal offenses - 14158
The vertical consistency cannot be ensured because in 2020, there were 520 cases that were added to other cases and 91 cases were returned to the investigative authorities to continue the investigation. These cases are not included in the subcategories of Q107. 3.1.4 Discontinued for other reasons: the cases included in this category are, for example, the cases in which the prosecutor took a decision to terminate criminal proceedings by conditionally releasing from criminal liability a person who has been accused of committing a serious crime and who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than the criminal offence committed by the relevant person himself / herself. The information compiled in the information system of the Prosecution Office shows that in 2020, prosecutors took 2 decisions to terminate criminal proceedings based on Paragraph prim of Section 415 of the Criminal Procedure Law. Besides, for 2020, in this category are included 955 cases in which criminal proceedings were suspended.
3.3. Cases closed by the public prosecutor for other reasons: the cases included in this category are, for example, the cases in which the Prosecutor General has made a decision to terminate criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than a criminal offence committed by such person himself / herself. In 2020, Prosecutor General has not terminated any criminal proceedings based on Article 410 of the Criminal Procedure Law. For 2020, in this category are included 285 cases that were sent in accordance with the relevant jurisdiction (including – abroad). The category “3.1. Discontinued during the reference year” decreased because 365 cases in which the prosecutor took a decision to terminate the criminal proceedings by conditionally releasing a person from criminal liability for the commission of a criminal offense or a less serious crime were included in the category “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor". This also explains the increase in the latter category.

Q107-1 (2024): Data collection and monitoring tools allow to provide more detailed overview of guilty plea procedures that was not available before.
Q109 (2021): Data from Accountancy system

Q013 (General Comment): Data on budget of the public prosecution includes only State budget for prosecution.

Q013 (2024): The main reason for difference between the approved budget and the implemented budget is related to the fact that there were several vacant prosecutor positions that were not filled but the salary amounts for these positions were allocated. In addition, several prosecutors are on maternity leave, their salary amounts also were allocated but not spent.
Another reason for underutilization of the planned budget was the fact that the expenses planned for foreign business trips in 2024 were not fully utilized, mainly because a significant part of the business trip expenses were covered by the institutions that had invited representatives of the Prosecution Office.
Savings were also generated because several prosecutors and employees were not working due to different incapacity for work situations, also several prosecutors retired.
Finally, part of the saving occurred because the Office of the Prosecutor General did not move to temporary premises at 1, Talejas Street and 3, Ierēdņu Street in Riga as was planned. The current premises of the Office of the Prosecutor General building on 6, Kalpaka Boulevard need major renovation. For reasons that were beyond the control of the Prosecution Office the funding that was allocated to cover costs of reconstruction, rent, equipment, relocation and other related expenses was not spent.
Prosecution Office of the Republic of Latvia has requested allocation of funds for trainings designed for prosecutors. In 2024 training regarding i2 Analysis Notebook software was organized to promote more efficient data analysis and coordination work among prosecutors and senior prosecutor assistants. Trainings regarding specific topics were conducted, such as psychological aspects of committing a crime, regulation of construction projects and criminal liability etc. Few of the activities were implemented by the Justice Academy, therefore some of the allocated budget for training was not spent for the activities.
Funding for training activities implemented by the Prosecution Office has increased due to the specific nature of the training activities organized, such as training in the use of specific software, improving English language skills, etc. The number of employees providing highly qualified support to prosecutors has increased at the Prosecution Office, and these employees also needed specific training to ensure the high-quality performance of their duties.

Q013 (2023): The expenses for the Prosecutor's Office has increased, as well as the number and scope of implemented trainings has been increased. Prosecution Office of the Republic of Latvia has requested additional budget allocation in respect to various training activities - such as language training courses, trainings and discussion regarding professional ethics and integrity, strengthening of communication skills etc. therefore the budget allocated for trainings has indeed increased.

Q013 (2022): The allocated budget has increased due to the fact that we were implementing the EC co-financed project BALTICS that conducted trainings for prosecutors in the field of financial and economic crime investigation. The project was financed from the funds of the Prosecutor's Office (budget was 28 930 EUR).
Decrease observed in the spending of budget in the training activities was due to the fact that several activities implemented in the Prosecution Office were financed by the European Commissions project (in accordance with the Explanatory note, EU fundings are not taken into consideration in Q13). Additionally, during the training period of 2022 many activities for prosecutors were financed by the project run by the Court Administration "Justice for growth".

Q013 (2020): 1. The cost of reimbursement was EUR 23 492 less due to the absence of 2 new posts.
2. Expenditure on goods and services of less than EUR 1 254 277, of which EUR 1 191 298 was not exhausted (used) because the original planned repairs were not carried out in the General Prosecutor's Office building on Kalpaka Boulevard 6 in 2020.
3. Capital expenditure was not fully absorbed at EUR 288 678.
4. Taking into account that raising the qualification of prosecutors is one of the priorities of the Prosecutor's Office, additional training measures and, accordingly, increased budgetary resources are envisaged.
On 1 January 2019, the Law “Amendments to the Law on Remuneration of Officials and Employees of State and Local Government Authorities” entered into force, by which there was prescribed a significantly higher remuneration for prosecutors. Consequently, the budget allocated to the Prosecution Office in 2020 is higher than in 2018.
“Annual public budget allocated to training of public prosecution services”: The Prosecution Office is financed from the State budget, then, taking into account the additional State budget funding allocated to the Prosecution Office for 2020, it was possible to increase the funding for the training of prosecutors.

Lithuania

Q107 (General Comment): Inconsistency is a result of different sources of data and their differing formulas for calculating some statistical indicators. Numbers of „Pending cases on 1 Jan“, „Pending cases on 31 Dec.“ and „Incoming cases“ are taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service. Number of "criminal cases" is counted by the crimes.
Before 2021, the Prosecutor's Office of Lithuania collected statistics by pre-trial investigations, but no matter if investigation is carried out for 1 crime or for 100 crimes, it would still count as one investigation in the statistics. For this reason methodology was changed, because data in crimes is more suitable for comparative analysis.

Q107 (2024): * Section 3.1.4 provides information on criminal cases transferred to a foreign country for further criminal proceedings. Number of "criminal cases" is counted by the crimes. Before 2021, the Prosecutor's Office of Lithuania collected statistics by pre-trial investigations, but no matter if investigation is carried out for 1 crime or for 100 crimes, it would still count as one investigation in the statistics. For this reason methodology was changed, because data in crimes is more suitable for comparative analysis.

Q107 (2023): Section 3.1.4 provides information on criminal cases transferred to a foreign country for further criminal proceedings. A large number of cases used to be transferred to Belarus or Russia. Recently, the Lithuanian Prosecutor's Office has reduced international cooperation with these countries to a minimum, which has had an impact on the total number of criminal proceedings transferred to foreign countries.

Q107 (2022): Inconsistency is a result of different sources of data and their differing formulas for calculating some statistical indicators. Numbers of „Pending cases on 1 Jan“, „Pending cases on 31 Dec.“ and „Incoming cases“ are taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.

Q107 (2021): The number of registered crimes is gradually decreasing since 2017 in Lithuania, and this also affects other numbers.
Prosecutor General's Office of the Republic of Lithuania: the numbers are correct. Vertical inconsistency is a result of different sources of data and differences in formulas for calculating some statistical indicators. Numbers of „Pending cases“ and „Incoming cases“ are taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.

Q107 (2020): Cases closed by the public prosecutor for other reasons: cases closed under Paragraph 3 Article 68 of the Criminal Procedure Code - when criminal act has been committed in the territory of the Republic of Lithuania by a citizen of a foreign country or other person who have subsequently left the Republic of Lithuania, the Prosecutor General's Office of the Republic of Lithuania may request foreign country to take over the criminal case. When criminal case is taken over by another country, the one in Lithuania is discontinued. The number of registered crimes is gradually decreasing since 2017 in Lithuania, and this affects number of incoming cases, processed cases, discontinued cases and cases brought to court.
The reason for the non-compliance of the result of the formula used ((pending cases on 1 January 2020 + incoming cases) – processed cases = pending cases on 31 December 2020) is a result of different sources of data and their differing formulas for calculating some statistical indicators. Numbers of „Pending cases“ and „Incoming cases“ is taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.

Q109 (General Comment): A traffic offence is qualified as criminal when it causes health impairment to another person, or the offender has been driving under influence of alcohol, narcotic, psychotropic of other psychoactive substances and his/her driving resulted in health impairment to or death of another person. Other traffic offences are qualified under the administrative legislation.

Q013 (2024): The increase in the budget for 2024 is primarily due to the increase of salaries of prosecutor‘s. On 1st January 2024 amendments to the Law on the Public Prosecution Service came into force which implemented the first phase of increase in the salaries of prosecutors. On 1 January 2025 – the second phase of salary increase came into force. The salary reform is considered completed and provides for the ratio between salaries of prosecutors and judges at on average 90 %.

Q013 (2023): In 2022, the Prosecutor's Office was intensively implementing projects and trainings funded by foreign grants, which reduced needs from Prosecutor's Office's training budget. The indicated amount of EUR 34,642 does not include funding from foreign grants and comes solely from the state budget.
With the conclusion of these grant-funded initiatives, all training activities must now be fully supported by the state budget. This transition accounts for the observed increase in budgetary allocation for training in 2023.
More over, the costs associated with organizing training events have risen, including venue rentals, materials, and other logistical expenses. These cost increases also contribute to the higher budgetary needs for 2023.

Q013 (2021): National Audit Office of Lithuania carried out an audit on the investigation and prevention of cybercrime, which aims to contribute to the creation of a safe environment for society in cyberspace. The audit recommendations highlighted the need for the General Prosecutor's Office to pay more attention to the development of competences in the investigation of cybercrime, as the competences of specialised prosecutors are not sufficiently enhanced due to an insufficient and unsystematic education system and the lack of methodologies for the investigation of cybercrime. Due to the high cost of cybercrime training, an additional budget was requested and a small part of it was received.

Q013 (2020): In 2020 the decrease in the state budget funds allocated to the training of prosecutors was influenced by objective reasons. It should be noted that the Prosecutor's Office participates in a wide range of international projects, from which it receives funding for capacity building activities. Also, individual trainings, traineeships and exchanges are funded by the European Judicial Training Network. In this context, there was no increased need for funds from the state budget for the training of prosecutors in 2020. In addition, the decrease in the need for allocations in this area has also been influenced by the onset of the COVID-19 pandemic.

Luxembourg

Q107 (2024): 3.1.1 Between 2023 and 2024, a significant 26% increase was observed in resolved cases by the public prosecutor because the offender could not be identified. This development is part of a broader trend, marked by a continuous rise in the number of incoming cases registered by the public prosecutor's offices in recent years. Since 2022, the proportion of cases with an unknown perpetrator has regularly exceeded 40% of the total cases handled.

This situation is partly explained by the growing prevalence of cybercrime, which represents an increasing share of discontinued cases without further action. Prosecution in this area is particularly complex due to the technical nature of the offenses and their often international scope, making it difficult or even impossible to identify the perpetrators.

Moreover, this increase also affects other categories of offenses, such as scams, frauds, and the intentional destruction or damage of movable property. In these cases as well, the absence of elements allowing for the identification of perpetrators prevents any judicial proceedings, thereby contributing to the rise in discontinued cases without further action.

Q107 (2023): The cases referred to under 3.2. are considered closed if the party concerned complies with the condition imposed by the warning or fulfils its obligations arising from the mediation.
In the event of non-compliance, the public prosecution will resume.
3.1.4: These mainly concern two specific measures: firstly, with regard to road traffic, the obligation to follow a driving course and, only for young adult offenders, participation in a course in the Choice 18+ programme designed to prevent drug addiction (https://www.solina.lu/fr/facilities/impuls/).
The drop in cases closed for Other reasons is explained by the drop in cases closed involving young adult offenders (aged 18 to 21). If these young offenders take part in a course as part of the Choice 18+ programme, designed to prevent drug addiction, and successfully complete it, their cases are closed. However, for reasons of internal organisation within the public prosecutor's offices, these cases are not closed as and when a traineeship is completed, but as a group, i.e. when a certain threshold of completed traineeships is reached. Finally, the drop in closed cases recorded since 2023 in the area of narcotics and concerning young offenders can be explained by the legalisation of recreational cannabis in Luxembourg in July 2023 and the subsequent drop in prosecutions by law enforcement.

Q107 (2022): Case covered by subcategory 3.2. are deemed closed if the relevant party complies with the condition set forth in the warning or fulfills its obligations arising from mediation. In case of non-compliance, public prosecution resumes.

Section 3.1.4 primarily encompasses two specific measures; firstly, concerning traffic regulations, the requirement to attend a driving course and, exclusively for young adult offenders, participation in a program called Choice 18+ aimed at preventing drug addiction (https://www.solina.lu/fr/facilities/impuls)."

Q107 (2021): 3.1.4 " Discontinued for other reasons": due to the continuing pandemic in 2021, no "Choice18 +" measures could be initiated, nor processed, during this year. Similarly, driving courses were suspended due to the pandemic and did not resume until October 2021.
3.2 "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor": the increase in the number of cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor between 2020 and 2021 cannot be explained by a single event. The increase is mainly due to the growing number of warnings issued by the prosecution service, which is on the one hand the result of punctual measures related to the health crisis and on the other hand depends on the subject matter of the cases dealt with, as warnings are usually issued in less serious cases.

Q107 (2020): "The cases referred to under 3.2. shall be considered closed if the party concerned complies with the condition imposed by the warning or fulfills its obligations arising from the mediation. In case of non-compliance, the public action will resume.
3.1.4: These are essentially two specific measures: firstly, in the area of traffic, the obligation to follow a driving course and, only for young offenders of full age, participation in a course in the Choice 18+ program for the prevention of drug addiction (https://www.solina.lu/fr/facilities/impuls/)."

Q107-1 (General Comment): The "criminal transaction" introduced by a law on February 24th, 2015 under the name of "judgment by agreement" allows the prosecutor and the defendant to engage in negotiations for a criminal judgment that will be enforced by the courts.

Q107-1 (2024): There was a marked increase in the use of the consent decree procedure in fiscal 2024, due to a heightened awareness of this procedure on the part of public prosecutors. This procedure is mainly used in cases of economic and financial crime.
Q107-1 (2021): In 2020 and 2021, health measures only allowed the physical presence of a reduced number of persons in hearings compared to previous years. To continue to work efficiently and resolve cases, prosecutors' offices have, as far as possible, given preference to the procedure of judgement by agreement (procédure du jugement sur accord), as it requires less physical presence of parties, defence counsel, witnesses, etc. Moreover, since the procedure of judgment by agreement was only introduced in 2015, the habit of resorting to this measure has only become established in recent years among lawyers, who now take the initiative themselves more often to launch this procedure.

Q107-1 (2020): In 2020, the sanitary measures did allow only a reduced number of people in the court hearings compared to previous years. In order to continue to work effectively and to resolve cases, the state prosecutors' offices decided to resort to the guilty plea procedure, since it does not require the same amount of physical presence of the parties, the defenders, witnesses, etc.
Q013 (General Comment): The budget of the public prosecution services cannot be distinguished from the budget of the courts.
Q013 (2024): There is no separate budget for the Public Prosecution Services.

Q013 (2023): There is no single budget for the Public Prosecution Service.

Q013 (2022): There is no separate budget allocation for the prosecution services.

Q013 (2020): Il n'existe pas de budget isolé pour les services du ministère public.

Malta

Q107 (2024): The quoted cases do not specifically refer to the caseload of the attorney general, but to all the cases brought to court at first instance by the police acting as prosecutors in cases requiring less than 2 years imprisonment.

Q107 (2022): Presently the figures provided are in lien with the cases that are brought to court. The Office of the Attorney General shall be developing its case management system and this data should then be easily captured by the new system.

Q107 (2021): The Office of the Attorney General is in the process of setting up a comprehensive case management system that will keep track of all the cases that are processed by the OAG. Until then, the cases quoted above are all cases prosecuted in court at 1st Instance.
The high pending caseload at the beginning of 2021 is a direct result of the inefficiencies experienced during the Covid-19 pandemic. In fact throughout 2020, given that most of the year the courts of justice were closed, the number of incoming cases far exceeding the number of resolved cases. This led to a low CR and a concomitant high pending caseload.

Q013 (General Comment): The public prosecution services are carried out by the Attorney General's office. The Attorney General not only acts as a public prosecutor but also as the principal legal advisor of all the Government Departments. As a result, the amount budgeted cannot be considered as being funds allocated solely for public prosecution services, but also for other purposes relating to legal work and advise for the Government, both locally and internationally.

Q013 (2024): This is the actual data derived from the financial estimates across different ministries and entities. The overall increase in the approved budget as well as the implemented training budget relates to the increase in the number of prosecutors within the office, but also to the efforts of the Attorney General to ensure that the staff receive continuous training.

Q013 (2023): The discrepancy between the approved and implemented budget results from an increase in the number of lawyers within the Office of the AG. This translated into added costs in respect of wages and training.
Q013 (2022): The Office of the Attorney General underwent a recruitment drive that resulted in an increment in wage-related costs.

Netherlands

Q107 (General Comment): The number of pending cases at the end of the year cannot equal pending cases at the start of the year + incoming cases – processed cases, because a specific type of case can only be counted in the stock when the file has been judged, not when they are pending. This is for criminal cases where an order is given, but the case is then returned because the order cannot be executed. This specific case type return to the stock, but cannot be measured in the system the public prosecution uses. Once those cases are assessed again and stream out, they become visible in the numbers in the system.
Pending cases are cases that are yet to be judged and for which a hearing has to be planned. Cases for which the hearing has been planned, are not included in this number.

Q107 (2022): There are a few numbers available, but NL does not register whether cases are litigious or not in the manner asked here.

Q107 (2021): Pending cases are cases that are yet to be judged and for which a hearing has to be planned. Cases for which the hearing has been planned, are not included in this number.
Discrepancy comment Pending cases January: The way in which pending cases were counted changed in August 2020, before that time a large number of cases were included that had already been dealt with administratively. Those cases are now excluded from the number of pending cases, which explains the difference in numbers between pending cases Jan 2020 and and pending cases Jan 2021.

Q107 (2020): The number of pending cases at the end of the year cannot equal pending cases at the start of the year + incoming cases – processed cases because a certain type of case can only be counted in the stock when the file has been judged, not when they are pending. These cases are criminal cases where an order is given, but they are then returned because the order cannot be executed. These criminal cases return to the stock, but cannot be measured in the system the public prosecution uses. Once a case like that it assessed again and streams out, it becomes visible in the numbers of the system.
Q107-1 (General Comment): Over the past years, there were experiments with judgement agreements (vonnisafspraken) and trial agreements (procesafspraken), see eg. https://www.bjutijdschriften.nl/tijdschrift/NTS/2022/2/NTS_2666-6553_2022_003_002_003. These experiments were evaluated, and further specified in directives and instructions in 2022/2023, see eg. https://www.om.nl/onderwerpen/beleidsregels/aanwijzingen/executie/aanwijzing-procesafspraken-in-strafzaken-2023a002. The numbers are not yet available.

Q107-1 (2023): Over the past years, there were experiments with judgement agreements (vonnisafspraken) and trial agreements (procesafspraken), see eg. https://www.bjutijdschriften.nl/tijdschrift/NTS/2022/2/NTS_2666-6553_2022_003_002_003. These experiments were evaluated, and further specified in directives and instructions in 2022/2023, see eg. https://www.om.nl/onderwerpen/beleidsregels/aanwijzingen/executie/aanwijzing-procesafspraken-in-strafzaken-2023a002. The numbers are not yet available.

Q107-1 (2022): In 2021, there were experiments with judgement agreements (vonnisafspraken) and trial agreements (procesafspraken), see eg. https://www.bjutijdschriften.nl/tijdschrift/NTS/2022/2/NTS_2666-6553_2022_003_002_003. These experiments were evaluated, and further specified in directives and instructions in 2022. The numbers are not yet available.

Q107-1 (2021): In 2021, there were experiments with judgement agreements (vonnisafspraken) and trial agreements (procesafspraken), see eg. https://www.bjutijdschriften.nl/tijdschrift/NTS/2022/2/NTS_2666-6553_2022_003_002_003. These experiments were evaluated, and further specified in directives and instructions in 2022. The numbers are not yet available.

Q109 (General Comment): These include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation of even administrative justice (wet Mulder).
Q109 (2022): These include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation of even administrative justice (wet Mulder).
Q109 (2020): These include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation of even administrative justice (wet Mulder).
Q013 (General Comment): Approved budget: the first version of the budget (estimated budget); implemented budget: annual financial report on the state expenditure. The budget for public prosecution services includes justice expenses in criminal cases, namely all kinds of cost types (e.g. wiretaps, interpreters, compensations for witnesses).
Budget allocated to training of public prosecution services is not registered separately in the budget report. The public prosecution services do have budget reserved for training, but that is for the entire public prosecution services and not just for public prosecutors. Regarding the public prosecutors, the services take part in the training institute of the Rechtspraak, and pay a yearly fee for that.

Poland

Q107 (General Comment): *The number of cases discontinued for any other reason consists of cases discontinued on the basis of: - art. 17 par. 1 point 3 to 11 of the Code of Criminal Procedure: the social harm of the act is negligible; the law provides that the perpetrator is not subject to punishment; the defendant has died; the criminal statute of limitations has run; criminal proceedings for the same act of the same person have been validly terminated or previously instituted proceedings are pending; the perpetrator is not subject to the jurisdiction of the Polish criminal courts; lack of complaint from an authorized prosecutor; absence of the required authorization for prosecution or request for prosecution from an authorized person, unless otherwise provided by law; there is another circumstance excluding prosecution.
- the Act on Counteracting Drug Addiction (Article 62a and 62b);
- other discontinuances - in addition to those described in report PK-P1K on activity of common organizational units of the Public Prosecutor's Office in criminal cases.
*The number of cases closed by the prosecutor for other reasons consists of: - refusal to prosecute, suspension, dealt with in another way, transfer to commander, criminal prosecution transferred.. At the end that following a change in Q107, starting from 2022, cases previously reported as “closed for other reason are presented as “discontinued for other reasons”.

Q107 (2023): 3.3. in the number of cases brought to the court (264,341) includes the cases indicated in 3.2. (41,512), after deducting these cases the value is 222,829 and in 3. is the number 1,099,217.
Cases closed by the public prosecutor for other reasons - 428 294
Q107 (2022): The other modes of termination concerned 414,485 cases (other modes of termination: refusal to prosecute, suspension, dealt with in another way, transfer to commander, criminal prosecution transferred). These cases are reported within the category “discontinued for other reasons”.
Q107 (2020): *The number of cases processed in 2018 was 1,076,123. The number of cases discontinued for this period is 397,471. This number is comparable to the 2019 data. (406,770 cases discontinued) and for 2020. (387,521 cases discontinued). *The number of cases - "concluded by a penalty or measure imposed or negotiated by the prosecutor" for each year was as follows: 2018. – 43 348, in 2019. -36 167, in 2020. - 25 635.
Q107-1 (General Comment): Article 335 [Sentencing without trial - motion] -Criminal Code Procedure
§ 1. If the accused pleads guilty, and in the light of his explanations the circumstances of the commission of the offence and his guilt raise no doubts, and the attitude of the accused indicates that the objectives of the proceedings will be achieved, further proceedings may be omitted.
The public prosecutor, instead of filing a bill of indictment, shall file a motion with the court for issuing a judgment of conviction at a hearing and for agreeing with the defendant on penalties or other measures envisaged for the offence charged, also taking into account the legally protected interests of the victim. The agreement may also include a specific decision on payment of legal costs.
The public prosecutor may attach to the indictment a motion for a judgment of conviction to be handed down at a hearing and for the penalties or other measures prescribed for the offence charged to be agreed upon with the defendant, also taking into account the legally protected interests of the victim, if the circumstances of the offence and the defendant's guilt are beyond doubt, the evidentiary statements made by the defendant do not contradict the findings made, and the defendant's attitude indicates that the objectives of the proceedings will be achieved.
*Article 156 of the Fiscal Penal Code, The public prosecutor, as well as the financial pre-trial body, may attach to the indictment a motion for issuing, without a hearing, a judgment of conviction and imposing a penalty or penal measure agreed with the accused for the fiscal offence or fiscal misdemeanour charged against him, if the circumstances of the commission of the offence do not raise any doubts and the attitude of the accused indicates that the objectives of the proceedings will be achieved.

Q107-1 (2024): *) Data refers to persons convicted at first instance (31354):
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 748 persons, in District Courts - 27 405 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 3 201 persons.

Q107-1 (2023): *) Data refers to persons convicted at first instance (39073):
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 814 persons, in District Courts - 35,020 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 3,239 persons.

Q107-1 (2022): *) 46 263 = Data refers to persons convicted at first instance:
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in District Courts - 658 persons, in Regional Courts - 41,690 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 3,915 persons.

Q107-1 (2021): *) 51 198 - Data refers to persons convicted at first instance:
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 580 persons, in District Courts - 46,148 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 4,470 persons.

Q107-1 (2020): *during the main trial – 53 072 - *) The data pertains to persons sentenced in the first instance:
- Sentenced as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 743 persons, in District Courts - 48,762 persons
- Voluntary submission to liability for penal and fiscal offences (Kks): in District Courts - 3,567 persons.
*57 735 - The data on the basis of which the information was provided are collected under the Law on Public Statistics in the Public Prosecutor office - P1K report on the activity of the common organizational units of the public prosecutor's office in criminal cases (statistical program SprawPro). The data for 2018 included only those cases in which a request under Article 335 par 1 of the Code of Criminal Procedure was addressed. On the other hand, the data for 2020 included cases in which the prosecutor addressed a motion for a conviction and motions to join the indictment under Article 335 par 2 of the Code of Criminal Procedure and Article 156 of the Fiscal Penal Code

Q013 (2024): The lowest expenditure on training was recorded in 2020 due to the epidemiological situation related to the COVID-19 pandemic and the risk of SARS-CoV-2 infection. This resulted in a significant reduction in training courses and workshops in the form of traditional meetings. This situation was mainly influenced by the training offer. Most of the training courses were offered and conducted online, which resulted in lower training costs. Since 2021, training expenditure has been steadily increasing. The reason for this is the expansion of the offer to include training in the form of traditional meetings, as well as an increase in training costs (inflation). The highest increase in expenditure in 2024 compared to 2023 for training recorded in § 4700 Training of employees who are not members of the civil service was recorded in the National Public Prosecutor's Office. In the National Prosecutor's Office, the increase in expenditure in 2024 on training compared to 2023 is primarily due to the purchase of the following specialist IT training courses: ‘Combating terrorist threats’ for the Department for Organised Crime and Corruption- for persons from general organisational units of the prosecutor's office performing tasks within the IT Shared Services Centre for the Department of Cybercrime and Computerisation, "Provision of warranty services for the Ordering Party's RedHat software" for the Department for Cybercrime and Computerisation, "Renewal of warranty service for the Ordering Party's backup system equipment and expansion of the current backup environment" for technical personnel in the Department of Cybercrime and Computerisation.

Q013 (2023): The average NBP exchange rate of 29 December 2023 was used to convert PLN to €. - 4,3480.
In 2023, the Prosecutor's Office budget was implemented in 99.86%. The difference between the approved and implemented budget is the amount of PLN 5,308,139.16 (1 220 823,17 euro). Within this amount, the planned budget expenditure was blocked. The blockage was a result of the notification by the organisational units of the Prosecutor's Office in section 753 Compulsory social insurance of the excess of the sub-allocated funds in the 2023 Prosecutor's Office budget for retired prosecutors‘ emoluments and family emoluments, due to the lower number of retired prosecutors’ retirements in relation to the amount assumed during the work on the 2023 Budget Act. The financial plan for 2023 in part 88 General organizational units of the Prosecutor's Office compared to 2022 increased by 17.08%, and the realized budget in 2023. was higher than that realized in 2022 by 16.92%.
The change in the size of the prosecutor's office budget for 2023 with respect to 2022 was mainly influenced by:
- Department 752 - National Defense - the creation of a new department for military affairs in accordance with the Decree of the Minister of Justice dated December 2, 2022. Regarding the establishment of a Department for Military Affairs in the District Prosecutor's Office Łódź - Polesie in Łódź,
- Section 753 Social Insurance - change of emoluments of prosecutors in retired status and family emoluments, the increase in relation to 2022 was as a result of the 7.8% salary indexation and the amounts of increased remuneration referred to in Article 10a of the Law on Special Solutions for the Implementation of the Budget Act for 2023 (outstanding benefit indexation) as well as additional funds for retiring prosecutors in 2023,
- Section 755 Justice - valorization of benefits of adjudicators and employees by 7.8%, as well as the amounts of increased remuneration referred to in Article 10a of the Law on Special Solutions for the Implementation of the Budget Act for 2023 (outstanding benefit valorization) as well as increased costs of operation of prosecution units and increased costs of pre-trial proceedings.

Q013 (2022): The average exchange rate of the National Bank of Poland as at 30 December 2022 was used to convert PLN to €. - PLN 4.6899.
In 2022, the budget of the Public Prosecutor's Office was implemented in 99.99%. The difference between the approved and implemented budget is the amount of PLN 237,656.33. Within this amount, the planned budget expenditure was blocked in the amount of PLN 228,314. The blockage was a result of the failure to realise planned expenditure, primarily under the Operational Programme Knowledge Education Development 2014-2020 in the amount of PLN 176,221, an excess of funds in the financial plan of expenditures due to a lower number of retirements of prosecutors than assumed in the course of work on the Budget Act for 2022, and remaining funds in the Prosecutor's Office units in § 6060 Investment expenditure on budgetary units.
*13.1
In fact, the prosecutor's budget for training in 2020-2021 was significantly lower than in previous years and in 2022.
In 2020-2021, the epidemiological situation related to the COVID-19 pandemic and the risk of infection with the SARS-CoV-2 virus resulted in a significant reduction in training and workshops in the form of traditional meetings. In fact, online trainings have prevailed.
Prosecution units also held in-house training sessions.
Expenditures on training in 2022 compared to 2020 and 2021 definitely increased. However, the training offerings have changed. Training in the form of traditional meetings returned but largely remained online training, which results in lower training costs. The budget for training in 2022 is 80.53% of the budget for training in 2018. It is likely that this trend will already continue.
It should be noted that prosecution units had a budget in 2022 that was sufficient to implement training at the 2018 level.

Q013 (2021): *1 euro= 4,5994 pln
*In 2020, the epidemiological situation related to the COVID-19 outbreak and the risk of virus infection resulted in a significant reduction in training and workshops in the form of traditional meetings. Training offerings changed and on line training was available. In view of the lack of mobility and the limitation of interpersonal contacts, the prosecution units organised in-house training. The training budget for 2020 represented 35.27% of the 2019 implementation and 36.3% of the 2018 implementation. The budget allocated for training in 2021 increased by 56.16% compared to 2020. The execution of training expenditure did not reach the level of 2018 and 2019. This was mainly influenced by the training offer. The majority of training is offered and delivered on line which results in lower training costs.

Q013 (2020): 1 euro=4.6148 PLN
The lower implementation of the training budget in 2020 compared to the implementation in previous years is primarily due to constraints related to the COVID-19 pandemic and the risk of SARS-COV-2 virus infection. The epidemiological situation has led to a reduction in training and workshops in the form of traditional meetings. Training offerings have changed. In essence, online training has become available. In view of the lack of mobility and the limitation of interpersonal contacts, the prosecution units organized in-house trainings. The budget for training in 2020 represents 35.7% of the 2019 implementation and 36.3% of the 2018 implementation. Below, I present the amounts of expenditures realized in 2018 - 2020 for training in the common prosecution units: 2018 - 683 618,27 euro, 2019 - 694 686,85 euro, 2020 - 248 164,77 euro. *The decrease in the approved budget alloceted of the training budget is primarily due to constraints related to the COVID-19 pandemic.

Portugal

Q107 (General Comment): The counting unit is the case (criminal proceedings at the investigation stage), so it is the same unit used to count incoming and outgoing cases for the other issues.
Incoming and outgoing cases include internal movements of cases between units (in 2023 there were 36,432 cases transferred between units).
Outgoing cases include cases that are joined together to form a single case.
3.1.1 When the offender is unknown, the case remains open until it is closed by decision of the competent public prosecutor, when all efforts to identify the offender have been exhausted. If a case is reopened, for statistical purposes it is considered a new case on the date it is reopened.

Q107 (2022): 3. The total figure for 2022 for the total number of completed criminal cases at the investigation stage is 427 664.

Q107 (2020): The data indicated for «number of processed cases» corresponds to “the total number of criminal cases at the investigation stage that have been closed”.
The Public Prosecutor's Office, closes the inquiry as soon as it has gathered sufficient evidence that no crime has been committed, that the defendant has not committed it or that the procedure is legally inadmissible.
The Public Prosecutor's Office also closes the inquiry if it has not been possible to obtain sufficient evidence that a crime has been committed or who the perpetrators were.

Q013 (2024): The 30% variation concerns DGAJ-MMP (Direção-Geral da Administração da Justiça - Magistratura do Ministério Público): payments were €35M higher than the initial allocation due to higher-level authorisations.

Q013 (2021): During the economic year, the budget needed to face needs that were not anticipated.

Q013 (2020): During the economic year, the budget needed to face needs that were not anticipated.

Romania

Q107 (2020): There are no available data on grounds on which a decision to discontinue a case is taken by the public prosecutor.
Q109 (2020): Only serious offenses that are considered crimes, such as drunk driving or involuntary manslaughter.

Q013 (2024): The data is now directly provided by the Prosecutor's Office Attached to the High Court of Cassation and Justice, while in previous reporting years the data was extracted by the Economic Department within the Ministry of Justice from the reports of the Ministry of Finance. Therefore, the difference could be explained by a distinct benchmark in reporting.

Q013 (2022): These figures concern the training of civil servants and other categories of staff in this system, not prosecutors - the costs of training magistrates cannot be broken down /highlighted here, being included in the budget of the Superior Council of Magistracy (training of this latter category carried out through the Higher Institute of Magistracy).

Q013 (2021): The training of judges and prosecutors is provided by the National Institute of Magistracy (Superior Council of Magistracy)- separate budgets. For 13.1, the amounts included only the sums from the state budget provided for the training of civil servants and other categories of non-judge/non-prosecutor staff within the system of the Public Ministry. Post-pandemic, both the frequency of trainings and the number of participants at trainings grew.

Q013 (2020): The training of judges and prosecutors is provided by the National Institute of Magistracy (Superior Council of Magistracy). For 2020, the amounts included to both Q6 and O13 included the amounts from the state budget provided for the training of civil servants and other categories of non-judge / non-prosecutor staff. In 2018, according the data provided by the economic department, at these amounts were included, the training within some European training programs (programs within European funds) of a number of judges (and prosecutors)- a separate budget from the budget regarding the training through the National Institute of Magistracy (Superior Council of Magistracy).

Slovak Republic

Q107 (2023): 3.1.3 Opportunism is not a feature of the Slovak legal system. Prosecutorial decisions are strictly bound by legality and officiality, with no discretion to decline prosecution if legal criteria are met. For the CEPEJ questionnaire, "NAP" is appropriate for the subcategory 'cases discontinued for reasons of opportunity'.
Q107 (2022): It is necessary to state that the required table, or criteria, are different from our legal system. In our criminal proceedings, a large number of cases in the preliminary proceedings are closed by the investigator or police officer, while the table only requires cases closed by the prosecutor. In addition, matters terminated by the prosecutor may also be terminated by the so-called diversions in criminal proceedings, while the table only requires cases stopped by the prosecutor. The inconsistency of data with previous years is also caused by the fact that the prosecutor in the Slovak Republic has slightly different powers in the preliminary proceedings in contrast to the legal systems of other countries, so the data differ according to the point of view of the processor of the data.

Q107 (2021): The General public prosecutors office did not deliver any explanation.

Q107 (2020): The data were delivered by General prosecutor office. The number of 1st instance criminal cases are not monitored by General prosecutor office in CEPEJ requested structure.
Q107-1 (2024): * Note: The above number represents only the number of guilty pleas agreements concluded at the prosecutor's office and submitted for court approval. We currently do not have the number of agreements that have been approved beyond the agreements submitted by prosecutors to the court during the main trial.
Q107-1 (2020): The data were delivered by General prosecutor office. The most of the data are not available, because these are not monitored by General prosecutor office in CEPEJ requested structure.
Q109 (2024): https://www.genpro.gov.sk/statistiky/statisticky-prehlad-trestnej-a-netrestnej-cinnosti-za-rok-2024/

Q013 (General Comment): The increase is correct. The prosecution department once again expected increased interest in training due to legislative changes. The approved budget may be adjusted by the prosecution department during the year with budgetary measures based on the real need for funding, while it must adhere to the overall limits of the allocated budget. The valorization of prosecutors' salaries, which we stated in the questionnaire as an increase in prosecutors' salary requirements.

Q013 (2024): The Prosecution Department may, during the course of the year, adjust the approved budget through budgetary measures based on the actual financing needs, while respecting the overall limits of the allocated budget.
The difference between the approved budget and the actual budget amounts to EUR 9,636,852.94.
The financial resources were allocated for the following purposes:
-reconstruction of buildings and premises of regional and district prosecutor's offices,
-increase of remuneration and salary components of prosecutors,
-severance payments for prosecutors,
-procurement of Microsoft licences,
-procurement of software and IT equipment for asset tagging,
-additional financing of essential operational expenditures of the prosecutor's offices,
-functional allowances for the performance of prosecutorial duties.

Q013 (2023): The prosecution department once again expected increased interest in training due to legislative changes.
The approved budget may be adjusted by the prosecution department during the year with budgetary measures based on the real need for funding, while it must adhere to the overall limits of the allocated budget.
The difference between the approved budget and the actual budget is EUR 12,685,808.10.
The funds were intended for:
- reconstruction of buildings and premises of regional and district prosecutor's offices,
- purchase of desktops for administrative staff and renewal of Lotus Notes e-mail equipment,
- building a communication infrastructure for the Nové Zámky District Prosecutor's Office,
- increase in salary requirements for prosecutors,
- severance pay of prosecutors,
- procurement of Microsoft licenses,
- payment of increased expenses for electricity and natural gas,
- additional fees for performing the function of a prosecutor,
- additional financing of operating costs (rent, communication infrastructure, general services) and expenses in the field of information technology,
- procurement of mobile workplaces for prosecutors.

Q013 (2022): The difference between the approved budget and the implemented budget is 8 609 822 Eurs. The increased funds were allocated to:
- valorisation of prosecutors' salaries
- implementation of the ECRIS TCN Third Country Citizens Registration Project
- expansion of the PATRICIA information system and its connection to the information system of the European Public Prosecutor's Office
- necessary reconstruction of district and regional prosecutor's offices
- more training - relieve of COVID19 restrictions - additional financing of energies.

Q013 (2021): The difference between the approved budget and the actual budget is EUR 3 197 554.
The increased funds were allocated to:
- valorisation of prosecutors' salaries;
- modernization of the ECRIS software to version 1.6 for the Criminal Register;
- connection of IS Patricia to IS of the European Prosecutor;
- necessary renovation of buildings of the General Prosecutor's Office of the Slovak Republic;
- budget allocated to training of public prosecution services has changed due to the possibility to make face-to-face trainings.

Q013 (2020): The General Prosecutor of the Slovak republic:
The difference between the approved and the implemented budget is 903 692 euros.
The financial means were allocated to:
- wage valorisation of prosecutors, increase of number of employees of the Prosecutor's - investment into the buildings
Discrepancies form the previous cycle in the annual public budget allocated to training are due to the COVID 19 pandemic situation due to which the trainings were not planned or applied. The increase in the approved budget in 2020 reflects the implemented budged allocated to training of public prosecution services in 2019. The budgetary needs for training in 2020 were expected similar (higher) as in 2019, therefore the increase. But the training plans were not implemented due the Covid pandemic situation, so the implementation of the budget in this category was much lower.

Slovenia

Q107 (General Comment): Methodology used: statistical data are kept on the accused, accused or convicted persons, and the data is related to the main crime per defendant (methodology as used in the Joint Annual Report on the Work of State Prosecutor's Offices and has been used in previous reports).
IMPORTANT: Data also includes unfinished criminal complaintes against unknown perpetrators. It should be noted that on average, State Prosecutor's Offices receive between 30.000 and 60,000 complaints per year against unknown perpetrators. These are included in statistical data as unresolved cases until the perpetrator is discovered or the statute of limitations expires.
1.Pending cases on 1 Jan. ref. Year: unresolved criminal complaints against known perpetrators (incl. adults, minors and legal entities) and unknown perpetrators.
2. Incoming/received cases: criminal denunciations against known and unknown offenders.
Criminal denunciations against known offenders include cases that were received by the prosecution office as cases with unknown offenders whose identity was discovered during the reporting period. Cases against known offenders are counted by the number of persons involved (i.e. a denunciation against five individuals is counited as five cases), cases against unknown offenders are counted by files.
3. Processed cases: all resolved criminal complaints in the reporting year. There can be multiple criminal complaints in one case file, however the resolution is only one (for all complaints in one case file) – hence the difference between the sum of subcategories (3.1, 3.2, 3.3 and 3.4) and the actual number of resolved criminal complaints. The discrepancies in the numbers arise from the way cases are recorded in the information system: in general, in cases with multiple offences by one suspect typically there is a single resolution; in cases with multiple suspects with different offences cases may be split to allow different resolutions; in cases with same suspect and multiple complaints the cases may be merged.
3.1.1 Discontinued by the public prosecutor because the offender could not be identified: the public prosecutor cannot discontinue a case, because the offender could not be identified.
3.1.2 Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation: dismissed denunciations for other reasons than opportunity and accomplishing some tasks imposed or negotiated by state prosecutor. This category includes cases where prosecutor refrains from prosecution after the finish of judicial investigation.
The great majority of cases against unknown offenders is dismissed because the pending time exceeds limitation period for criminal prosecution.
In the case of proposed criminal offenses, the motion of the injured party is a procedural precondition for conducting criminal proceedings. If this presumption does not exist (it is no longer due to withdrawal), the legal consequence is rejection.
For the most part, public prosecutors rejected complaints for other reasons, including cases in which it was not possible to continue the proceedings due to a lack of procedural or material preconditions (the act is not a criminal offense, there is no reasonable suspicion that the suspect committed a criminal offense (prosecuted ex officio), various procedural obstacles).
3.1.3 Discontinued by the public prosecutor for reasons of opportunity
Cases where denunciations were dismissed because the consequences of criminal prosecution would prove disproportionate to the weight of criminal offence and dismissed denunciations agains

t minors because the proceedings against him/her would not be appropriate in view of the nature of the offence and circumstances in which it was committed, as well as in view of the past conduct of the minor and his personal traits.
3.1.4 Discontinued for other reasons
NAP - all data already covered in the above.
3.2.Concluded by a penalty or a measure imposed or negotiated by the public prosecutor
Dismissed denunciations due to concluded settlement between an offender and the aggrieved person or due to the offender accomplishing some tasks imposed by public prosecutor.
3.3.Cases closed by the public prosecutor for other reasons
NAP - all already covered in the above data.
3.4.Cases brought to court
Natural persons and legal entities charged before district and local courts and motions for punishment or educational measure for minors.
4. Pending cases on 31 Dec. ref. year
Unresolved criminal complaints as at 31 December of the previous year for all categories (adults, minors and legal entities).
Inconsistencies within the table are possible due to the peculiarity of the IT system - it is a "live" system (dynamic reporting), meaning that the reported figures for a specific date or period of time inevitably vary for different reasons (e.g. the data was not promptly entered into the CMS; in some instances, the decision, in which category some specific new cases should be included, may be subsequently changed and when data are unified some figures change; there is also the possibility that a mistake was done when entering the data and was later detected in the quality check and corrected.). Every category (row in the table) is calculated (counted) separately, therefore the „Pending on 31 Dec“ may not equal to the formula (Pending 1 Jan + Incoming – Processed) due to aforementioned influences.

Q107 (2024): Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints against known offenders (4,60%) and unknown offenders (95,40%)
(2) Incoming cases include criminal denunciations against known offenders (42,40%) and unknown offenders (57,60%)
(3) Processed cases include processed cases against known offenders (38,44%) and unknown offenders (61,56%)
(3.1.) Discontinued during the reference year include dismissed criminal complaints against known offenders (26,70%) and unknown offenders (73,30%)
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include known offenders (22,32%) and unknown offenders (77,68%)
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints against known offenders (5,08%) and unknown offenders (94,92%)

Q107 (2023): Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints against known offenders (5%) and unknown offenders (95%)
(2) Incoming cases include criminal denunciations against known offenders (44%) and unknown offenders (56%)
(3) Processed cases include processed cases against known offenders (38%) and unknown offenders (62%)
(3.1.) Discontinued during the reference year include dismissed criminal complaints against known offenders (26%) and unknown offenders (74%)
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include known offenders (23%) and unknown offenders (77%)
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints against known offenders (5%) and unknown offenders (95%)
Discrepancies (to 2022 data):
The increase in processed cases (3) is due to increase in discontinued cases (3, 3.1) against unknown offenders, due to the expiry of statue of limitations (an increase in number of cases against known offenders is negligible). 50% of cases, discontinued in 2023 were in fact filed in 2013 (10 years is the statue of limitation for most of criminal offences in the Penal Code). Structurally, in 50% of discontinued cases the criminal offence was theft. Another factor is that in 2013 the data collection in public prosecution migrated from written records to informatised records, which might affected the consistency of data pre/post 2013. However in long term, the number of cases filed against unknown offenders had been decreasing from 2012 to 2021 (decrease by more than 55%), and only in 2022 the number of filed cases increased somewhat.

Q107 (2022): Discrepancies (to 2020 data) - 3.Processed cases: In 2021 the reporting changed to include cases of discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations in the category (3) Processed cases (previously excluded).
3.Processed cases... increase by 91%: 2 factors contributed to the increase: 1) in 2020, the work of state prosecution was impacted by the Covid19 pandemic; 2) more willingness of suspects and victims to cooperate in alternative forms of law enforcement is observed.
Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints: 11.543 (known offenders) and 271.319 (unknown offenders)
(2) Incoming cases include criminal denunciations: 24.815 (known offenders) and 35.036 (unknown offenders)
(3) Processed cases include processed cases: 24.475 (known offenders) and 29.886 (unknown offenders)
(3.1.) Discontinued during the reference year include dismissed criminal complaints: 14.207 (known offenders) and 29.886 (unknown offenders)
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include: 11.639 (known offenders) and 29.886 (unknown offenders)
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints: 12.024 (known offenders) and 277.436 (unknown offenders)

Q107 (2021): In 2021 the reporting changed to include cases of discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations in the category (3) Processed cases (previously excluded).
Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints: - against known perpetrators: 11.951 and
- against unknown perpetrators: 269.260.
(2) Incoming cases include criminal denunciations: - against known offenders: 24.658 and
- against unknown offenders: 27.199.
(3) Processed cases include processed cases:
- against known offenders: 24.658 and
- discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations: 29.140
(3.1.) Discontinued during the reference year include dismissed criminal complaints:
- against known perpetrators: 14.260 and
- against unknown perpetrators: 29.140
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include:
- a) discontinued criminal complaints against known perpetrators due to the lack of procedural or material preconditions: 10.022, b) cases discontinued (rejected) due to withdrawal of the motion of the injured party: 2.000 and c) cases discontinued due to expiration of the statue of limitation: 75 (total 12.097 cases) and
- discontinued criminal complaints against unknown perpetrators due to the expiration of statute of limitations: 29.140.
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints:
- against known offenders: 11.709.
- against known offenders: 277.564.
Differences to 2020 data:
2.Incoming/received cases: decrease by 16%
Contributing factors: a) Covid-19 pandemics, especially limit of movement of population and related police control, b) changes in the registration of the number of criminal offences in police registers and c) increase in merging of diferent cases in one case at the Police and state prosecution level, compared to the previous year. 3.1.2 Discontinued by the public prosecutor due to the lack of an established offence or a
specific legal situation: increase by 17%
The increase is mainly due to a higher number of cases against unknown offenders due to the expiration of statute of limitations, which is beyond control of state prosecution. The number of discontinued cases agains known offenders did not change significantly. 3.1.3 Discontinued by the public prosecutor for reasons of opportunity: decrease by 22%
The number of cases remains comparable (despite the decrease in last year) and cannot be considered unusual, due to the structure of processed cases with the majority of offences against property and within it low value cases. 3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor: increase by 23%
The increase in 2021 is due to partial relief of preventive measures, related to Covid-19 pandemics.

Q107 (2020): Pending cases on 1 Jan. ref. year includes 12.452 cases against known perpetrators and 263.139 cases against unknown perpetrators.
Incoming/received cases includes 27.770 cases against known offenders and 34.019 cases against unknown offenders.
Pending cases on 31 Dec. ref. year includes 12.072 cases against known offenders and 269.260 cases against unknown offenders.

Q107-1 (General Comment): The defendant may plead guilty in two kinds of situations. He/she can achieve an agreement with a state prosecutor in a plea-bargaining procedure or he/she can make a guilty plea irrespectively of the state prosecutor at the pretrial hearing and until the beginning of a main hearing. Cases brought to court by the public prosecutor through the guilty plea procedure are only first mentioned kind of cases. The agreement on guilty plea between the defendant and state prosecutor may be concluded before the commencement of the criminal proceedings and not later than by the beginning of the main hearing. There is no available data on the stage of the proceeding when the agreement was concluded.

Q107-1 (2024): In 2024, the majority of plea negotiations were conducted in cases falling within the jurisdiction of the district courts and concerned serious criminal offences, often involving multiple defendants and requiring complex evidentiary proceedings. Increase in number of procedures: Approximately 40% of all plea agreements were concluded by a district prosecutor's office located in proximity to the state border, primarily in relation to offences of unlawful border crossing or irregular entry into the country, as defined in Article 308 of the Criminal Code-1.

Q107-1 (2023): Compared to the previous year, there has been a 43% increase in the number of plea agreements. The increase in plea agreements is primarily due to crimes involving illegal border crossings.
Q107-1 (2021): In the previous year (2020) the number of guilty plea procedures was unusually low due to two reasons: a stricter criminal framework (regarding illegal crossing of the state border or territory under Article 308 of the Criminal Code) and the impact of the Covid-19 pandemics.

Q107-1 (2020): The reason for fewer negotiations and fewer agreements is mainly a stricter criminal framework for crimes that were still regulated in 2018 in such a way that they could be the subject of negotiations between the prosecutor and the defendant (illegal crossing of the state border or territory under Article 308 of Criminal Code). Due to the above, there was no interest on the part of the defendants as well as the state prosecutors to agree on guilt and criminal sanction as parties to criminal proceedings. In addition to this, an epidemiological reason for measures to prevent the spread of the covid-19 epidemic is cited as the reason for the reduction in negotiations and plea agreements concluded, furthermore, the poor staffing situation and the high workload of state prosecutors who are engaged in urgent matters in the on-call service and in attending court hearings and the prompt announcement of pre-trial hearings shortly after the indictment becomes final, which significantly shortened the time for conducting negotiations and concluding a plea deal.

Q109 (General Comment): The communicated data include only traffic offences, stipulated as criminal offences (in the Penal Code) and therefore prosecuted by State prosecutors. There are two such criminal offences: causing a traffic accident through negligence whereby another person is seriously injured or died and audacious driving in road traffic which is committed by a serious breach of road safety regulations, while other cases of traffic offences are not criminal offences, but minor offences and are not included in the provided figures.

Q013 (General Comment): The indicated amount of approved and implemented budget is allocated for the overall functioning of State Prosecutor's Office of the Republic of Slovenia. It does not include budget for functioning of the State Prosecution Council (included in Q15.1 and Q15.2.)
Q013 (2024): The biggest savings were on salaries, which is still mainly due to vacancies, especially in prosecutorial posts, for which salaries were already planned in 2024. There were also some savings due to several longer absences from work for health reasons, which were reimbursed by the Health Insurance Institute of Slovenia. The same reasons apply also for lower expenditures on training.
Q013 (2023): Difference between approved and implemented: The biggest savings were on salaries, which is still mainly due to vacancies, especially in prosecutorial posts, for which salaries were already planned in 2023. There were also significant savings due to several longer absences from work for health reasons, which were reimbursed by the Health Insurance Institute of Slovenia. The same reasons apply also for lower expenditures on training.

Q013 (2022): Discrepancies at 13.1 (training): In 2020 and 2021, the budget was impacted by the limitations due to Covid-19 pandemics, hence the increase in 2022 (compared to 2020).
Q013 (2021): The low implementation in comparison with the adopted budget is a consequence of the COVID- 19 epidemic, as there were no educational events with physical participation, but rather virtual ones. For the aforementioned type of events there were no registration fees, or they were lower, compared to participation fees for events with physical participation. Due to the COVID-19 epidemic, the public prosecution's own educational event - Educational Prosecutor's Days, which represents the largest cost of the state prosecutor's office in the field of education, was held virtually.

Q013 (2020): Training: the implemented budget was impacted by the limitations due to Covid-19 pandemics.

Spain

Q107 (General Comment): In Spain the general rule is that the Prosecutor is party in the criminal cases, but the Prosecutor does not process (with exclusive competence) the criminal cases. The investigation Judge (Juez de Instrucción) does that. Data provided in question 107 tries to adapt the information in the Annual Report of the State Attorney General's Office to the criteria of CEPEJ, by offering the data of cases received by the Prosecution Service, according to the classification of procedures of the Spanish procedural legislation (diligencias previas, diligencias urgentes, procedimiento por delitos leves, sumarios y procedimientos del jurado). In addition to that, there are other two kinds of actions for which the Prosecution have exclusive competence: Investigation of criminal reponsibility of minors, and preliminary diligences of Article 773.2 of the Criminal Procedural Act.

Q107 (2020): The provided number of incoming cases is the number of the criminal proceedings received by the Prosecution Service (page 1117 of the Annual Report of the Prosecution Service). It is consistent with the explanatory note as it includes "cases submitted to public prosecutors by the police and other bodies as well as victims (if applicable) within the reference year". It is an official data, provided by the State Attorney Office.
Q107-1 (2021): Explanation of the increased number of guilty plea procedures: Probably, coming back to normal activity after covid restrictions.
Q013 (General Comment): In Spain, it is very difficult to carry out a perfect separation between the budget of Courts and the Budget of Prosecution services, because some concepts are common (civil servants, material resources, buildings, etc). These items cannot be separated from the budget allocated to the functioning of courts. Therefore, the figure provided in respect of the "Total" represents only the salaries.
It is noteworthy that data on the implemented budget is an estimations of the Statistic Department of the General Council of the Judiciary.

Q013 (2024): The data Annual public budget allocated to training of public prosecution services are those contained in the General State Budget for the financial year 2024. Programme: 111R "Training of the Prosecutorial Career" of State General Budget, which has led to an improvement in the investment destined to the training of the prosecutors' career. This is a result of the political commitment to improving investment in prosecutors training. Since 2021, the budget has steadily increased with the implementation of the Ministry's Scholarship Programme. The increase in the 2024 budget compared to 2023 is due to the financial requirements needed to implement the Ministry of the Presidency, Justice and Relations with the Parliament's Scholarship Programme for the exam preparation for entry into the public prosecutor career.
Below are the figures for the total aproval budget and, within that total, the portion corresponding exclusively to scholarships. Also included, with the same breakdown, are the figures for the executed budget.
Total Aproved budget (€)12,308,387; total implemented budget :10.021.227,61 € Scholarship Program aproved budget: 7.085.671,99 (€); Scholarship Program implemented budget: 6.323.316,53; €

Q013 (2023): -The data Annual public budget allocated to training of public prosecution services are those contained in the General State Budget for the financial year 2023.
Section: 13 MINISTRY OF JUSTICE
Programme: 111R Training of the Prosecutorial Career
- Justification for the discrepancy of the approved budget allocated to training of public prosecution services: The increase is due to the Program 111R "Training of Prosecution Career" of State General Budget, which has led to an improvement in the investment destined to the training of the prosecutors' career. This is a result of the political commitment to improving investment in prosecutors training

Q013 (2022): The variation in the implemented budget are within normal parameters taking into account the variation in the price of money in two years. The budget allocated to training includes a part of the training institution's budget corresponding to the prosecutors training. Regarding approved budget allocated to training the increase is related to the Program 111R "Training of Prosecution Career" that is financed from the State General Budget.

Q013 (2021): Regarding the approved annual budget allocated to training, the difference with respect to 2020 lies mainly in the fact that the budgets had been extended for several budget years, starting from a year in which the number of trainee prosecutors was much lower. The increase is due to the approval of budgets for the year 2021 that already took into account much greater promotions of the Prosecution career.
Q013 (2020): Concerning budget allocated for training of public prosecutors, the difference between the approved and implemented budget, namely the fact that the latter is considerably lower than the former, possibly stems from the pandemic and the impossibility to carry out all the foreseen training courses in 2020.

Indicator 4: Public prosecution services - Case flow

Comments provided by the national correspondents

organised by question no.

Question 107. Public prosecutors: Total number of 1st instance criminal cases.

Question 107-1. If the guilty plea procedure exists, how many cases were concluded by this procedure?

Question 109. Do the figures provided in Q107 include traffic offence cases?

Question 013. Annual (approved and implemented) public budget allocated to the public prosecution services, in €.

Question 107

Austria

Q107 (General Comment): “3.1.3 Discontinued by the public prosecutor for reasons of opportunity”: discontinued investigations for reasons of opportunity are only counted by persons against which the investigation was discontinued. In one case, more than one person can be accused and the investigation can be discontinued for reasons of opportunity against more than one accused person. Therefore, the person-count was not delivered because it is inconsistent with the case-count (3.1.1, 3.1.2 and 3.1.4). The number of cases in which an investigation was discontinued for reasons of opportunity is included in the number provided for 3.1.1 and 3.1.2 but cannot be evaluated separately with the standard statistic tools of the Federal Ministry of Justice of Austria.
The provided number of cases discontinued for other reasons (3.1.4) contains cases discontinued because the offender is fugitive or an investigation may not be instituted or continued by law (e.g. because of diplomatic immunity of the offender), also cases (investigations) that were not instituted in the first place because the of a lack of an initial suspicion and all other cases that were discontinued but can not be allocated to one of the above mentioned reasons or the other reasons under 3.1.
Under 3.3, closed cases against unidentified offenders were counted which were discontinued because of another reason than not identifying the offender in the end (mostly cases in which at least one formerly unidentified offender could be identified and therefore the case against the unidentified offender(s) is closed and another (new) case against the known offender(s) is opened).
Following a change in Question 107, starting from 2022, cases previously reported as "closed for other reasons" are included in "discontinued for other reasons".

Q107 (2020): The Austrian code of criminal procedure knows measures that the public prosecutor can take in cases of minor criminal offences (“Diversion”). Comparable measures have to be taken by the public prosecutor under certain circumstances under the addictive drug act (“Suchtmittelgesetz”). Until 2019, the last-mentioned cases were counted as files “discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation” (3.1.2). Since 2020, these cases are now counted as “concluded by a penalty or a measure imposed or negotiated by the public prosecutor” (3.2). These changes explain the higher number of cases under 3.1.2. Cases brought to court declined mainly because in 2020 there were far less incoming cases (-13 % compared to 2018).
The number of persons against which an investigation was discontinued by the public prosecutor for reasons of opportunity in 2020 is 9 672.

Belgium

Q107 (General Comment): Data concerning the investigation and prosecution of criminal cases by the prosecutors' offices at the courts of first instance (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.
The data concern only criminal offences committed by persons of legal age. For “juvenile cases”, only data for incoming cases are available (no data available for resolved cases). Statistics on juvenile courts are currently being developed. Cases where the perpetrator is unknown are also included. The unit of account is a criminal case: a case may involve none, one or more defendants and/or one or more offences. Since the reform of the judicial landscape entered into force on 1 April 2014, Belgium has 15 first instance public prosecutors' offices (14 public prosecutors' offices + the Federal prosecutor's office). Data of the Federal prosecutor's office (FPO) are not included in the figures. The FPO prosecutes a limited list of offences set out in articles 144ter et seq of the Judicial Code. This list includes the following offences: crimes and offences against State security; threats of attack or theft of nuclear material; trafficking and organised trafficking in human beings; illegal arms trafficking; criminal conspiracy and criminal organisation; terrorism; offences related to these offences; offences which, to a large extent, concern several jurisdictions or which have an international dimension, in particular those of organised crime. Given the specific matters dealt with by the FPO and the low figures, the FPO data are not included in the figures provided. The FP0 data can be consulted separately on the Public Prosecutor's website: https://www.om-mp.be/stat/corr/jstat2022/n/home.html .
Prior to 2022, “cases discontinued for other reasons” referred only to cases in which it was possible to determine from the database that they had been discontinued but the reason was not entered or was not correctly recorded. When the reason is correctly recorded, the case is then classified under headings 3.1.1, 3.1.2 or 3.1.3. As a result, the heading “discontinued for other reasons” concerned “unknown reasons” and not “special’ reasons”. Since 2022, following the deletion of a sub-category in Q107, cases previously reported in line 3.3. “Cases closed by the prosecutor for other reasons” are added to cases in line “3.1.4. Discontinued for other reasons”.

Q107 (2024): Source: Annual statistics from the Public Prosecutor's Office – Investigation and prosecution of criminal cases by prosecution offices attached to first instance courts (http://www.om-mp.be/stat): tables 1, 6, 9, and 11.
Useful information for interpreting the data: of the 74 526 cases in section “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor” (see table 9), 23 827 cases were closed following probation, 25 370 cases were closed following a chain settlement: administrative processing, 6 318 cases were closed following another chain settlement, 16 746 cases were closed following payment of a sum of money, 2 265 cases were closed following successful mediation and measures.
The 124 792 cases in section 3.1.4 “Discontinued for other reasons” include: 6 611 cases in which the suspect is the subject of a report. Once the suspect has been identified, the case may be reopened; 43 397 cases that were referred to another authority for disposition. A case referred for disposition is considered as a closed case for the public prosecutor's office that made this decision. The recipient of this case will open a new case and start the judicial investigation; 74 242 cases joined to another case. When one or more cases are joined to a parent case, all subsequent decisions are recorded at the parent case level. The “daughter case” receives the joinder decision; 542 cases closed following processing without criminal prosecution for unknown reasons/error.

Q107 (2023): “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor”: of the 60 912 cases, 20 658 cases were terminated following probation; 22 410 cases were closed following a chain settlement - administrative processing; 3 836 cases were closed following another chain settlement; 11 766 cases were closed following payment of a sum of money; 2 242 cases were closed following a successful mediation procedure and measures.
“3.1.4 Discontinued for other reasons”: out of 126 624 cases, 6 372 cases in which the suspect is the subject of an alert. Once the suspect has been discovered, the case can be reopened; 43 955 cases that have been referred for disposal to another authority. A case that has been sent for disposal is a closed case for the public prosecutor who took the decision. The authority that receives this case will open a new case and start the judicial investigation; 76 235 cases were joined to another case. If one or more cases are joined to a “mother-case”, all subsequent decisions are recorded in the “mother -case”. The daughter case receives the decision of joining; 62 cases were closed without prosecution for unknown/erroneous reasons.
“3.3 Cases brought to court”: in order to count these cases (34 166 cases), all cases closed by direct summons (18 825 cases) and all cases placed under judicial investigation (15 341 cases) are taken into account. In fact, all these cases are also considered as cases closed by the public prosecutor's office in the annual statistics of the Public Prosecutor's Office (see table 9).
See: Annual statistics of the public prosecution offices - Investigation and prosecution of criminal cases by the criminal prosecution departments of the first instance courts (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.

Q107 (2022): Annual statistics of the Public Prosecutor's Office - Investigation and prosecution of criminal cases by the criminal prosecutors' offices at the courts of first instance (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.

More precisely, in respect of cases "3.2. Concluded with a sanction", out of the 65 486 cases, 20 799 cases were closed following praetorian probation, 24 881 cases were closed following an administrative settlement chain process, 2 130 cases were closed following another settlement chain process, 15 025 cases were closed following a payment of money, 2 651 cases were closed due to successful mediation procedure.

Out of the 126 753 cases "discontinued for other reasons" there were: 6 697 cases where the suspect is the subject of an alert (once a suspect is identified, the case may be reopened); 45 327 cases referred to another instance (such cases are closed for the prosecutor making this decision, while they are incoming cases for the recipient); 74 526 cases that were joined with others; 203 cases settled following processing without criminal prosecutions for unknown reasons/error.

As concerns the 36 068 cases brought to court, were taken into account all cases closed by direct citation (21 679) and all cases that take place under judicial instruction(14 389).

The decreases observed in respect of cases "concluded by a penalty" and "brought to court", have been explained by the decrease in the number of Covid-19 files following the relaxation of Corona measures. Such cases were solved mainly through payment or direct summons.

Q107 (2021): Annual statistics of the Public Prosecution services - Search and prosecution of criminal cases by the public prosecutor's offices at the courts of first instance (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.
The figures in the table have been extracted from the database of the College of General public prosecutors, which is fed by the records of the correctional sections of the public prosecutors' offices at the courts of first instance (MaCH system).
The unit of account is a criminal case: a case can have none, one or more defendants and/or one or more offences.
For point 3.4: In order to count the number of cases brought to courts (55 585 cases), we counted on the one hand all the cases that were closed as a result of a direct summons (41 324 cases) and on the other hand all the cases that were closed as a result of a first fixation before the council chamber in the framework of the settlement of the proceedings (14 261 cases). Indeed, all these cases are also counted as cases closed by the prosecution in the annual statistics of the Public Prosecution services (see table 9).
Additional information on point 3.2:
Of the 100 567 cases closed by a sanction or a measure imposed or negotiated by the King prosecutor (see table 9), 55 167 cases were closed following the payment of a penal transaction; 23 743 cases were closed following an administrative sanction; 19 169 cases were closed as a result of pre-trial probation; 2 446 cases were closed following a successful mediation procedure and measures; 42 cases were closed after referral to the head of the corps.

Q107 (2020): "The figures in the table have been extracted from the Data Bank of the College of Public Prosecutors, which is fed by the records of the correctional sections of the Public Prosecutor's Offices at the first instance courts (MaCH system). The data presented below correspond to the status of the database as of January 9, 2021. Useful notes for the interpretation of the data:
Of the 88,614 cases that ended with a sanction or a measure imposed or negotiated by the public prosecutor
- 48,205 cases were closed following the payment of a penal transaction, - 22,091 cases were closed following an administrative sanction
- 15.969 cases were closed as a result of pre-trial probation,
- 2.308 cases were closed following a successful criminal mediation procedure, - 41 cases were closed after referral to the head of the corps.
Of the 122,581 cases closed by the public prosecutor for other reasons. These are :
- 6,249 cases in which the suspect is the subject of an alert. Once the suspect has been discovered, the case can be reopened.
- 40,748 cases that were referred for disposition. A case that has been sent for disposal is a closed case for the prosecutor's office (its division) that made the decision. The recipient of this case will open a new case and start the judicial investigation.
- 75,584 cases were joined. If one or more cases are joined to a parent case, all subsequent decisions are registered in the parent case. The daughter case receives the joinder decision.
In order to count the number of cases brought before the courts (47,274 cases), in contrast to previous years, we counted on the one hand all cases that were closed as a result of a direct summons (33,105 cases) and on the other hand all cases that were closed as a result of a first determination before the council chamber within the framework of the settlement of the proceedings (14,169 cases). In fact, all these cases are also counted as cases closed by the public prosecutor's office in the annual statistics of the public prosecutor's office.
In the previous questionnaires we only counted direct summonses from the Public Prosecutor's Office to the correctional chambers (31,737 cases in 2020), summonses via accelerated procedure (1,159 cases in 2020) and correctionalizations (78 cases in 2020) and referrals to the correctional chambers of the courts following a first fixation before the council chamber within the framework of the settlement of the procedure (7,592 cases in 2020). A part of these referrals relates to cases that were initiated as a result of a civil action. Therefore, these cases were not initiated by the prosecution.
The numbers of incoming, processed and pending cases have all increased for the same reason. Indeed, in 2020, the health crisis due to the outbreak of COVID-19 began. The government took measures to combat this crisis, including several periods of containment. The Public Prosecutor's Office was responsible for taking criminal action against non-compliance with these measures, which explains the sharp increase in the number of new cases and the fact that, at the same time, the flow of other types of cases did not decrease in the same proportions.
Pending cases are cases that are being processed at a given time. If the inflow increases significantly, the number of pending cases will increase accordingly and reach a higher level.
The increase in the "terminated with penalty" and "brought to court" headings is also related to the health crisis. The primary response to a COVID-19 non-compliance violation was a settlement (recorded under "terminated by pe-
nalty"). In the case of non-payment of the settlement, repeat offenses, or serious violations of these measures, the criminal policy was to bring the case to court, given the importance of compliance with these measures. About half of the increase in court cases is due to the new methodology. The other half is explained by citations in health crisis cases, as explained above.

Bulgaria

Q107 (General Comment): The following clarification is made on the specific indicators in the table:
“1. 1.Pending cases on 1 Jan. ref. year” – This refers to pre-trial proceedings pending with the prosecutor on 1 January of the reference year, where the investigation has been completed by an investigating body and sent to the prosecutor. PTP not closed by an investigating authority are not included under this indicator.
“2. Incoming/received cases” – Report the pre-trial proceedings for which an investigation by an investigative body was completed during the reference year and sent to the prosecutor for adjudication. The Prosecutor's Office reports as closed PTP cases with an investigation completed by an investigative body, not cases adjudicated by a prosecutor.
“3. Processed cases” – For this indicator, the number indicated for PTP represents the number of PTPs disposed by a prosecutor. This number is formed as the sum of the number of cases decided by the PTP prosecutor (either by an act of referral to court or by an act of discontinuance of pre-trial proceedings) and the number of pre-trial proceedings decided by the prosecutor by an act of suspension or referral to another prosecutor's office. Cases suspended and sent to the prosecutor's office are counted as decided by the prosecutor's office, but provisionally, not on the merits. The prosecutor's act of suspending PTP does not constitute a decision on the merits, as it does not put an end to the criminal proceedings and the work on them is only suspended temporarily, i.e. they are not investigated by the investigating authority.
With regard to the PTPs discontinued by the Prosecutor referred to under indicator “3.1. Discontinued during the reference year” the figure is formed by the sum of the data submitted under indicator “3.1.2. Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation”, including pre-trial proceedings terminated because the act was not committed or did not constitute a crime, as well as PTPs terminated due to statute of limitations; and the data submitted under indicator "3.1.4. Discontinued for other reasons”, reporting on PTPs discontinued/suspended and PTPs sent to the jurisdiction/sent by competence during the reporting period. The data on cases discontinued due to perpetrator of the crime not being identified are reported in indicator 3.1.4. This indicator (3.1.4.) reflects the total number of discontinued/suspended cases, without distinguishing between those discontinued due to failure to identify the perpetrator and those discontinued against a known perpetrator on other grounds. It should be borne in mind that PTPs suspended by limitation and PTPs sent to the competent prosecutor's office (by the sending prosecutor's office) are counted as PTPs resolved, so their number is included under the indicator 'Processed cases (3.1+3.2+3.3)', but not under the indicator 'Incoming/received cases '.
Indicators “3.1.1. Discontinued by the public prosecutor because the offender could not be identified”, “3.1.3. Discontinued by the public prosecutor for reasons of opportunity” and 3.2. “Concluded by a penalty or a measure imposed or negotiated by the public prosecutor” are not applicable to prosecutors' rulings according to the CCP, and therefore no data are presented.
“3.3. Cases brought to court” – This indicator takes into account the number of pre-trial proceedings brought to court with a prosecutor's report during the reference year.
In the official statistical reporting of the PRB, a criminal case is reported as brought to cour

t if at least one prosecutorial act has been submitted to the court – an indictment; a proposal for an agreement under Article 381 of the Penal Procedure Code; a proposal for exemption from criminal liability and imposition of an administrative penalty under Article 78a of the Criminal Code, and a proposal for an agreement under Article 375a(1) of the Penal Procedure Code. However, more than one prosecutorial act may be submitted to the court in relation to a single pre-trial proceeding (e.g. an agreement in relation to one person and an indictment in relation to the other defendants). The prosecutorial acts submitted give rise to court cases in which prosecutors participate in court hearings, including when a proposal has been submitted to settle the case by agreement. A case is also opened in court, in which the prosecutor, the defendant and his defence counsel appear, and the court issues a judicial act. It should be noted that the official statistics of the PRB do not explicitly collect data on the number of pre-trial proceedings in which an indictment has been filed (the acts are counted, not the cases). Since there can only be one indictment per pre-trial proceeding, we have assumed that the number of pre-trial proceedings with an indictment is equal to the number of indictments. However, the official statistics of the PRB do not explicitly collect data on the number of pre-trial proceedings brought before the court with proposals for agreements under Article 381 of the Penal Procedure Code, proposals for exemption from criminal liability and imposition of administrative penalties under Article 78a of the Criminal Code, and proposals for agreements under Article 375a(1) of the Penal Procedure Code. In order to obtain this data, the number of pre-trial proceedings in which an indictment has been filed is subtracted from the total number of pre-trial proceedings brought before the court. Cases resolved by agreement or proposal under Article 78a of the Criminal Code can be indicated as a total number, without being able to distinguish them by type of prosecutorial act. “4. Pending cases on 31 Dec. ref. year” – This refers to PTPs remaining with the prosecutor for resolution as of 31 December of the reference year, where the investigation has been concluded by an investigating authority and sent to the prosecutor. The indicator does not include PTPs pending prosecution by an investigating authority as of 31 December.
Regarding the cases sent by competence, the mathematical calculation for collecting the values is not applicable for the two prosecutor's offices - one that sent it by competence (according to the rules of local, functional or special competence), for which the case was decided “discontinued case for other reasons“ and the other, which accepted it within its competence, if at the end of the year the same case remained pending, the latter is included in the above data.

Q107 (2024): The official statistics of the PORB also report and aggregate data on other indicators of pre-trial work that cannot be identified or do not match the indicators in the Questionnaire, therefore the following clarification is made:
According to the reporting system introduced in the PORB, pretrial proceedings are reported as: Monitored, Closed (with investigation completed by investigating authority) and Resolved (by a prosecutor).
Supervised pre-trial proceedings include: the newly initiated PTPs during the reporting period, in this case 2024 (89 145 PTPs), the PTPs pending by an investigating authority at the end of the previous reporting period (57 495 PTPs), the PTPs pending by a prosecutor at the end of the previous reporting period (4 163 PTPs), the PTPs received under the jurisdiction during the reporting period, the PTPs returned by the court as well as by a prosecutor (incl. PTPs decided in previous periods but returned during the reporting period), PTPs reopened during the reporting period, PTPs merged (joined) and PTPs split.
For statistical reporting purposes in the PORB (and not pursuant to the CCP), a pretrial proceeding is reported as resolved when any of the following prosecutor's decisions are made: a decree to send the PTP to the competent jurisdiction, a decree to suspend the PTP, a decree of discontinuance, a prosecutor's act to bring the case to court – indictment, a proposal for a settlement under Article 381 CCP, a proposal under Article 375 CCP, in conjunction with Article 78a CCP, for exemption from criminal responsibility with the imposition of an administrative penalty, and a proposal for a settlement under Article 375a(1) CCP.
The statistical analysis distinguishes between the total number of cases decided in which one of the above-mentioned prosecutor's acts was handed down and the cases decided on the merits. Cases decided on the merits are only those decided by a decision to discontinue the criminal proceedings or by a prosecutor's act to bring the case to court, which concludes the pre-trial phase. PTPs decided by a decision to suspend and refer are not included as they do not end the pre-trial phase/criminal proceedings. PTPs sent to the jurisdiction are reported by the sending prosecutor's office as monitored PTPs and resolved PTPs, but are not reported as PTPs closed by the investigating authority. PTPs discontinued due to the expiry of the statutory limitation period (under Article 24(1)(3) CCP) shall be counted as PTPs observed and decided, but shall not be counted in the number of PTPs discontinued as they were already counted as such when they were discontinued. Suspended PTPs in previous periods are not counted in the total number of PTPs observed during the reference period, except in cases where the suspended PTP is resumed, where it is included in the number of PTPs observed and according to its current status at the end of the period.

Q107 (2023): The data in the table, are derived from the official statistical reporting of the PTB for 2023, according to the indicators and order defined by the Guideline on the organization of information activities in the PTB, approved by order of the Attorney General, as follows point by point:
1) in the indicator "Pending cases as of January 1 of the reference year", the pending pre-trial proceedings (PTP) by a prosecutor as of January 1 of 2023 are reported
2) the indicator "Incoming/received cases" reports the closed PTPs by an investigating authority.
3) the "Processed cases" indicator reports PTPs processed of by a prosecutor and is the sum of data from the three indicators (3.1+3.2+3.3), with PTP disposition types reflected. This number is formed as the sum of the number of PTP decided by a prosecutor on the merits (by an act to bring the case to court or by an act to terminate the pre-trial proceedings), and the number of pre-trial proceedings that the prosecutor decided by an act to suspend them or to send them to another prosecutor's office.
3.1) The indicator "Discontinued during the reference year" takes into account the discontinued PTP, including those due to prescription, the suspended PTP and the PTP sent to the jurisdiction and is the sum of the data from the following four indicators.
(3.1.1 + 3.1.2 + 3.1.3 + 3.1.4), reflecting the types of terminations:
3.1.1) in indicator "Discontinued by the public prosecutor because the offender could not be identified", no data is shown as it is not applicable.
3.1.2) in indicator "Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation", PTP terminations are reported, including those due to statute of limitations.
3.1.3) in the indicator "Discontinued by the public prosecutor for reasons of opportunity" – no data is provided as it is not applicable.
3.1.4) in indicator "Discontinued for other reasons" – PTPs terminated are reported, as well as PTPs sent to another prosecutor's office for jurisdiction. These cases are considered closed/resolved for the respective prosecutor's office, albeit without a final decision on the merits.
3.2) in indicator "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor" – not applicable. No data is provided.
3.3) in indicator "Cases brought to court", PTP filed in court are reported.
4) In the indicator "Cases pending on December 31 of the reference year", the PTP pending by the prosecutor as of December 31, 2023 are reported.
The official statistics of the PORB also report and aggregate data on other indicators of pre-trial work that cannot be identified or do not match the indicators in the Questionnaire, therefore the following clarification is made:
According to the reporting system introduced in the PRB, pretrial proceedings (PTP) are reported as: Monitored, Closed (with investigation completed by investigating authority) and Resolved (by a prosecutor).
Supervised pre-trial proceedings include: the newly initiated PTPs during the reporting period, in this case 2023 (89 580 PTPs), the PTPs pending by an investigating authority at the end of the previous reporting period (57 495 PTPs), the PTPs pending by a prosecutor at the end of the previous reporting period (4 208 PTPs), the PTPs received under the jurisdiction
ical reporting purposes in the PTP (and not pursuant to the CCP), a pretrial proceeding is reported as resolved when any of the following prosecutor's decisions are made: a decree to send the PTP to the competent jurisdiction, a decree to suspend the PTP, a decree of discontinuance, a prosecutor's act to bring the case to court – indictment, a proposal for a settlement under Article 381 CCP, a proposal under Article 375 CCP, in conjunction with Article 78a CCP, for exemption from criminal responsibility with the imposition of an administrative penalty, and a proposal for a settlement under Article 375a(1) CCP.
The statistical analysis distinguishes between the total number of cases decided in which one of the above-mentioned prosecutor's acts was handed down and the cases decided on the merits. Cases decided on the merits are only those decided by a decision to discontinue the criminal proceedings or by a prosecutor's act to bring the case to court, which concludes the pre-trial phase. PTPs decided by a decision to suspend and refer are not included as they do not end the pre-trial phase/criminal proceedings. PTPs sent to the jurisdiction are reported by the sending prosecutor's office as monitored PTPs and resolved PTPs, but are not reported as PTPs closed by the investigating authority. PTPs discontinued due to the expiry of the statutory limitation period (under Article 24(1)(3) CCP) shall be counted as PTPs observed and decided, but shall not be counted in the number of PTPs discontinued as they were already counted as such when they were discontinued. Suspended PTPs in previous periods are not counted in the total number of PTPs observed during the reference period, except in cases where the suspended PTP is resumed, where it is included in the number of PTPs observed and according to its current status at the end of the period.

Q107 (2022): “1. Pending cases on 1 January of the reference year” – pre-trial proceedings (PTP) pending with the prosecutor as of 1 January of the reference year (4 205) for which the investigation has been completed by an investigative body and sent to the prosecutor (PTPs closed by an investigating authority (47 969) are not included). “2. Received/Incoming cases” – PTP in which an investigation by an investigative body was completed during the reference year and sent to the prosecutor for adjudication. In the Prosecutor's Office the term closed PTP refers to cases with a completed investigation by an investigative body, not cases resolved by a prosecutor “3. Processed cases” – the figure of 161,905 PTP is the sum of the number of PTP decided on merits by the prosecutor (by act of bringing the cases to court or by act of termination the pre-trial proceedings), and the number of pre-trial proceedings decided by the prosecutor by act of suspending them or sending by competence during the reporting period to another prosecutor's office. Cases suspended and sent by competence are reported as resolved by the prosecution, but temporarily, not on the merits. The prosecutor's act of suspension of PTP does not constitute a decision on the merits, as it does not put an end to the criminal proceedings and the work on them is only temporarily suspended, i.e. they are not investigated by the investigating authority. "3.1. The number of PTPs discontinued during the reference year" is 133 466, the figure being formed by the sum of the data submitted under indicator "3.1.2. Terminated by the prosecutor due to the lack of an established offence or a specific legal situation" (98 306), including pre-trial proceedings terminated because the act was not committed or did not constitute an offence, pursuant to Art. 243(1), in conjunction with Art. 1(1) of the CPC, (31 302) and PTPs terminated due to the statute of limitations (67 004), and the data submitted under indicator "3.1.4 Discontinued for other reasons" (35 160), taking into account the suspended PTPs and the pre-trial proceedings sent by competence during the reporting period Indicators "3.1.1 Discontinued by the public prosecutor because the offender could not be identified", "3.1.3 Discontinued by the public prosecutor for reasons of opportunity" and 3.2. "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor" are not applicable to the decisions of prosecutors according to the CCP, as indicated in the Questionnaire. “3.3. Cases brought to court" – PTP brought to court with a prosecutor's report in the reference year – 28 439. “4. Pending cases on 31 December" – PTP pending with the prosecutor on 31 December of the reference year (4 208), where the investigation has been completed by an investigating authority and sent to the prosecutor. The indicator does not include PTPs pending with an investigating authority, which total 52 423 as of 31 December 2022.

Q107 (2021): 3.1. Discontinued during the reference year (3.1.1+3.1.2+3.1.3+3.1.4.)
The number of discontinued cases in the reference year (in the case of 2021) is 101626. This number includes all discontinued criminal proceedings by the prosecutor in the year on the basis of Art. 24 of the Criminal Procedure Code, including those terminated due to the expiration of the statute of limitations on the basis of Art. 24, para. 1, item 3 of the Criminal Procedure Code (criminal liability is extinguished due to the expiration of the statute of limitations).
The number of cases terminated on statute of limitations grounds is a fact of objective reality, which does not depend on the prosecution. This number is a function of the number of the pending pre-trial proceedings, incl. suspended (predominantly due to failure to establish the perpetrator of the crime during the investigation), as well as the specific crime on which the case is being prosecuted, as the absolute statute of limitations for seeking criminal liability is different and depends on the amount of the penalty provided for in the Criminal Code for the relevant crime (according to Art. 81 of the Criminal Code).
The increase in the number of dismissed cases for 2021 compared to those dismissed in 2020 is mainly due to the greater number of dismissed cases by the prosecutor on the grounds of absolute statute of limitations for prosecution, which obliges the prosecutor to dismiss the case on the basis of Art. 24, para. 1, item 3 of the Criminal Procedure Code. This conclusion is supported by the statistical data for the two years - in 2021, the dismissed cases, on grounds other than the statute of limitations, are relatively similar: 32,400 for 2021 compared to 32,002 for 2020. However, those dismissed on statute of limitations grounds in 2021 are 69,226, and in 2020 - 42565. It can be seen that in 2021 the terminated pre-trial proceedings were significantly more than in the previous year. There is no evidence that this increase is due to any special or extraordinary circumstance that occurred in 2021. Each year the number of cases dismissed on statute of limitations grounds is different and this is due to the above reasons.

Q107 (2020): Question 107:
1)"Pending cases on 1 Jan. ref. year" the unresolved pre-trial proceedings (PTPs) by a prosecutor as of 1 January of the reference year are reported.
2)“Incoming/received cases” are reported the closed PTPs (analogous to the previous questionnaires);
3)“Processed cases” are reported the decided PTPs by a prosecutor and is the total value of the data from four indicators (3.1 + 3.2 + 3.3 + 3.4), with reflected types of decisions under the PTPs;
3.1.)“Discontinued during the reference year” the terminated PTPs (including those by prescription) are reported and is the total value of the data from the next four indicators (3.1.1 + 3.1.2 + 3.1.3 + 3.1.4.), with reflected types of terminations;
3.1.1)"Discontinued by the public prosecutor because the offender could not be identified" indicates NAP (similar to the previous questionnaire);
3.1.2 "Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation" are reported the terminated PTPs, incl. those by prescription (similar to the previous questionnaires);
3.1.3)"Discontinued by the public prosecutor for reasons of opportunity " the NAP is indicated (analogous to the previous questionnaires); 3.1.4) the indicator "Discontinued for other reasons" indicates NAP (similar to the previous questionnaire);
3.2)"Concluded by a penalty or a measure imposed or negotiated by the public prosecutor " is indicated NAP (analogous to the previous questionnaires);
3.3)“Cases closed by the public prosecutor for other reasons” the suspended PTPs are reported, as well as the PTPs sent by competence (for the respective prosecutor's office, although these cases are essentially unresolved they are closed). It is not obligatory for the prosecutor's office, which sent the case within its competence, to conduct a full investigation. If a ground for the competence of another prosecutor's office is established under the rules of local, functional or special competence, the case shall be sent to the respective prosecutor's office for continuation of the investigation. The grounds for determining the competence are exhaustively specified in the CPC (Chapter Four, Section II of the CPC, Article 35 et seq. Of the CPC, Article 195 of the CPC, Articles 396-398 of the CPC, Article 411a of the CPC);
3.4) in the indicator “Cases brought to court” the submitted PDs in the court are reported (analogous to the previous questionnaires);
4) in the indicator “Pending cases on 31 Dec. ref. year” the unresolved PDs by a prosecutor as of December 31of the reference year are reported;
Concerning the increase in the number of processed cases between 2018 and 2020, the number of "cases closed by the prosecutor for other reasons", taken into consideration for this cycle, makes the differnce.

Croatia

Q107 (General Comment): Discontinued for other reasons: cases can be discontinued for reasons such as circumstances which exclude guilt, the fact that there is no reasonable suspicion that the suspect committed particular criminal offence, in the case when criminal complaint is not credible. The reason for discontinue the case can be if the data in the criminal complaint indicate the conclusion that the complaint is not credible.
Cases closed by the public prosecutor for other reasons: cases can be closed for reasons such as the existence of circumstances that preclude the guilt of the defendant or there is no evidence that the defendant committed the offence. Other reasons: If the data in the criminal complaint indicate the conclusion that the application is not credible.

Q107 (2024): The calculation of the vertical discrepancy in the table results in the following: (56,550 + 42,187) - 41,035 = 57,702. The total number of pending cases as of December 31 is 61,969, reflecting a 9.59% increase in discrepancy compared to the previous reporting period.
It is important to highlight that the data requested in the questionnaire are not fully aligned with the statistical reporting framework employed by the State Attorney's Office. This discrepancy is evident in sections 3.1.1 and 3.1.2, where the responses were marked as NA (not available), and in section 3.2, marked as NAP (not applicable). Section 3.1.3 includes data on decisions not to initiate proceedings under the principle of opportunity, but only in relation to juvenile offenders, as these are the only such cases recorded separately in statistical reports. For other offenders, only the overall number of dismissals is provided, without distinguishing whether they were based on the principle of expediency.
The questionnaire instructions clarify that when several NA and NAP responses are present—as is the case here—the standard requirement for vertical and horizontal consistency of the data in the table does not apply. Part of the observed discrepancy can be attributed to the increase in pending cases by the end of the year, which rose to 61,969 from 56,550 in the previous year.
The rise in case numbers can be attributed, among other things, to vacant positions for deputy prosecutors and legal advisors, which has led to an above-average workload for the remaining staff, as well as a higher number of hearings and court sessions. Additionally, question 107 in category 3.2 did not initially include plea agreements, although these were later entered under question 107-1.

Q107 (2022): Data source: Report of the Attorney General of the Republic of Croatia on the work of state attorneys' offices in 2022.
*3.1. the total number of cases are completed with the adoption of a decision on the dismissal of the criminal report or a decision on the suspension of the investigation, however statistical data are not reccorded according to the categories requested in the table (15,414).
**3.1.3. the data includes only juvenile offenders, as data in relation to other offenders is not available in the aforementioned Report.
For 2022, the data in section 3.1 (Discontinued during the reference year) also include data from section 3.1.4 (Discontinued for other reasons), which for 2021 were presented in section 3.3. (cases closed by public prosecutor for other reasons).
It is necessary to take into account the statistical specifics of the presentation of individual decisions, because the questionnaire asks for data in a way that is not harmonized with the statistical presentation of the work of the state attorney's office. This is why there are certain statistical deviations because the data is not compared in the annual report of the State Attorney's Office of the Republic of Croatia. Besides, due to the overloading of certain state attorney's offices, specifically for the Municipal Criminal State Attorney's Office in Zagreb, 1,060 cases were delegated to other state attorney's offices, which statistically for the Zagreb Municipal Criminal State Attorney's Office is shown as a transfer of cases and also included in the number of cases resolved by the state attorney's office to another method (that is, for 2022 in section 3.1.4, which is included in the total in section 3.1). So, in fact, the increase in the number of cases discontinued during the reference year is an increase that occurred due to the statistical method of presentation, and not a real increase.

Q107 (2021): Source of information: Report of the Chief State Attorney of the Republic of Croatia on the work of State Attorney's offices in 2021
3.1. the total number of cases completed by adopting a decision rejecting criminal charges or a decision terminating the investigation is presented, however, statistical data are not kept by categories requested in the table
3.1.3. There was 523 discontinued cases by the public prosecutor for reasons of opportunity (data covers juvenile perpetrators only because data in relation to other perpetrators is not available).

Q107 (2020): Reason for decreased number of incoming cases same as for the courts - pandemic of COVID-19.
Discontinued cases decreased - same as for the courts (COVID-19), please see comment in Q091.
For the category 3.1. Discontinued during the reference year (3.1.1+3.1.2+3.1.3+3.1.4.), PP is not able to differ categories 3.1.1., 3.1.2 and 3.1.4.

Czech Republic

Q107 (2024): Four years ago, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + .Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

Q107 (2023): Three years ago, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + .Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.

If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.
There is no specific reason identified for the 53% increase in cases discontinued during the reference year, as these figures can vary annually.

Q107 (2022): Two years ago, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + .Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.

If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

Q107 (2021): In 2019, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

Q107 (2020): Last year, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + .Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

Denmark

Q107 (General Comment): The number of processed cases includes both cases dismissed by the police and cases dismissed by the public prosecutor. All prosecutors are subject to a recruitment procedure conducted by The Director of Public Prosecutions' Office on behalf of the Ministry of Justice. A prosecutor can serve within The Local Prosecution Service based in one of the 15 the police districts or within The Central Prosecution Service with one of the Regional State Prosecutors' offices or with The Director of Public Prosecutions' Office.

Q107 (2024): In some cases indictment and subsequent discontinuation occurs within the same year. In such instances, a single case will both occur in both point 3.2 and 3.3. However, the case will only occur once when computing the total. Thus, the sum of 3.1-3.3 might not be the same as the total in 3.
The reason for the discrepancy in closed/finished cases relative to incoming cases is that processed cases include cases that the prosecution service has responsibility for, but that both the police and prosecution service conducts work on – depending on the case. We cannot always distinguish closed/finished cases between the police and prosecution service as they are often archived in police departments regardless of who processed the case.
One case accounts for one crime for each person involved in the crime. If two crimes were committed by three people, there would be six counts of crimes (=cases). Reports of crime might also grow in number of counts as it progresses through the chain of criminal proceedings. The 'owner' of the case is the department that last worked on it.
The term "Reasons of opportunity" entails cases discontinued according to section 721, subsection 1, no. 3-4 of The Danish Administration of Justice Act, which is applied in cases where it is assed that legal costs and processing time are disproportionate in relation to the significance of the case and its potential sentence.
It is correct that there has been an increase of approximately 83% when comparing 2024 to 2023. However, it is important to emphasize that these number cover individual offences rather than court cases they fall under. When comparing the number of court cases, where one or more offences have been discontinued due to reason of opportunity, we only see an ~18% increase. The reason behind this being that in 2024 a number of court cases, with a large number of individual offences, were settled with discontinuation. For instance; in 2024 five court cases had over 100 offences discontinued due to reason of opportunity – while another case had over 500 offences.
Throughout 2024, there has been an increased effort in reducing the backlog of pending indictments, by prioritizing the processing of existing cases in court. Due to this prioritization, there has been a ~40% decrease in the number of pending indictments when comparing the beginning and end of 2024. However, this has also meant fewer resources allocated to initiating new prosecutions. The natural consequence being an increase in the number of pending charges.

Q107 (2023): The reason for the discrepancy in closed/finished cases relative to incoming cases is that processed cases include cases that the prosecution service has responsibility for, but that both the police and prosecution service conduct work on – depending on the case. We cannot always distinguish closed/finished cases between the police and prosecution service as they are often archived in police departments regardless of who processed the case.
One case accounts for one crime for each person involved in the crime. If two crimes were committed by three people, there would be six counts of crimes (=cases). Reports of crime might also grow in number of counts as it progresses through the chain of criminal proceedings. The 'owner' of the case is the department that last worked on it.
It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not divided in such subsectors.
From 2021 to 2023 we have had an increased effort in lowering the amount of pending cases. This can partly explain the surge of processed cases.

Q107 (2022): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not divided in such subsectors.
Regarding point 3.1.3 in question 107, it is not possible to account for one specific reason behind the increased number of discontinued cases for reasons of opportunity. However, during 2021 and 2022 we have had an increased effort in lowering the amount of pending cases. This can partly explain the surge of discontinued cases in 3.1.3.
Regarding the increase in incoming cases, it should be noted, that the police is responsible for charging possible perpetrators and hence the number of incoming cases received by the prosecution service. An explanation of the increase in number of incoming cases should therefore be directed to the police. With that being said, the number of incoming cases varies from year to year and the amount in 2021 was lower than the previous years.

Q107 (2021): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not devided in such subsectors.
Regarding point 3.1.3 in question 107, it is not possible to account for one specific reason behind the increased number of discontinued cases for reasons of opportunity. However, during 2021 we have had an increased effort in lowering the amount of pending cases. This can partly explain the surge of discontinued cases in 3.1.3.

Q107 (2020): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not devided in such subsectors. The data source used in points 1 and 4 (data that do not include post-registration of charges) are different from the data source used in points 2 and 3 (data that includes post-registration of charges). Hence, data does not fit the formula: (pending at the beginning of the year + incoming) – resolved = pending at the end of the year) due to post-registrations of further charges. The number of incoming charges has decreased considerably between 2018 and 2020. This is due to a change in the way we measure the number of incoming charges. The new way of measure incoming cases more correctly than the previous way of measuring as the new way contains all incoming charges and not all processed charges as the previous way did. The number of incoming cases in 2018 is 245.687 when using the new way of measuring.

Estonia

Q107 (General Comment): The number of incoming cases is given by registered crimes while the number of cases resolved is given by the number of persons in respect of whom a procedural decision has been made.

Q107 (2022): The general trend shows a decrease in registered crimes.

Q107 (2020): The number of incoming cases is given by registered crimes. the number of cases resolved is given by the number of persons in respect of whom a procedural decision has been made.

Finland

Q107 (2024): Regarding section 3.1.2, there has been a change in our statistic model. The previous statistic model was inaccurate and did not respond this section reliably. The figures previously included in this section are now included in section 3.1.4.

Q107 (2023): 3.1.4 In earlier reply there was a mistake in figures:In earlier answer the 3.1.4 included only motions to dismiss and restrictions of pretrial investigations; now the numbers include also other technical decisions (5205, "closed by other reasons"). 3.2 The absolute amounts in these transfers of are so small, that even a change to just a few cases causes discrepencies. The drop of the number of cases from 9 to 4 is within normal variation.

Q107 (2022): 3.2 Notice cases of summary fines are not included. The number of summary fines in 2022 was 34426.

Q107 (2021): 3.2 Notice cases of summary fines are not included. The number of summary fines in 2021: 34 306.
3.3: Consist of internal transfers of cases between prosecution districts, joining of cases and technical decisions.

Q107 (2020): Comments: 3.2 Notice cases of summary fines are not included. The number of summary fines: 38433.
The decrease in the number of cases “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor” is due to a change in the law. The law on certain type of fine (rangaistusmääräysmenettely) was abolished in 2016 and replaced with the law on fines and summary penalty fee (laki sakon ja rikesakon määräämisestä (754/2010). According to this law, the police can order the summary penal fee. This page, in Finnish, shows figures of the amount in euros of these summary fines imposed by prosecutors (2nd graph) and by the police (3rd graph).
https://www.oikeusrekisterikeskus.fi/fi/index/tietopalvelu/tilastotjaavoindata/sakot.html
3.1.4 Discontinued for other reasons and 3.3. Cases closed by the public prosecutor for other reasons: The prosecutor must waive prosecution if: (1) the prerequisites for the bringing of charges provided in section 6, subsection 1 are not met; (2) the prosecutor waives prosecution on the basis of section 6, subsection 2; (3) the injured party has not requested that charges be brought or another special prerequisite provided in law for the bringing of charges referred to in section 2, subsection 2 is not met and the nature of the case requires that a separate decision be made. The prosecutor may waive prosecution if: (1) if no sentence more severe than a fine is to be anticipated for the offence and the offence, with consideration to its detrimental effects or the degree of culpability of the offender manifested in it, is to be deemed petty as a whole; and (2) if the suspect had not reached the age of eighteen at the time of the commission of the suspected offence and no sentence more severe than a fine or imprisonment for at most six months is to be anticipated for this offence and it is to be deemed to be more the result of lack of understanding or thoughtlessness than of heedlessness of the prohibitions and commands of the law. In addition, the prosecutor may waive prosecution, unless an important public or private interest requires otherwise if: 1) if criminal proceedings and punishment are to be deemed unreasonable or inappropriate in view of a settlement reached by the suspect in the offence and the injured party, the other action of the suspect in the offence to prevent or remove the effects of the offence, the personal circumstances of the suspect in the offence, the other consequences of the act to him or her, the welfare and health care measures undertaken and the other circumstances; (2) under the provisions on joint punishment or on the consideration of previous punishments in sentencing, the suspected offence would not have an essential effect on the total punishment; or (3) the expenses in continuing to consider the case would be in manifest disproportion to the nature of the case and to the sanction possibly to be expected in it. Also, If charges are being considered for two or more offences for which the same person is suspected and if he or she has contributed to the clarification of one or more of the suspected offences, the prosecutor may decide not to bring charges for all of the suspected offences. However, charges shall be brought if required by an important public or private interest.

France

Q107 (General Comment): The complexity and diversity of criminal data do not allow for estimates of pending cases to be produced.
The data concern cases recorded regardless of the number of offenses or individuals involved. However, if the same case involving multiple individuals is subject to several different courses of action (for example, different treatment of minors and adults or dismissal and prosecution in the same case), then the number of actions taken is counted.
The data concern adults, minors, and legal entities.

Q107 (2024): Source: SSER, statistical file Cassiopée

Q107 (2023): “3.1.2 Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation” and “3.1.3 Discontinued by the public prosecutor for reasons of opportunity”: data used are based on extractions from “Cassiopée”. However, the introduction of the PPN has led to the gradual integration into the applications over the period 2022-2024 of cases that were not previously recorded in the applications. As a result, the number of criminal cases at first instance has increased artificially in 2023 as a result of the integration of unrecorded cases (small X). It should be noted that there is an effect from 2022, which is less strong but already present. Source(s) : SSER, Cassiopée statistical file

Q107 (2021): source SDSE

Germany

Q107 (General Comment): Once per year, the Federal Statistical Office compiles and publishes the public prosecution statistic. Statistical ordinances define the scope and rules of data collection for these statistics. The public prosecution offices collect the data and submit it to the statistical offices of the federal states, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the statistical ordinance provides two different kinds of data collection sheets: The "procedural survey" that collects data on the specifics of the investigation proceedings carried out by the public prosecution and the "monthly survey" that collects data on the caseload and other workload of the public prosecution offices. The figures entered here do not include investigations against persons unknown. The public prosecution statistic only shows the number of charges filed against unknown perpetrators. Information on the further treatment of those charges is not available. This is because the monthly survey distinguishes between "caseload of investigation proceedings covered by the procedural surveys" and "other workload". Charges against persons unknown fall into the category “other workload”. The number of resolved and pending cases is only collected with regard to the first category (proceedings covered by the procedural surveys). If a suspect is identified in cases with an unknown perpetrator, the case receives a new file-number and then appears in the category "covered by the procedural surveys".

Q107 (2024): "Other reasons" include: referral to private action, referral to administrative authority as regulatory offence, referral to a different public prosecutor's office, joining with another case, referral to the European Public Prosecutor's Office
3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("nonprosecution subject to imposition of conditions and directions") These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.
Horizontal inconsistencies in the table:
The inconsistency with regard to the pending cases at the end of the year also occurs in the official statistic published by the Federal Statistical Office. The reason for this are count corrections of the monthly collected data at the end of the year.

Q107 (2023): 3.1.4: Cases from former line 3.3 "closed by the public prosecutor for other reasons" are now included here. In the previous evaluation cycle, those cases were included in the total of processed cases (3.) but were not displayed under "discontinued cases".
"Other reasons" include: referral to private action, referral to administrative authority as regulatory offence, referral to a different public prosecutor's office, joining with another case, referral to the European Public Prosecutor's Office
3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.

Q107 (2022): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.
3.1.4 Discrepancy in comparison to the 2020-2022 cycle: The number of cases discontinued for other reasons was consideralbly higher in the public prosecution statistic 2020 and in previous years. This was due to a programming issue in one of the federal states. Many of the cases that were registered in this category should have actually been registered within the category "discontinued for reasons of opportunity". The issue was noticed and fixed at the end of 2020.

Q107 (2021): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("Non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.
3.1.4 The number of cases discontinued for other reasons in the public prosecution statistic 2020 (and previous years) was considerably higher due to a programming issue in one of the Länder. Many of the cases that were registered in this category should have actually been registered within the category "discontinued for reasons of opportunity". The issue was noticed and fixed at the end of 2020.

Q107 (2020): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("Non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.

Greece

Q107 (General Comment): The data in the table are presented by case file (and not, for example, on the number of offenders). Vertical consistency in the table is not ensured because the data are continuously updated/corrected and because of unknown offender cases that are referred either to the investigating magistrate (when they are felonies) or to a preliminary procedure (when they are misdemeanors) have not yet been completed. All cases that are referred to the investigator are returned to the public prosecutor, whether the perpetrator is identified or not. Cases where the perpetrator could not be identified are considered as resolved, while the rest (where the perpetrator is identified) follow further criminal proceedings and are either solved within the reporting period or are considered pending in the next time period. More precisely, cases where the offender could not be identified are placed in the "unknown perpetrator file". Cases placed in the "unknown perpetrator file" are suspended with a decision of the prosecutor and such decisions are counted as “ 3.1.1 Discontinued by the public prosecutor because the offender could not be identified”.

Q107 (2024): Source: Independent Department for the Collection and Processing of Judicial Statistical Data (JustStat).
The observed increase in the number of cases discontinued for reasons of opportunity (+42%) and the number of cases referred to court (+30%) can be attributed to the reforms of the public prosecutor's office introduced in 2024. More specifically, under Law 5090/2024 prosecutors were given greater discretion to close cases when it is not in the public interest or when the offense is of low severity. This was applied more actively to misdemeanors, especially in cases with limited evidence or with conciliatory intentions.
At the same time, the prosecution of crimes of domestic violence, organized crime, and corruption was strengthened, resulting in an increase in the number of cases brought to court for trial.

Q107 (2023): The data are provided by the Office for the collection and processing of judicial statistics.
Decreases in the number of cases dismissed for reasons of opportunity and cases concluded by a penalty: during the implementation of the restrictive measures to deal with the Covid 19 pandemic, police activity was greatly increased with constant patrols which resulted in a rapid increase in arrests and consequently in criminal prosecutions for selected offences, such as violation of the drug law (supplying drugs even for personal use is strictly illegal in Greece). With the expiry of the restraining orders, arrests and criminal convictions decreased.

Q107 (2022): It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting and calculating statistical data. As the methodology is developing, discrepancies in data can be observed.

Q107 (2021): The definition of the pending cases includes postponed cases or the cases the trial date has been setting out of the refence year or hasn't been determined during the year. The fact is that the theoretical pending cases resulted from pending cases on 1st of January + Incoming cases (cases are related to reference + previous years). However, pending cases on 31 Dec. are only the cases that have not been determined, or cases that have been determined after the reference year. All of the pending cases on 31 of Dec. are related only to the reference year.
Considering that this is the first year where offices calculate their pending cases, and some of them do not have electronical systems to monitor their data, in the next years we will get better and more accurate statistics.

Q107 (2020): No data available for this query.

Hungary

Q107 (2024): Discrepancy explanation:
Overall, it can be concluded that from 2023 to 2024, there was a significant increase in both the number of offences (+20.2%) and the number of offenders (number of offences per offender) (+40.6%).
Since the number of procedural decisions recorded takes into account the individual offences and, if there are multiple perpetrators of an offence, the procedural decisions recorded for the perpetrators, the number of procedural decisions recorded by the prosecution service has increased exponentially (+45.7%).
The most significant changes in the individual data can be attributed to the following: With regard to question 3.1.2, the increase (110.64%) – beyond the average increase detailed above – can be attributed to two cases. 1) In case no. 926/2021 of the Szigetszentmiklós District Prosecution Office, procedural decision M036 was recorded in 4,381 cases (It cannot be established that the suspect committed the crime [Section 398 (2) a) of the Criminal Procedure Code]).
In the case of several thousand counts of "serial fraud", the proceedings were terminated in respect of all acts with regard to eight perpetrators, while the other perpetrators were subject to indictment.
2) In case no. 25/2024 of the Budapest XIV-XVI District Prosecution Office, procedural decision M036 was recorded in 1,734 cases (It cannot be established that the suspect committed the crime [Section 398 (2) a) of the Criminal Procedure Code]).
In the case of 868 counts of "serial fraud," the proceedings were terminated in respect of all acts committed with regard to two perpetrators, while the other perpetrators were subject to indictment.
In contrast, in 2023, even the case with the most procedural decisions on this legal basis contained only 76 such procedural decisions. With regard to question 3.1.1, although the decrease appears significant, such "fluctuations" may occur due to the low number of cases. It can be stated that the vast majority of procedural decisions in this category (investigation/proceedings suspended due to the perpetrator being unknown/statute of limitations) are made by the investigating authority, so it is difficult to draw conclusions from the data provided by the prosecution service about changes in the legal system.
In general, the prosecution service has no influence on the number of cases in a given year in which sufficient evidence is obtained to bring charges (point 3.3) or in which proceedings are terminated for any reason (points 3.1, 3.1.1, 3.1.2. and 3.1.4.). Depending on the assessment of evidence in specific cases, changes in statistical data from year to year may occur (decreases or increases).

Q107 (2023): 3.1.4 Cases discontinued for other reasons - The reason for the increase is the growth in the number of cases recorded under provision IV of Section 398 (2) c) of the Criminal Procedure Code (Termination of liability to punishment for other reasons specified by law).

Q107 (2022): The data source - in accordance with the previous data provision - is The Statistical Subsystem of Completed Criminal Proceedings of the Unified Investigation Authority and Prosecution Service Criminal Statistics System (hereinafter ENyÜBS-BBS). In the ENyÜBS-BBS subsystem, the data is recorded when the investigating authorities or the Prosecution Service have made a procedural decision giving reasons for the provision of statistical data in connection with the crime (e.g.: dismissal of the criminal complaint, termination, suspension, accusation/indictment), relating to which statistical data was provided. Considering the time of data recording, the ENyÜBS-BBS subsystem is, therefore, of a so-called follow-up nature, so it does not show how many crimes occurred in the year under review, but it shows how many legal decisions were made in connection with such acts and in how many cases statistical data was provided in this context (in a registrative manner). As a result, the above also means that it may occur there is an ongoing criminal proceeding that is not included in the ENyÜBS database yet. For the questions "Pending cases on 1 Jan. ref. year" and "Pending cases on 31 December ref.year" in the table, please note that no data is collected on the number of pending cases – on a given day – into the records of the Prosecution Service. Set of data: ENyÜBS-BBS: number of criminal procedure decisions
Unit of recording: criminal procedure decision
Selection date: May 30, 2023.

Q107 (2021): As to 'Pending cases on 1 Jan. ref. year' and 'Pending cases on 31 Dec. ref. year', please note that the number of pending cases at a given day is not recorded in the database operated by the prosecution service. As to 'Processed cases' (3.), please note that the database of the prosecution service records the number of cases where one or more procedural acts were performed by the prosecution service; besides that, it records the number of procedural acts regarding each type of act.

Q107 (2020): 3.1.4 Discontinued for other reasons:
If the Special Part of the Penal Code regulates the conduct of the accused after the commencement of the proceedings as a ground for termination of criminal liability.
3.3. Cases closed by the public prosecutor for other reasons:At the stage of preparation of the prosecution, Section 221 / A (7) of the Criminal Procedure Act provides that if the mediation proceedings are successful and the application of Section 29 (1) of the Criminal Code is appropriate, the prosecutor shall terminate the proceedings.

Ireland

Q107 (General Comment): As many of our cases are prosecuted by State Solicitors we don't have any data on the status of a case between the time the direction is issued and when we receive the final outcome; this is for matters on indictment. For summary cases outside of Dublin, we rarely even if ever hear back on the outcome as these directions are passed on to the police by the State Solicitor and the police execute the direction to prosecute without reference to the State Solicitor. This may change in the future if outcome data is exchange using the Criminal Justice Operational Hub. Summary cases outside of Dublin would make up a significant proportion of the files given in our figures.
As per the instructions provided, cases are counted per prosecution file which could include more than one suspect and multiple charges preferred. Therefore, the figure give for 'Discontinued' in 107.3.1 is the number of distinct files where a suspect was directed for 'no prosecution'; in some of these files, other suspects on the file may have been prosecuted in the courts.

Q107 (2024): Discontinued by the public prosecutor because the offender could not be identified' files should never have been sent into the ODPP as a direction cannot be issued if there is no suspect to direct upon. The fall should be considered positive on this basis.
In relation to Q107-3.3.2, it must be noted that prosecutors do not negotiate or plea bargain in this jurisdiction. This information is therefore not available.

Q107 (2023): 3.1.4- In 2023, the remaining 3,490 files in the 'discontinued' figure are files where all the suspects were directed for 'no prosecution'. It is not possible to break them down into 107.3.1.2 and 107.3.1.3 as they don't map to the picklist of reasons for not prosecuting that are selected by our Directing Officers.
Discontinued by the public prosecutor because the offender could not be identified' files should never have been sent into the ODPP as a direction cannot issue if there is no suspect to direct upon. The fall should be considered positive on this basis.

Q107 (2021): There has been a significant increase in files received by the office in the last number of years - this is partially due to the increase in complexity of offences and investigations.
These figures were compiled by the Office of the Director of Public Prosecutions and will be included in the Annual Report 2021 which is published annually on the Office of the Director of Public Prosecutions website. Caution should be exercised when comparing these statistics with statistics published by other organisations such as the Courts Service or An Garda Síochána. The statistics published here are based on our own classification and categorisation systems and may in some cases not be in line with the classification systems of other organisations.
Q.3.4: indictable offences

Italy

Q107 (2023): “Discontinued for other reasons” includes e.g. the transfer of the case by competence to another office or another register, the joining with another case.
An increase in cases "Discontinued by the public prosecutor for reasons of opportunity" and "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor" has been recorded due to due to Legislative Decree 150/2022 which aims to reduce the load on the courts by facilitating the definition by dismissal in the case of tenuousness or irrelevance of the fact.

Q107 (2022): We do not know the reasons for these discrepancies. However, the figures are correct.

Latvia

Q107 (General Comment): Information obtained from the ProIS (Prosecution Information System), that is a 'living' system (input of data is not 'freezed' at the end of the year). Vertical consistency cannot be ensured because there is a number of cases that have been added to "cases discontinued for other reasons" and others that have been returned to the investigative authorities to continue the investigation.

Q107 (2024): Increase in Cases Brought to Court (Section 3.3):
In 2024, prosecutors took over 4,057 criminal proceedings involving particularly significant offenses. Compared to 2022, this represents a 40.3% increase. This rise is partly due to the reclassification of certain crimes as high-priority, such as violations of international and national sanctions, illegal border crossings, human smuggling, and facilitating unlawful residence in Latvia. Additionally, the number of cases submitted for prosecution involving these offenses increased significantly—from 454 in 2023 to 975 in 2024—reflecting both improved investigative efforts and enhanced prosecutorial oversight.
Decrease in Cases Concluded by Prosecutorial Penalty or Measure (Section 3.2):
Contrary to previous years, where a growing number of cases were concluded within the prosecution, 2024 saw a notable decline. This shift is primarily due to amendments to the Criminal Law (effective July 4, 2024), which changed sentencing policies for certain categories of offenses—especially those involving violence or committed under the influence of alcohol or drugs in traffic incidents. These amendments removed alternative penalties such as community service and fines, leaving only probation supervision as an option. As a result, for offenses committed between July 4 and December 31, 2024, prosecutors could not conclude proceedings without referring the cases to court. This led to a significant increase in cases brought to court and a decrease in those resolved by prosecutorial penalty.

Q107 (2023): Comment on 3.1. : (3.1.+3.2.+3.3.+4.) does not equal to 3, therefore it should be noted that the difference lies in 3.1. since some cases match and are included in both – 3.1.2. (discontinued due to statute of limitation) and 3.1.3. (discontinued for reasons of opportunity).
3.1.3. point - last year's "non-rehabilitating circumstances of a person" covered by the law, defined in articles 415 and 415.1 of the Criminal Code (conditional release from liability) was included in 3.1.3.point, but for 2023 data, these data are included in 3.2. point (because cases are still considered completed with a sanction (last year, paragraph 3.2 contained only the prosecutor's instructions on punishment)).

Q107 (2022): Information obtained from the ProIS (Prosecution Information System) data downloaded in February 2023. The same data is used in drawing up the Annual Report of the Prosecution Office submitted to the Parliament. The difference from the number of pending cases on 31 December previous period reported in last CEPEJ questionnaire may be explained that the ProIS is a 'living' system (input of data is not 'freezed' at the end of the year), therefore some cases may be marked in the system as 'pending' between August 2022 and February 2023. One of the reasons for the increase of the number in comparison with the year 2020 may be the structural reforms carried out in the prosecution office, as of 1 November 2021 first instance prosecution offices prosecute all types of criminal offences that were previously prosecuted by prosecution offices of the Judicial Regions. Thus, not only the number/numerical volume of 1st instance prosecutors' cases (criminal proceedings taken under supervision) increased, but also their legal complexity which has impacted the workload backlog. -107. 3.1. Discontinued during the reference year (3.1.1.-3.1.4.) In consistency with the decrease in total number of incoming/received cases, a decrease can also be observed in the number of all of the discontinued cases.
- 3.1.3. Discontinued by the public prosecutor for reasons of opportunity: includes discontinued on the basis of the following grounds set forth in Article 380 of the Criminal Procedure Law: termination of criminal proceedings on the basis of circumstances that exclude criminal proceedings (several subcategories listed in Article 377), termination of criminal proceedings by releasing a person from criminal liability (Parts 1 and 2 of Article 379), including conditional release from liability (Article 415), and termination of criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime.
The remaining reason of opportunity mentioned in Article 380, namely Article 421 'Prosecutor's penal order' – number of cases discontinued on this basis is included in 107.3.2.: Concluded by a penalty or a measure imposed or negotiated by the public prosecutor.
- 3.1.4. Discontinued for other reasons: includes 675 cases in which criminal proceedings were suspended, 5 cases where the criminal proceedings have been terminated by conditionally releasing from criminal liability for a serious crime, plus 41 case sent on the basis of the jurisdiction (including – abroad).
- 107. 3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor – the answer for the increase in number lies within the proposed strategical goal of the prosecution office – to complete the criminal proceedings in the prosecution office whenever possible. This has led to the significant increase in the total value of number in Q 107. 3.2. and decrease in numbers in Q 107. 3.3.
- 107. 4. Pending cases on 31 Dec. ref. year: explanation given for Q 107. 1.1. applies to this number as well.

Q107 (2021): Cases brought to court: 6061 cases with the total number of criminal offenses - 11008.
Number of incoming cases in 2021 was 11 529. This includes cases received: for initiation of criminal prosecution; after the division of cases or during the phase of investigation; in accordance with urgent procedures; from the court for the elimination of violations/deficiencies; taken over for investigation; restored previously terminated or suspended cases.
The vertical consistency cannot be ensured because in 2021 there were 370 cases that were added to other cases and 82 cases were returned to the investigative authorities to continue the investigation. These cases are not included in the subcategories of Q107. 3.1.2. Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation - according to Article 380 of the Criminal Procedure Law these preconditions (stated in Article 377, Clauses 1, 2 and 10 of the Criminal Procedure Law) are exonerating circumstances. Data for the year 2020 included also other clauses of Article 377 that contain circumstances that do not exonerate persons, which explains the remarkable difference in numbers. Accordingly, 3.1.3. has increased by the number of relevant cases (that also constitute reasons of opportunity).
3.1.4. Discontinued for other reasons: the cases included in this category are, for example, the cases in which the prosecutor took a decision to terminate criminal proceedings by conditionally releasing from criminal liability a person who has been accused of committing a serious crime and who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than the criminal offence committed by the relevant person himself / herself (Paragraph prim of Section 415 of the Criminal Procedure Law). The information compiled in the information system of the Prosecution Office shows that in 2021, prosecutors took 9 decisions to terminate criminal proceedings based on the aforementioned Paragraph. Besides, for 2021, there are 675 cases in which criminal proceedings were suspended included in this category.
Just like for the year 2020, 365 cases in which the prosecutor took a decision to terminate the criminal proceedings by conditionally releasing a person from criminal liability for the commission of a criminal offense or a less serious crime were included in the category “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor". This, along with the recommendation included in the Operational Strategy of the Prosecution Office 2022-2027- on the completion of the criminal proceedings in the Prosecution Office where possible, also explains the increase in the latter category. 3.3. Cases closed by the public prosecutor for other reasons: the cases included in this category are, for example, the cases in which the Prosecutor General has made a decision to terminate criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than a criminal offence committed by such person himself / herself. In 2021, Prosecutor General has not terminated any criminal proceedings based on Article 410 of the Criminal Procedure Law. For 2021, in this category there are 285 cases included that were sent on the basis of the jurisdiction (including – abroad).
4 Pending cases on 31 Dec. ref year: The number has increased mainly due to the COVID-19 pandemic (that affected the timely execution of procedural/in

vestigative actions).
3.4. In 2021 there has been a significant decrease of the number of initiated criminal proceedings (-17%), furthermore the number of criminal proceedings completed in the prosecutor's office has increased (+26%).

Q107 (2020): Cases brought to court
8088 cases with the total number of criminal offenses - 14158
The vertical consistency cannot be ensured because in 2020, there were 520 cases that were added to other cases and 91 cases were returned to the investigative authorities to continue the investigation. These cases are not included in the subcategories of Q107. 3.1.4 Discontinued for other reasons: the cases included in this category are, for example, the cases in which the prosecutor took a decision to terminate criminal proceedings by conditionally releasing from criminal liability a person who has been accused of committing a serious crime and who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than the criminal offence committed by the relevant person himself / herself. The information compiled in the information system of the Prosecution Office shows that in 2020, prosecutors took 2 decisions to terminate criminal proceedings based on Paragraph prim of Section 415 of the Criminal Procedure Law. Besides, for 2020, in this category are included 955 cases in which criminal proceedings were suspended.
3.3. Cases closed by the public prosecutor for other reasons: the cases included in this category are, for example, the cases in which the Prosecutor General has made a decision to terminate criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than a criminal offence committed by such person himself / herself. In 2020, Prosecutor General has not terminated any criminal proceedings based on Article 410 of the Criminal Procedure Law. For 2020, in this category are included 285 cases that were sent in accordance with the relevant jurisdiction (including – abroad). The category “3.1. Discontinued during the reference year” decreased because 365 cases in which the prosecutor took a decision to terminate the criminal proceedings by conditionally releasing a person from criminal liability for the commission of a criminal offense or a less serious crime were included in the category “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor". This also explains the increase in the latter category.

Lithuania

Q107 (General Comment): Inconsistency is a result of different sources of data and their differing formulas for calculating some statistical indicators. Numbers of „Pending cases on 1 Jan“, „Pending cases on 31 Dec.“ and „Incoming cases“ are taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service. Number of "criminal cases" is counted by the crimes.
Before 2021, the Prosecutor's Office of Lithuania collected statistics by pre-trial investigations, but no matter if investigation is carried out for 1 crime or for 100 crimes, it would still count as one investigation in the statistics. For this reason methodology was changed, because data in crimes is more suitable for comparative analysis.

Q107 (2024): * Section 3.1.4 provides information on criminal cases transferred to a foreign country for further criminal proceedings. Number of "criminal cases" is counted by the crimes. Before 2021, the Prosecutor's Office of Lithuania collected statistics by pre-trial investigations, but no matter if investigation is carried out for 1 crime or for 100 crimes, it would still count as one investigation in the statistics. For this reason methodology was changed, because data in crimes is more suitable for comparative analysis.

Q107 (2023): Section 3.1.4 provides information on criminal cases transferred to a foreign country for further criminal proceedings. A large number of cases used to be transferred to Belarus or Russia. Recently, the Lithuanian Prosecutor's Office has reduced international cooperation with these countries to a minimum, which has had an impact on the total number of criminal proceedings transferred to foreign countries.

Q107 (2022): Inconsistency is a result of different sources of data and their differing formulas for calculating some statistical indicators. Numbers of „Pending cases on 1 Jan“, „Pending cases on 31 Dec.“ and „Incoming cases“ are taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.

Q107 (2021): The number of registered crimes is gradually decreasing since 2017 in Lithuania, and this also affects other numbers.
Prosecutor General's Office of the Republic of Lithuania: the numbers are correct. Vertical inconsistency is a result of different sources of data and differences in formulas for calculating some statistical indicators. Numbers of „Pending cases“ and „Incoming cases“ are taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.

Q107 (2020): Cases closed by the public prosecutor for other reasons: cases closed under Paragraph 3 Article 68 of the Criminal Procedure Code - when criminal act has been committed in the territory of the Republic of Lithuania by a citizen of a foreign country or other person who have subsequently left the Republic of Lithuania, the Prosecutor General's Office of the Republic of Lithuania may request foreign country to take over the criminal case. When criminal case is taken over by another country, the one in Lithuania is discontinued. The number of registered crimes is gradually decreasing since 2017 in Lithuania, and this affects number of incoming cases, processed cases, discontinued cases and cases brought to court.
The reason for the non-compliance of the result of the formula used ((pending cases on 1 January 2020 + incoming cases) – processed cases = pending cases on 31 December 2020) is a result of different sources of data and their differing formulas for calculating some statistical indicators. Numbers of „Pending cases“ and „Incoming cases“ is taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.

Luxembourg

Q107 (2024): 3.1.1 Between 2023 and 2024, a significant 26% increase was observed in resolved cases by the public prosecutor because the offender could not be identified. This development is part of a broader trend, marked by a continuous rise in the number of incoming cases registered by the public prosecutor’s offices in recent years. Since 2022, the proportion of cases with an unknown perpetrator has regularly exceeded 40% of the total cases handled.

This situation is partly explained by the growing prevalence of cybercrime, which represents an increasing share of discontinued cases without further action. Prosecution in this area is particularly complex due to the technical nature of the offenses and their often international scope, making it difficult or even impossible to identify the perpetrators.

Moreover, this increase also affects other categories of offenses, such as scams, frauds, and the intentional destruction or damage of movable property. In these cases as well, the absence of elements allowing for the identification of perpetrators prevents any judicial proceedings, thereby contributing to the rise in discontinued cases without further action.

Q107 (2023): The cases referred to under 3.2. are considered closed if the party concerned complies with the condition imposed by the warning or fulfils its obligations arising from the mediation.
In the event of non-compliance, the public prosecution will resume.
3.1.4: These mainly concern two specific measures: firstly, with regard to road traffic, the obligation to follow a driving course and, only for young adult offenders, participation in a course in the Choice 18+ programme designed to prevent drug addiction (https://www.solina.lu/fr/facilities/impuls/).
The drop in cases closed for Other reasons is explained by the drop in cases closed involving young adult offenders (aged 18 to 21). If these young offenders take part in a course as part of the Choice 18+ programme, designed to prevent drug addiction, and successfully complete it, their cases are closed. However, for reasons of internal organisation within the public prosecutor's offices, these cases are not closed as and when a traineeship is completed, but as a group, i.e. when a certain threshold of completed traineeships is reached. Finally, the drop in closed cases recorded since 2023 in the area of narcotics and concerning young offenders can be explained by the legalisation of recreational cannabis in Luxembourg in July 2023 and the subsequent drop in prosecutions by law enforcement.

Q107 (2022): Case covered by subcategory 3.2. are deemed closed if the relevant party complies with the condition set forth in the warning or fulfills its obligations arising from mediation. In case of non-compliance, public prosecution resumes.

Section 3.1.4 primarily encompasses two specific measures; firstly, concerning traffic regulations, the requirement to attend a driving course and, exclusively for young adult offenders, participation in a program called Choice 18+ aimed at preventing drug addiction (https://www.solina.lu/fr/facilities/impuls)."

Q107 (2021): 3.1.4 " Discontinued for other reasons": due to the continuing pandemic in 2021, no “Choice18 +” measures could be initiated, nor processed, during this year. Similarly, driving courses were suspended due to the pandemic and did not resume until October 2021.
3.2 “Concluded by a penalty or a measure imposed or negotiated by the public prosecutor”: the increase in the number of cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor between 2020 and 2021 cannot be explained by a single event. The increase is mainly due to the growing number of warnings issued by the prosecution service, which is on the one hand the result of punctual measures related to the health crisis and on the other hand depends on the subject matter of the cases dealt with, as warnings are usually issued in less serious cases.

Q107 (2020): "The cases referred to under 3.2. shall be considered closed if the party concerned complies with the condition imposed by the warning or fulfills its obligations arising from the mediation. In case of non-compliance, the public action will resume.
3.1.4: These are essentially two specific measures: firstly, in the area of traffic, the obligation to follow a driving course and, only for young offenders of full age, participation in a course in the Choice 18+ program for the prevention of drug addiction (https://www.solina.lu/fr/facilities/impuls/)."

Malta

Q107 (2024): The quoted cases do not specifically refer to the caseload of the attorney general, but to all the cases brought to court at first instance by the police acting as prosecutors in cases requiring less than 2 years imprisonment.

Q107 (2022): Presently the figures provided are in lien with the cases that are brought to court. The Office of the Attorney General shall be developing its case management system and this data should then be easily captured by the new system.

Q107 (2021): The Office of the Attorney General is in the process of setting up a comprehensive case management system that will keep track of all the cases that are processed by the OAG. Until then, the cases quoted above are all cases prosecuted in court at 1st Instance.
The high pending caseload at the beginning of 2021 is a direct result of the inefficiencies experienced during the Covid-19 pandemic. In fact throughout 2020, given that most of the year the courts of justice were closed, the number of incoming cases far exceeding the number of resolved cases. This led to a low CR and a concomitant high pending caseload.

Netherlands

Q107 (General Comment): The number of pending cases at the end of the year cannot equal pending cases at the start of the year + incoming cases – processed cases, because a specific type of case can only be counted in the stock when the file has been judged, not when they are pending. This is for criminal cases where an order is given, but the case is then returned because the order cannot be executed. This specific case type return to the stock, but cannot be measured in the system the public prosecution uses. Once those cases are assessed again and stream out, they become visible in the numbers in the system.
Pending cases are cases that are yet to be judged and for which a hearing has to be planned. Cases for which the hearing has been planned, are not included in this number.

Q107 (2022): There are a few numbers available, but NL does not register whether cases are litigious or not in the manner asked here.

Q107 (2021): Pending cases are cases that are yet to be judged and for which a hearing has to be planned. Cases for which the hearing has been planned, are not included in this number.
Discrepancy comment Pending cases January: The way in which pending cases were counted changed in August 2020, before that time a large number of cases were included that had already been dealt with administratively. Those cases are now excluded from the number of pending cases, which explains the difference in numbers between pending cases Jan 2020 and and pending cases Jan 2021.

Q107 (2020): The number of pending cases at the end of the year cannot equal pending cases at the start of the year + incoming cases – processed cases because a certain type of case can only be counted in the stock when the file has been judged, not when they are pending. These cases are criminal cases where an order is given, but they are then returned because the order cannot be executed. These criminal cases return to the stock, but cannot be measured in the system the public prosecution uses. Once a case like that it assessed again and streams out, it becomes visible in the numbers of the system.

Poland

Q107 (General Comment): *The number of cases discontinued for any other reason consists of cases discontinued on the basis of: - art. 17 par. 1 point 3 to 11 of the Code of Criminal Procedure: the social harm of the act is negligible; the law provides that the perpetrator is not subject to punishment; the defendant has died; the criminal statute of limitations has run; criminal proceedings for the same act of the same person have been validly terminated or previously instituted proceedings are pending; the perpetrator is not subject to the jurisdiction of the Polish criminal courts; lack of complaint from an authorized prosecutor; absence of the required authorization for prosecution or request for prosecution from an authorized person, unless otherwise provided by law; there is another circumstance excluding prosecution.
- the Act on Counteracting Drug Addiction (Article 62a and 62b);
- other discontinuances - in addition to those described in report PK-P1K on activity of common organizational units of the Public Prosecutor's Office in criminal cases.
*The number of cases closed by the prosecutor for other reasons consists of: - refusal to prosecute, suspension, dealt with in another way, transfer to commander, criminal prosecution transferred.. At the end that following a change in Q107, starting from 2022, cases previously reported as “closed for other reason are presented as “discontinued for other reasons”.

Q107 (2023): 3.3. in the number of cases brought to the court (264,341) includes the cases indicated in 3.2. (41,512), after deducting these cases the value is 222,829 and in 3. is the number 1,099,217.
Cases closed by the public prosecutor for other reasons - 428 294

Q107 (2022): The other modes of termination concerned 414,485 cases (other modes of termination: refusal to prosecute, suspension, dealt with in another way, transfer to commander, criminal prosecution transferred). These cases are reported within the category “discontinued for other reasons”.

Q107 (2020): *The number of cases processed in 2018 was 1,076,123. The number of cases discontinued for this period is 397,471. This number is comparable to the 2019 data. (406,770 cases discontinued) and for 2020. (387,521 cases discontinued). *The number of cases - "concluded by a penalty or measure imposed or negotiated by the prosecutor" for each year was as follows: 2018. – 43 348, in 2019. -36 167, in 2020. - 25 635.

Portugal

Q107 (General Comment): The counting unit is the case (criminal proceedings at the investigation stage), so it is the same unit used to count incoming and outgoing cases for the other issues.
Incoming and outgoing cases include internal movements of cases between units (in 2023 there were 36,432 cases transferred between units).
Outgoing cases include cases that are joined together to form a single case.
3.1.1 When the offender is unknown, the case remains open until it is closed by decision of the competent public prosecutor, when all efforts to identify the offender have been exhausted. If a case is reopened, for statistical purposes it is considered a new case on the date it is reopened.

Q107 (2022): 3. The total figure for 2022 for the total number of completed criminal cases at the investigation stage is 427 664.

Q107 (2020): The data indicated for «number of processed cases» corresponds to “the total number of criminal cases at the investigation stage that have been closed”.
The Public Prosecutor's Office, closes the inquiry as soon as it has gathered sufficient evidence that no crime has been committed, that the defendant has not committed it or that the procedure is legally inadmissible.
The Public Prosecutor's Office also closes the inquiry if it has not been possible to obtain sufficient evidence that a crime has been committed or who the perpetrators were.

Romania

Q107 (2020): There are no available data on grounds on which a decision to discontinue a case is taken by the public prosecutor.

Slovak Republic

Q107 (2023): 3.1.3 Opportunism is not a feature of the Slovak legal system. Prosecutorial decisions are strictly bound by legality and officiality, with no discretion to decline prosecution if legal criteria are met. For the CEPEJ questionnaire, "NAP" is appropriate for the subcategory 'cases discontinued for reasons of opportunity'.

Q107 (2022): It is necessary to state that the required table, or criteria, are different from our legal system. In our criminal proceedings, a large number of cases in the preliminary proceedings are closed by the investigator or police officer, while the table only requires cases closed by the prosecutor. In addition, matters terminated by the prosecutor may also be terminated by the so-called diversions in criminal proceedings, while the table only requires cases stopped by the prosecutor. The inconsistency of data with previous years is also caused by the fact that the prosecutor in the Slovak Republic has slightly different powers in the preliminary proceedings in contrast to the legal systems of other countries, so the data differ according to the point of view of the processor of the data.

Q107 (2021): The General public prosecutors office did not deliver any explanation.

Q107 (2020): The data were delivered by General prosecutor office. The number of 1st instance criminal cases are not monitored by General prosecutor office in CEPEJ requested structure.

Slovenia

Q107 (General Comment): Methodology used: statistical data are kept on the accused, accused or convicted persons, and the data is related to the main crime per defendant (methodology as used in the Joint Annual Report on the Work of State Prosecutor's Offices and has been used in previous reports).
IMPORTANT: Data also includes unfinished criminal complaintes against unknown perpetrators. It should be noted that on average, State Prosecutor's Offices receive between 30.000 and 60,000 complaints per year against unknown perpetrators. These are included in statistical data as unresolved cases until the perpetrator is discovered or the statute of limitations expires.
1.Pending cases on 1 Jan. ref. Year: unresolved criminal complaints against known perpetrators (incl. adults, minors and legal entities) and unknown perpetrators.
2. Incoming/received cases: criminal denunciations against known and unknown offenders.
Criminal denunciations against known offenders include cases that were received by the prosecution office as cases with unknown offenders whose identity was discovered during the reporting period. Cases against known offenders are counted by the number of persons involved (i.e. a denunciation against five individuals is counited as five cases), cases against unknown offenders are counted by files.
3. Processed cases: all resolved criminal complaints in the reporting year. There can be multiple criminal complaints in one case file, however the resolution is only one (for all complaints in one case file) – hence the difference between the sum of subcategories (3.1, 3.2, 3.3 and 3.4) and the actual number of resolved criminal complaints. The discrepancies in the numbers arise from the way cases are recorded in the information system: in general, in cases with multiple offences by one suspect typically there is a single resolution; in cases with multiple suspects with different offences cases may be split to allow different resolutions; in cases with same suspect and multiple complaints the cases may be merged.
3.1.1 Discontinued by the public prosecutor because the offender could not be identified: the public prosecutor cannot discontinue a case, because the offender could not be identified.
3.1.2 Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation: dismissed denunciations for other reasons than opportunity and accomplishing some tasks imposed or negotiated by state prosecutor. This category includes cases where prosecutor refrains from prosecution after the finish of judicial investigation.
The great majority of cases against unknown offenders is dismissed because the pending time exceeds limitation period for criminal prosecution.
In the case of proposed criminal offenses, the motion of the injured party is a procedural precondition for conducting criminal proceedings. If this presumption does not exist (it is no longer due to withdrawal), the legal consequence is rejection.
For the most part, public prosecutors rejected complaints for other reasons, including cases in which it was not possible to continue the proceedings due to a lack of procedural or material preconditions (the act is not a criminal offense, there is no reasonable suspicion that the suspect committed a criminal offense (prosecuted ex officio), various procedural obstacles).
3.1.3 Discontinued by the public prosecutor for reasons of opportunity
Cases where denunciations were dismissed because the consequences of criminal prosecution would prove disproportionate to the weight of criminal offence and dismissed denunciations agains

t minors because the proceedings against him/her would not be appropriate in view of the nature of the offence and circumstances in which it was committed, as well as in view of the past conduct of the minor and his personal traits.
3.1.4 Discontinued for other reasons
NAP - all data already covered in the above.
3.2.Concluded by a penalty or a measure imposed or negotiated by the public prosecutor
Dismissed denunciations due to concluded settlement between an offender and the aggrieved person or due to the offender accomplishing some tasks imposed by public prosecutor.
3.3.Cases closed by the public prosecutor for other reasons
NAP - all already covered in the above data.
3.4.Cases brought to court
Natural persons and legal entities charged before district and local courts and motions for punishment or educational measure for minors.
4. Pending cases on 31 Dec. ref. year
Unresolved criminal complaints as at 31 December of the previous year for all categories (adults, minors and legal entities).
Inconsistencies within the table are possible due to the peculiarity of the IT system - it is a "live" system (dynamic reporting), meaning that the reported figures for a specific date or period of time inevitably vary for different reasons (e.g. the data was not promptly entered into the CMS; in some instances, the decision, in which category some specific new cases should be included, may be subsequently changed and when data are unified some figures change; there is also the possibility that a mistake was done when entering the data and was later detected in the quality check and corrected.). Every category (row in the table) is calculated (counted) separately, therefore the „Pending on 31 Dec“ may not equal to the formula (Pending 1 Jan + Incoming – Processed) due to aforementioned influences.

Q107 (2024): Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints against known offenders (4,60%) and unknown offenders (95,40%)
(2) Incoming cases include criminal denunciations against known offenders (42,40%) and unknown offenders (57,60%)
(3) Processed cases include processed cases against known offenders (38,44%) and unknown offenders (61,56%)
(3.1.) Discontinued during the reference year include dismissed criminal complaints against known offenders (26,70%) and unknown offenders (73,30%)
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include known offenders (22,32%) and unknown offenders (77,68%)
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints against known offenders (5,08%) and unknown offenders (94,92%)

Q107 (2023): Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints against known offenders (5%) and unknown offenders (95%)
(2) Incoming cases include criminal denunciations against known offenders (44%) and unknown offenders (56%)
(3) Processed cases include processed cases against known offenders (38%) and unknown offenders (62%)
(3.1.) Discontinued during the reference year include dismissed criminal complaints against known offenders (26%) and unknown offenders (74%)
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include known offenders (23%) and unknown offenders (77%)
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints against known offenders (5%) and unknown offenders (95%)
Discrepancies (to 2022 data):
The increase in processed cases (3) is due to increase in discontinued cases (3, 3.1) against unknown offenders, due to the expiry of statue of limitations (an increase in number of cases against known offenders is negligible). 50% of cases, discontinued in 2023 were in fact filed in 2013 (10 years is the statue of limitation for most of criminal offences in the Penal Code). Structurally, in 50% of discontinued cases the criminal offence was theft. Another factor is that in 2013 the data collection in public prosecution migrated from written records to informatised records, which might affected the consistency of data pre/post 2013. However in long term, the number of cases filed against unknown offenders had been decreasing from 2012 to 2021 (decrease by more than 55%), and only in 2022 the number of filed cases increased somewhat.

Q107 (2022): Discrepancies (to 2020 data) - 3.Processed cases: In 2021 the reporting changed to include cases of discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations in the category (3) Processed cases (previously excluded).
3.Processed cases... increase by 91%: 2 factors contributed to the increase: 1) in 2020, the work of state prosecution was impacted by the Covid19 pandemic; 2) more willingness of suspects and victims to cooperate in alternative forms of law enforcement is observed.
Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints: 11.543 (known offenders) and 271.319 (unknown offenders)
(2) Incoming cases include criminal denunciations: 24.815 (known offenders) and 35.036 (unknown offenders)
(3) Processed cases include processed cases: 24.475 (known offenders) and 29.886 (unknown offenders)
(3.1.) Discontinued during the reference year include dismissed criminal complaints: 14.207 (known offenders) and 29.886 (unknown offenders)
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include: 11.639 (known offenders) and 29.886 (unknown offenders)
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints: 12.024 (known offenders) and 277.436 (unknown offenders)

Q107 (2021): In 2021 the reporting changed to include cases of discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations in the category (3) Processed cases (previously excluded).
Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints: - against known perpetrators: 11.951 and
- against unknown perpetrators: 269.260.
(2) Incoming cases include criminal denunciations: - against known offenders: 24.658 and
- against unknown offenders: 27.199.
(3) Processed cases include processed cases:
- against known offenders: 24.658 and
- discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations: 29.140
(3.1.) Discontinued during the reference year include dismissed criminal complaints:
- against known perpetrators: 14.260 and
- against unknown perpetrators: 29.140
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include:
- a) discontinued criminal complaints against known perpetrators due to the lack of procedural or material preconditions: 10.022, b) cases discontinued (rejected) due to withdrawal of the motion of the injured party: 2.000 and c) cases discontinued due to expiration of the statue of limitation: 75 (total 12.097 cases) and
- discontinued criminal complaints against unknown perpetrators due to the expiration of statute of limitations: 29.140.
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints:
- against known offenders: 11.709.
- against known offenders: 277.564.
Differences to 2020 data:
2.Incoming/received cases: decrease by 16%
Contributing factors: a) Covid-19 pandemics, especially limit of movement of population and related police control, b) changes in the registration of the number of criminal offences in police registers and c) increase in merging of diferent cases in one case at the Police and state prosecution level, compared to the previous year. 3.1.2 Discontinued by the public prosecutor due to the lack of an established offence or a
specific legal situation: increase by 17%
The increase is mainly due to a higher number of cases against unknown offenders due to the expiration of statute of limitations, which is beyond control of state prosecution. The number of discontinued cases agains known offenders did not change significantly. 3.1.3 Discontinued by the public prosecutor for reasons of opportunity: decrease by 22%
The number of cases remains comparable (despite the decrease in last year) and cannot be considered unusual, due to the structure of processed cases with the majority of offences against property and within it low value cases. 3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor: increase by 23%
The increase in 2021 is due to partial relief of preventive measures, related to Covid-19 pandemics.

Q107 (2020): Pending cases on 1 Jan. ref. year includes 12.452 cases against known perpetrators and 263.139 cases against unknown perpetrators.
Incoming/received cases includes 27.770 cases against known offenders and 34.019 cases against unknown offenders.
Pending cases on 31 Dec. ref. year includes 12.072 cases against known offenders and 269.260 cases against unknown offenders.

Spain

Q107 (General Comment): In Spain the general rule is that the Prosecutor is party in the criminal cases, but the Prosecutor does not process (with exclusive competence) the criminal cases. The investigation Judge (Juez de Instrucción) does that. Data provided in question 107 tries to adapt the information in the Annual Report of the State Attorney General's Office to the criteria of CEPEJ, by offering the data of cases received by the Prosecution Service, according to the classification of procedures of the Spanish procedural legislation (diligencias previas, diligencias urgentes, procedimiento por delitos leves, sumarios y procedimientos del jurado). In addition to that, there are other two kinds of actions for which the Prosecution have exclusive competence: Investigation of criminal reponsibility of minors, and preliminary diligences of Article 773.2 of the Criminal Procedural Act.

Q107 (2020): The provided number of incoming cases is the number of the criminal proceedings received by the Prosecution Service (page 1117 of the Annual Report of the Prosecution Service). It is consistent with the explanatory note as it includes “cases submitted to public prosecutors by the police and other bodies as well as victims (if applicable) within the reference year”. It is an official data, provided by the State Attorney Office.

Question 107-1

Austria

Q107-1 (General Comment): There is no guilty plea procedure in Austria.

Belgium

Q107-1 (General Comment): The guilty plea procedure was introduced by the law of February 5, 2016 (Article 216 of the Code of Criminal Investigation), which entered into force on February 29, 2016.
According to Article 216 of the CIC, §1, al.1 "For acts that do not appear to be of a nature to be punishable by a main imprisonment of more than five years, the public prosecutor may, either ex officio or at the request of the suspect or defendant or his/her lawyer, propose the application of the "procedure of prior acknowledgement of guilt" defined in this article, if the suspect or defendant admits to being guilty of the acts attributed to him/her". There are no national statistics available due to the lack of uniform coding rules.

Bulgaria

Q107-1 (General Comment): The indicator "Before the main trial" takes into account the agreements submitted to the court by the prosecutor on the basis of Article 381 CCP and on the basis of Article 375a(1) CCP (the latter was introduced by the Law on the Internal Revenue Code, promulgated, SG No. 48 of 2023), while the indicator "During the main trial" gives a value, which is the sum of the number of agreements under Article 384 CCP (with a person or for any of the offences) concluded by the prosecutors in the trial phase (after an indictment has been filed), by the number of proceedings under the summary trial procedure under Article 371, item 2 CCP (under Chapter Twenty-Eight CCP, under Article 373(3), in conjunction with Article 372(4), in conjunction with Article 371(2) CCP), in which convictions have been handed down (similar to the previous questionnaires), and by the number of agreements under Article 375a(3) CCP, in conjunction with Article 78a CCP, concluded by prosecutors in the judicial phase (after an indictment has been filed or after the submission of orders for exemption from criminal liability with the imposition of an administrative penalty).
Thus, of the 10 571 plea procedures during the trial, 8 049 were agreements concluded under Article 384 CCP, 906 were agreements concluded under Article 375a(3) CCP, and 1 616 were summary proceedings under Article 373(3) in conjunction with Article 372(4) in conjunction with Article 371(2) CCP.
In the indicator "Total number of guilty plea procedures" the aggregate of the above two indicators is indicated.

Q107-1 (2023): The indicator "Before the main trial" takes into account the agreements submitted to the court by the prosecutor on the basis of Article 381 CCP and on the basis of Article 375a(1) CCP (the latter was introduced by the Law on the Internal Revenue Code, promulgated, SG No. 48 of 2023), while the indicator "During the main trial" gives a value, which is the sum of the number of agreements under Article 384 CCP (with a person or for any of the offences) concluded by the prosecutors in the trial phase (after an indictment has been filed), by the number of proceedings under the summary trial procedure under Article 371, item 2 CCP (under Chapter Twenty-Eight CCP, under Article 373(3), in conjunction with Article 372(4), in conjunction with Article 371(2) CCP), in which convictions have been handed down (similar to the previous questionnaires), and by the number of agreements under Article 375a(3) CCP, in conjunction with Article 78a CCP, concluded by prosecutors in the judicial phase (after the submission of orders for exemption from criminal liability with the imposition of an administrative penalty).
Thus, of the 10 691 plea procedures during the trial, 8 589 were agreements concluded under Article 384 CCP, 472 were agreements concluded under Article 375a(3) CCP, and 1 630 were summary proceedings under Article 373(3) in conjunction with Article 372(4) in conjunction with Article 371(2) CCP.
In the indicator "Total number of guilty plea proceedings" the aggregate of the above two indicators is indicated.

Q107-1 (2022): - in the "Total number of guilty plea procedures" indicator, the total value of the following two indicators is indicated;
- in the indicator "Before the main trial" the agreements submitted to the court by the prosecutor on the basis of Art. 381 et seq. of the Criminal Procedure Code.
- in the indicator "During the main trial" a value is indicated, which is the sum of the number of agreements under Art. 384 of the Criminal Procedure Code (with a person or for any of the crimes), concluded by the prosecutors in a court phase (after the indictment has been filed), as well as the number of procedures under reduced court investigation under Art. 371, item 2 of the Criminal Procedure Code (under Chapter Twenty-Seven of the Criminal Procedure Code, pursuant to Art. 373, paragraph 3, article 372, paragraph 4, article 371, item 2 of the Criminal Procedure Code), under which convictions and acquittals have been handed down (analogous to the previous questionnaires). Out of 10 541 procedures for admission of guilt during the trial, 9 113 were the agreements concluded under Art. 384 of the Criminal Procedure Code.

Q107-1 (2020): Question 107–1:
– the indicator "Total number of guilty plea procedures" indicates the total value of the next two indicators;
– in the indicator "Before the main trial" the agreements submitted by a prosecutor to the court are taken into account (analogous to the previous questionnaires);
– in the indicator “During the main trial” a value is indicated, which is the sum of the number of agreements under Article 384 of the Criminal Procedure Code (with a person or for any of the crimes), concluded by the prosecutors in a court phase (after an indictment has been filed), as well as by the number of procedures under the abbreviated court investigation under Article 371, item 2 of the CPC (under Chapter Twenty-eight of the CPC, pursuant to Article 373, para. 3, supra Article 372, para. 4, supra Article 371, item 2 CPC), under which there have been convictions and acquittals (similar to the previous questionnaires).

Croatia

Q107-1 (General Comment): In criminal proceedings, the defendant is granted the right to plead guilty (for all or a number of the counts of the charge) and reach agreement on the sanction. If the defendant pleads guilty and no agreement on the sanction is reached, the panel shall confirm the indictment and a trial must be scheduled. The parties may negotiate on the conditions of pleading guilty and agreeing on a sanction. During these negotiations, the defendant shall have a defence counsel. If the president of the panel is served with a confirmed indictment to which the accused has pleaded guilty, the proposing of evidence for the trial shall be limited only to the evidence which concerns the decision on criminal-law sanctions. Where the accused pleads guilty to all counts of the charge, the president of the panel shall instruct him/her that he/she may immediately state his/her position on all the circumstances that incriminate him/her and present all the facts in his/her favour, after which the accused shall be interrogated. The guilty plea does not exempt the court from its duty to present other evidence as well. If the confession of the accused at the trial is complete and in accordance with the evidence already gathered, the court shall, in the course of evidentiary proceedings, present only those pieces of evidence that relate to the decision on punishment or other sanction. The State Attorney’s Office keeps only a track record on the judgments rendered by the court in the guilty plea procedure and no distinction can be made between the number of guilty plea procedures “before the court case” and their number “during the court case”.

Q107-1 (2024): In response to question 107-1 (guilty plea procedure), information on judgments based on plea agreements was provided only under the "Before the main trial" section. The "During the main trial" section was marked as NAP (not applicable), as our legal system does not recognize a formal procedure for plea agreements during the trial. The reason for the increase relates to more frequent use of guilty plea procedures in 2024. The emphasis on utilizing such procedures stems from their ability to expedite court proceedings, enhance overall efficiency, and significantly reduce expenditures from the national budget."

Q107-1 (2023): Regarding question 107-1 (guilty plea procedure), data on judgments based on the parties' agreement were entered only in the column "Before the main trial," while the column "During the main trial" was entered as NAP (not applicable) because our country lacks a formal institute for communication during the discussion.
The stated discrepancy percentage of 21.77% can be attributed to the strike.

Q107-1 (2022): Data source: Report of the Attorney General of the Republic of Croatia on the work of state attorneys' offices in 2022.
* The data refer to cases under the jurisdiction of county state attorneys' offices and the Office for the Suppression of Corruption and Organized Crime
**The data refer to cases under the jurisdiction of the municipal state attorney's offices, with a note that certain severe criminal cases are also under their jurisdiction, however, statistical data are presented in total for all criminal offenses under the jurisdiction of the municipal state attorney's offices without separating them into "lighter" and "serious" crimes.
The number of agreements from municipal jurisdiction was 318 in 2022, and 242 in 2021, which represents a true increase of 31%. There is no particular reason for this increase, as it is a number that varies depending on the specifics of each reporting period (for example, it was 190 in 2018, 2019 -315, 2020 -266, 2021 -242 and 2022 -318). In fact, it is about the decisions of the court that should accept the agreement proposal submitted jointly by the state attorney's office and the defence. The State Attorney's Office strives to increase the number of agreements concluded every year in order to shorten court proceedings and relieve the work of the State Attorney's Office and the court, which is why the number of judgments based on the parties' agreement is monitored and analysed. However, the state attorney's office tries to maintain an appropriate criminal policy and insists on compensation for damages for victims, which is why the state attorney's office's proposals for agreements are not acceptable for defence in conditions of slow trials due to the significant workload of the courts, and realistically the number of agreements is not high. For this reason, data on the number of verdicts based on agreements in the annual report of the State Attorney's Office of the Republic of Croatia are considered in relation to the total number of convictions. In 2022, agreements from municipal jurisdiction accounted for 2.19% of the total number of convictions from municipal jurisdiction, which is only a slight increase of 0.62% compared to 2021, when agreements accounted for 1.68% of the total number of convictions % which actually does not represent a significant difference and is therefore not commented on.

Q107-1 (2021): Source of information: Report of the Chief State Attorney of the Republic of Croatia on the work of State Attorney's offices in 2021
Data under Severe criminal cases refers to cases under the jurisdiction of county state attorney's offices and the Office for the Suppression of corruption and organised crime
Data under Misdemeanour and / or minor criminal cases refers to cases under the jurisdiction of municipal state attorney's offices, noting that certain severe criminal cases are also within their jurisdiction, however, statistical data are presented in total for all criminal offences under the jurisdiction of municipal state attorney's offices, without separating them into “lighter” and “more serious” criminal offences.

Czech Republic

Q107-1 (2024): Total number of guilty plea procedures: After the change in legislation in 2020, there was a huge increase in the number of guilty pleas. It seems that the number is now again decreasing. It could be just a random fluctuation though.

Q107-1 (2022): There was a legislative change, which make several changes regarding the guilty pleas - it is easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes. As a result, the number of guilty pleas is rapidly rising.

Q107-1 (2021): There was a legislative change which make several changes regarding the guilty pleas - it easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes. As a result the number of guilty pleas is rapidly rising.

Q107-1 (2020): There was a legislative change which make it easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes.

Denmark

Q107-1 (General Comment): The guilty plea procedure including a main trial will always be concluded during the main trial, as it is a court decision whether or not a person can be convicted in court. Cases with accepted fines are not included in the answer above, as it is not part of a trial. Plea guilty procedure can only take place during the main trial.

Q107-1 (2024): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In Denmark, a guilty plea procedure is concluded in a court hearing, not in a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must ensure that the conditions for proceeding the case as a guilty plea procedure are present.

Q107-1 (2023): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2023, the number of complexes are 3,909. There has been an increase in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded in a court hearing, not in a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must ensure that the conditions for proceeding the case as a guilty plea procedure are present.

Q107-1 (2022): Comments Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2022, the number of complexes are 3.526. There has been an increase in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded by a court hearing, not a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must in a court hearing ensure that the conditions for proceeding the case as a guilty plea procedure are present.
The answer regarding whether the case was concluded before/during the main trial differs from last year´s answer, as guilty plea procedures are correctly concluded before the main trial, as the confession must subsequently be validated by a judge. The data is registered through a case-filing tool, POLSAS. POLSAS is first and foremost a case-filing tool, which may be subject to human entry error. Furthermore, the number of guilty plea procedures can fluctuate on a yearly basis for a variety of reasons. We cannot conclude anything of substance regarding the decrease without a manual investigation.

Q107-1 (2021): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2021, the number of complexes are 2997. There has been a decrease in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded by a court hearing, not a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must in a court hearing ensure that the conditions for proceeding the case as a guilty plea procedure are present. The answer regarding whether the case was concluded before/during the main trial differs from last year´s answer, as guilty plea procedures are correctly concluded before the main trial, as the confession must subsequently be validated by a judge. The data is registrered through a case-filing tool, POLSAS. POLSAS is first and foremost a case-filing tool, which may be subject to human entry-error. Furthermore, the number of guilty plea procedures can fluctuate on a yearly basis for a variety of reasons. We cannot conclude anything of substance regarding the decrease without a manual investigation.

Q107-1 (2020): The discrepancy is due to the method of calculation. In 2018 the answer covers the number of complexes of cases, and the answer in 2020 covers the number of counts (measured by charges per person). In 2020 the number om number of complexes are 3.449.

Finland

Q107-1 (General Comment): The possibility of plea bargaining was introduced to the Finnish legal system in the beginning of year 2015. The aim of the reform was to allocate the resources of the national authorities in a more effective way and to speed up both the pre-trial phase of the criminal process and the court proceedings. A defendant can agree to plead guilty to a particular charge in exchange for a more lenient sentence. The prosecutor may also decide not to prosecute for one or for several of the suspected crimes. Plea bargaining can be used if the injured party has no demands in the matter and if he/she agrees to plea bargaining. Plea bargaining can be used when a person is suspected of a crime carrying a maximum sentence of six years' imprisonment. It cannot be used for crimes like homicide, causing bodily injury and sex offences or when the injured party is a child. Plea bargain is also applicable for white-collar crimes.

Q107-1 (2022): Data on guilty plea procedure is not comprehensive. The procedure is registered in information systems only in a few cases. The usage of the procedure is likely much more broad than indicated, but there is no data available to confirm this.

Q107-1 (2020): The known number of guilty plea procedures is 80. However, the number could be higher as the use of this procedure is not systematically reported, especially when it takes place during the main trial.

France

Q107-1 (General Comment): Appearance on prior recognition of guilt (CRPC) is a simplified prosecution procedure. The public prosecutor can propose to any adult offender who acknowledges the facts attributed to them to serve one or more of the penalties they face. This procedure applies to offenses (délits) except for exceptions provided by law (see Article 495-7 of the Code of Criminal Procedure). In case of acceptance of the proposed penalties, the public prosecutor refers the case to the judge to approve the accepted penalties. The approval order has the effect of a conviction judgment. It is recorded in the National Criminal Record.
The CRPC is considered a full hearing (the judge wears a robe, and renders an "order" accepting the sentence — though not a judgment). The penalty imposed will carry the same weight as if it had been imposed during a "regular" hearing. However, if the individual refuses the penalty during this process, the prosecutor will redirect the case to a regular criminal trial. If the CRPC is successful, it will be considered the "main judicial procedure." However, if it fails, the individual will be presented before the criminal court, meaning the CRPC can be seen as a procedure that happens "before the main trial" In this sense, during a CRPC, the individual is not subject to "formal prosecution" before the court, but rather summoned before the prosecutor who offers them a penalty, which may or may not be accepted, and later approved or not by a judge.

Q107-1 (2024): These figures correspond only to the CRPC: Appearance on prior recognition of guilt.
It is a simplified prosecution procedure. The public prosecutor can propose to any adult offender who acknowledges the facts attributed to them to serve one or more of the penalties they face. This procedure applies to offenses (délits) except for exceptions provided by law (see Article 495-7 of the Code of Criminal Procedure). In case of acceptance of the proposed penalties, the public prosecutor refers the case to the judge to approve the accepted penalties. The approval order has the effect of a conviction judgment. It is recorded in the National Criminal Record.

Q107-1 (2021):
source SDSE
Increase in the number of guilty plea procedures: 2020 was marked by a significant drop in activity (caused by the lawyers' strike movement initiated in the second half of 2019 and which continued at the beginning of 2020, then by the slowdown in court activity under the effect of the COVID-19 pandemic and successive lockdowns of the population) and 2021 by a return to normal activity in the courts. It is also necessary to take into account the impact of the law n° 2019-222 of 23 March 2019 on the nature of cases under the CRPC procedure.

Greece

Q107-1 (General Comment): The accused who is usually a temporary prisoner but whose case is pending before the investigating judge, requests, either through his/her counsel or himself/herself (through an ex officio counsel) the criminal negotiation of his/her case. This request is forwarded to the Prosecutor's Office of Appeal to which copies of the relevant file are sent. Depending on the case, the appeal prosecutor will either recommend that the case be successful or unsuccessful. In the first case, if the case succeeds, a trial date is set at which the defendant appears before the court (Court of Appeal) and is given the proposed sentence. If he or she agrees, the procedure is completed and in most cases the defendant is released and the time spent in temporary custody is taken into account. If the defendant does not agree with the sentence proposed, the defendant withdraws his/her request for criminal negotiation, the proceedings are considered as not having taken place, and the defendant's criminal treatment continues from the point of the request for criminal negotiation.

Q107-1 (2024): Source: Independent Department for the Collection and Processing of Judicial Statistical Data (JustStat)
The violations of restrictive measures that led to mass registrations and quick guilty pleas in 2021–2022 no longer exist, resulting in a natural decrease in related cases. However, additional factors in 2024 contributed to this trend, including reforms of the prosecution service under Law 5090/2024, stricter criteria for accepting guilty pleas, increased use of the principle of opportunity, and the expansion of alternative dispute resolution mechanisms. More specifically, the new Criminal Code introduced stricter criteria for accepting guilty pleas, especially in cases involving social disapproval or domestic violence. The strengthening of the opportunity principle has led to more cases being shelved rather than confessions being accepted. The promotion of criminal mediation and out-of-court settlements has reduced the need for formal guilty plea procedures.

Q107-1 (2023): The data are provided by the Office for the collection and processing of judicial statistics.
The observed decreases in the number of guilty plea procedures between 2022 and 2023 are due to specific offenses related to violations of containment measures implemented in 2021 and 2022 to address the pandemic. For example, while gatherings were banned at that time, social events e.g. weddings were held in some areas of the country. In these cases, the guests (who may have exceeded, for example, 100) were brought before, for example, the public prosecutor who, in application of Article 48 of the Code of Criminal Procedure, terminated the criminal prosecution by means of a reasoned order after imposing on the accused the obligation to pay a donation to the Greek State.

Q107-1 (2022): This year, we modified the request by asking the information from the courts. We believe that this is reason for the variations observed.

Q107-1 (2020): No data available for this query.

Hungary

Q107-1 (2024): Discrepancy explanation:
Based solely on data analysis, it can be stated that the number of defendants affected by final court decisions decreased by 3.8% in 2024 compared to the previous year (2,156 defendants). Thus, as can be seen from the other data sets, there has been a general decrease in the number of defendants.
If we examine the ratios of the two legal institutions (acceptance of confessions made at preparatory hearings; acceptance of confessions made at first instance trials), a kind of restructuring can be observed.
In 2023, compared to all defendants affected by final judgments, the acceptance of confessions made at the preparatory hearing by the court accounted for 21.4%, while the acceptance of confessions made at the first instance trials by the court accounted for 2.2% of the cases. The same figures for 2024 were 21.9% and 1.7%, respectively. It can therefore be concluded from the above that although the number of defendants decreased in both data sets, proportionally more defendants made confessions and had them accepted by the court during the preparatory proceedings than during the first instance trial.
Thus, it can be concluded that, looking solely at the ratios, proportionally more defendants made confessions during the preparatory proceedings, which were accepted by the court, and this presumably led to a decrease in the number of defendants who made confessions during the first-instance trial.
In general, the prosecution service has no influence on how many defendants make confessions during court proceedings in a given year, or at what stage of the proceedings they do so.

Q107-1 (2022): The guilty plea procedure as such does not exist in the Hungarian legal system; however, the new Code of Criminal
Proceedings has introduced the so-called plea agreement, which is, in essence, a similar instrument.

Q107-1 (2021): The guilty plea procedure as such does not exist in the Hungarian legal system; however, the new Code of Criminal Proceedings has introduced the so-called plea agreement, which is, in essence, a similar instrument.

Q107-1 (2020): This procedure exists only from 1 July 2018, following the entry into force of the Act XC of 2017 on the new criminal procedure law. In the event that the prosecution can prove the guilt of the accused beyond a reasonable doubt and there is no opportunity to explain what happened in an acceptable manner, the accused will do his best to admit the act and avoid a lengthy trial.

Ireland

Q107-1 (2024): There is no 'guilty plea procedure' in Ireland, as defined by the explanatory note. We have a procedure for guilty pleas but not as envisaged by the question. Also, our system does not collect data on guilty pleas in accordance with the timing of entry as requested. Data on pleas is based on the year that the file is opened, as opposed to the year the plea is entered. This information is published in the Office's Annual Report:https://www.dppireland.ie/app/uploads/2024/05/AR-2022-eng-copy.pdf

Q107-1 (2023): There is no 'guilty plea procedure' in Ireland, as defined by the explanatory notes. We have a procedure for guilty pleas but not as envisaged by the question. Also, our system does not collect data on guilty pleas in accordance with the timing of entry as requested. Data on pleas is based on the year that the file is opened, as opposed to the year the plea is entered. This information is published in the Office's Annual Report

Q107-1 (2022): Data is collected in the Office of Director Public Prosecutions but is not available in the format specifically set out in the explanatory notes.

Italy

Q107-1 (General Comment): In the Italian judicial system, it is not the public prosecutor but the judge who determines the plea bargain, following the request of the public prosecutor or the defendant before the trial, or even during the trial, or in opposition to a conviction by decree.

Q107-1 (2024): In the Italian judicial system, it is not the public prosecutor but the judge who determines the plea bargain, following the request of the public prosecutor or the defendant before the trial, or even during the trial, or in opposition to a conviction by decree.

Latvia

Q107-1 (2024): Data collection and monitoring tools allow to provide more detailed overview of guilty plea procedures that was not available before.

Luxembourg

Q107-1 (General Comment): The "criminal transaction" introduced by a law on February 24th, 2015 under the name of "judgment by agreement" allows the prosecutor and the defendant to engage in negotiations for a criminal judgment that will be enforced by the courts.

Q107-1 (2024): There was a marked increase in the use of the consent decree procedure in fiscal 2024, due to a heightened awareness of this procedure on the part of public prosecutors. This procedure is mainly used in cases of economic and financial crime.

Q107-1 (2021): In 2020 and 2021, health measures only allowed the physical presence of a reduced number of persons in hearings compared to previous years. To continue to work efficiently and resolve cases, prosecutors' offices have, as far as possible, given preference to the procedure of judgement by agreement (procédure du jugement sur accord), as it requires less physical presence of parties, defence counsel, witnesses, etc. Moreover, since the procedure of judgment by agreement was only introduced in 2015, the habit of resorting to this measure has only become established in recent years among lawyers, who now take the initiative themselves more often to launch this procedure.

Q107-1 (2020): In 2020, the sanitary measures did allow only a reduced number of people in the court hearings compared to previous years. In order to continue to work effectively and to resolve cases, the state prosecutors' offices decided to resort to the guilty plea procedure, since it does not require the same amount of physical presence of the parties, the defenders, witnesses, etc.

Netherlands

Q107-1 (General Comment): Over the past years, there were experiments with judgement agreements (vonnisafspraken) and trial agreements (procesafspraken), see eg. https://www.bjutijdschriften.nl/tijdschrift/NTS/2022/2/NTS_2666-6553_2022_003_002_003. These experiments were evaluated, and further specified in directives and instructions in 2022/2023, see eg. https://www.om.nl/onderwerpen/beleidsregels/aanwijzingen/executie/aanwijzing-procesafspraken-in-strafzaken-2023a002. The numbers are not yet available.

Q107-1 (2023): Over the past years, there were experiments with judgement agreements (vonnisafspraken) and trial agreements (procesafspraken), see eg. https://www.bjutijdschriften.nl/tijdschrift/NTS/2022/2/NTS_2666-6553_2022_003_002_003. Poland

Q107-1 (General Comment): Article 335 [Sentencing without trial - motion] -Criminal Code Procedure
§ 1. If the accused pleads guilty, and in the light of his explanations the circumstances of the commission of the offence and his guilt raise no doubts, and the attitude of the accused indicates that the objectives of the proceedings will be achieved, further proceedings may be omitted.
The public prosecutor, instead of filing a bill of indictment, shall file a motion with the court for issuing a judgment of conviction at a hearing and for agreeing with the defendant on penalties or other measures envisaged for the offence charged, also taking into account the legally protected interests of the victim. The agreement may also include a specific decision on payment of legal costs.
The public prosecutor may attach to the indictment a motion for a judgment of conviction to be handed down at a hearing and for the penalties or other measures prescribed for the offence charged to be agreed upon with the defendant, also taking into account the legally protected interests of the victim, if the circumstances of the offence and the defendant's guilt are beyond doubt, the evidentiary statements made by the defendant do not contradict the findings made, and the defendant's attitude indicates that the objectives of the proceedings will be achieved.
*Article 156 of the Fiscal Penal Code, The public prosecutor, as well as the financial pre-trial body, may attach to the indictment a motion for issuing, without a hearing, a judgment of conviction and imposing a penalty or penal measure agreed with the accused for the fiscal offence or fiscal misdemeanour charged against him, if the circumstances of the commission of the offence do not raise any doubts and the attitude of the accused indicates that the objectives of the proceedings will be achieved.

Q107-1 (2024): *) Data refers to persons convicted at first instance (31354):
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 748 persons, in District Courts - 27 405 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 3 201 persons.

Q107-1 (2023): *) Data refers to persons convicted at first instance (39073):
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 814 persons, in District Courts - 35,020 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 3,239 persons.

Q107-1 (2022): *) 46 263 = Data refers to persons convicted at first instance:
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in District Courts - 658 persons, in Regional Courts - 41,690 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 3,915 persons.

Q107-1 (2021): *) 51 198 - Data refers to persons convicted at first instance:
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 580 persons, in District Courts - 46,148 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 4,470 persons.

Q107-1 (2020): *during the main trial – 53 072 - *) The data pertains to persons sentenced in the first instance:
- Sentenced as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 743 persons, in District Courts - 48,762 persons
- Voluntary submission to liability for penal and fiscal offences (Kks): in District Courts - 3,567 persons.
*57 735 - The data on the basis of which the information was provided are collected under the Law on Public Statistics in the Public Prosecutor office - P1K report on the activity of the common organizational units of the public prosecutor's office in criminal cases (statistical program SprawPro). The data for 2018 included only those cases in which a request under Article 335 par 1 of the Code of Criminal Procedure was addressed. On the other hand, the data for 2020 included cases in which the prosecutor addressed a motion for a conviction and motions to join the indictment under Article 335 par 2 of the Code of Criminal Procedure and Article 156 of the Fiscal Penal Code

Slovak Republic

Q107-1 (2024): * Note: The above number represents only the number of guilty pleas agreements concluded at the prosecutor's office and submitted for court approval. We currently do not have the number of agreements that have been approved beyond the agreements submitted by prosecutors to the court during the main trial.

Q107-1 (2020): The data were delivered by General prosecutor office. The most of the data are not available, because these are not monitored by General prosecutor office in CEPEJ requested structure.

Slovenia

Q107-1 (General Comment): The defendant may plead guilty in two kinds of situations. He/she can achieve an agreement with a state prosecutor in a plea-bargaining procedure or he/she can make a guilty plea irrespectively of the state prosecutor at the pretrial hearing and until the beginning of a main hearing. Cases brought to court by the public prosecutor through the guilty plea procedure are only first mentioned kind of cases. The agreement on guilty plea between the defendant and state prosecutor may be concluded before the commencement of the criminal proceedings and not later than by the beginning of the main hearing. There is no available data on the stage of the proceeding when the agreement was concluded.

Q107-1 (2024): In 2024, the majority of plea negotiations were conducted in cases falling within the jurisdiction of the district courts and concerned serious criminal offences, often involving multiple defendants and requiring complex evidentiary proceedings. Increase in number of procedures: Approximately 40% of all plea agreements were concluded by a district prosecutor's office located in proximity to the state border, primarily in relation to offences of unlawful border crossing or irregular entry into the country, as defined in Article 308 of the Criminal Code-1.

Q107-1 (2023): Compared to the previous year, there has been a 43% increase in the number of plea agreements. The increase in plea agreements is primarily due to crimes involving illegal border crossings.

Q107-1 (2021): In the previous year (2020) the number of guilty plea procedures was unusually low due to two reasons: a stricter criminal framework (regarding illegal crossing of the state border or territory under Article 308 of the Criminal Code) and the impact of the Covid-19 pandemics.

Q107-1 (2020): The reason for fewer negotiations and fewer agreements is mainly a stricter criminal framework for crimes that were still regulated in 2018 in such a way that they could be the subject of negotiations between the prosecutor and the defendant (illegal crossing of the state border or territory under Article 308 of Criminal Code). Due to the above, there was no interest on the part of the defendants as well as the state prosecutors to agree on guilt and criminal sanction as parties to criminal proceedings. In addition to this, an epidemiological reason for measures to prevent the spread of the covid-19 epidemic is cited as the reason for the reduction in negotiations and plea agreements concluded, furthermore, the poor staffing situation and the high workload of state prosecutors who are engaged in urgent matters in the on-call service and in attending court hearings and the prompt announcement of pre-trial hearings shortly after the indictment becomes final, which significantly shortened the time for conducting negotiations and concluding a plea deal.

Spain

Q107-1 (2021): Explanation of the increased number of guilty plea procedures: Probably, coming back to normal activity after covid restrictions.

Question 109

Austria

Q109 (General Comment): The courts only deal with damages to property and negligent bodily injuries caused by traffic accidents in civil and criminal proceedings; offences which do not lead to damages or injuries are punished by administrative bodies (e.g. speeding, having worn-out tires, drunk-driving).

Belgium

Q109 (General Comment): The data do not include traffic offences, cases handled by the labor auditorates, or appeals against police decisions handled by the prosecutor's offices attached to teh first instance criminal courts.

Q109 (2021): The data do not include traffic law cases, cases handled by the labor auditorates, or appeals against police decisions handled by the correctional prosecutor's office.

Bulgaria

Q109 (2024): The figures in the table in question 107 include criminal cases for traffic offences which constitute a public crime under the Bulgarian Criminal Code.

Q109 (2022): Only the cases for violations that constitute a crime of a general nature under the Bulgarian Criminal Code are included.

Q109 (2021): Statistical reporting of the PORB. The data are derived from the statistical reporting of the PORB, according to indicators and order, approved by the Prosecutor General with the Instruction for the organization of the information activity in the PORB.

Croatia

Q109 (2024): In question 109, the answer "yes" was submitted, indicating that the data in question 107 includes only criminal violations against traffic safety.
Specifically, evaluating the Croatian version of Directive 2015/413 of March 11, 2015, it was discovered that "road traffic offense cases" were rendered as traffic violations

Q109 (2023): In question 109, the answer "yes" was submitted, indicating that the data in question 107 exclusively covers criminal violations against traffic safety.
Specifically, evaluating the Croatian version of Directive 2015/413 of March 11, 2015, it was discovered that "road traffic offense cases" were rendered as traffic violations.

Q109 (2022): The data includes cases of criminal offenses committed in traffic.

Estonia

Q109 (2020): Only the ones that are classified as criminal offences.

France

Q109 (2022): The positive reply concerns criminal offences and fines.

Q109 (2021): source SDSE

Greece

Q109 (2024): The new Penal Code, which came into effect on May 1, 2024, with Law 5090/2024, introduced significant stiffening of penalties for cases of traffic accidents and dangerous driving. The new Article 290A defines 'dangerous driving' as any behavior that seriously endangers life or health, such as: Excessive speed, Driving under the influence of alcohol or drugs, Ignoring traffic signals, Aggressive or careless driving. Some violations now incur, in addition to a monetary fine, prison sentences ranging from 1 to 5 years.

Ireland

Q109 (General Comment): In the vast majority of cases involving traffic offences, the police service (An Garda Síochána) will prefer charges without reference to the Office of the Director of Public Prosecutions. Only in the more serious of such cases, including causing death by dangerous driving, will the Office of the DPP receive files for a decision whether to prosecute or not. Any such traffic offence cases received by the Office of the DPP and decided upon would normally be included in the figures.

Q109 (2023): In the vast majority of cases involving traffic offences, the police service (An Garda Síochána) will prefer charges without reference to the Office of the Director of Public Prosecutions. Only in the more serious of such cases, including causing death by dangerous driving, will the Office of the DPP receive files for a decision whether to prosecute or not. Any such traffic offence cases received by the Office of the DPP and decided upon would normally be included in the figures.

Q109 (2022): There was no discrepancy in the replies provided.

Latvia

Q109 (2021): Data from Accountancy system

Lithuania

Q109 (General Comment): A traffic offence is qualified as criminal when it causes health impairment to another person, or the offender has been driving under influence of alcohol, narcotic, psychotropic of other psychoactive substances and his/her driving resulted in health impairment to or death of another person. Other traffic offences are qualified under the administrative legislation.

Netherlands

Q109 (General Comment): These include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation of even administrative justice (wet Mulder).

Q109 (2022): These include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation of even administrative justice (wet Mulder).

Q109 (2020): These include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation of even administrative justice (wet Mulder).

Romania

Q109 (2020): Only serious offenses that are considered crimes, such as drunk driving or involuntary manslaughter.

Slovak Republic

Q109 (2024): https://www.genpro.gov.sk/statistiky/statisticky-prehlad-trestnej-a-netrestnej-cinnosti-za-rok-2024/

Slovenia

Q109 (General Comment): The communicated data include only traffic offences, stipulated as criminal offences (in the Penal Code) and therefore prosecuted by State prosecutors. There are two such criminal offences: causing a traffic accident through negligence whereby another person is seriously injured or died and audacious driving in road traffic which is committed by a serious breach of road safety regulations, while other cases of traffic offences are not criminal offences, but minor offences and are not included in the provided figures.

Question 013

Austria

Q013 (General Comment): In Austria the budget for courts cannot be separated from the budget of the prosecution services. With regard to the sub-category “annual public budget allocated to training of public prosecution services” an answer is not possible because the costs for trainings for judges, public prosecutors, judicial officers (“Rechtspfleger”) and other staff working within courts or public prosecution services are summarized in one figure.

Q013 (2024): In Austria the budget for courts cannot be separated from the budget of the prosecution services. With regard to the sub-category “annual public budget allocated to training of public prosecution services” an answer is not possible because the costs for trainings for judges, public prosecutors, judicial officers (“Rechtspfleger”) and other staff working within courts or public prosecution services are summarized in one figure.

Belgium

Q013 (General Comment): Training budget for the public prosecutor's offices: the vast majority of training courses are open to both, judges and public prosecutors, as well as to non-judge and non-prosecutor staff. It is therefore very difficult to distinguish the training budget for the public prosecutor's offices. Only the total training budget (for judges and public prosecutors) is available.

Q013 (2023): 2023 Budget for training: total planned expenditure for courts and public prosecution services: EUR 2,573,900.00; total implemented budget for courts and public prosecution services: EUR 2,315,435.95’.

Q013 (2021): Approved budget (total €721 493 690): this budget represents the total budget allocated to the Court of Cassation, all ordinary courts except administrative courts, and the public prosecution services. It is not possible to isolate the approved budget of the Public Prosecutor's Office from the aforementioned total amount. Implemented budget (total €243 867 402): this total includes the operating costs of the public prosecution services (including staff costs, equipment) but excludes the budget for training.

Bulgaria

Q013 (General Comment): The Prosecutor's Office prepares a consolidated budget for all units, namely district, regional, military-regional, appellate, military-appellate prosecutor's offices, the administration of the European delegated prosecutors, training and rest bases and submits it to the Supreme Judicial Council (SJC). Pursuant to Article 361 of the Judicial System Act, the budget of the PRB includes all revenues from the activity, maintenance costs, relations with the central budget and other budgets.
The budget procedure is carried out in two stages. First stage - preparation of a medium-term forecast for a period of three years. Second stage - preparation of a draft budget for the relevant year and updated budget forecasts for the next two years. The Minister of Justice proposes a draft budget for the judiciary and submits it for discussion in the Plenum of the SJC. The draft budget of the judiciary is accompanied by estimates for the next two years. The Council of Ministers submits to the National Assembly the draft law on the state budget of the Republic of Bulgaria for the relevant year together with the draft annual budget of the judiciary, proposed by the plenary session of the SJC, with a detailed justification. When adopting the state budget, the National Assembly listens to a report of the plenary session of the SJC, presented by its representative. The National Assembly adopts the budget of the judicial power, allocated to the SJC, the Inspectorate of the SJC, the bodies of the judicial power, including PRB and the National Institute of Justice (NIJ).
The Plenum of the SJC organizes the execution of the budget of the judiciary through the Inspectorate of the SJC, the Supreme Court of Cassation, the Supreme Administrative Court, the courts, the Prosecutor General and the National Institute of Justice. The PRB is a second-level budget manager and all units of the PRB system are third-level budget managers. For third-level managers, the budget manager is the relevant manager.
1. Preparation and presentation of a draft budget for the current budget year. The Law on the State Budget of the Republic of Bulgaria adopts the budget of the judiciary, including the Prosecutor's Office of the Republic of Bulgaria. By decree of the Council of Ministers, the main parameters and Guidelines for the implementation of the budget are given.
2. Budget adjustments. Currently, during the calendar year, the Prosecutor General submits proposals for updating to the Budget and Finance Committee of the SJC

Q013 (2024): The specific indicators in the table are explained as follows:
For the total annual public budget allocated to the prosecution service, the column ‘Approved budget’ shows the budget of the Prosecutor's Office of the Republic of Bulgaria as finally approved by the SJC on 31 December 2024, which is updated and amended during the budget year by decisions of the Plenary Session of the SJC.
For the total annual public budget allocated to the prosecution service, the column ‘Executed budget’ shows the amount corresponding to the actual reported expenditure at cash level as at 31 December 2024.
In section 13.1 Annual public budget allocated for training of the prosecution services, the column ‘Approved budget’ shows the approved budget for all structural units of the Prosecutor's Office for training in 2024. In section 13.1 Annual public budget allocated for training of the prosecution services, in the column ‘Executed budget’, the amount corresponding to the actual reported, actual expenses for training at cash level as at 31 December 2024 is indicated. The difference between the approved/planned and implemented/spent funds for training in 2024 is due to savings achieved at the level of actual expenditure at lower rates than that forecast. The amounts indicated are in EUR.

Q013 (2023): Q 13 – There are objective reasons for the high growth in the approved (and respectively implemented) training budget in 2023 compared to 2022. On the one hand, there was higher activity of magistrates in organizing and participating in external trainings (organized by other institutions, forums, etc. with participation fees) after the lifting of the COVID 19 quarantine.
On the other hand the in-person trainings in the learning facilities and training centers of the Prosecutor's Office of the Republic of Bulgaria were minimized or not conducted during the coronavirus period according to the internal training calendar. In addition, by Decision under Protocol No. 8/10.03.2022, p. 3 of the Plenum of the Supreme Judicial Council a positive opinion was expressed that the Prosecutors' Training Base - Recreational Facility "Izgrev" in the town of Byala, assigned to be managed by the Prosecutor General of the Republic of Bulgaria, should be provided for temporary use by evacuating representatives of the judiciary in the Republic of Ukraine and their family members and/or Bulgarian citizens and Bulgarians with Ukrainian citizenship living in Ukraine, including in the event of evacuation. In 2022, due to the accommodation of refugees from Ukraine, the base in Byala could not be used for conducting trainings/seminars, which is also the reason for the higher increase in funds for training magistrates planned for 2023 after the base is emptied of refugees.

Q013 (2022): Supreme Judicial Council: The implemented budget differs from the approved due to unspent funds for major repairs, acquisition of long-lasting tangible and intangible assets, as well as current repairs due to unfinished procedures under the Law on Public Procurement (LPP).
The Prosecutor's Office:
The difference between the approved and the executed budget lies in the fact that the approved budget corresponds to the budget of the Judiciary, including the Prosecutor's Office of the Republic of Bulgaria, adopted by the State Budget Act for 2022 – SBRBA (as of 01.01.2022), while the executed budget corresponds to the actual expenditures as of 31.12.2022 – at the cash level.
Specifically, at the beginning of 2022, funds for training amounting to BGN 23 800 are planned. (EUR 12 169). The information is based on summary draft budgets for all structural units in PORB for 2022, prepared at the end of January 2022. At the end of the reference year (as at 31.12.2022), approximately BGN 14,129 had actually been spent at cash level (EUR 7 224). The lower implementation is to some extent due to both organisational (most of the training organised and delivered was conducted online) and financial reasons (in 2022, the SBARB was adopted later – on 4 March 2022).
A comparison of data for several consecutive years – 2020, 2021 and 2022 – shows an increase in the planned training funds for the respective years (given the increase in the cost of posting and services) and a decrease in the actual spent ones in relation to the restrictive measures introduced during the coronavirus pandemic and conducting online trainings instead of face-to-face ones, resulting in a decrease in spending.

Q013 (2021): The implemented budget differs from approvals due to unspent funds for major repairs, acquisition of durable tangible assets and current repairs due to unfinished procedures under the Public Procurement Law and restrictive measures related to COVID-19.
The source of the data for the approved and implemented budget, including for the Trainings in the Prosecutor's Office of the Republic of Bulgaria, is the Annual Financial Report of the Public Prosecutor's Office for 2021.
As to the annual public budget allocated to training of public prosecutors, it should be recalled that the significant reduction in 2020 of this budgetary component was the result of the declared in March 2020 extraordinary epidemic situation in Bulgaria, as well as the restrictive measures related to the spread of COVID-19.

Q013 (2020): The significant differences in the approved and implemented budget for 2020 compared to 2018 for the prosecution are due to the reasons set out in the remarks on question 6, namely - increase in funds for remunerations by 10% in 2019 and in 2020, increase the amount of the minimum wage, which is the basis for determining payments under contracts. There is also an increase in the compensations under the JSA and LC by EUR 786,870 compared to 2018, as well as the planned and paid funds for apparel. For detailed information - see question 6.
The implemented budget differs from the approved one due to unspent funds for major repairs, acquisition of tangible fixed assets and current repairs due to unfinished procedures under the Public Procurement Act and restrictive measures related to COVID 19.
The source of the data for approved and implemented budget, including for Trainings in the Prosecutor's Office of the Republic of Bulgaria is the Annual Financial Report of the Prosecutor's Office of the Republic of Bulgaria for 2020.
The probability of a significant reduction of the utilized budget for training of prosecutors is the declared in March 2020 extraordinary epidemic situation in Bulgaria, which continues to this day, as well as the restrictive measures related to the spread of COVID-19.

Croatia

Q013 (2024): The increase compared to the previous period is due to the implementation of mandatory consultations and seminars for judicial officials, as well as the rise in training fees and associated costs related to the training (such as accommodation, travel, etc.).

Q013 (2023): In the previous period, there were more on-line educations, and therefore in the observed period there was an increase in planned and executed funds.

Q013 (2022): The stated amount differs from the previously submitted data because of an increase in the base for civil servants and state employees, as well as an increase in the amount for holiday pay, Christmas bonus, and children's gift.

Q013 (2021): Between 2020 and 2021 there was a significant increase in the budget approved and implemented for the training of public prosecution services because during the Covid pandemic in 2020 trainings were not held.

Q013 (2020): There is a significant increasing of the total annual budget allocated to the public prosecution services due to the increasing of salaries of the public prosecutors.
The annual public budget allocated to training of public prosecution services is lower than in 2019 due to the fact that in 2019 the Judicial Academy conducted professional training of judicial officials and advisors and a foreign language education program for judicial officials, while in 2020 due to the COVID pandemic these trainings were not held.

Cyprus

Q013 (2024): The judicial training school is completely independent from the Academy of the Law office. The Academy had been set up in 2022 but started to plan and organize seminars in 2024.

Q013 (2023): In 2022 there was an increase in the budget due to specific copensations awarded only in that year.

Q013 (2022): There was a major restructuring of the posts in the public prosecution service as a number of new posts were created. At the same time, there was an increase in the salaries of the counsels working at the Attorney General's Office.
In the previous cycle, there were not many trainings as a result of covid.

Q013 (2021): In 2021 there was a massive increase in the compensation paid in action of 10 million, representing compensation awarded in actions against the state.
Less training seminars have been held in person due to covid.

Q013 (2020): In 2020, there was a significant increase in the salaries of the prosecutors of the office of the Attorney General.

Czech Republic

Q013 (General Comment): It is noteworthy that before 2014, the implemented budget was provided instead of the approved one.

Q013 (2024): More money was planned for training, but the priority remains to make full use primarily of the services provided by the Judicial Academy.

Q013 (2022): There can be movement between the different categories of the budget during the year according to the current needs.
Desirable increasing of budget to training.

Q013 (2021): There can be movement between the different categories of the budget during the year according to the current needs. Moreover, there is also influence of exchange rate. The difference between approved and implemented budget allocated to training is mostly caused by pandemic situation.

Q013 (2020): There can be movement between the different categories of the budget during the year according to the current needs. Moreover, there is also influence of exchange rate.

Denmark

Q013 (General Comment): The implemented budget corresponds to the observed expenditures during the reference year. There has moreover been a strengthening of criminal case processing in recent years, especially compared to 2021 with a wish to reduce case processing times and case backlogs in criminal case processing, which has led to an increase in re-source consumption on case processing and prosecution activities

Q013 (2024): In 2024, there was a balance between budget and consumption. Compared to 2023, consumption has increased by approximately 5 percent. This can primarily be attributed to a continued strong focus on strengthening criminal case processing with a view to reducing case processing times and case backlogs in criminal case processing.

Q013 (2023): The explanation of the difference between the implemented budget and the budget that has been formally approved by the Parliament is that the implemented budget corresponds to the observed expenditures during the reference year. There has moreover been a strengthening of criminal case processing in 2023 compared to 2021 with a wish to reduce case processing times and case backlogs in criminal case processing, which has led to an increase in resource consumption on case processing and prosecution activities.

Q013 (2020): The increasing expenses compared to previous years are partly due to an increased effort to reduce case processing times and case stocks in the criminal case chain. In 2019, further expenses were incurred in connection with the implementation of several commissions of inquiry set up by the government

Estonia

Q013 (2023): Ministry of Justice does not have data on budget allocated to training.

Q013 (2020): Annual public budget allocated to training of public prosecution services: due to COVID-19 restrictions, there were less trainings.

Finland

Q013 (2024): The budget excess is due to a surprising and large overshoot in ICT expenditures in 2024.
The direct training costs were 465 242 euros. The wage costs (indirect costs) for the training days were 521 243 euros.

Q013 (2023): Budget excess is due to increase in prosecutor personel resources. Reason for this was to control the amount of pending cases and shorten case processing time. Training budget contains only direct costs but training implementation also contain indirect costs such as travel expenses. Overall, the trend of training participation has been on the increase.
Training costs have increased strongly: year 2021 they were 393 000 euro, year 2022: 749 000 euro and year 2023: 933 000 euro. Also number of training participants has increased: 475 (2021), 484 (2022), 783 (2023) as were the training days: 1189 (2021), 1555 (2022) and 1821 (2023).

Q013 (2022): Annual public budget allocated to training of public prosecution services: in 2022 the total amount used for training was 715 813 euro. This comprises of: 374 587 euro for salaries related to trainings (+ plus pensions etc. payments), 173 843 euro of travel expenses, 57 925 euro for purchasing different course and conference services, and 109 458 euro (excluding VAT) used for training by the Office of the Prosecutor General. In 2020 the expenses were historically low and in 2022 the expenses were closer to the annual average. In 2022, there were about 50 % more training days than in 2020. More people also participated in the trainings. In addition, the travel costs for trainings increased in 2022. The exact reasons for the low figures in 2020 are no clear, but it can be assumed that the Covid pandemic had an impact.

Q013 (2021): Annual public budget allocated to training of public prosecution services: in 2021 the total amount used for training was 407 595 euro. This comprises of: 261 683 euro for salaries related to trainings (+ plus pensions etc payments); 29 328 euro of travel expenses (excluding VAT), 73 230 euro for purchasing different course and conference services, and 43 354 euro used for training by the Office of the Prosecutor General.
The annual public budget allocated to training of public prosecution services increased only slightly since the particular year of the pandemic. In fact, in 2021, the Prosecution Authority had a recommendation on remote work in force and also most of the trainings were organized remotely.

Q013 (2020): Annual public budget allocated to training of public prosecution services: in 2020 the total amount used for training was 379 043 euro. This comprises of: 208 000 euro for salaries related to trainings (+ plus pensions etc payments); 38 673 euro of travel expenses (excluding VAT), 83 062 euro for purchasing different course and conference services, and 49 300 euro used for training by the Office of the Prosecutor General. It is noteworthy that the travel expenses decreased approximately 170.000. This was due to, amongst others, covid-19 situation which led to holding the training remotely.

France

Q013 (2024): For 2024, and in accordance with the CEPEJ methodology, the credits allocated to the National School for the Judiciary have not been included in “13.1 Annual public budget allocated to training of public prosecution services.

Q013 (2021): As in the previous year, as it is not possible to distinguish between data related to courts and data related to the public prosecution services, an 80/20 ratio has been applied to the data from the LFI 2021 of P166 and the annual performance report 2021 of P 166.
Source DSJ

Germany

Q013 (General Comment): It is noteworthy that all data concerning the budget should be construed in the light of the federal structure of the justice system in Germany. Variations are often due to the fact that the federal states' budget plans and budget statistics can differ from one another relatively widely. Accordingly, the federal states' answers in this section are inconstistent.

Q013 (2024): Roughly half of the federal states cannot provide seperate information on the budget allocated to the public prosecution services.

Q013 (2023): In roughly half of the federal states, the budget of the courts cannot be separated from budget of the public prosecution. A few federal states that can make this distinction, can, however, not separate the training budget of the public prosecution services from the training budget of the whole judiciary.
Of the 16 federal states - 7 could not provide any data
- 9 have figures available
The Federal Ministry of Justice can provide budget information for the Federal Public Prosecutor's office.

Q013 (2022): In the majority of the federal states, the budget of the courts cannot be separated from budget of the public prosecution. A few federal states that can make this distinction, can, however, not separate the training budget of the public prosecution services from the training budget of the whole judiciary.
Of the 16 federal states - 7 could not provide any data
- 8 have figures available
One federal state has not yet replied. The Federal Ministry of Justice can provide budget information for the Federal Public Prosecutor's office.

Q013 (2021): In the majority of the Länder, the budget of the courts cannot be separated from budget of the public prosecution. A few Länder that can make this distinction, can, however, not separate the training budget of the public prosecution services from the training budget of the whole judiciary.

Q013 (2020): The budget of the courts cannot be separatd from budget of the public prosecution.

Greece

Q013 (General Comment): The public prosecution services budget can not be separated from the courts budget.

Q013 (2023): There is no possibility of separating the budgeted expenses on the one hand and some individual categories of expenses (in terms of execution) on the other, between the prosecutor's offices and other courts of the country.

Q013 (2022): As explained in question 6, there is no possibility of separating budgeted expenditures on the one hand and some sub-categories of expenditures (in terms of execution) on the other, between the public prosecutor's offices and other courts in the country.

Q013 (2021): Not available, cannot be separated.

Q013 (2020): There is no separate budget for Public Prosecutions included in the special code 1017-201-00000000 .Impossible to fill.

Hungary

Q013 (2024): When evaluating the data, the change in the euro/forint exchange rate must be taken into account in all cases, as a decrease/increase in the exchange rate may result in a significant change in the figures given in euros, while there is no significant change in the forint figures.

Q013 (2022): Act XC of 2021 on Hungary's central budget for 2022.
The draft act for implemented state budget of 2022 has not yet been adopted by the Parliament.

Q013 (2021): Statistical data on the human resources of the prosecution service of Hungary;
Data from the 'Persona' electronic human resources database of the prosecution service;
Act CLXIV of 2011 on the status of the General Prosecutor, prosecutors and other employees of the prosecution service, as well as on the career of prosecutors (hereinafter: 'Act on Prosecutors').

Q013 (2020): Q 13 Act LXXI of 2019 on Hungary's central budget for 2020
The act for implemented state budget of 2020 is before the Parliament (T / 17188. of law proposal ON THE IMPLEMENTATION OF Act LXXI OF 2019 ON HUNGARY'S CENTRAL BUDGET FOR THE YEAR 2020) but not yet adapted.

Ireland

Q013 (2024): The total annual budget is for:
- The salaries and expenses of the Director and her staff;
- Fees to counsel engaged by the Director to prosecute cases in the various courts;
- Costs awarded against the State arising out of Judicial Review and other legal proceedings;
- The cost of the local State Solicitor Service.

The increase in expenditure for training is due to increased staff numbers.

Q013 (2023): The shortfall in expenditure on approved budget can be attributed to a shortfall on salaries which was due to the slower than expected recruitment of staff and an IT shortfall which was due to infrastructure which did not proceed as quickly as expected.
The increase in the implemented budget for training is due to a number of factors. There was a significant increase in new staff to the Office over 2023 which led to a rise in the number of training courses availed of by staff. In addition, there was an increased demand for the Office’s sponsorship of third level educational courses which the Office wanted to respond positively to as it is committed to being a learning organisation

Q013 (2020): Parliament approved a budget of €44.813M for the public prosecution service for 2020. Expenditure by the prosecution service in 2020 amounted to €44.248M. The unspent amount of approved funding was surrendered at the end of the year in accordance with national public expenditure rules.
The annual budget for training is allocated by the prosecution service from within total funds allocated to it annually by Parliament. In 2020 expenditure on training initiatives amounted to €201K. This was down somewhat on previous years because of restrictions in place due to COVID-19.

Italy

Q013 (General Comment): Starting from 2023, the final balance is automatically processed by the Init application of the Ragioneria Generale dello Stato on the basis of the individual accounting records made by all the operators of the paying judicial offices on the national territory, therefore the data is devoid of the correction and integration entries that were previously made by the central administration to correct any significant errors found. This explains the higher value compared to the previous year.

Q013 (2023): Starting from 2023, the final balance is automatically generated by the INIT application of the Ragioneria Generale dello Stato, based on the individual accounting records entered by all the operators of the paying judicial offices on the national territory. As a result, the data no longer includes the correction and integration entries previously made by the central administration to address significant errors. This change explains the higher value compared to the previous year.

Q013 (2022): The increase in the budget for training is due to the fact that in 2020 the training was mainly delivered online (less expensive) due to the pandemic.

Q013 (2021): Difference in the implemented budget might be due to spending shifts from one financial year to another.

Q013 (2020): In general, the budget for training has drastically decreased in 2020 because the majority of the training was provided online rather than in person. This holds for both courts and prosecution offices. The reason why this trend is not evident at Q.6 (item 6) is due to the presence of administrative justice whose investments in terms of training were massive.

Latvia

Q013 (General Comment): Data on budget of the public prosecution includes only State budget for prosecution.

Q013 (2024): The main reason for difference between the approved budget and the implemented budget is related to the fact that there were several vacant prosecutor positions that were not filled but the salary amounts for these positions were allocated. In addition, several prosecutors are on maternity leave, their salary amounts also were allocated but not spent.
Another reason for underutilization of the planned budget was the fact that the expenses planned for foreign business trips in 2024 were not fully utilized, mainly because a significant part of the business trip expenses were covered by the institutions that had invited representatives of the Prosecution Office.
Savings were also generated because several prosecutors and employees were not working due to different incapacity for work situations, also several prosecutors retired.
Finally, part of the saving occurred because the Office of the Prosecutor General did not move to temporary premises at 1, Talejas Street and 3, Ierēdņu Street in Riga as was planned. The current premises of the Office of the Prosecutor General building on 6, Kalpaka Boulevard need major renovation. For reasons that were beyond the control of the Prosecution Office the funding that was allocated to cover costs of reconstruction, rent, equipment, relocation and other related expenses was not spent.
Prosecution Office of the Republic of Latvia has requested allocation of funds for trainings designed for prosecutors. In 2024 training regarding i2 Analysis Notebook software was organized to promote more efficient data analysis and coordination work among prosecutors and senior prosecutor assistants. Trainings regarding specific topics were conducted, such as psychological aspects of committing a crime, regulation of construction projects and criminal liability etc. Few of the activities were implemented by the Justice Academy, therefore some of the allocated budget for training was not spent for the activities.
Funding for training activities implemented by the Prosecution Office has increased due to the specific nature of the training activities organized, such as training in the use of specific software, improving English language skills, etc. The number of employees providing highly qualified support to prosecutors has increased at the Prosecution Office, and these employees also needed specific training to ensure the high-quality performance of their duties.

Q013 (2023): The expenses for the Prosecutor's Office has increased, as well as the number and scope of implemented trainings has been increased. Prosecution Office of the Republic of Latvia has requested additional budget allocation in respect to various training activities - such as language training courses, trainings and discussion regarding professional ethics and integrity, strengthening of communication skills etc. therefore the budget allocated for trainings has indeed increased.

Q013 (2022): The allocated budget has increased due to the fact that we were implementing the EC co-financed project BALTICS that conducted trainings for prosecutors in the field of financial and economic crime investigation. The project was financed from the funds of the Prosecutor's Office (budget was 28 930 EUR).
Decrease observed in the spending of budget in the training activities was due to the fact that several activities implemented in the Prosecution Office were financed by the European Commissions project (in accordance with the Explanatory note, EU fundings are not taken into consideration in Q13). Additionally, during the training period of 2022 many activities for prosecutors were financed by the project run by the Court Administration "Justice for growth".

Q013 (2020): 1. The cost of reimbursement was EUR 23 492 less due to the absence of 2 new posts.
2. Expenditure on goods and services of less than EUR 1 254 277, of which EUR 1 191 298 was not exhausted (used) because the original planned repairs were not carried out in the General Prosecutor's Office building on Kalpaka Boulevard 6 in 2020.
3. Capital expenditure was not fully absorbed at EUR 288 678.
4. Taking into account that raising the qualification of prosecutors is one of the priorities of the Prosecutor's Office, additional training measures and, accordingly, increased budgetary resources are envisaged.
On 1 January 2019, the Law “Amendments to the Law on Remuneration of Officials and Employees of State and Local Government Authorities” entered into force, by which there was prescribed a significantly higher remuneration for prosecutors. Consequently, the budget allocated to the Prosecution Office in 2020 is higher than in 2018.
“Annual public budget allocated to training of public prosecution services”: The Prosecution Office is financed from the State budget, then, taking into account the additional State budget funding allocated to the Prosecution Office for 2020, it was possible to increase the funding for the training of prosecutors.

Lithuania

Q013 (2024): The increase in the budget for 2024 is primarily due to the increase of salaries of prosecutor‘s. On 1st January 2024 amendments to the Law on the Public Prosecution Service came into force which implemented the first phase of increase in the salaries of prosecutors. On 1 January 2025 – the second phase of salary increase came into force. The salary reform is considered completed and provides for the ratio between salaries of prosecutors and judges at on average 90 %.

Q013 (2023): In 2022, the Prosecutor's Office was intensively implementing projects and trainings funded by foreign grants, which reduced needs from Prosecutor's Office's training budget. The indicated amount of EUR 34,642 does not include funding from foreign grants and comes solely from the state budget.
With the conclusion of these grant-funded initiatives, all training activities must now be fully supported by the state budget. This transition accounts for the observed increase in budgetary allocation for training in 2023.
More over, the costs associated with organizing training events have risen, including venue rentals, materials, and other logistical expenses. These cost increases also contribute to the higher budgetary needs for 2023.

Q013 (2021): National Audit Office of Lithuania carried out an audit on the investigation and prevention of cybercrime, which aims to contribute to the creation of a safe environment for society in cyberspace. The audit recommendations highlighted the need for the General Prosecutor's Office to pay more attention to the development of competences in the investigation of cybercrime, as the competences of specialised prosecutors are not sufficiently enhanced due to an insufficient and unsystematic education system and the lack of methodologies for the investigation of cybercrime. Due to the high cost of cybercrime training, an additional budget was requested and a small part of it was received.

Q013 (2020): In 2020 the decrease in the state budget funds allocated to the training of prosecutors was influenced by objective reasons. It should be noted that the Prosecutor’s Office participates in a wide range of international projects, from which it receives funding for capacity building activities. Also, individual trainings, traineeships and exchanges are funded by the European Judicial Training Network. In this context, there was no increased need for funds from the state budget for the training of prosecutors in 2020. In addition, the decrease in the need for allocations in this area has also been influenced by the onset of the COVID-19 pandemic.

Luxembourg

Q013 (General Comment): The budget of the public prosecution services cannot be distinguished from the budget of the courts.

Q013 (2024): There is no separate budget for the Public Prosecution Services.

Q013 (2023): There is no single budget for the Public Prosecution Service.

Q013 (2022): There is no separate budget allocation for the prosecution services.

Q013 (2020): Il n'existe pas de budget isolé pour les services du ministère public.

Malta

Q013 (General Comment): The public prosecution services are carried out by the Attorney General's office. The Attorney General not only acts as a public prosecutor but also as the principal legal advisor of all the Government Departments. As a result, the amount budgeted cannot be considered as being funds allocated solely for public prosecution services, but also for other purposes relating to legal work and advise for the Government, both locally and internationally.

Q013 (2024): This is the actual data derived from the financial estimates across different ministries and entities. The overall increase in the approved budget as well as the implemented training budget relates to the increase in the number of prosecutors within the office, but also to the efforts of the Attorney General to ensure that the staff receive continuous training.

Q013 (2023): The discrepancy between the approved and implemented budget results from an increase in the number of lawyers within the Office of the AG. This translated into added costs in respect of wages and training.

Q013 (2022): The Office of the Attorney General underwent a recruitment drive that resulted in an increment in wage-related costs.

Netherlands

Q013 (General Comment): Approved budget: the first version of the budget (estimated budget); implemented budget: annual financial report on the state expenditure. The budget for public prosecution services includes justice expenses in criminal cases, namely all kinds of cost types (e.g. wiretaps, interpreters, compensations for witnesses).
Budget allocated to training of public prosecution services is not registered separately in the budget report. The public prosecution services do have budget reserved for training, but that is for the entire public prosecution services and not just for public prosecutors. Regarding the public prosecutors, the services take part in the training institute of the Rechtspraak, and pay a yearly fee for that.

Poland

Q013 (2024): The lowest expenditure on training was recorded in 2020 due to the epidemiological situation related to the COVID-19 pandemic and the risk of SARS-CoV-2 infection. This resulted in a significant reduction in training courses and workshops in the form of traditional meetings. This situation was mainly influenced by the training offer. Most of the training courses were offered and conducted online, which resulted in lower training costs. Since 2021, training expenditure has been steadily increasing. The reason for this is the expansion of the offer to include training in the form of traditional meetings, as well as an increase in training costs (inflation). The highest increase in expenditure in 2024 compared to 2023 for training recorded in § 4700 Training of employees who are not members of the civil service was recorded in the National Public Prosecutor's Office. In the National Prosecutor's Office, the increase in expenditure in 2024 on training compared to 2023 is primarily due to the purchase of the following specialist IT training courses: 'Combating terrorist threats' for the Department for Organised Crime and Corruption- for persons from general organisational units of the prosecutor's office performing tasks within the IT Shared Services Centre for the Department of Cybercrime and Computerisation, "Provision of warranty services for the Ordering Party's RedHat software" for the Department for Cybercrime and Computerisation, "Renewal of warranty service for the Ordering Party's backup system equipment and expansion of the current backup environment" for technical personnel in the Department of Cybercrime and Computerisation.

Q013 (2023): The average NBP exchange rate of 29 December 2023 was used to convert PLN to €. - 4,3480.
In 2023, the Prosecutor's Office budget was implemented in 99.86%. The difference between the approved and implemented budget is the amount of PLN 5,308,139.16 (1 220 823,17 euro). Within this amount, the planned budget expenditure was blocked. The blockage was a result of the notification by the organisational units of the Prosecutor's Office in section 753 Compulsory social insurance of the excess of the sub-allocated funds in the 2023 Prosecutor's Office budget for retired prosecutors‘ emoluments and family emoluments, due to the lower number of retired prosecutors’ retirements in relation to the amount assumed during the work on the 2023 Budget Act. The financial plan for 2023 in part 88 General organizational units of the Prosecutor's Office compared to 2022 increased by 17.08%, and the realized budget in 2023. was higher than that realized in 2022 by 16.92%.
The change in the size of the prosecutor's office budget for 2023 with respect to 2022 was mainly influenced by:
- Department 752 - National Defense - the creation of a new department for military affairs in accordance with the Decree of the Minister of Justice dated December 2, 2022. Regarding the establishment of a Department for Military Affairs in the District Prosecutor's Office Łódź - Polesie in Łódź,
- Section 753 Social Insurance - change of emoluments of prosecutors in retired status and family emoluments, the increase in relation to 2022 was as a result of the 7.8% salary indexation and the amounts of increased remuneration referred to in Article 10a of the Law on Special Solutions for the Implementation of the Budget Act for 2023 (outstanding benefit indexation) as well as additional funds for retiring prosecutors in 2023,
- Section 755 Justice - valorization of benefits of adjudicators and employees by 7.8%, as well as the amounts of increased remuneration referred to in Article 10a of the Law on Special Solutions for the Implementation of the Budget Act for 2023 (outstanding benefit valorization) as well as increased costs of operation of prosecution units and increased costs of pre-trial proceedings.

Q013 (2022): The average exchange rate of the National Bank of Poland as at 30 December 2022 was used to convert PLN to €. - PLN 4.6899.
In 2022, the budget of the Public Prosecutor's Office was implemented in 99.99%. The difference between the approved and implemented budget is the amount of PLN 237,656.33. Within this amount, the planned budget expenditure was blocked in the amount of PLN 228,314. The blockage was a result of the failure to realise planned expenditure, primarily under the Operational Programme Knowledge Education Development 2014-2020 in the amount of PLN 176,221, an excess of funds in the financial plan of expenditures due to a lower number of retirements of prosecutors than assumed in the course of work on the Budget Act for 2022, and remaining funds in the Prosecutor's Office units in § 6060 Investment expenditure on budgetary units.
*13.1
In fact, the prosecutor's budget for training in 2020-2021 was significantly lower than in previous years and in 2022.
In 2020-2021, the epidemiological situation related to the COVID-19 pandemic and the risk of infection with the SARS-CoV-2 virus resulted in a significant reduction in training and workshops in the form of traditional meetings. In fact, online trainings have prevailed.
Prosecution units also held in-house training sessions.
Expenditures on training in 2022 compared to 2020 and 2021 definitely increased. However, the training offerings have changed. Training in the form of traditional meetings returned but largely remained online training, which results in lower training costs. The budget for training in 2022 is 80.53% of the budget for training in 2018. It is likely that this trend will already continue.
It should be noted that prosecution units had a budget in 2022 that was sufficient to implement training at the 2018 level.

Q013 (2021): *1 euro= 4,5994 pln
*In 2020, the epidemiological situation related to the COVID-19 outbreak and the risk of virus infection resulted in a significant reduction in training and workshops in the form of traditional meetings. Training offerings changed and on line training was available. In view of the lack of mobility and the limitation of interpersonal contacts, the prosecution units organised in-house training. The training budget for 2020 represented 35.27% of the 2019 implementation and 36.3% of the 2018 implementation. The budget allocated for training in 2021 increased by 56.16% compared to 2020. The execution of training expenditure did not reach the level of 2018 and 2019. This was mainly influenced by the training offer. The majority of training is offered and delivered on line which results in lower training costs.

Q013 (2020): 1 euro=4.6148 PLN
The lower implementation of the training budget in 2020 compared to the implementation in previous years is primarily due to constraints related to the COVID-19 pandemic and the risk of SARS-COV-2 virus infection. The epidemiological situation has led to a reduction in training and workshops in the form of traditional meetings. Training offerings have changed. In essence, online training has become available. In view of the lack of mobility and the limitation of interpersonal contacts, the prosecution units organized in-house trainings. The budget for training in 2020 represents 35.7% of the 2019 implementation and 36.3% of the 2018 implementation. Below, I present the amounts of expenditures realized in 2018 - 2020 for training in the common prosecution units: 2018 - 683 618,27 euro, 2019 - 694 686,85 euro, 2020 - 248 164,77 euro. *The decrease in the approved budget alloceted of the training budget is primarily due to constraints related to the COVID-19 pandemic.

Portugal

Q013 (2024): The 30% variation concerns DGAJ-MMP (Direção-Geral da Administração da Justiça - Magistratura do Ministério Público): payments were €35M higher than the initial allocation due to higher-level authorisations.

Q013 (2021): During the economic year, the budget needed to face needs that were not anticipated.

Q013 (2020): During the economic year, the budget needed to face needs that were not anticipated.

Romania

Q013 (2024): The data is now directly provided by the Prosecutor's Office Attached to the High Court of Cassation and Justice, while in previous reporting years the data was extracted by the Economic Department within the Ministry of Justice from the reports of the Ministry of Finance. Therefore, the difference could be explained by a distinct benchmark in reporting.

Q013 (2022): These figures concern the training of civil servants and other categories of staff in this system, not prosecutors - the costs of training magistrates cannot be broken down /highlighted here, being included in the budget of the Superior Council of Magistracy (training of this latter category carried out through the Higher Institute of Magistracy).

Q013 (2021): The training of judges and prosecutors is provided by the National Institute of Magistracy (Superior Council of Magistracy)- separate budgets. For 13.1, the amounts included only the sums from the state budget provided for the training of civil servants and other categories of non-judge/non-prosecutor staff within the system of the Public Ministry. Post-pandemic, both the frequency of trainings and the number of participants at trainings grew.

Q013 (2020): The training of judges and prosecutors is provided by the National Institute of Magistracy (Superior Council of Magistracy). For 2020, the amounts included to both Q6 and O13 included the amounts from the state budget provided for the training of civil servants and other categories of non-judge / non-prosecutor staff. In 2018, according the data provided by the economic department, at these amounts were included, the training within some European training programs (programs within European funds) of a number of judges (and prosecutors)- a separate budget from the budget regarding the training through the National Institute of Magistracy (Superior Council of Magistracy).

Slovak Republic

Q013 (General Comment): The increase is correct. The prosecution department once again expected increased interest in training due to legislative changes. The approved budget may be adjusted by the prosecution department during the year with budgetary measures based on the real need for funding, while it must adhere to the overall limits of the allocated budget. The valorization of prosecutors' salaries, which we stated in the questionnaire as an increase in prosecutors' salary requirements.

Q013 (2024): The Prosecution Department may, during the course of the year, adjust the approved budget through budgetary measures based on the actual financing needs, while respecting the overall limits of the allocated budget.
The difference between the approved budget and the actual budget amounts to EUR 9,636,852.94.
The financial resources were allocated for the following purposes:
-reconstruction of buildings and premises of regional and district prosecutor's offices,
-increase of remuneration and salary components of prosecutors,
-severance payments for prosecutors,
-procurement of Microsoft licences,
-procurement of software and IT equipment for asset tagging,
-additional financing of essential operational expenditures of the prosecutor's offices,
-functional allowances for the performance of prosecutorial duties.

Q013 (2023): The prosecution department once again expected increased interest in training due to legislative changes.
The approved budget may be adjusted by the prosecution department during the year with budgetary measures based on the real need for funding, while it must adhere to the overall limits of the allocated budget.
The difference between the approved budget and the actual budget is EUR 12,685,808.10.
The funds were intended for:
- reconstruction of buildings and premises of regional and district prosecutor's offices,
- purchase of desktops for administrative staff and renewal of Lotus Notes e-mail equipment,
- building a communication infrastructure for the Nové Zámky District Prosecutor's Office,
- increase in salary requirements for prosecutors,
- severance pay of prosecutors,
- procurement of Microsoft licenses,
- payment of increased expenses for electricity and natural gas,
- additional fees for performing the function of a prosecutor,
- additional financing of operating costs (rent, communication infrastructure, general services) and expenses in the field of information technology,
- procurement of mobile workplaces for prosecutors.

Q013 (2022): The difference between the approved budget and the implemented budget is 8 609 822 Eurs. The increased funds were allocated to:
- valorisation of prosecutors' salaries
- implementation of the ECRIS TCN Third Country Citizens Registration Project
- expansion of the PATRICIA information system and its connection to the information system of the European Public Prosecutor's Office
- necessary reconstruction of district and regional prosecutor's offices
- more training - relieve of COVID19 restrictions - additional financing of energies.

Q013 (2021): The difference between the approved budget and the actual budget is EUR 3 197 554.
The increased funds were allocated to:
- valorisation of prosecutors' salaries;
- modernization of the ECRIS software to version 1.6 for the Criminal Register;
- connection of IS Patricia to IS of the European Prosecutor;
- necessary renovation of buildings of the General Prosecutor's Office of the Slovak Republic;
- budget allocated to training of public prosecution services has changed due to the possibility to make face-to-face trainings.

Q013 (2020): The General Prosecutor of the Slovak republic:
The difference between the approved and the implemented budget is 903 692 euros.
The financial means were allocated to:
- wage valorisation of prosecutors, increase of number of employees of the Prosecutor's - investment into the buildings
Discrepancies form the previous cycle in the annual public budget allocated to training are due to the COVID 19 pandemic situation due to which the trainings were not planned or applied. The increase in the approved budget in 2020 reflects the implemented budged allocated to training of public prosecution services in 2019. The budgetary needs for training in 2020 were expected similar (higher) as in 2019, therefore the increase. But the training plans were not implemented due the Covid pandemic situation, so the implementation of the budget in this category was much lower.

Slovenia

Q013 (General Comment): The indicated amount of approved and implemented budget is allocated for the overall functioning of State Prosecutor's Office of the Republic of Slovenia. It does not include budget for functioning of the State Prosecution Council (included in Q15.1 and Q15.2.)

Q013 (2024): The biggest savings were on salaries, which is still mainly due to vacancies, especially in prosecutorial posts, for which salaries were already planned in 2024. There were also some savings due to several longer absences from work for health reasons, which were reimbursed by the Health Insurance Institute of Slovenia. The same reasons apply also for lower expenditures on training.

Q013 (2023): Difference between approved and implemented: The biggest savings were on salaries, which is still mainly due to vacancies, especially in prosecutorial posts, for which salaries were already planned in 2023. There were also significant savings due to several longer absences from work for health reasons, which were reimbursed by the Health Insurance Institute of Slovenia. The same reasons apply also for lower expenditures on training.

Q013 (2022): Discrepancies at 13.1 (training): In 2020 and 2021, the budget was impacted by the limitations due to Covid-19 pandemics, hence the increase in 2022 (compared to 2020).

Q013 (2021): The low implementation in comparison with the adopted budget is a consequence of the COVID- 19 epidemic, as there were no educational events with physical participation, but rather virtual ones. For the aforementioned type of events there were no registration fees, or they were lower, compared to participation fees for events with physical participation. Due to the COVID-19 epidemic, the public prosecution's own educational event - Educational Prosecutor's Days, which represents the largest cost of the state prosecutor's office in the field of education, was held virtually.

Q013 (2020): Training: the implemented budget was impacted by the limitations due to Covid-19 pandemics.

Spain

Q013 (General Comment): In Spain, it is very difficult to carry out a perfect separation between the budget of Courts and the Budget of Prosecution services, because some concepts are common (civil servants, material resources, buildings, etc). These items cannot be separated from the budget allocated to the functioning of courts. Therefore, the figure provided in respect of the "Total" represents only the salaries.
It is noteworthy that data on the implemented budget is an estimations of the Statistic Department of the General Council of the Judiciary.

Q013 (2024): The data Annual public budget allocated to training of public prosecution services are those contained in the General State Budget for the financial year 2024. Programme: 111R "Training of the Prosecutorial Career" of State General Budget, which has led to an improvement in the investment destined to the training of the prosecutors' career. This is a result of the political commitment to improving investment in prosecutors training. Since 2021, the budget has steadily increased with the implementation of the Ministry's Scholarship Programme. The increase in the 2024 budget compared to 2023 is due to the financial requirements needed to implement the Ministry of the Presidency, Justice and Relations with the Parliament's Scholarship Programme for the exam preparation for entry into the public prosecutor career.
Below are the figures for the total aproval budget and, within that total, the portion corresponding exclusively to scholarships. Also included, with the same breakdown, are the figures for the executed budget.
Total Aproved budget (€)12,308,387; total implemented budget :10.021.227,61 € Scholarship Program aproved budget: 7.085.671,99 (€); Scholarship Program implemented budget: 6.323.316,53; €

Q013 (2023): -The data Annual public budget allocated to training of public prosecution services are those contained in the General State Budget for the financial year 2023.
Section: 13 MINISTRY OF JUSTICE
Programme: 111R Training of the Prosecutorial Career
- Justification for the discrepancy of the approved budget allocated to training of public prosecution services: The increase is due to the Program 111R "Training of Prosecution Career" of State General Budget, which has led to an improvement in the investment destined to the training of the prosecutors' career. This is a result of the political commitment to improving investment in prosecutors training

Q013 (2022): The variation in the implemented budget are within normal parameters taking into account the variation in the price of money in two years. The budget allocated to training includes a part of the training institution's budget corresponding to the prosecutors training. Regarding approved budget allocated to training the increase is related to the Program 111R "Training of Prosecution Career" that is financed from the State General Budget.

Q013 (2021): Regarding the approved annual budget allocated to training, the difference with respect to 2020 lies mainly in the fact that the budgets had been extended for several budget years, starting from a year in which the number of trainee prosecutors was much lower. The increase is due to the approval of budgets for the year 2021 that already took into account much greater promotions of the Prosecution career.

Q013 (2020): Concerning budget allocated for training of public prosecutors, the difference between the approved and implemented budget, namely the fact that the latter is considerably lower than the former, possibly stems from the pandemic and the impossibility to carry out all the foreseen training courses in 2020.

Indicator 5: System for compensation of users

- System for compensating users

Table 5.1 System for compensating users: number of requests for compensations and number of granted compensations by specific circumstances in 2024 (Q37)

Indicator 5: Legal aid

Comments provided by the national correspondents

organised by country

Question 037. Is there a system of compensation in the following circumstances:

Austria

Q037 (General Comment): : The Public Authority's Liability Act (Amtshaftungsgesetz) provides for liability of the state (and other legal entities) for misconduct of their employees in the exercise of public authority, including court proceedings and court decisions, causing damage to persons or property by excessive length of proceedings, wrongful arrest and/or wrongful condemnation. The liability presupposes both wrongfulness and fault. In the case of wrongful arrest or wrongful criminal condemnation, compensation can also be obtained according to the Penal Law's Compensation Act (Strafrechtliches Entschädigungsgesetz) without proving fault of the Authorities. The compensation procedure is laid down in para. 8 ff. Amtshaftungsgesetz and para. 9 ff. Strafrechtliches Entschädigungsgesetz. The injured person may demand – free of costs - of the legal entity against which the claim for damages is to be raised to forward her/him within a three months' term a written statement indicating as to whether it accepts or partially or totally rejects the claim for damages. If the claim is partially or totally rejected, the complaint can still be filed at court. The exclusive jurisidiction over the claim of the injured person against the legal entity rests in the first instance with the regional court (Landesgericht) in charge of civil matters in whose range of jurisdiction the infringement of law occurred. Compensation is funded by the Public Authority's general budget. The liability is unlimited, indemnity is to be paid in terms of money only. To make sure that compensation is paid following the concrete circumstances of each individual case, there is no such thing as a daily tariff or a flat compensation sum. The amount of compensation depends solely on the magnitude of damage suffered by the victim and the degree of fault attributable to the Public Authority. According to sec 67 CCP victims have the right to claim reimbursement for the damage caused by the criminal act or compensation for the impairment of their legally protected interests. The extent of the damage or the impairment has to be established ex officio as far as this can be done on the basis of the results of the criminal proceeding or with the help of additional simple investigations. If for the assessment of a bodily injury or damage to the health of a person an expert is appointed, he/she also has to be requested to establish the periods of pain.

Q037 (2024): The payments according to the Public Authority's Liability Act, European Convention on Human Rights and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act and the European Convention on Human Rights in the area of the courts were: € 524.788,14 and those according to the Penal Law's Compensation Act were € 434.686,04 in 2024. The decrease of payments of more than 20% compared to the previous year is due to the fact that those payments are based on decisions by independent courts, which cannot be controlled by the judicial administration and are subject to strong fluctuations.

Q037 (2023): The payments according to the Public Authority's Liability Act, European Convention on Human Rights and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act and the European Convention on Human Rights in the area of the courts were 1.004.651,63 Euro and those according to the Penal Law's Compensation Act were 532.659,80 Euro in 2023.
The increase in payments of more than 20% compared to the previous year is due to the fact that those payments are based on decisions by independent courts, which cannot be controlled by the judicial administration and are subject to strong fluctuations.

Q037 (2022): The payments according to the Public Authority's Liability Act, European Convention on Human Rights and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act and the European Convention on Human Rights in the area of the courts were 458.891,35 Euro and those according to the Penal Law's Compensation Act were 593.651,96 Euro in 2022.

Q037 (2021): The payments according to the Public Authority's Liability Act and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act were 714.676,17 Euro and those according to the Penal Law's Compensation Act were 574.038,47 Euro.

Q037 (2020): The payments according to the Public Authority's Liability Act and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act were 444.740,27 Euro and those according to the Penal Law's Compensation Act were 865.635,22 Euro.

Belgium

Q037 (General Comment): In Belgian law, the term « inoperative pre-trial detention" is used instead of "wrongful arrest".
Compensation through the civil liability procedure:
In Belgium, the State's liability for damages resulting from faults committed by the public prosecutor's office or judges falls under Article 1382 of the Civil Code according to which: "Any act whatsoever of a person which causes damage to another person obliges the person by whose fault it occurred to make reparation". The fault may consist of negligence according to the terms of article 1383 which provides that "everyone is responsible for the damage he/she causes not only by his/her own act but also by his/her negligence or imprudence". To obtain compensation, the plaintiff must prove the existence of a fault, damage and a causal link between the fault and the damage. According to the Constitutional Court (see Constitutional Court ruling of June 30th, 2014 (no. 99/2014)), a constitutionally correct interpretation of Article 1382 of the Civil Code implies that even if an erroneous decision is not repealed, modified, annulled, or revoked, the state can be held responsible for a serious mistake of a judge sitting at last instance. It is necessary that the mistake constitutes a sufficiently serious violation of the applicable rule of law and that, because of the limited appeal remedies available against the wrong decision, it is not possible to obtain the annulment of such decision. These claims are brought before civil courts.
Exceeding the reasonable time of proceedings should also be considered as a fault. However, article 21ter of the Criminal Procedure Code provides for that in case the right to be judged within a reasonable time is violated, courts can either inflict lower sentence than the legal minimum sentence, or simply pronounce guilty verdict without imposing punishment. With regard to the State's liability for unlawful detention, Article 27 of the Act of March 13, 1973, on compensation for ineffective pre-trial detention provides for a right to compensation for any person who has been deprived of their liberty in conditions incompatible with the provisions of Article 5 of the ECHR.
Reference should also be made to the Act of 13 March 1973 on compensation for inoperative pre-trial detention. Article 28 of this law provides for that "Any person who has been held in preventive detention for more than eight days without this detention or its continuation having been caused by his/her own conduct may claim compensation:
a) if he or she has been directly or indirectly exempted from liability by a judicial decision that has become res judicata;
b) if he/she has benefited from an order or a ruling of dismissal;
c) if he/she has been arrested or kept in detention after the public action has been extinguished by prescription;
The amount of such compensation shall be determined in equity, taking into account all the circumstances of public and private interest. If the person concerned is unable to bring an action for compensation before the ordinary courts, the compensation must be requested in writing to the Minister of Justice, who shall decide within six months. The compensation shall be granted by the Minister of Justice at the expense of the Treasury, if the conditions provided for in § 1 are met. If the compensation or the charge is refused, if the amount of the compensation or the number of days charged is deemed insufficient, or if the Minister of Justice has not taken a decision within six months of the request, the person concerned may apply to the Commission for Inoperative

Pre-trial Detention.

Q037 (2024): Number of cases still open (for inoperative pre-trial detention): 19.

Q037 (2023): Number of cases still open for (for inoperative pre-trial detention): 28

Q037 (2022): The number of ongoing cases (for ineffective pre-trial detention) stands at 29. Compensation has been granted in 13 cases.
Q037 (2021): For the item "wrongful arrest" (corresponding in Belgium to "inoperative preventive detention"): concerning the number of decisions taken, there were 20 decisions granting and 21 decisions refusing compensation (+ 39 pending cases), in total 80 applications. Only the 20 decisions granting compensation and the total number of applications are included in the table.

Bulgaria

Q037 (General Comment): In the Republic of Bulgaria, there are two mechanisms for indemnification for damages. 1)The proceedings under the State and Municipalities Liability for Damages Act (SMLDA) aim to determine the procedure and grounds for holding the state and municipalities liable and for citizens and legal entities to receive compensation in cases of damage suffered as a result of unlawful acts, actions or omissions of state or municipal authorities and officials in the course of or in connection with the performance of administrative activities. Article 2 of SMLDA also regulates the liability of human rights bodies, including the prosecution service, whereby the state is liable for damage caused to citizens by the investigating authorities, the prosecution service or the court in the following cases: detention, including all cases of deprivation of liberty in violation of Article 5, § 1 of the ECHR; violation of rights protected by Article 5, § 2 – 4 of the Convention; charges for a crime if the person is found not guilty or if the criminal proceedings are dropped or the act has been amnestied; imposition of a penalty under the Criminal Code or an administrative penalty where the person is acquitted or the administrative penalty is annulled; application by the court of an administrative measure where its decision is annulled as unlawful; enforcement of a penalty imposed in excess of the specified term or amount; unlawful use of special intelligence means; an established violation committed by a pre-trial body through the disclosure of investigation materials in violation of the presumption of innocence or in a public statement in which the accused is presented as guilty; established violation of the rights of third parties under Section IX of Chapter Fourteen of the Criminal Procedure Code. Claims under Article 2, paragraphs 1 and 2 shall be examined by the courts in accordance with the procedure established in the Civil Procedure Code. Article 2b of SMLDA regulates the liability of the judicial authorities for violation of the right to have a case examined and decided within a reasonable time, in accordance with Article 6, §1 of the Convention. The courts shall determine the amount of compensation to be awarded on an equitable basis.
2)The second legal indemnification mechanism is based on Chapter 3 “a” of the Judicial System Act that provides for the examination of applications by citizens and legal entities against acts, actions or omissions of the judicial authorities that violate their right to have their case examined and decided within a reasonable time.
Applications may be submitted by citizens and legal entities who are: parties to concluded civil, administrative and criminal proceedings; defendants, victims or aggrieved legal entities in terminated pre-trial proceedings. Compensation for concluded or terminated proceedings shall be determined and paid in accordance with the practice of the ECrHR in an amount not exceeding BGN 10,000.
Applications under paragraph 1 shall be submitted within six months of the conclusion of the relevant proceedings with a final act through the Inspectorate to the Supreme Judicial Council to the Minister of Justice. The Minister of Justice or a person authorised by him shall determine the amount of compensation (provided from the state budget) in accordance with the practice of the ECHR and shall propose the conclusion of an agreement with the applicant. The circumstances shall be verified and a decision on the application shall be taken within six months of its receipt. Compensation shall be paid on the ba

sis of the agreement concluded. Persons who have received compensation under this chapter may not seek compensation on the same grounds through the courts.
A separate register shall be created for applications, which shall be published on the website of the Inspectorate to the Supreme Judicial Council. The Prosecutor's Office shall not keep statistics on compensation awarded under this procedure in connection with the activities of the Prosecutor's Office.
No fee shall be payable for the examination of applications under this chapter.

Q037 (2024): The table above presents data from both mechanisms: 1)Claims brought against the Public Prosecutor's Office before the courts under the State and Municipalities Liability for Damages Act (SMLDA), as the amount of damages awarded by the courts in such claims. Column 1: the number of claims brought against the Public Prosecutor's Office under the SMLDA in 2024. Column 2: number of court decisions handed down in 2024 in respect of such claims (not yet final). Column 3: total amount of compensation awarded (in EUR) in court decisions handed down in 2024 under the SMLDA in claims against the prosecution service (not yet final). In 2024, the total amount of compensation under the SMLDA in claims against the prosecution based on enforcement orders (final court decisions) was €33,319.61 – all for wrongful conviction.
- “the numbers provided by the Prosecutor's Office also include the cases for damages against the investigative bodies. This probably also covers the police investigative bodies, which, although being part of the Ministry of Interior, investigate individual cases under the leadership of a prosecutor and in this area they are subordinate to him and are obliged to carry out his orders”.
-“As for cases against the courts under Art. 2 and 2b SMLDA, the data relating to civil proceedings cannot be differentiated within the larger data set, which is collected by the SJC and which covers all cases under this act”.
2)Ministry of Justice (Chapter Three "a" of the Judicial System Act: “Excessive length of proceedings”): number of requests for compensation:775; number of compensations granted:327; total amount of compensations granted (in €):524 954
It should be noted that for 2024, in contrast with the previous evaluation cycles, the category “excessive length of proceedings” contain data from both mechanisms: Number of requests for compensation:53 (first mechanism) +775 (second mechanism)=828; Number of compensations granted: 19(first mechanism) +327(second mechanism)=346; Total amount of compensations granted (in €): 189 230(first mechanism) +524 954 (second mechanism) = 714 184. Before, only data from the Ministry of Justice were communicated.

Q037 (2023): Prosecutor's Office of RB: In the Republic of Bulgaria, there are two mechanisms for indemnification for damages, in relation to the criminal proceedings.
The first mechanism is regulated in the Liability of the State and Municipalities for Damages Act. The state and the municipalities are liable for the damages caused to citizens and legal entities by unlawful deeds, acts or omissions of their authorities and officials in relation or with respect to the performance of an administrative activity, as well as for damages caused by the effect of secondary legislation revoked as being unlawful or declared null and void. Pursuant to Article 2 of this Act, the state is liable for damages caused to citizens by the investigation authorities, the prosecutor's office or the court in hypotheses determined in this text of the Act.
Statistics is not maintained in the Prosecutor's Office, in the form of the indicators in the table in the present questionnaire. The data for year 2023 about the obtaining of a damage award against the Prosecutor's Office under the Liability of the State and Municipalities for Damages Act is, as follows:
In 2023, the Prosecutor's Office lost suits filed by 292 persons under actions based on the legal grounds of Article 2 and Article 2b of the Liability of the State and Municipalities for Damages Act, as 281 court damage awards entered into force.
Out of the legally effective 281 damage awards, 146 are based on granted actions based on the legal grounds of Article 2, Paragraph 1, Subparagraph 3, Option 1 of the Liability of the State and Municipalities for Damages Act (legally effective acquittal), and 103 — based on the legal ground of Article 2, Paragraph 1, Subparagraph 3, Option 2 of the Liability of the State and Municipalities for Damages Act (legally effective writ for the termination of the criminal proceeding).
There are no legally effective court judgments based on the legal grounds of Article 2, Paragraph 1, Subparagraph 2 of the Liability of the State and Municipalities for Damages Act (violation of rights protected by Article 5, § 2-4 of the European Convention for the Protection of Human Rights and Fundamental Freedoms.)
On the grounds of Article 2, Paragraph 1, Subparagraph 1, Option 1 of the Liability of the State and Municipalities for Damages Act, 7 damage awards were issued (unlawful detention in custody), which are legally effective.
As regards actions based on the legal grounds of Article 2b of the Liability of the State and Municipalities for Damages Act (violation of the right to hearing of the case within a reasonable time, in accordance with Article 6, § 1 of the European Convention for the Protection of Human Rights and Fundamental Freedoms), 22 award damages were rendered and entered into legal force.
There are no actions brought on the legal grounds of Article 2, Paragraph 1, Subparagraph 1, last option of the Liability of the State and Municipalities for Damages Act (deprivation of liberty in violation of Article 5, § 1 of the European Convention for the Protection of Human Rights and Fundamental Freedoms). On the grounds of Article 2, Paragraph 1, Subparagraph 7 of the Liability of the State and Municipalities for Damages Act (unlawful use of Special Intelligence Means), 1 damage award is rendered, which is legally effective. Under Article 2, Paragraph 1, Subparagraph 6 of the Liability of the State and Municipalities for Damages Act (execution of an punishment imposed over and above the determined period or amount) 2 legally effective damage awards were rendered.
The total amount of the in

demnifications awarded under actions brought against the Prosecutor's Office in accordance with the procedure of the Liability of the State and Municipalities for Damages Act for year 2023 is BGN 2 824 095.16 (EUR 1 443 937).
The data contained in column 3 of the table is in EUR on the basis of the legally effective court judgments under the Liability of the State and Municipalities for Damages Act in year 2023 in cases pursued against the Prosecutor's Office. The Prosecutor's Office does not keep statistics in the form of the other indicators in the table in the questionnaire. The data is therefore presented as a text in the answer to question No.37.
The second legal indemnification mechanism is provided for in the Judicial System Act (Chapter Three "a" of the Judicial System Act — consideration of applications against a violation of the right to hearing and resolution of the case within a reasonable time.
This chapter governs the hearing of applications of citizens and legal entities against deeds, acts or omissions of the bodies of the Judiciary whereby their right to hearing and resolution of the case within a reasonable time is violated.
The applications are filed by citizens and legal entities, which are:
1.parties to completed civil, administrative and criminal proceedings;
2.accused, victims or damaged legal entities under terminated pre-trial proceedings.
This chapter also governs the determination and payment of an indemnification in accordance with the case-law of the European Court of Human Rights in the amount of no more than BGN 10 000.
The Minister of Justice is competent to make a decision, and the deadline for considering applications is 6 months.
The Procedural Representation before the ECHR Directorate of the Ministry of Justice: In 2023, under the Judicial System Act, Chapter Three "a", compensations were paid under 213 agreements in the amount of 311,320 euros /608,900 BGN/ total.

Q037 (2022): Prosecutor's Office of RB: In the Republic of Bulgaria, there are two mechanisms for compensation for damages in connection with criminal proceedings.
The first mechanism is regulated in the Law on the Liability of the State and Municipalities for Damages (LLSMD). The state and municipalities are responsible for the damages caused to citizens and legal entities by illegal acts, actions or inactions of their bodies and officials during or on the occasion of the performance of administrative activities, as well as for the damages caused by the action of canceled as illegal or declared as null and void by-laws. According to Art. 2 of this law, the state is responsible for the damages caused to citizens by the investigative bodies, the prosecutor's office or the court in the hypotheses specified in this text of the law.
The Prosecutor's Office does not keep statistics in the form of the indicators in the table in this questionnaire. The data for 2022 regarding the conviction of the Prosecutor's Office under LLSMD are as follows:
In 2022, the Prosecutor's Office was convicted by 255 persons on claims with a legal basis, Art. 2 and Art. 2b LLSMD, with 248 convictions entering into force.
Of the 248 convictions that entered into force, 134 were based on upheld claims with a legal basis, Art. 2, para. 1, item 3, item 1 LLSMD (acquittal entered into force), and 92 - with legal basis, Art. 2, para. 1, item 3, item 2 LLSMD (decree on termination of criminal proceedings entered into force).
2 court decisions were issued on the basis of Art. 2, para. 1, item 2 LLSMD (violation of rights protected by Art. 5, § 2-4 of the ECHR.)
Pursuant to Art. 2, para. 1, item 1, item 1 LLSMD, 2 convictions were rendered (illegal detention).
For claims with a legal basis, Art. 2b LLSMD (violation of the right to consider the case within a reasonable time, according to Art. 6, § 1 of the Criminal Procedure Code) 18 convictions were issued and entered into force.
There are no claims filed with a legal basis under Art. 2, para. 1, item 1, proposal last LLSMD (imprisonment, in violation of Art. 5, § 1 ECHR), under Art. 2, para. 1, item 7 of LLSMD (illegal use of Special Intelligence Means) and under Art. 2, para. 1, item 6 LLSMD (execution of an imposed penalty exceeding the specified term or amount).
The total amount of compensation awarded for claims brought against the Prosecutor's Office under the LLSMD procedure for 2022 is BGN 2,564,814.75 (EUR 1,311,369).
The second legal mechanism for compensation is regulated in the Law on the Judiciary (Chapter Three "a" Judiciary System Act- consideration of applications against violation of the right to consider and resolve the case within a reasonable time.
In accordance with the procedure of this chapter, applications of citizens and legal entities against acts, actions or inactions of the bodies of judicial power, which violate their right to consider and resolve the case within a reasonable time, are considered.
Applications are submitted by citizens and legal entities that are:
1. parties to closed civil, administrative and criminal proceedings;
2. accused, injured or damaged legal entities in terminated pre-trial proceedings.
In accordance with the procedure of this chapter, compensation is determined and paid in accordance with the practice of the European Court of Human Rights in the amount of no more than BGN 10,000.
Data on the implementation of the mechanism under Chapter Three "a" of the Judicial System Act are not collected in the Prosecutor's Office. The applications under para. 1 shall be submitted within 6

months from the completion of the relevant proceedings with a final act through the Inspectorate of the Supreme Judicial Council to the Minister of Justice.
Supreme Judicial Council: The Law on the Judiciary regulates an administrative procedure according to which citizens and legal entities can be compensated when their right to consider and resolve the case within a reasonable time is violated. Compensations are in the amount of no more than BGN 10,000. The Minister of Justice is competent to make a decision, and the deadline for considering applications is 6 months.
Ministry of Justice: Statistics on number of compensations granted for wrongful arrest include overall prosecution data on detention in custody and house arrest, but also for wrongful charges with subsequent acquittals and termination of proceedings, as well as violations of Art. 5, § 2 – 4 of the ECHR, since the numbers under the provision for seeking compensation for those are aggregate. Amount of compensation also includes compensations under another 18 court decisions for length of proceedings, but data cannot be disaggregated. No exact explanation can be given for any possible differences, because there is no data available on the calculation method or details on the proceedings. Statistics on excessive length of proceedings use data by the Procedural Representation before the ECHR Directorate of the Ministry of Justice on the review of applications for the domestic compensatory remedy for excessive length of proceedings under the Judicial System Act. Sums paid may include payments under applications from December of the previous year. No exact explanation can be given for differences in numbers of requests, or compensations given, as they are subject to complex criteria, based on ECtHR case-law.

Q037 (2021): Statistics on excessive length of proceedings use data by the Procedural Representation before the ECHR Directorate of the Ministry of Justice on the review of applications for the domestic compensatory remedy for an excessive length of proceedings under the Judicial System Act. Sums paid may include payments under applications from December of the previous year. Statistics on wrongful arrest include prosecution data (on detention in custody and house arrest, but also on wrongful charges, because the numbers on the provision for seeking compensation for those are aggregate) and on 24-hour police detention.

Croatia

Q037 (2024): Claims for compensation for unlawful detention and wrongful conviction shall be submitted to this Ministry, which is also competent to conduct the procedure for an amicable settlement. Should the claimant not accept the offer made by the Ministry, they are entitled to bring an action before the competent court.
The amount of compensation offered by the Ministry, as fair pecuniary reparation on this basis, is fixed at a uniform rate of EUR 37.16 per day of deprivation of liberty, applicable in all cases.
The amounts disbursed in 2024 relate to payments made pursuant to decisions adopted in amicable settlement proceedings, as well as to court judgments delivered in 2024 concerning cases initiated in previous years.

Q037 (2023): In our instance, the term "wrongful arrest/detention" in the chart refers to payment for an erroneous arrest and conviction.
To this Ministry, which is also in charge of peaceful processes, is presented the request for compensation for unwarranted arrest and conviction. The applicant has the option to file a complaint with the appropriate court if he rejects the Ministry's offer. On this basis, the Ministry provides the aggrieved parties with a unique sum of compensation—HRK 280.00 (€37.16) per day of deprivation of liberty—as a fair monetary settlement. Payments based on peaceful proceedings rulings and 2023 court judgments are included in the sum paid for 2023; these cases are from previous years.

Q037 (2022): The information in the table also refers to Wrongful arrest/detention and wrongful conviction.
The request for compensation for unfounded arrest and unjustified conviction is submitted to the Ministry of Justice and Administration, which is also responsible for peaceful proceedings. In case the applicant does not accept the offer of the Ministry of Justice and Administration, he has the right to file a complaint with the competent court.
The amount of compensation that the Ministry offers to the injured parties as a fair monetary compensation on this basis is unique in all cases and amounts to HRK 280.00 per day of deprivation of liberty. The amount paid for 2022 refers to payments based on decisions made in a peaceful procedure. The amount is expressed in kuna.

Q037 (2020): The data in the table refer to the compensation for unjustified arrest and unjustified conviction
An application for compensation for unjustified arrest and unjustified conviction shall be submitted to the Ministry of Justice and Public Administration. If the applicant does not accept the offer of the Ministry of Justice and Public Administration, he has a right to sue at the competent court.
The Ministry of Justice of the Administration issued a Decision on 19 November 2019, which established that the financial compensation in the mediation procedure amounts to HRK 280.00 for each day of imprisonment for unfounded arrest or unjustified conviction. Therefore, there was an increase in the amount of compensation and a greater number of acceptance of bids, and for that reason there was a greater number of resolved cases.
The amount paid for 2020 refers to payments based on decisions rendered in amicable procedure and court judgments, cases and from previous years in which the payment was made in 2020.
For excessive length of proceedings, the compensation can not exceed 35.000 Croatian kunas (cca 4.600 EUR) per case.

Czech Republic

Q037 (2024): Number of requests for compensation: 2 710 in the pre-court phase, 1 216 court cases.
Number of compensations granted: in 1 673 cases compensation was granted at least partially by the ministry, in 711 cases compensation was granted by the court (28 fully and 683 partially).
Other - it can be any other malpractice of the court, public prosecution, executor or notary.
in 2023 we reported the number of cases that we ourselves classify statistically as “other,” but in the current table, “other” also includes compensation for harm/damage caused by criminal prosecution. If we read what the table means by the row “other” (wrongful criminal proceedings…), I understood it as their intention to separate data on compensation for unjustified criminal prosecution (in our system, this issue is more complex due to case law, because we have absolute objective liability of the state—as the only country in Europe, together with Slovakia—and the state is liable, based on a legal fiction of unlawfulness, even for criminal prosecutions that were procedurally correct but did not end with a conviction).

Q037 (2023): Number of requests for compensation: 2 631 in the pre-court phase, 1 880 court cases.
Number of compensations granted: in 1 472 cases compensation was granted at least partially by the ministry, in 610 cases compensation was granted by the court.
Other - it can be any other malpractice of the court, public prosecution, executor or notary.
Q037 (2021): There were 5 356 requests for compensation in 2021, from this number 3 045 requests filed to the Ministry of Justice and 2 311 reguests filed to the courts. In 2 490 cases in total was the applicant successful, either fully or partially. 9 617 860 Euro in total was paid.

Denmark

Q037 (2024): The numbers in table 37 are based on data from Platina, which is a case management system used by The Danish Prosecution System. Data in table 37 has been created outside the standard data model. Specifically developed data models are tested, but still associated with a higher risk of unidentified errors compared to the standard model. Thus, the data in table 37 is associated with considerable uncertainty. The number of cases with a request for compensation corresponds to the number of distinct case reference numbers of relevant cases within the Regional State Prosecutors or the State Prosecutor for Special Crimes. The number of cases where a compensation has been granted, corresponds to the number of distinct case reference numbers of relevant cases within the Regional State Prosecutors, the State Prosecutor for Special Crimes or the Director of Public Prosecutions.
The total sum of compensations is calculated as the sum of compensations in cases where the request for compensation has been either fully or partially granted by the Regional State Prosecutors, the State Prosecutor for Special Crimes or the Director of Public Prosecutions. It should be noted that cases in which a court has ordered The Danish Prosecution System to grant compensation are not included in table 37. This is because such cases are not registered in our case handling system (Platina). It should be noted that in Platina the amount of compensation granted is registered in a text-field where it is possible for the user to write characters other than numbers. Thus, there is a risk of some amounts not being included in the total if these are written in a way that means they cannot be converted in to a numerical value. In Platina, it is possible for a user to assign a case certain keywords. These keywords can later aid the identification of cases regarding a request for compensation that involve specific interventions, such as “arrests”, “pre-trial detentions” or “preliminary charges”. Since a single case may contain multiple keywords, but only one compensation amount, it is not possible to determine which specific interventions the compensation covers, or how the compensation is distributed if compensation was granted due to several different interventions. For this reason, a keyword-based classification is associated with such significant uncertainty that it is assessed that such a classification of numbers will provide an un-accurate representation of how request for compensation and compensations amounts are distributed across the categories ’Wrongful arrest/detention’ and ’Wrongful conviction’. We are aware that we, in previous contributions to CEPEJ’s evaluation, have provided data on request for compensation and compensations amounts divided into the categories ’Wrongful arrest/detention’ and ’Wrongful conviction’. However, we have subsequently become aware that previously used data models were subject to a significant uncertainty for the reason described above.

Q037 (2023): Data in the table (37) has been created outside the standard data model. Specifically developed data models are tested, but there is a greater risk of unidentified errors than when using the standard model. Data in the table are thus associated with considerable uncertainty. All figures indicating condemnations of requests and total amount are the sum of cases and amounts fully or partially granted. € amount is calculated via xe.com. In regards to the "other Category, the figures given are total numbers minus the numbers in the three categories for which separate figures are given (excessive length of proceedings, wrongful arrest and wrongful conviction).
There is no specific reason to the surges in compensation requests and awards, but these can fluctuate considerably from year to year. The available data is from a case management system and is not constructed for statistical purposes. For this reason the registrations within the different categories may vary a lot, depending on the case manager. Nevertheless; the total number of compensation requests, compensations granted and amounts should be correct. It is the division into the different categories that is associated with uncertainty.

Q037 (2022): We can only supply data for the two sub-groups that can be filtered correct. The figures that do not fit under the other categories now appear under "other". It should be noted that the data comes from a case filing tool, and therefore is not a statistics tool. Data may be subject to entry-errors of all sorts such as compensation amount, categorization etc.

Q037 (2021): We can only supply data for the two sub-groups that can be filtered correct. The figures that do not fit under the other categories now appear under "other". It should be noted that the data comes from a case filing tool, and therefore is not a statistics tool. Data may be subject to entry-errors of all sorts such as compensation amount, categorization etc.

Q037 (2020): Data in the table (Q37) has been created outside the standard model. Specifically developed data models are tested, but there is a greater risk of unidentified errors than when using the standard model. Data in the table are thus associated with considrable uncertainty. All figures indicating condemnations of requests and total amount are the sum of cases and amounts fully or partially granted. In regards to the "Other" category, the figures given are total numbers minus the numbers in the three categories for which separate figures are given (excessive length of proceedings, wrongful arrest and wrongful conviction).

Finland

Q037 (General Comment): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not reflect the whole picture of the cases where the proceeding has taken too long. In 2023 the sentence was reduced in five cases. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if there are special circumstances. The information on wrongful arrest and wrongful conviction are compiled together.

Q037 (2023): In 2023 there were 442 requests and the State Treasury issued 462 decisions. On 71 cases the right to compensation was denied. A total of 1 800 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

Q037 (2022): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 459 requests. A total of 2 200 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

Q037 (2021): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if
there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 415 requests. A total of 1 530 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

Q037 (2020): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if
there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 437 requests. A total of 2 916 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

France

Q037 (General Comment): The Legal Affairs Sub-Directorate of the Ministry of Justice, in conjunction with the State Judicial Officer, monitors liability actions relating to the malfunctioning of the public justice service (mainly based on Article L. 141-1 of the Code of Judicial Organisation, with regard to users of this service).
The State Judicial Officer directly monitors actions for compensation for pre-trial detention in criminal proceedings that have ended in a decision to dismiss the case, acquittal, or discharge (Articles 149 et seq. of the Code of Criminal Procedure).
1. With regard to liability actions relating to the malfunctioning of the public justice service:
the vast majority of these are based on Article L. 141-1 of the Code of Judicial Organisation.
Under this article, the State is required to compensate for damage caused by the malfunctioning of the justice service. Unless otherwise specified, this liability is only incurred in the event of gross negligence or denial of justice. This liability regime applies only to users of the public justice service, as third parties to legal proceedings can only invoke the State's strict liability for breach of equality before public burdens.
With regard to actions brought on the basis of Article 149 et seq. of the Code of Criminal Procedure: article 149 of the CPC grants the right, under certain conditions, to full compensation for damage suffered as a result of detention in proceedings that have been dismissed, discharged, or acquitted.
Any person who has been held in pre-trial detention during proceedings that have been terminated by a final decision to dismiss the case, acquit or discharge them is entitled, except in cases specifically defined in Article 149 of the CPC, to full compensation for the moral and material damage caused by such detention, upon request. The compensation awarded shall be paid by the State.
The first president of the court of appeal in whose jurisdiction the decision to dismiss the case, acquit or discharge the detainee, thereby establishing their innocence, was handed down, shall rule, following a public and adversarial procedure, by means of a reasoned decision that may be appealed before the National Commission for the Compensation of Detentions attached to the Court of Cassation (CNRD).

Q037 (2024): The figures provided with regard to the category “excessive length of proceedings” correspond to liability actions relating to the malfunctioning of the public justice service (Article L. 141-1 of the Code of Judicial Organization); the figures provided for the category “Unjustified arrest/detention” correspond to legal actions initiated on the basis of Article 149 et seq. of the Code of Criminal Procedure; the figures indicated for the category ‘Other’ correspond to disputes concerning “seals,” "police material damage” (broken doors) and “malfunctions of the public justice service due to gross negligence.”
With regard to the compensation procedure (IDP) and the method of calculating the amount of compensation (e.g., the daily rate for an unjustified arrest or conviction):
-there is no official scale for IDPs. They are assessed on a case-by-case basis, with reference to the case law of the CNRD, which applies relatively consistent amounts but without an official scale.
The case law of the National Commission for the Compensation of Detentions (CNRD) and the Court of Cassation provides some numerical trends:
• Moral damages: between €50 and €100 per day of detention on average (often around €1,500 to €3,000 per month)
• Material damages: compensated on the basis of supporting documents (pay slips, employer certificates, economic losses).
• In certain serious cases (very long detention, major psychological impact), the compensation may be much higher.
In practice, unjustified detention can result in total compensation (moral + material) averaging around €25,000 to €26,000.
Recent decisions illustrate a range from €10,000 for five months to €73,500 (moral + material damages + costs) for 20 months.

Q037 (2023): The figures given in the “excessive length of proceedings” category correspond to liability actions relating to the defective operation of the public justice service (article L. 141-1 of the Code of Judicial Organisation); the figures given in the “wrongful arrest/detention” category correspond to legal actions initiated on the basis of article 149 et seq. of the Code of Criminal Procedure; the figures given in the “Other” category correspond to legal proceedings relating to ‘seals’ and ‘police property damage’ (door breakage).
Q037 (2022): The compensation procedure is the same as the one described for 2020.

Q037 (2021): The sub-directorate for legal affairs of the Ministry of Justice, in conjunction with the State judicial agent, monitors liability actions relating to the defective functioning of the public service of Justice (essentially based on Article L. 141-1 of the Code of Judicial Organisation, with regard to users of this service). The State judicial agent directly follows up actions for compensation for pre-trial detention undergone in the context of criminal proceedings that have ended with a decision to dismiss, discharge or acquit (Articles 149 et seq. of the Code of Criminal Procedure).
1. Regarding liability actions relating to the defective functioning of the public service of Justice: The vast majority of them are based on Article L. 141-1 of the Code of Judicial Organisation. According to this article, the State is obliged to allow a compensation for damage caused by the defective functioning of the Justice service. Except in the case of special provisions, this liability is incurred only in the event of serious fault or a denial of justice. This regime of liability concerns only the user of the public service of Justice, the third party to the legal proceedings being able to engage only the liability without fault of the State for breach of equality before public charges.
During 2021, the number of new liability actions brought against the State in connection with the functioning of the civil and criminal justice is 1 016 (compared with 908 in 2020, and 510 in 2019). Of these 1 016 new cases, 754 relate to the excessive length of proceedings before labour courts. In 2021, 580 decisions condemned the State for malfunctioning of the public Justice service, out of a total of 717 decisions on the merits of the case (compared with 249 convictions out of 398 decisions in 2020, and 352 convictions out of 485 decisions in 2019).
Out of the 717 decisions, 530 decisions involve the State's responsibility for the excessive length of proceedings, of which 31 decisions concern the length of proceedings in criminal matters and 499 in civil matters (compared with 17 convictions for excessive length in criminal matters and 200 in civil matters in 2020).
The amount of the condemnations is of 2 514 646,05 euro for excessive length of proceedings out of a total amount of 5 225 167,81 euros (compared with 1 388 393 euros out of a total of 1 975 018 euros in 2020).
2) With regard to actions based on Article 149 et seq. of the Code of Criminal Procedure: article 149 of the Code of Criminal Procedure gives the right, under certain conditions, to full compensation for the damage suffered as a result of detention in proceedings that have been dismissed, acquitted or discharged. Any person who has been held in pre-trial detention during proceedings which have ended in a decision to dismiss, discharge or acquit that has become final, shall be entitled, subject to the exceptions precisely defined by Article 149 of the CCP, at his or her request, to full compensation for the moral and material damage caused by this detention. The compensation awarded is payable by the State.
It is the First president of the court of appeal within whose jurisdiction the decision to dismiss, discharge or acquit, resulting in the detainee's innocence, has been taken, who decides, after a public and contradictory procedure, by a reasoned decision that can be appealed to the national commission for compensation for detention placed at the Court of Cassation (CNRD).
According to data from the State Judicial Agent (SJA) (Sillage application and dashboards), the key data for 2021 are

as follows: 571 new cases registered; 575 decisions handed down by the First presidents of the courts of appeal; 19 settlements concluded; 53 decisions rendered by the CNRD with an average detention period of almost 140 days; 28 appeals to the CNRD in 2021 (12 at the initiative of the SJA and 16 at the initiative of the applicants). Source - Sub-Directorate for Legal Affairs, SEM, General Secretariat

Q037 (2020): "The sub-directorate for legal affairs of the Ministry of Justice, in conjunction with the State judicial agent, monitors liability actions relating to the defective operation of the public justice service (essentially based on Article L. 141-1 of the Code of Judicial Organization, with regard to users of this service).
The State's judicial agent directly follows up actions for compensation for pre-trial detention undergone in the context of criminal proceedings that have ended with a decision to dismiss, discharge or acquit (Articles 149 et seq. of the Code of Criminal Procedure).
1. With regard to liability actions relating to the defective functioning of the public service of justice:
The vast majority of them are based on article L. 141-1 of the Code of Judicial Organization.
Under the terms of this article, the State is obliged to repair the damage caused by the defective functioning of the judicial service. Except in the case of specific provisions, this liability is only incurred by gross negligence or by a denial of justice. This system of liability concerns only the user of the public service of justice, the third party to the legal proceedings being able to engage only the liability without fault of the State for breach of equality before public charges.
During the year 2020, the number of new liability actions brought against the State for gross negligence or denial of justice is 908 compared to 510 in 2019. During the same year 2020, 249 decisions condemned the State for malfunctioning of the public service of justice against 352 in 2019, out of a total of 398 decisions on the merits rendered in this matter.
Of the 249 condemnation decisions, 217 decisions implicated the responsibility of the State due to the excessive length of the proceedings, of which 17 decisions concerned proceedings in criminal matters and 200 in civil matters.
The amount of the sentences pronounced is 1,388,393 euros for excessive length of proceedings out of a total amount of 1,975,018 euros. 2. Article 149 of the Code of Criminal Procedure gives the right, under certain conditions, to full compensation for the damage suffered as a result of detention in the context of proceedings that have been dismissed, acquitted or discharged.
Any person who has been remanded in custody in the course of proceedings that have ended in a decision to dismiss, discharge or acquit that has become final, is entitled, with the exceptions specifically defined by Article 149 of the Code of Criminal Procedure, at his or her request, to full compensation for the moral and material damage caused by this detention. The compensation awarded is to be paid by the State.
It is the first president of the court of appeal in whose jurisdiction the decision to dismiss the case, acquit or acquit the detainee was handed down, which results in the detainee's innocence, who decides, after a public and contradictory procedure, by a reasoned decision that can be appealed to the national commission for compensation for detentions placed at the Court of Cassation (CNRD).
According to data from the State Judicial Agent (Sillage application and follow-up tables), the key data for the year 2020 are as follows
- 423 new cases registered.
- 436 decisions rendered by the first presidents of the courts of appeal.
- 8 settlements reached.
- 83 decisions rendered by the CNRD with an average length of compensated detention of less than 400 days.
- 37 appeals to the CNRD in 2020 (4 at the initiative of the AJE and 33 at the initiative of the claimants)

Germany

Q037 (General Comment): According to the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings (Gesetz über den Rechtsschutz bei überlangen Gerichtsverfahren und strafrechtlichen Ermittlungsverfahren) a person affected may file a complaint about undue delay (censure of delay) to the court seized of the case if proceedings seem unreasonably long. Subsequently, the person affected may bring a court action claiming compensation. The claim may be brought even before completion of the main proceedings. Adequate compensation is granted for pecuniary and nonpecuniary disadvantages. In criminal proceedings, the passage of time between the offence and the conviction, as well as the length of the proceedings, must also be taken into account and compensated ex officio by the court and the public prosecutor's office in favour of the accused. Depending on the extent of the delay and the disadvantages suffered by the accused as a result, compensation may be provided by a ruling that a quantified part of the sentence imposed is already deemed to have been enforced (this will be stated in the operative part of the judgment). In individual cases, it may suffice – even at the investigation stage by the public prosecutor's office – to discontinue proceedings (e.g. pursuant to Sections 153, 153a or 154 of the German Code of Criminal Procedure [Strafprozessordnung – StPO]), to dispense with imposing a penalty (Section 60 of the German Criminal Code [Strafgesetzbuch – StGB]) or, in the event of minor delays, to establish in the grounds of the judgment that the proceedings have been delayed in breach of the rule of law. In extreme cases, undue delay may constitute a procedural impediment that requires the court to terminate proceedings. If compensation has been provided in the criminal proceeding, except for compensation for material damage, the accused has received sufficient redress and is not further entitled to compensation in accordance with the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings. If parties to a legal dispute suffer damage due to the excessive length of court proceedings, a compensation claim may also ensue under Section 839 of the German Civil Code (Bürgerliches Gesetzbuch – BGB) in conjunction with Article 34 of the German Basic Law (Grundgesetz – GG). A claim under these provisions requires that an official intentionally or negligently breaches the official duty incumbent upon him in relation to a third party. If the official breaches his duties in a judicial decision in a legal matter, then the state is only liable if the breach of duty consists in a criminal offence. This limitation does not apply if the official refuses or delays the exercise of his duty. However, the manner in which a judge conducts the legal proceedings may only be examined for its justifiability due to the constitutional principle of judicial independence. If the official responsible for the execution of the court decision has delayed compulsory enforcement intentionally or negligently and in breach of his official duty, a compensation claim may ensue under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law. A claim may also exist under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law in cases of wrongful arrest if the official responsible intentionally or negligently breaches the official duty. Decisions by the judge responsible for matters of custody, as well as discretionary decisions by the pub

lic prosecution office in criminal investigation proceedings, may, however, only be examined for their justifiability. In the case of a wrongful conviction a state liability claim requires that the judge responsible intentionally or negligently breaches the official duty in such a way that the breach of duty consists in a criminal offence.
Anyone who has suffered damage from a criminal conviction is compensated by the Treasury if the conviction is quashed or reduced in reopened proceedings or otherwise in criminal proceedings after having become final and binding (Section 1(1) of the Act on Compensation for Criminal Prosecution Measures [Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen – StrEG]). The same applies if a measure of correction and prevention or an ancillary measure has been ordered without a conviction (Section 1(2) StrEG). In cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings, Section 2(1) StrEG provides for compensation for the damage suffered inter alia due to the execution of remand detention or temporary arrest. Where the proceedings are discontinued in accordance with a discretional provision, compensation may be granted ex bono (Section 3 StrEG). The subject of the compensation is the property damage caused by the criminal prosecution measure. In cases of deprivation of liberty on the basis of a court ruling, this can also be immaterial damage (Section 7(1) StrEG). The current immaterial compensation is €75 for each day of deprivation of liberty commenced.

A claim may also exist under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law in cases of wrongful arrest if the official responsible intentionally or negligently breaches the official duty. Decisions by the judge responsible for matters of custody, as well as discretionary decisions by the pu

blic prosecution office in criminal investigation proceedings, may, however, only be examined for their justifiability.
In the case of a wrongful conviction a state liability claim requires that the judge responsible intentionally or negligently breaches the official duty in such a way that the breach of duty consists in a criminal offence.
Anyone who has suffered damage from a criminal conviction is compensated by the Treasury if the conviction is quashed or reduced in reopened proceedings or otherwise in criminal proceedings after having become final and binding (Section 1(1) of the Act on Compensation for Criminal Prosecution Measures [Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen – StrEG]). The same applies if a measure of correction and prevention or an ancillary measure has been ordered without a conviction (Section 1(2) of the Act on Compensation for Criminal Prosecution Measures). In cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings, Section 2(1) of the Act on Compensation for Criminal Prosecution Measures provides for compensation for the damage suffered inter alia due to the execution of remand detention or temporary arrest. Where the proceedings are discontinued in accordance with a discretional provision, compensation may be granted ex bono (Section 3 of the Act on Compensation for Criminal Prosecution Measures).
The subject of the compensation is the property damage caused by the criminal prosecution measure. In cases of deprivation of liberty on the basis of a court ruling, this can also be immaterial damage (section 7(1) of the Act on Compensation for Criminal Prosecution Measures). The current immaterial compensation is €25 75 for each day of deprivation of liberty commenced

Greece

Q037 (2024): The data in the table correspond to requests for compensation before administrative courts of all instances.
It is to be noted that in two cases the request for compliance concerned a decision of another administrative court and for this reason the Council of State referred the request.

Q037 (2023): For 2023, only data concerning the administrative justice are available. Administrative Courts
-Council of State (Supreme Administrative Court)
1. The following data concern the relevant proceedings before the Council of State.
Excessive length of proceedings – just satisfaction: Law 4055/2012 .
Administrative compliance with court decisions: Law 3068/2002. 2. Within 2023, 2 applications for excessive duration of the trial were filed before the Council of State and 4 decisions were issued on applications from previous years, with which the public was imposed a total amount of 15,400 euros as just satisfaction. 3. Within 2023, 42 applications were submitted for non-execution of decisions of the Council of State and 4 decisions were issued on applications from previous years, with which monetary sanctions of 76,000 euros were imposed on the administration.
-first and second instance Administrative Courts
•Excessive length of proceedings: 11 (number of requests for compensation), 6 (number of compensations granted), 10,500 € { total amount of compensation granted (in €)}
•Non -execution of court decisions: 396(number of requests for compensation),38(number of compensations granted),150,800€ so far, as significant percentage of these cases is still pending and it is not possible to estimate the total amount of compensation awarded by Administrative Tribunals during 2023{ total amount of compensation granted (in €)}
[A] Compensation cases before the civil Courts Due to unjustified delay – Excessive length of trial
In accordance with the provisions of article 1 of Law 4239/2014 (Government Gazette A 43) "Just satisfaction due to exceeding the reasonable duration of the trial in the civil and criminal courts and in the Court of Auditors and other provisions" under the title "Entitled to bring an application".
In accordance with the provisions of article 2 of the above Law 4239/2014, under the title "Competence".
In accordance with the provisions of article 3 of the same above Law 4239/2014, under the title "Application".
In accordance with the provisions of article 4 of the same above Law 4239/2014, under the title "Procedure".
In accordance with the provisions of article 5 of the same above Law 4239/2014, under the title "Criteria for the determination of the excess and the adjudication of just satisfaction".
In accordance with the provisions of article 6 of the same above Law 4239/2014, under the title "Execution of the decision".
[B] Compensation cases before the criminal Courts [I] Due to unjustified delay – Excessive length of trial.
In accordance with the provisions of article 7 of Law 4239/2014 under the title "Procedures before criminal courts".
[II] Due to wrongful arrest/detention and wrongful conviction.
In accordance with the provisions of article 535 of the Code of Criminal Procedure under the title "Who is entitled to compensation.".
According to the provisions of article 536 of the Code of Criminal Procedure under the title "When there is no right to compensation.".
According to the provisions of article 537 of the Code of Criminal Procedure under the title "Who else is entitled to compensation.".
According to the provisions of article 538 of the Code of Criminal Procedure under the heading "Submit the application".
According to the provisions of article 540 of the Code of Criminal Procedure under the heading "Determination of for wrongful conviction at least 50,140€.

Q037 (2022): -Articles 538,539,540 of the Code of Criminal Procedure
-According to the Council of the State (1501/2014) and in line with the case law of the CJUE, the State may be held liable for damages to the citizen in case of an erroneous judicial decision if there is a manifest error.
-Law 4239/2014 as amended by Law 4842/2021 provides for fair compensation for excessive length of proceedings

Hungary

Q037 (General Comment): Excessive length: If the court is not able to finish the cases within reasonable time a compensation may be awarded to the parties. The court decides about the compensation in a fast tarck procedure. Non-execution of court decisions: Usually the court orders a 15 day deadline for fulfilling its final decision. If the party that is obliged to do so does not fulfil this obligation he/she also has to pay an interest from that day. Wrongful arrest: The damages occured for wrongful arrest, house arrest or preliminary detention at a psychiatric institution shall be compensated. Wrongful condemnation: If the person was convicted, but later - as a result of an extraordinary review procedure - he/she was not found guilty or received a lenient punishment. Any pecuniary punishment or cost of the procedure that was paid by the accused person should be repaid with interest included. Other: the court awards a compenstaion if the circumstances of the imprisonment of a convicted or arrested person violate his/her fundamental rights.

Q037 (2024): Civil Proceedings

Excessive Length of Proceedings (Civil Proceedings)

In 2022, Act XCIV of 2021 on the enforcement of financial compensation related to the delay of civil litigation entered into force.

According to the Hungarian civil procedural law there is a compensation for breach of the reasonable time requirement and also for not paying the monetary compensation. The consequences of the breach of the reasonable time requirement are regulated in the Act XCIV of 2021 on the enforcement of pecuniary compensation in connection with the protracted civil proceedings.

Financial compensation is only available to the party who participated in the proceedings complained of, regardless of whether he or she was the successful or unsuccessful party. It is granted if the reasonable period of time specified by law is exceeded during the proceedings or a specific stage of the proceedings (according to the Hungarian laws, such stages are the first instance, the second instance and the review proceedings), and no concrete disadvantage needs to be proven.

To determine the amount of pecuniary compensation, the duration of the proceedings or stage of proceedings to be taken into account must first be determined. This can be calculated by deducting from the duration of the proceedings or stage of proceedings calculated in accordance with the law the periods of time that are to be disregarded in accordance with the law. The period calculated in this way is subject to the payment of financial compensation if it exceeds the reasonable period laid down by law. In general, the duration of the entire court proceedings is considered reasonable if it does not exceed sixty months. The duration of the procedural stages is deemed reasonable if the duration of the proceedings at first instance does not exceed thirty months (or thirty-six months if the proceedings are initiated by an order for payment procedure), the duration of the proceedings at second instance eighteen months, and the duration of the review proceedings twelve months.

For some actions (personal status, maintenance of a minor child, press vindication and employment) shorter time limits apply. In these cases, the duration of the entire court proceedings is considered reasonable if it does not exceed thirty-six months. The amount of the pecuniary compensation is the multiplication of the duration of the procedure (procedural stage) to be taken into account by four hundred forints per day.

As of August 19th of 2025 according to Section 147/A of the Act CXXX of 2016 on the Code of Civil Procedure in case the time limit is overrun, the parties are entitled ex officio to monetary compensations, starting from the day after the time limit is overrun. The daily amount of monetary compensation is the 1,5 percent of the minimum wage (valid on the day of delay) and the courts are obligated to pay the monetary compensation for the entire duration of the time limit overrun.

Non-execution of Court Decisions (Civil Proceedings)

First of all, it should be noted that the fulfilment of judgments in civil proceedings is essentially voluntary. Consequently, if the unsuccessful party fails to fulfil the judgment voluntarily within a prescribed period of time, the successful party has the possibility to initiate enforcement proceedings. The costs of the enforcement procedure is borne by the unsuccessful party. According to the Hungarian laws in the case of a payment delay, the debtor is liable to pay interest for late payment from the date of the delay. It is important to note that this is not compensation, i.e. it is

not necessary that the successful party suffers damages as a result of late payment.

Criminal Proceedings

Act XC of 2017 on Criminal Procedure (hereinafter: Be.) arranges in Chapter CVIII of its own right compensation in the case of unjustly limited and abstract leave. Compensation shall be payable for unlawful arrest, prior forced medical treatment and criminal supervision in which the defendant was required not to leave an apartment, other premises, institution or enclosed place without authorisation, and for detention ordered prior to the order of the accused person. In addition, compensation shall be granted to the accused person for imprisonment, imprisonment, education at a juvenile institution or forced treatment carried out on the basis of a final judgment, if he was subsequently acquitted as a result of an extraordinary remedy, the proceedings were terminated or a lesser penalty was imposed on him.

The length of the criminal proceedings does not in itself constitute a ground for compensation, but the court may consider it as an attenuating circumstance when imposing the penalty, and then the Be. In accordance with Paragraph 562(1), the grounds of the court’s decision must state this.

Q037 (2023): Civil Proceedings

Excessive Length of Proceedings (Civil Proceedings)

According to the Hungarian civil procedural law there is a compensation for breach of the reasonable time requirement. Financial compensation is only available to the party who participated in the proceedings complained of, regardless of whether he or she was the successful or unsuccessful party. It is granted if the reasonable period of time specified by law is exceeded during the proceedings or a specific stage of the proceedings (according to the Hungarian laws, such stages are the first instance, the second instance and the review proceedings), and no concrete disadvantage needs to be proven.

To determine the amount of pecuniary compensation, the duration of the proceedings or stage of proceedings to be taken into account must first be determined. This can be calculated by deducting from the duration of the proceedings or stage of proceedings calculated in accordance with the law the periods of time that are to be disregarded in accordance with the law. The period calculated in this way is subject to the payment of financial compensation if it exceeds the reasonable period laid down by law. In general, the duration of the entire court proceedings is considered reasonable if it does not exceed sixty months. The duration of the procedural stages is deemed reasonable if the duration of the proceedings at first instance does not exceed thirty months (or thirty-six months if the proceedings are initiated by an order for payment procedure), the duration of the proceedings at second instance eighteen months, and the duration of the review proceedings twelve months.

For some actions (personal status, maintenance of a minor child, press vindication and employment) shorter time limits apply. In these cases, the duration of the entire court proceedings is considered reasonable if it does not exceed thirty-six months. The amount of the pecuniary compensation is the multiplication of the duration of the procedure (procedural stage) to be taken into account by four hundred forints per day.

Non-execution of Court Decisions (Civil Proceedings)

First of all, it should be noted that the fulfilment of judgments in civil proceedings is essentially voluntary. Consequently, if the unsuccessful party fails to fulfil the judgment voluntarily within a prescribed period of time, the successful party has the possibility to initiate enforcement proceedings. The costs of the enforcement procedure is borne by the unsuccessful party. According to the Hungarian laws in the case of a payment delay, the debtor is liable to pay interest for late payment from the date of the delay. It is important to note that this is not compensation, i.e. it is not necessary that the successful party suffers damages as a result of late payment.

Criminal Proceedings

Act XC of 2017 on Criminal Proceedings (hereinafter: Be.) regulates the recompense in case of unjustly limited and deprived liberty in a separate Chapter (Chapter CVIII – Recompense for unfounded restriction of freedom). Recompense shall be provided for any pre-trial detention, preliminary compulsory psychiatric treatment, criminal supervision during which, as prescribed by the court, the defendant was not allowed to leave a home, other premises, an institute or a fenced area of it without permission, or custody ordered before ordering any of the above. Recompense shall also be provided for any imprisonment, confinement, special education in a juvenile correctional institution, or compulsory psychiatric treatment enforced on the basis of a final and b

inding judgment, provided that a court, as a result of extraordinary legal remedy acquitted the defendant with final and binding effect; imposed a less detrimental penalty on the defendant; terminated the proceeding against the defendant with a final and binding conclusive order. Protraction of the criminal proceedings does not in itself constitute a ground for recompense, but the court may take it into account as a mitigating circumstance when imposing the sentence. In this case, pursuant to Section 562 (1) of Be., a reference to this fact shall be included in the short statement of reasons for the decision.

In 2022, Act XCIV of 2021 on the enforcement of financial compensation related to the delay of civil litigation entered into force. The above data shows the results of the proceedings initiated under the new legislation.

Q037 (2022): As regards private law, we highlight the possibility to enforce claims based on Act XCIV of 2021 on the Enforcement of Property Compensation for Delay in Civil Proceedings.
The act defines the timeframe which may be regarded as reasonable and which is absolutely sufficient for the court to carry out the procedural steps necessary for a well-founded decision in the case.
As a general rule, the duration of court proceedings is considered reasonable if it does not exceed sixty months from the date of commencement of the proceedings at first instance to the date of notification of the final decision closing the proceedings. A claim may also be brought in the event of a delay in the procedure phase. The duration of the procedural phase is considered reasonable if, for example, the duration of procedural phase at first instance does not exceed thirty months, the duration of procedural phase at second instance does not exceed eighteen months, and the duration of the review proceedings does not exceed twelve months. A shorter objective timeframe is set for specific cases that need to be dealt with quickly such as cases related to personal status, child support and employment. However, depending on the circumstances of a given case, the court seised may, at its judicial discretion, set a shorter timeframe as reasonable. A claim for compensation may be brought in relation to both pending and concluded cases if either the duration of the entire proceedings or a procedural phase exceeds the reasonable timeframe defined by law.
If the duration of the court proceedings or procedural phase exceeds the timeframe considered reasonable, the party may claim monetary compensation from the court conducting the delayed proceedings at the rate set by government decree (HUF 400,- per day). The compensation awarded is in proportion to the duration of the court proceedings. [see also the Government Decree 372/2021 (VI. 30.) on the amount of property compensation for delay in civil proceedings and the rules for calculating the amount to be paid.]
Concerning criminal law, we would add that in case of an unlawful arrest, imprisonment, confinement, placement in a juvenile correctional institution or compulsory psychiatric treatment, a recompensation procedure as included in the Criminal Procedural Act, may be initiated. The person entitled to compensation may choose to enter into an agreement with the Ministry of Justice in a simplified procedure, in the framework of which a settlement is reached on the amount of the compensation, or to file a lawsuit and the court will decide on the amount of the compensation.
In case of an agreement in the simplified compensation procedure, the compensation is adjusted to the number of days of unlawful deprivation of liberty, the amount per day is seven thousand forints (in the case of criminal supervision, the amount per day of compensation is three thousand five hundred forints).

Q037 (2020): There is no national level database containing the data for the question.

Italy

Q037 (2021): The number of condemnations is higher than the number of requests because the former refers to condemnations in year 2021 and some of them were initiated in previous years.

Latvia

Q037 (General Comment): In Latvia, there is no compensation in the category “Non-execution of court decisions”. In civil proceedings it is possible for individuals in Latvia to bring an action against the State for damages caused by the malfunctioning, or abnormal functioning, of the justice system (for example in case of excessive length of proceedings). The basis for bringing such an action is Article 92 of the Constitution of Latvia, which states that "Everyone, where his or her rights are violated without basis, has a right to commensurate compensation."

Q037 (2024): Number of requests for compensation - received at the Ministry of Justice (no data about requests received at prosecutor's office and the State Police). Number of compensations granted - the compensation shall be disbursed by the Ministry of Justice accordance also with the decisions of the prosecutor's office and the State Police on the compensation from the State basic budget resources intended for such purpose.
The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037. The Ministry of Justice informs that the total amount of compensation in 2024 consists of non-pecuniary damages 56 392,77 euros, damages 46 390,78 euros, state social insurance contributions 2433,94 euros and personal income tax compensation 983,06 euros. The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2024 was 46 euros ((700 euros : 30 = 23 euros); 23 euro x 2 x 1 day = 46 euros).

Q037 (2023): Number of requests for compensation - received at the Ministry of Justice (no data about requests received at prosecutor's office). Number of compensations granted - the compensation shall be disbursed by the Ministry of Justice accordance also with the decision of the prosecutor's office on the compensation from the State basic budget resources intended for such purpose.
The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2023 consists of non-pecuniary damages 23 738 euros, damages 43 081,76 euros, state social insurance contributions 6032,35 euros and personal income tax compensation 3515,59 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2023 was 40 euros ((620 euros : 30 = 20,66 euros); 20 euro x 2 x 1 day = 40 euros).

Q037 (2022): Number of requests for compensation - received at the Ministry of Justice (no data about requests received at prosecutor's office).
The Ministry of Justice informs that the total amount of compensation in 2022 consists of non-pecuniary damages 62147.40 euros, damages 35 699.71 euros, state social insurance contributions 4 776.49 euros and personal income tax compensation 1 912.68 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2021 was 32 euros ((500 euros : 30 = 16,66 euros); 16 euro x 2 x 1 day = 32 euros).

Q037 (2021): The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2021 consists of non-pecuniary damages 75350 euros, damages 18708,39 euros, state social insurance contributions 2053,21 euros and personal income tax compensation 1100,40 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2021 was 32 euros ((500 euros : 30 = 16,66 euros); 16 euro x 2 x 1 day = 32 euros).

Q037 (2020): The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2020 consists of non-pecuniary damages 69 889,70 euros, damages 31 471,31 euros, state social insurance contributions 1867,12 euros and personal income tax compensation 820,09 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2020 was 28 euros ((430 euros : 30 = 14,33 euros); 14 euro x 2 x 1 day = 28 euros).
In Latvia, there is no compensation in the categories “Non-execution of court decisions” and “Number of condemnations”.

Lithuania

Q037 (2023): We cannot indicate any specific reasons why the number of requests for compensation for damage out of court has significantly decreased. We also observe a consistent decrease in the number of persons applying to court for compensation for damage caused by unlawful actions of the state. We can perhaps attribute such a general trend to the fact that state institutions and officials make fewer mistakes that cause harm to individuals.
From 2022-06-30, the legal regulation was changed, the amounts of damage that we compensate outside the court procedure were increased (property - no more than 10 thousand, non-property - no more than 5 thousand). However, the predictions that the number of requests would increase did not come true. Since the number of cases in courts is not increasing, it can be concluded that the institutions adhere to the human rights standard and try not to perform such actions that would be considered unlawful and cause harm (particularly positive changes are seen in criminal proceedings and in the execution of sentences).

Q037 (2020): Total - compensation for damage caused by public authorities + compensation for damage caused by public prosecutors and courts;
Other - compensation for damage caused by public authorities;

Luxembourg

Q037 (General Comment): The law of 1st September 1988 concerning the civil liability of the State and public authorities permits the State to be held civilly liable before ordinary courts when a litigant alleges harm resulting from the defective functioning of judicial bodies. Examples of such dysfunction include excessive length of proceedings or a conviction stemming from judicial malpractice, which could form the basis of a claim. These complaints are typically brought before courts of first instance.

Additionally, complaints about the excessive length of proceedings may also be pursued before the European Court of Human Rights (for violations of Article 6 of the European Convention on Human Rights) or could result in procedural sanctions during ongoing proceedings. However, the latter do not appear within the scope of our national systems. The involvement of various actors complicates the identification and categorisation of claims and compensation decisions, making it challenging to provide data that accurately reflects the broader situation.

Nevertheless, we have been able to compile data on compensation for wrongful arrest/detention as regulated by the law of 30 December 1981 on compensation for inoperative pre-trial detention. Available figures pertain to requests for compensation and decisions granting such compensation in cases of inoperative preventive detention (IPD)(https://mj.gouvernement.lu/fr/service-citoyens/detention-preventive.html), as well as the total amounts disbursed. It should be noted that, under the provisions of the law of 30 December 1981, the decisions are of administrative nature, rather than convictions.

Q037 (2024): Wrongful convictions: This category includes applications for review submitted to the Court of Cassation. In 2024, two applications for review were filed, one of which was dismissed. In the case where the review was granted, compensation of 5000€ was awarded.
Q037 (2023): Wrongful convictions: This item includes applications for review lodged with the Cour de cassation. In 2023, no requests for compensation were lodged with the Court of Cassation and consequently, there were no compensations granted.

Q037 (2021): The law of 1 September 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person considers that he or she has been victim of a defective functioning of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before first instance courts. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the European Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last procedural steps do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for wrongful arrest, provided for by the law of 30 December 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of 30 December 1981, it is not appropriate to speak of convictions, but of administrative decisions that can be appealed before the administrative courts.

Q037 (2020): The law of September 1, 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person believes that he or she has been the victim of a defective operation of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before the courts of first instance. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last approaches do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for unjustified arrest, provided for by the law of December 30, 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of December 30, 1981, it is not appropriate to speak of convictions, but of administrative decisions.

Malta

Q037 (General Comment): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention.
However no data is available.

Q037 (2024): Anyone who has experienced an injustice can seek redress in the Courts of Justice. The Laws of Malta provide for compensation in cases of wrongful conviction and unlawful detention (Chapter 319 of the Laws of Malta), while S.L. 9.12 of the Criminal Code establishes a compensation system for victims of crime. However, data on these cases is not currently available.

Q037 (2022): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention.
However no data is available.

Q037 (2021): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention. For the purpose of the evaluation, 'unlawful detention' falls under the category 'Wrongful arrest' even if the difference between the two is being acknowledged. For both categories, no data is available.

Q037 (2020): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention.
However no data is available.

Netherlands

Q037 (General Comment): There are compensation regulations for certain situations (see 4th Book, Title VIa of the Penal Code). If an offender is acquitted, he/she may request compensation for travel- and accommodation costs, the costs of a lawyer, or because of being held in temporary custody.
Numbers cannot be provided for most categories, as compensation may involve people who were held in custody but were either not accused or not found guilty, damages due to an arrest, or possessed goods that have been damaged, sold, destroyed or gone missing.

Q037 (2024): Under Article 533 Sv, a suspect who is not convicted or whose case is dismissed may be compensated for damages suffered as a result of undergoing (pre-trial) detention or clinical observation.

Q037 (2023): Under Article 533 Sv, a suspect who is not convicted or whose case is dismissed may be compensated for damages suffered as a result of undergoing (pre-trial) detention or clinical observation.

Q037 (2022): There are compensation regulations for certain situations (see 4th Book, Title VIa of the Penal Code). If an offender is acquitted, he/she may request compensation for travel- and accommodation costs, the costs of a lawyer, or because of being held in temporary custody.

Poland

Q037 (General Comment): The rules for granting a sum of money in case of finding excessive length of proceedings are specified in the Act of 17 June 2004 on complaints of violation of the right of a party to hear a case in preparatory proceedings conducted or supervised by a prosecutor and court proceedings without unreasonable delay. According to art. 12 para. 4 of this Act, having regard to the complaint on (excessive), the court adjudicates from the Treasury, and in the case of complaints about the length of the proceedings conducted by the bailiff - from the bailiff, a sum of PLN 2,000 to PLN 20,000. The amount of the monetary sum, within the limits specified in the first sentence, is not less than PLN 500 for each year of the current duration of the proceedings, regardless of the number of stages of proceedings related to the excessive length of proceedings. The court may award a sum of money higher than PLN 500 for each year of the current duration of the proceedings, if the case is of particular importance to the applicant, who by his attitude did not contribute in a manner to prolonging the proceedings. This sum includes the amounts already awarded 16 to the applicant as a sum of money in the same case. No monetary sum is granted in the event of a complaint filed by the State Treasury or public sector units of the public finance sector.
The accused, who was acquitted or condemned to a more lenient punishment as a result of the resumption of the proceedings or cassation, serves the State Treasury for damages and compensation for the harm suffered resulting from the execution of all or part of the punishment he was not supposed to incur. This provision shall also apply if the proceedings were discontinued after the convicting decision was abrogated as a result of circumstances which were not taken into account in the earlier proceedings. The right to compensation and redress also arises in connection with the application of a safeguard measure under the conditions laid down in those circumstances. Compensation and redress also apply in the event of undoubtedly unjustified detention or detention (Article 552 of the Code of Criminal Procedure).

Q037 (2024): The data below presents the amounts of compensation paid in 2024 from chapter 75595, which were awarded against the State Treasury, indicating the specific legal acts on the basis of which the compensation was awarded.
Specification of compensation from chapter 75595 amounts paid in 2024:
1. Act of February 23, 1991, on the invalidation of judgments issued against persons repressed for activities in favor of the independent existence of the Polish State 193 733 000 (PLN) 45 339 000(EUR)
2. Article 552 of the Act of June 6, 1997 - Code of Criminal Procedure 21 368 000 (PLN) 5 001 000(EUR)
3. Act of June 17, 2004, on complaints against violations of the right of a party to have their case heard in preparatory proceedings conducted or supervised by a prosecutor and in court proceedings without undue delay 6 581 000(PLN) 1 540 000 (EUR)
4. Other compensation: including compensation pensions, compensation for property damage, unlawful eviction 658 000 (PLN) 154 000 (EUR)
5. Act of July 7, 2005, on state compensation for victims of certain prohibited acts 224 000 PLN 52 000 EUR;
Total compensation from chapter 75595 222 564 000 (PLN) 52 086 000 PLN
The amount of funds spent on compensation payments to eligible persons results directly from the content of judgments of independent courts deciding on the validity of claims and the amount of compensation awarded. The implementation of the expenditure plan in chapter 75595 during the fiscal year is therefore independent of the actions of the financial services of individual courts, as the payment of funds by the court's financial department is based solely on a final court ruling on the payment of compensation to the eligible person.

Q037 (2022): *246 - number of persons
11 - number of persons
Q037 (2021): *272- number of persons; *12 - number of persons
The amounts of compensations from chapter 75595 paid in 2021 ordered from the State Treasury are presented below, together with an indication of the legal acts on the basis of which the compensations were ordered.
Specification of damages from chapter 75595 amounts paid in 2021
1. Act of 23 February 1991 on declaring invalid judgments issued against persons repressed for activities in favour of the independent existence of the Polish state = EUR 21,625
2 Article 552 of the Act of 6 June 1997 - Code of Criminal Procedure = €6,707; 3 Act of 17 June 2004 on Complaint for Infringement of the Right of a Party to Investigate a Case in Pre-trial Proceedings Conducted or Supervised by a Public Prosecutor and in Judicial Proceedings without Undue Delay € 1,188
4 other damages: inter alia, compensatory pensions, compensation for property damage, unlawful eviction € 324
5 Act of 7 July 2005 on State compensation to victims of certain criminal acts 71 euro
Total compensation in chapter 75595 137 590 pln 29 915 euro
The amount of funds spent on the payment of compensation to entitled persons results directly from the content of judgments of independent courts deciding on the legitimacy of claims and the amount of compensation awarded. Course of implementation of the expenditure plan in chapter 75595 in the course of the financial year is therefore independent of the activities of the financial services of individual courts, since the payment of funds by the financial branch of the court occurs only on the basis of a final court ruling on the payment of compensation to the entitled person.

Q037 (2020): *229 - numer of persons
*19 - numer of persons
Regarding the content of question 37, we would like to inform you that the Ministry of Justice , within its jurisdiction has the following data on the amount of compensation payments also from Section 15 of the State Budget, Chapter 75595, adjudged by the State Treasury in 2020
Specification of compensation from Chapter 75595 in 2020 in euro: 1.On the basis of the Act of 23 February 1991 on the recognition of invalid rulings issued against persons repressed for activities for the benefit of the independent state of Poland - EUR 13 123 0002. On the basis of Article 552 of the Act of 6 June 1997 Code of Criminal Procedure (Journal of Laws of 2018, item 1987) 4 552 000 euros3. pursuant to the Act of 17 June 2004 on a complaint for violation of a party's right to examine a case in preparatory proceedings conducted or supervised by a prosecutor and court proceedings without undue delay (Journal of Laws of 2018, item 75) EUR 1 005 0004. other compensations: inter alia, compensatory pensions, compensation in property damage, unlawful eviction 114 000 euro
5. under the Act of 7 July 2005 on State Compensation to victims of certain criminal acts 32 000 euro
Total compensations from chapter 75595 - 18 826 000 euro
The amount of funds spent on compensation payments to entitled persons results directly from the content of judgments of independent courts deciding on the legitimacy of claims and the amount of awarded compensation. The course of implementation of the expenditure plan in chapter 75595 during the budget year is therefore independent of the actions of the financial services of individual courts, because the payment of funds by the financial branch of the court, occurs only on the basis of a final court decision to pay compensation to the entitled person.

Portugal

Q037 (General Comment): There is no data with these levels of disaggregation in Portugal, we can only offer the total amount of the compensation.
The right to compensation in the cases listed is provided for in Law no. 67/2007 of December 31, which establishes the regime of non-contractual civil liability of the State and other Public Entities, specifically providing for an autonomous regime of State liability for damages arising from the exercise of the judicial function (chapter III, arts. 12 to 14).
In particular, with regard to Wrongful arrest/detention, it is important to mention article 225 and 226 of the Criminal Procedure Code, which provide for the right to compensation for illegal or unjustified deprivation of liberty by establishing a special regime. These articles also give effect to Article 27(5) CRP, which states that "Deprivation of liberty contrary to the provisions of the Constitution and the law shall constitute the State's duty to compensate the injured party under the terms established by law".

Q037 (2024): The total amount paid includes compensation in cases of the European Court of Human Rights and compensations set by national courts in cases within the responsibility of the Ministry of Justice .
Compared to previous cycles, this year it was found that the data (Total amount of compensations granted) was available in other entity of the Ministry of Justice (The Secretary General of the Ministry of Justice).
Q037 (2022): The right to compensation in the cases listed is provided for in Law no. 67/2007 of December 31, which establishes the regime of non-contractual civil liability of the State and other Public Entities, specifically providing for an autonomous regime of State liability for damages arising from the exercise of the judicial function (chapter III, arts. 12 to 14).
In particular, with regard to Wrongful arrest/detention, it is important to mention article 225 and 226 of the Criminal Procedure Code, which provide for the right to compensation for illegal or unjustified deprivation of liberty by establishing a special regime. These articles also give effect to Article 27(5) CRP, which states that "Deprivation of liberty contrary to the provisions of the Constitution and the law shall constitute the State's duty to compensate the injured party under the terms established by law".

Romania

Q037 (General Comment): There is no mechanism for calculating the compensation. The courts take into consideration the national case law and the jurisprudence of the European Court of Human Rights in similar cases.
Even if the civil regulations of material and procedural law do not provide special mechanisms for the compensation of individuals in case of excessive duration of procedures and non-enforcement of judgments, there are norms guaranteeing the right to a fair trial and at case settlement within a reasonable time-limit. In such circumstances, there is a possibility to pay certain sums of money as fines or even as a compensation. In criminal matters, the only possibility to obtain damages in case of procedural delays is the civil claim for damages, based on the provisions of the Civil Code. The Civil Procedure Code (the Law 134/2010) provides for a much more efficient mechanism to this effect, respectively the contestation concerning the protraction of the case settlement. Thus, according to Article 522 para. (1) of the CPC, any party, as well as the prosecutor attending the trial may make contestation by which, invoking the infringement of the right to the settlement of the trial within an optimal and reasonable time-limit, he/she solicits the adoption of legal measures remedying to this situation. Please, refer to the regulations of the CPC as concerns the guarantee of the right to a fair trial and a case settlement within a reasonable time-limit.
The non-observance of judgments is incriminated as offence by Art. 287 of the Criminal Code. Within the criminal trial there may be also formulated the civil claim for damages for the non-enforcement of the judgment. The civil action may be also introduced separately, at the civil court. Both actions shall be judged according to the provisions of the Civil Code, regulating the delictual civil responsibility.
Illegal arrest and illegal conviction are situations circumscribed to judicial errors for which the Romanian state is responsible according to Art. 538-539 and the following of the Criminal Procedure Code (the Law 135/2010). For the appreciation in substance of the civil responsibility, common law rules laid down by the Civil Code apply. According to the provisions of the art. 538 of the Criminal Procedure Code, any person who suffered a wrongful condemnation or was, during a criminal trial, illegally deprived of his/her liberty is entitled to receive a compensation. The compensation should cover both the material and moral prejudices caused to that person. The amount of the compensation is to be determined by the court (the tribunal) in whose district the entitled person has its domicile. The entitled person should introduce a civil action against the state (which is represented by the Ministry of Public Finances), action which is exempted of any judicial fees.
Regarding the excessive duration of the criminal procedures, there is a remedy, but it is not compensatory - see art. 488 (index1) and the following of the Criminal Procedure Code. Law no. 201/2023 introduced a new article in the Criminal Procedure Code (the Law 135/2010) art. 359/1, stating the right to compensation for damage in the case of technical surveillance measures or activities specific to the collection of information illegally arranged (1) The person against whom he was ordered, confirmed, extended or illegally enforced a technical surveillance measure is entitled to compensation for the damage caused by this measure.

Q037 (2020): There is no mechanism for calculating the compensation. The courts take into consideration the national case law and the jurisprudence of the European Court of Human Rights in similar cases.
Even if the civil regulations of material and procedural law do not provide special mechanisms for the compensation of individuals in case of excessive duration of procedures and non-enforcement of judgments, there are norms guaranteeing the right to a fair trial and at case settlement within a reasonable time-limit. In such circumstances, there is a possibility to pay certain sums of money as fines or even as a compensation. In criminal matters, the only possibility to obtain damages in case of procedural delays is the civil claim for damages, based on the provisions of the Civil Code. The new Civil Procedure Code (the Law 134/2010) provides for a much more efficient mechanism to this effect, respectively the contestation concerning the protraction of the case settlement. Thus, according to Article 522 para. (1) of the NCPC, any party, as well as the prosecutor attending the trial may make contestation by which, invoking the infringement of the right to the settlement of the trial within an optimal and reasonable time-limit, he/she solicits the adoption of legal measures remedying to this situation. Please, refer to the regulations of the NCPC as concerns the guarantee of the right to a fair trial and a case settlement within a reasonable time-limit.
The non-observance of judgments is incriminated as offence by Art. 287 of the Criminal Code. Within the criminal trial there may be also formulated the civil claim for damages for the non-enforcement of the judgment. The civil action may be also introduced separately, at the civil court. Both actions shall be judged according to the provisions of the Civil Code, regulating the delictual civil responsibility.
Illegal arrest and illegal conviction are situations circumscribed to judicial errors for which the Romanian state is responsible according to Art. 538-539 and the following of the Criminal Procedure Code (the Law 135/2010). For the appreciation in substance of the civil responsibility, common law rules laid down by the Civil Code apply. According to the provisions of the art. 538 of the Criminal Procedure Code, any person who suffered a wrongful condemnation or was, during a criminal trial, illegally deprived of his/her liberty is entitled to receive a compensation. The compensation should cover both the material and moral prejudices caused to that person. The amount of the compensation is to be determined by the court (the tribunal) in whose district the entitled person has its domicile. The entitled person should introduce a civil action against the state (which is represented by the Ministry of Public Finances), action which is exempted of any judicial fees.
Regarding the excessive duration of the criminal procedures, there is a remedy, but it is not compensatory - see art. 488 (index1) and the following of the Criminal Procedure Code.

Slovak Republic

Q037 (General Comment): The compensations for the excessive length of proceedings can be awarded by the Constitutional court in the finding on violation of the right to trial in the reasonable time. The compensation for wrongful arrest or conviction, non-execution of court decisions can be awarded by the court in the civil procedure. The aggrieved person can seek compensation against the state according to the Act on State Liability for Damage in Exercise of the Public Power.

Q037 (2022): The data are not collected in this structure in our judicial system.

Slovenia

Q037 (General Comment): The Protection of Right to Trial without Undue Delay Act gives a party to court proceedings the right to have his rights, duties and any charges brought against him in his case before the court to be decided upon by the court without undue delay, as well as a right to compensation, if the aforementioned right was infringed.
The procedure for compensation in the case of wrongful arrest and wrongful condemnation is regulated by the Criminal Procedure Act.
The compensation, offered by the State Attorney’s Office for wrongful arrest varies from case to case, since circumstances of the individual case (e.g. length of wrongful arrest, effect on the injured person's family life and his closest social circle, effects of media exposure, effect to injured person's health, etc.), as well as court decisions in similar cases, are taken into account.
The State Attorney's Office has its own budget to pay compensation in preliminary procedures. If a case goes to court, it usually becomes a long and complex process. Once the case is in court, compensation based on judgments or settlements is paid by the Ministry of Finance. To reach a court settlement, the State Attorney's Office must first get the Ministry’s approval.

Q037 (2024): The figures above represent cases, opened or closed in 2024, with compensations to be paid in 2024 or later. The figures above represent only cases in courts and court settlements.
Wrongful conviction: Out of 4 court cases, 3 ended in court settlement. Wrongful arrest: Out of 17 court cases, 9 ended in court settlement. The number of court settlements indicates that the State Attorney plays an effective role in resolving disputes peacefully. Even when it isn't possible to agree on the amount of compensation during the preliminary procedure, settlements are often reached later in court—usually after some evidence has already been presented and the facts in the court process are clear enough to justify a settlement.
Data for procedures at the State Attorney for 2024 (mandatory before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 30;
Number of settlements: 14;
Total amount (in €): 32.224,49;
Number of requests decreased significantly in 2024. In its 2024 Annual Report, the State Attorney concluded that the increased number of cases in 2022 and 2023 did not reflect a systemic problem of court backlogs or a violation of the parties' right to a trial without undue delay. 2. Wrongful arrest - Number of requests for compensation: 36;
Number of settlements: 17;
Total amount (in €): 99.309,34
3. Wrongful conviction - Number of requests for compensation: 10;
Number of settlements: 0;
Total amount (in €): 0.
Not all cases where a settlement wasn't reached in the preliminary procedure end up in court, because the State Attorney's Office often rejects compensation claims with strong arguments.

Q037 (2023): The figures above represent cases, opened or closed in 2023, with compensations to be paid in 2023 or later. The figures above represent only cases in courts and court settlements.
Data for procedures at the State Attorney for 2023 (mandatory before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 138;
Number of settlements: 23;
Total amount (in €): 47.546,80;
2. Wrongful arrest - Number of requests for compensation: 49;
Number of settlements: 19;
Total amount (in €): 104.281,60
3. Wrongful conviction - Number of requests for compensation: 6;
Number of settlements: 3;
Total amount (in €): 103.730,00.
The above data demonstrate the effective role of the State Attorney's Office in the peaceful resolution of disputes, as only cases in which the amount of appropriate compensation cannot be determined in the preliminary proceedings at the State Attorney's Office are brought to court.

Q037 (2022): The figures above represent cases, closed in 2022, with compensations to be paid in 2022 or later. The figures above represent cases before courts only.
Data for procedures at the State Attorney for 2022 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 5;
Number of settlements: 1;
Total amount (in €): 6.810;
2. Wrongful arrest - Number of requests for compensation: 35;
Number of settlements: 18;
Total amount (in €): 157.893
3. Wrongful conviction - Number of requests for compensation: 56;
Number of settlements: 23;
Total amount (in €): 42.209.

Q037 (2021): *The figures above represent cases, closed in 2021, with compensations to be paid in 2021 or later. The figures above represent cases before courts only (court decisions and court settlements).
Data for procedures at the State Attorney for 2021 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 33;
Number of settlements: 10;
Total amount (in €): 21.715 EUR;
2. Wrongful arrest - Number of requests for compensation: 32;
Number of settlements: 8;
Total amount (in €): 63.174 EUR;
3. Wrongful conviction - Number of requests for compensation: 5;
Number of settlements: 0;
Total amount (in €): 0.

Q037 (2020): *The figures above represent cases, closed in 2020, with compensations to be paid in 2020 or later. The figures above represent cases before courts only.
Data for procedures at the State Attorney for 2020 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 60;
Number of settlements: 10;
Total amount (in €): 23.222;
2. Wrongful arrest - Number of requests for compensation: 30;
Number of settlements: 8
Total amount (in €): 140.330
3. Wrongful conviction - Number of requests for compensation: 8;
Number of settlements: 1;
Total amount (in €): 1.260.

Spain

Q037 (General Comment): Spanish legislation recognizes the right to compensation from the State in two generic cases, judicial error and abnormal functioning of the Administration of Justice and in a specific case of judicial error relating to pre-trial detention followed by acquittal or dismissal for lack of evidence. Cases of intentional or negligent conduct by the injured party and cases of force majeure are exempted. The request for compensation shall be processed in accordance with the rules regulating state liability. In cases of dolo (wilful misconduct) or gross negligence by judges or magistrates, the injured party may not directly sue them but shall address their request to the Ministry of Justice. The right to claim compensation has one year limitation period (statutory time-limit). The General Administration of the State may demand reimbursement from the responsible party once the injured party has been compensated. This will require that the dolo (wilful misconduct) or gross negligence of the judge or magistrate has been expressly recognized by a judgment or resolution issued by the General Council of the Judiciary. Article 121 Spanish Constitution and articles 292 et seq, Organic Law of the Judiciary, of July 1, 1985.

Q037 (2024): The "Others" category corresponds to abnormal functioning of the Administration of Justice.

Q037 (2023): In the current cycle the data has been provided in disaggregated form (a breakdown for number of requests for compensation for wrongful arrest/detention, wrongful conviction and others) by the National Centre for Court Statistics.
Others category corresponds to abnormal functioning of the Administration of Justice.
The total amount of compensation fluctuates from year to year and corresponds to the amount recognised by the contentious-administrative jurisdiction.
648 cases of patrimonial liability were opened and 410 were resolved, of which 88 were upheld

Q037 (2021): In 2021, 368 files were initiated for abnormal functioning of the Administration of Justice, 205 for preventive detention, 83 for judicial error. € 802.735 were paid for administrative condemnations and € 1.486.968 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater
than the one proposed by the CEPEJ. SOURCE: La Justicia dato a dato, (document issued by the CGPJ)

Q037 (2020): In 2020, 320 files were initiated for abnormal functioning of the Administration of Justice, 62 for preventive detention, 223 for judicial error. € 124.367,5 were paid for administrative condemnations and €445.491,3 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater
than the one proposed by the CEPEJ. The answer tries to group the Spanish categories into those of the CEPEJ.

Indicator 5: Legal aid

Comments provided by the national correspondents

organised by question no.

Question 037. Is there a system of compensation in the following circumstances:

Question 037

Austria

Q037 (General Comment): : The Public Authority's Liability Act (Amtshaftungsgesetz) provides for liability of the state (and other legal entities) for misconduct of their employees in the exercise of public authority, including court proceedings and court decisions, causing damage to persons or property by excessive length of proceedings, wrongful arrest and/or wrongful condemnation. The liability presupposes both wrongfulness and fault. In the case of wrongful arrest or wrongful criminal condemnation, compensation can also be obtained according to the Penal Law's Compensation Act (Strafrechtliches Entschädigungsgesetz) without proving fault of the Authorities. The compensation procedure is laid down in para. 8 ff. Amtshaftungsgesetz and para. 9 ff. Strafrechtliches Entschädigungsgesetz. The injured person may demand – free of costs - of the legal entity against which the claim for damages is to be raised to forward her/him within a three months' term a written statement indicating as to whether it accepts or partially or totally rejects the claim for damages. If the claim is partially or totally rejected, the complaint can still be filed at court. The exclusive jurisidiction over the claim of the injured person against the legal entity rests in the first instance with the regional court (Landesgericht) in charge of civil matters in whose range of jurisdiction the infringement of law occurred. Compensation is funded by the Public Authority's general budget. The liability is unlimited, indemnity is to be paid in terms of money only. To make sure that compensation is paid following the concrete circumstances of each individual case, there is no such thing as a daily tariff or a flat compensation sum. The amount of compensation depends solely on the magnitude of damage suffered by the victim and the degree of fault attributable to the Public Authority. According to sec 67 CCP victims have the right to claim reimbursement for the damage caused by the criminal act or compensation for the impairment of their legally protected interests. The extent of the damage or the impairment has to be established ex officio as far as this can be done on the basis of the results of the criminal proceeding or with the help of additional simple investigations. If for the assessment of a bodily injury or damage to the health of a person an expert is appointed, he/she also has to be requested to establish the periods of pain.

Q037 (2024): The payments according to the Public Authority's Liability Act, European Convention on Human Rights and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act and the European Convention on Human Rights in the area of the courts were: € 524.788,14 and those according to the Penal Law's Compensation Act were € 434.686,04 in 2024. The decrease of payments of more than 20% compared to the previous year is due to the fact that those payments are based on decisions by independent courts, which cannot be controlled by the judicial administration and are subject to strong fluctuations.

Q037 (2023): The payments according to the Public Authority's Liability Act, European Convention on Human Rights and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act and the European Convention on Human Rights in the area of the courts were 1.004.651,63 Euro and those according to the Penal Law's Compensation Act were 532.659,80 Euro in 2023.
The increase in payments of more than 20% compared to the previous year is due to the fact that those payments are based on decisions by independent courts, which cannot be controlled by the judicial administration and are subject to strong fluctuations.

Q037 (2022): The payments according to the Public Authority's Liability Act, European Convention on Human Rights and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act and the European Convention on Human Rights in the area of the courts were 458.891,35 Euro and those according to the Penal Law's Compensation Act were 593.651,96 Euro in 2022.

Q037 (2021): The payments according to the Public Authority's Liability Act and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act were 714.676,17 Euro and those according to the Penal Law's Compensation Act were 574.038,47 Euro.

Q037 (2020): The payments according to the Public Authority's Liability Act and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act were 444.740,27 Euro and those according to the Penal Law's Compensation Act were 865.635,22 Euro.

Belgium

Q037 (General Comment): In Belgian law, the term « inoperative pre-trial detention" is used instead of "wrongful arrest".
Compensation through the civil liability procedure:
In Belgium, the State's liability for damages resulting from faults committed by the public prosecutor's office or judges falls under Article 1382 of the Civil Code according to which: "Any act whatsoever of a person which causes damage to another person obliges the person by whose fault it occurred to make reparation". The fault may consist of negligence according to the terms of article 1383 which provides that "everyone is responsible for the damage he/she causes not only by his/her own act but also by his/her negligence or imprudence". To obtain compensation, the plaintiff must prove the existence of a fault, damage and a causal link between the fault and the damage. According to the Constitutional Court (see Constitutional Court ruling of June 30th, 2014 (no. 99/2014)), a constitutionally correct interpretation of Article 1382 of the Civil Code implies that even if an erroneous decision is not repealed, modified, annulled, or revoked, the state can be held responsible for a serious mistake of a judge sitting at last instance. It is necessary that the mistake constitutes a sufficiently serious violation of the applicable rule of law and that, because of the limited appeal remedies available against the wrong decision, it is not possible to obtain the annulment of such decision. These claims are brought before civil courts.
Exceeding the reasonable time of proceedings should also be considered as a fault. However, article 21ter of the Criminal Procedure Code provides for that in case the right to be judged within a reasonable time is violated, courts can either inflict lower sentence than the legal minimum sentence, or simply pronounce guilty verdict without imposing punishment. With regard to the State's liability for unlawful detention, Article 27 of the Act of March 13, 1973, on compensation for ineffective pre-trial detention provides for a right to compensation for any person who has been deprived of their liberty in conditions incompatible with the provisions of Article 5 of the ECHR.
Reference should also be made to the Act of 13 March 1973 on compensation for inoperative pre-trial detention. Article 28 of this law provides for that "Any person who has been held in preventive detention for more than eight days without this detention or its continuation having been caused by his/her own conduct may claim compensation:
a) if he or she has been directly or indirectly exempted from liability by a judicial decision that has become res judicata;
b) if he/she has benefited from an order or a ruling of dismissal;
c) if he/she has been arrested or kept in detention after the public action has been extinguished by prescription;
The amount of such compensation shall be determined in equity, taking into account all the circumstances of public and private interest. If the person concerned is unable to bring an action for compensation before the ordinary courts, the compensation must be requested in writing to the Minister of Justice, who shall decide within six months. The compensation shall be granted by the Minister of Justice at the expense of the Treasury, if the conditions provided for in § 1 are met. If the compensation or the charge is refused, if the amount of the compensation or the number of days charged is deemed insufficient, or if the Minister of Justice has not taken a decision within six months of the request, the person concerned may apply to the Commission for Inoperative

Pre-trial Detention.

Q037 (2024): Number of cases still open (for inoperative pre-trial detention): 19.

Q037 (2023): Number of cases still open for (for inoperative pre-trial detention): 28

Q037 (2022): The number of ongoing cases (for ineffective pre-trial detention) stands at 29. Compensation has been granted in 13 cases.

Q037 (2021): For the item "wrongful arrest" (corresponding in Belgium to "inoperative preventive detention"): concerning the number of decisions taken, there were 20 decisions granting and 21 decisions refusing compensation (+ 39 pending cases), in total 80 applications. Only the 20 decisions granting compensation and the total number of applications are included in the table.

Bulgaria

Q037 (General Comment): In the Republic of Bulgaria, there are two mechanisms for indemnification for damages. 1)The proceedings under the State and Municipalities Liability for Damages Act (SMLDA) aim to determine the procedure and grounds for holding the state and municipalities liable and for citizens and legal entities to receive compensation in cases of damage suffered as a result of unlawful acts, actions or omissions of state or municipal authorities and officials in the course of or in connection with the performance of administrative activities. Article 2 of SMLDA also regulates the liability of human rights bodies, including the prosecution service, whereby the state is liable for damage caused to citizens by the investigating authorities, the prosecution service or the court in the following cases: detention, including all cases of deprivation of liberty in violation of Article 5, § 1 of the ECHR; violation of rights protected by Article 5, § 2 – 4 of the Convention; charges for a crime if the person is found not guilty or if the criminal proceedings are dropped or the act has been amnestied; imposition of a penalty under the Criminal Code or an administrative penalty where the person is acquitted or the administrative penalty is annulled; application by the court of an administrative measure where its decision is annulled as unlawful; enforcement of a penalty imposed in excess of the specified term or amount; unlawful use of special intelligence means; an established violation committed by a pre-trial body through the disclosure of investigation materials in violation of the presumption of innocence or in a public statement in which the accused is presented as guilty; established violation of the rights of third parties under Section IX of Chapter Fourteen of the Criminal Procedure Code. Claims under Article 2, paragraphs 1 and 2 shall be examined by the courts in accordance with the procedure established in the Civil Procedure Code. Article 2b of SMLDA regulates the liability of the judicial authorities for violation of the right to have a case examined and decided within a reasonable time, in accordance with Article 6, §1 of the Convention. The courts shall determine the amount of compensation to be awarded on an equitable basis.
2)The second legal indemnification mechanism is based on Chapter 3 “a” of the Judicial System Act that provides for the examination of applications by citizens and legal entities against acts, actions or omissions of the judicial authorities that violate their right to have their case examined and decided within a reasonable time.
Applications may be submitted by citizens and legal entities who are: parties to concluded civil, administrative and criminal proceedings; defendants, victims or aggrieved legal entities in terminated pre-trial proceedings. Compensation for concluded or terminated proceedings shall be determined and paid in accordance with the practice of the ECrHR in an amount not exceeding BGN 10,000.
Applications under paragraph 1 shall be submitted within six months of the conclusion of the relevant proceedings with a final act through the Inspectorate to the Supreme Judicial Council to the Minister of Justice. The Minister of Justice or a person authorised by him shall determine the amount of compensation (provided from the state budget) in accordance with the practice of the ECHR and shall propose the conclusion of an agreement with the applicant. The circumstances shall be verified and a decision on the application shall be taken within six months of its receipt. Compensation shall be paid on the ba

sis of the agreement concluded. Persons who have received compensation under this chapter may not seek compensation on the same grounds through the courts.
A separate register shall be created for applications, which shall be published on the website of the Inspectorate to the Supreme Judicial Council. The Prosecutor's Office shall not keep statistics on compensation awarded under this procedure in connection with the activities of the Prosecutor's Office.
No fee shall be payable for the examination of applications under this chapter.

Q037 (2024): The table above presents data from both mechanisms: 1)Claims brought against the Public Prosecutor's Office before the courts under the State and Municipalities Liability for Damages Act (SMLDA), as the amount of damages awarded by the courts in such claims. Column 1: the number of claims brought against the Public Prosecutor's Office under the SMLDA in 2024. Column 2: number of court decisions handed down in 2024 in respect of such claims (not yet final). Column 3: total amount of compensation awarded (in EUR) in court decisions handed down in 2024 under the SMLDA in claims against the prosecution service (not yet final). In 2024, the total amount of compensation under the SMLDA in claims against the prosecution based on enforcement orders (final court decisions) was €33,319.61 – all for wrongful conviction.
- “the numbers provided by the Prosecutor's Office also include the cases for damages against the investigative bodies. This probably also covers the police investigative bodies, which, although being part of the Ministry of Interior, investigate individual cases under the leadership of a prosecutor and in this area they are subordinate to him and are obliged to carry out his orders”.
-“As for cases against the courts under Art. 2 and 2b SMLDA, the data relating to civil proceedings cannot be differentiated within the larger data set, which is collected by the SJC and which covers all cases under this act”.
2)Ministry of Justice (Chapter Three "a" of the Judicial System Act: “Excessive length of proceedings”): number of requests for compensation:775; number of compensations granted:327; total amount of compensations granted (in €):524 954
It should be noted that for 2024, in contrast with the previous evaluation cycles, the category “excessive length of proceedings” contain data from both mechanisms: Number of requests for compensation:53 (first mechanism) +775 (second mechanism)=828; Number of compensations granted: 19(first mechanism) +327(second mechanism)=346; Total amount of compensations granted (in €): 189 230(first mechanism) +524 954 (second mechanism) = 714 184. Before, only data from the Ministry of Justice were communicated.

Q037 (2023): Prosecutor's Office of RB: In the Republic of Bulgaria, there are two mechanisms for indemnification for damages, in relation to the criminal proceedings.
The first mechanism is regulated in the Liability of the State and Municipalities for Damages Act. The state and the municipalities are liable for the damages caused to citizens and legal entities by unlawful deeds, acts or omissions of their authorities and officials in relation or with respect to the performance of an administrative activity, as well as for damages caused by the effect of secondary legislation revoked as being unlawful or declared null and void. Pursuant to Article 2 of this Act, the state is liable for damages caused to citizens by the investigation authorities, the prosecutor's office or the court in hypotheses determined in this text of the Act.
Statistics is not maintained in the Prosecutor's Office, in the form of the indicators in the table in the present questionnaire. The data for year 2023 about the obtaining of a damage award against the Prosecutor's Office under the Liability of the State and Municipalities for Damages Act is, as follows:
In 2023, the Prosecutor's Office lost suits filed by 292 persons under actions based on the legal grounds of Article 2 and Article 2b of the Liability of the State and Municipalities for Damages Act, as 281 court damage awards entered into force.
Out of the legally effective 281 damage awards, 146 are based on granted actions based on the legal grounds of Article 2, Paragraph 1, Subparagraph 3, Option 1 of the Liability of the State and Municipalities for Damages Act (legally effective acquittal), and 103 — based on the legal ground of Article 2, Paragraph 1, Subparagraph 3, Option 2 of the Liability of the State and Municipalities for Damages Act (legally effective writ for the termination of the criminal proceeding).
There are no legally effective court judgments based on the legal grounds of Article 2, Paragraph 1, Subparagraph 2 of the Liability of the State and Municipalities for Damages Act (violation of rights protected by Article 5, § 2-4 of the European Convention for the Protection of Human Rights and Fundamental Freedoms.)
On the grounds of Article 2, Paragraph 1, Subparagraph 1, Option 1 of the Liability of the State and Municipalities for Damages Act, 7 damage awards were issued (unlawful detention in custody), which are legally effective.
As regards actions based on the legal grounds of Article 2b of the Liability of the State and Municipalities for Damages Act (violation of the right to hearing of the case within a reasonable time, in accordance with Article 6, § 1 of the European Convention for the Protection of Human Rights and Fundamental Freedoms), 22 award damages were rendered and entered into legal force.
There are no actions brought on the legal grounds of Article 2, Paragraph 1, Subparagraph 1, last option of the Liability of the State and Municipalities for Damages Act (deprivation of liberty in violation of Article 5, § 1 of the European Convention for the Protection of Human Rights and Fundamental Freedoms). On the grounds of Article 2, Paragraph 1, Subparagraph 7 of the Liability of the State and Municipalities for Damages Act (unlawful use of Special Intelligence Means), 1 damage award is rendered, which is legally effective. Under Article 2, Paragraph 1, Subparagraph 6 of the Liability of the State and Municipalities for Damages Act (execution of an punishment imposed over and above the determined period or amount) 2 legally effective damage awards were rendered.
The total amount of the in

demnifications awarded under actions brought against the Prosecutor's Office in accordance with the procedure of the Liability of the State and Municipalities for Damages Act for year 2023 is BGN 2 824 095.16 (EUR 1 443 937).
The data contained in column 3 of the table is in EUR on the basis of the legally effective court judgments under the Liability of the State and Municipalities for Damages Act in year 2023 in cases pursued against the Prosecutor's Office. The Prosecutor's Office does not keep statistics in the form of the other indicators in the table in the questionnaire. The data is therefore presented as a text in the answer to question No.37.
The second legal indemnification mechanism is provided for in the Judicial System Act (Chapter Three "a" of the Judicial System Act — consideration of applications against a violation of the right to hearing and resolution of the case within a reasonable time.
This chapter governs the hearing of applications of citizens and legal entities against deeds, acts or omissions of the bodies of the Judiciary whereby their right to hearing and resolution of the case within a reasonable time is violated.
The applications are filed by citizens and legal entities, which are:
1.parties to completed civil, administrative and criminal proceedings;
2.accused, victims or damaged legal entities under terminated pre-trial proceedings.
This chapter also governs the determination and payment of an indemnification in accordance with the case-law of the European Court of Human Rights in the amount of no more than BGN 10 000.
The Minister of Justice is competent to make a decision, and the deadline for considering applications is 6 months.
The Procedural Representation before the ECHR Directorate of the Ministry of Justice: In 2023, under the Judicial System Act, Chapter Three "a", compensations were paid under 213 agreements in the amount of 311,320 euros /608,900 BGN/ total.

Q037 (2022): Prosecutor's Office of RB: In the Republic of Bulgaria, there are two mechanisms for compensation for damages in connection with criminal proceedings.
The first mechanism is regulated in the Law on the Liability of the State and Municipalities for Damages (LLSMD). The state and municipalities are responsible for the damages caused to citizens and legal entities by illegal acts, actions or inactions of their bodies and officials during or on the occasion of the performance of administrative activities, as well as for the damages caused by the action of canceled as illegal or declared as null and void by-laws. According to Art. 2 of this law, the state is responsible for the damages caused to citizens by the investigative bodies, the prosecutor's office or the court in the hypotheses specified in this text of the law.
The Prosecutor's Office does not keep statistics in the form of the indicators in the table in this questionnaire. The data for 2022 regarding the conviction of the Prosecutor's Office under LLSMD are as follows:
In 2022, the Prosecutor's Office was convicted by 255 persons on claims with a legal basis, Art. 2 and Art. 2b LLSMD, with 248 convictions entering into force.
Of the 248 convictions that entered into force, 134 were based on upheld claims with a legal basis, Art. 2, para. 1, item 3, item 1 LLSMD (acquittal entered into force), and 92 - with legal basis, Art. 2, para. 1, item 3, item 2 LLSMD (decree on termination of criminal proceedings entered into force).
2 court decisions were issued on the basis of Art. 2, para. 1, item 2 LLSMD (violation of rights protected by Art. 5, § 2-4 of the ECHR.)
Pursuant to Art. 2, para. 1, item 1, item 1 LLSMD, 2 convictions were rendered (illegal detention).
For claims with a legal basis, Art. 2b LLSMD (violation of the right to consider the case within a reasonable time, according to Art. 6, § 1 of the Criminal Procedure Code) 18 convictions were issued and entered into force.
There are no claims filed with a legal basis under Art. 2, para. 1, item 1, proposal last LLSMD (imprisonment, in violation of Art. 5, § 1 ECHR), under Art. 2, para. 1, item 7 of LLSMD (illegal use of Special Intelligence Means) and under Art. 2, para. 1, item 6 LLSMD (execution of an imposed penalty exceeding the specified term or amount).
The total amount of compensation awarded for claims brought against the Prosecutor's Office under the LLSMD procedure for 2022 is BGN 2,564,814.75 (EUR 1,311,369).
The second legal mechanism for compensation is regulated in the Law on the Judiciary (Chapter Three "a" Judiciary System Act- consideration of applications against violation of the right to consider and resolve the case within a reasonable time.
In accordance with the procedure of this chapter, applications of citizens and legal entities against acts, actions or inactions of the bodies of judicial power, which violate their right to consider and resolve the case within a reasonable time, are considered.
Applications are submitted by citizens and legal entities that are:
1. parties to closed civil, administrative and criminal proceedings;
2. accused, injured or damaged legal entities in terminated pre-trial proceedings.
In accordance with the procedure of this chapter, compensation is determined and paid in accordance with the practice of the European Court of Human Rights in the amount of no more than BGN 10,000.
Data on the implementation of the mechanism under Chapter Three "a" of the Judicial System Act are not collected in the Prosecutor's Office. The applications under para. 1 shall be submitted within 6

months from the completion of the relevant proceedings with a final act through the Inspectorate of the Supreme Judicial Council to the Minister of Justice.
Supreme Judicial Council: The Law on the Judiciary regulates an administrative procedure according to which citizens and legal entities can be compensated when their right to consider and resolve the case within a reasonable time is violated. Compensations are in the amount of no more than BGN 10,000. The Minister of Justice is competent to make a decision, and the deadline for considering applications is 6 months.
Ministry of Justice: Statistics on number of compensations granted for wrongful arrest include overall prosecution data on detention in custody and house arrest, but also for wrongful charges with subsequent acquittals and termination of proceedings, as well as violations of Art. 5, § 2 – 4 of the ECHR, since the numbers under the provision for seeking compensation for those are aggregate. Amount of compensation also includes compensations under another 18 court decisions for length of proceedings, but data cannot be disaggregated. No exact explanation can be given for any possible differences, because there is no data available on the calculation method or details on the proceedings. Statistics on excessive length of proceedings use data by the Procedural Representation before the ECHR Directorate of the Ministry of Justice on the review of applications for the domestic compensatory remedy for excessive length of proceedings under the Judicial System Act. Sums paid may include payments under applications from December of the previous year. No exact explanation can be given for differences in numbers of requests, or compensations given, as they are subject to complex criteria, based on ECtHR case-law.

Q037 (2021): Statistics on excessive length of proceedings use data by the Procedural Representation before the ECHR Directorate of the Ministry of Justice on the review of applications for the domestic compensatory remedy for an excessive length of proceedings under the Judicial System Act. Sums paid may include payments under applications from December of the previous year. Statistics on wrongful arrest include prosecution data (on detention in custody and house arrest, but also on wrongful charges, because the numbers on the provision for seeking compensation for those are aggregate) and on 24-hour police detention.

Croatia

Q037 (2024): Claims for compensation for unlawful detention and wrongful conviction shall be submitted to this Ministry, which is also competent to conduct the procedure for an amicable settlement. Should the claimant not accept the offer made by the Ministry, they are entitled to bring an action before the competent court.
The amount of compensation offered by the Ministry, as fair pecuniary reparation on this basis, is fixed at a uniform rate of EUR 37.16 per day of deprivation of liberty, applicable in all cases.
The amounts disbursed in 2024 relate to payments made pursuant to decisions adopted in amicable settlement proceedings, as well as to court judgments delivered in 2024 concerning cases initiated in previous years.

Q037 (2023): In our instance, the term "wrongful arrest/detention" in the chart refers to payment for an erroneous arrest and conviction.
To this Ministry, which is also in charge of peaceful processes, is presented the request for compensation for unwarranted arrest and conviction. The applicant has the option to file a complaint with the appropriate court if he rejects the Ministry's offer. On this basis, the Ministry provides the aggrieved parties with a unique sum of compensation—HRK 280.00 (€37.16) per day of deprivation of liberty—as a fair monetary settlement. Payments based on peaceful proceedings rulings and 2023 court judgments are included in the sum paid for 2023; these cases are from previous years.

Q037 (2022): The information in the table also refers to Wrongful arrest/detention and wrongful conviction.
The request for compensation for unfounded arrest and unjustified conviction is submitted to the Ministry of Justice and Administration, which is also responsible for peaceful proceedings. In case the applicant does not accept the offer of the Ministry of Justice and Administration, he has the right to file a complaint with the competent court.
The amount of compensation that the Ministry offers to the injured parties as a fair monetary compensation on this basis is unique in all cases and amounts to HRK 280.00 per day of deprivation of liberty. The amount paid for 2022 refers to payments based on decisions made in a peaceful procedure. The amount is expressed in kuna.

Q037 (2020): The data in the table refer to the compensation for unjustified arrest and unjustified conviction
An application for compensation for unjustified arrest and unjustified conviction shall be submitted to the Ministry of Justice and Public Administration. If the applicant does not accept the offer of the Ministry of Justice and Public Administration, he has a right to sue at the competent court.
The Ministry of Justice of the Administration issued a Decision on 19 November 2019, which established that the financial compensation in the mediation procedure amounts to HRK 280.00 for each day of imprisonment for unfounded arrest or unjustified conviction. Therefore, there was an increase in the amount of compensation and a greater number of acceptance of bids, and for that reason there was a greater number of resolved cases.
The amount paid for 2020 refers to payments based on decisions rendered in amicable procedure and court judgments, cases and from previous years in which the payment was made in 2020.
For excessive length of proceedings, the compensation can not exceed 35.000 Croatian kunas (cca 4.600 EUR) per case.

Czech Republic

Q037 (2024): Number of requests for compensation: 2 710 in the pre-court phase, 1 216 court cases.
Number of compensations granted: in 1 673 cases compensation was granted at least partially by the ministry, in 711 cases compensation was granted by the court (28 fully and 683 partially).
Other - it can be any other malpractice of the court, public prosecution, executor or notary.
in 2023 we reported the number of cases that we ourselves classify statistically as “other,” but in the current table, “other” also includes compensation for harm/damage caused by criminal prosecution. If we read what the table means by the row “other” (wrongful criminal proceedings…), I understood it as their intention to separate data on compensation for unjustified criminal prosecution (in our system, this issue is more complex due to case law, because we have absolute objective liability of the state—as the only country in Europe, together with Slovakia—and the state is liable, based on a legal fiction of unlawfulness, even for criminal prosecutions that were procedurally correct but did not end with a conviction).

Q037 (2023): Number of requests for compensation: 2 631 in the pre-court phase, 1 880 court cases.
Number of compensations granted: in 1 472 cases compensation was granted at least partially by the ministry, in 610 cases compensation was granted by the court.
Other - it can be any other malpractice of the court, public prosecution, executor or notary.

Q037 (2021): There were 5 356 requests for compensation in 2021, from this number 3 045 requests filed to the Ministry of Justice and 2 311 reguests filed to the courts. In 2 490 cases in total was the applicant successful, either fully or partially. 9 617 860 Euro in total was paid.

Denmark

Q037 (2024): The numbers in table 37 are based on data from Platina, which is a case management system used by The Danish Prosecution System. Data in table 37 has been created outside the standard data model. Specifically developed data models are tested, but still associated with a higher risk of unidentified errors compared to the standard model. Thus, the data in table 37 is associated with considerable uncertainty. The number of cases with a request for compensation corresponds to the number of distinct case reference numbers of relevant cases within the Regional State Prosecutors or the State Prosecutor for Special Crimes. The number of cases where a compensation has been granted, corresponds to the number of distinct case reference numbers of relevant cases within the Regional State Prosecutors, the State Prosecutor for Special Crimes or the Director of Public Prosecutions.
The total sum of compensations is calculated as the sum of compensations in cases where the request for compensation has been either fully or partially granted by the Regional State Prosecutors, the State Prosecutor for Special Crimes or the Director of Public Prosecutions. It should be noted that cases in which a court has ordered The Danish Prosecution System to grant compensation are not included in table 37. This is because such cases are not registered in our case handling system (Platina). It should be noted that in Platina the amount of compensation granted is registered in a text-field where it is possible for the user to write characters other than numbers. Thus, there is a risk of some amounts not being included in the total if these are written in a way that means they cannot be converted in to a numerical value. In Platina, it is possible for a user to assign a case certain keywords. These keywords can later aid the identification of cases regarding a request for compensation that involve specific interventions, such as “arrests”, “pre-trial detentions” or “preliminary charges”. Since a single case may contain multiple keywords, but only one compensation amount, it is not possible to determine which specific interventions the compensation covers, or how the compensation is distributed if compensation was granted due to several different interventions. For this reason, a keyword-based classification is associated with such significant uncertainty that it is assessed that such a classification of numbers will provide an un-accurate representation of how request for compensation and compensations amounts are distributed across the categories ’Wrongful arrest/detention’ and ’Wrongful conviction’. We are aware that we, in previous contributions to CEPEJ’s evaluation, have provided data on request for compensation and compensations amounts divided into the categories ’Wrongful arrest/detention’ and ’Wrongful conviction’. However, we have subsequently become aware that previously used data models were subject to a significant uncertainty for the reason described above.

Q037 (2023): Data in the table (37) has been created outside the standard data model. Specifically developed data models are tested, but there is a greater risk of unidentified errors than when using the standard model. Data in the table are thus associated with considerable uncertainty. All figures indicating condemnations of requests and total amount are the sum of cases and amounts fully or partially granted. € amount is calculated via xe.com. In regards to the "other Category, the figures given are total numbers minus the numbers in the three categories for which separate figures are given (excessive length of proceedings, wrongful arrest and wrongful conviction).
There is no specific reason to the surges in compensation requests and awards, but these can fluctuate considerably from year to year. The available data is from a case management system and is not constructed for statistical purposes. For this reason the registrations within the different categories may vary a lot, depending on the case manager. Nevertheless; the total number of compensation requests, compensations granted and amounts should be correct. It is the division into the different categories that is associated with uncertainty.

Q037 (2022): We can only supply data for the two sub-groups that can be filtered correct. The figures that do not fit under the other categories now appear under "other". It should be noted that the data comes from a case filing tool, and therefore is not a statistics tool. Data may be subject to entry-errors of all sorts such as compensation amount, categorization etc.

Q037 (2021): We can only supply data for the two sub-groups that can be filtered correct. The figures that do not fit under the other categories now appear under "other". It should be noted that the data comes from a case filing tool, and therefore is not a statistics tool. Data may be subject to entry-errors of all sorts such as compensation amount, categorization etc.

Q037 (2020): Data in the table (Q37) has been created outside the standard model. Specifically developed data models are tested, but there is a greater risk of unidentified errors than when using the standard model. Data in the table are thus associated with considrable uncertainty. All figures indicating condemnations of requests and total amount are the sum of cases and amounts fully or partially granted. In regards to the "Other" category, the figures given are total numbers minus the numbers in the three categories for which separate figures are given (excessive length of proceedings, wrongful arrest and wrongful conviction).

Finland

Q037 (General Comment): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not reflect the whole picture of the cases where the proceeding has taken too long. In 2023 the sentence was reduced in five cases. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if there are special circumstances. The information on wrongful arrest and wrongful conviction are compiled together.

Q037 (2023): In 2023 there were 442 requests and the State Treasury issued 462 decisions. On 71 cases the right to compensation was denied. A total of 1 800 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

Q037 (2022): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 459 requests. A total of 2 200 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

Q037 (2021): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if
there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 415 requests. A total of 1 530 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

Q037 (2020): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if
there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 437 requests. A total of 2 916 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

France

Q037 (General Comment): The Legal Affairs Sub-Directorate of the Ministry of Justice, in conjunction with the State Judicial Officer, monitors liability actions relating to the malfunctioning of the public justice service (mainly based on Article L. 141-1 of the Code of Judicial Organisation, with regard to users of this service).
The State Judicial Officer directly monitors actions for compensation for pre-trial detention in criminal proceedings that have ended in a decision to dismiss the case, acquittal, or discharge (Articles 149 et seq. of the Code of Criminal Procedure).
1. With regard to liability actions relating to the malfunctioning of the public justice service:
the vast majority of these are based on Article L. 141-1 of the Code of Judicial Organisation.
Under this article, the State is required to compensate for damage caused by the malfunctioning of the justice service. Unless otherwise specified, this liability is only incurred in the event of gross negligence or denial of justice. This liability regime applies only to users of the public justice service, as third parties to legal proceedings can only invoke the State's strict liability for breach of equality before public burdens.
With regard to actions brought on the basis of Article 149 et seq. of the Code of Criminal Procedure: article 149 of the CPC grants the right, under certain conditions, to full compensation for damage suffered as a result of detention in proceedings that have been dismissed, discharged, or acquitted.
Any person who has been held in pre-trial detention during proceedings that have been terminated by a final decision to dismiss the case, acquit or discharge them is entitled, except in cases specifically defined in Article 149 of the CPC, to full compensation for the moral and material damage caused by such detention, upon request. The compensation awarded shall be paid by the State.
The first president of the court of appeal in whose jurisdiction the decision to dismiss the case, acquit or discharge the detainee, thereby establishing their innocence, was handed down, shall rule, following a public and adversarial procedure, by means of a reasoned decision that may be appealed before the National Commission for the Compensation of Detentions attached to the Court of Cassation (CNRD).

Q037 (2024): The figures provided with regard to the category “excessive length of proceedings” correspond to liability actions relating to the malfunctioning of the public justice service (Article L. 141-1 of the Code of Judicial Organization); the figures provided for the category “Unjustified arrest/detention” correspond to legal actions initiated on the basis of Article 149 et seq. of the Code of Criminal Procedure; the figures indicated for the category ‘Other’ correspond to disputes concerning “seals,” "police material damage” (broken doors) and “malfunctions of the public justice service due to gross negligence.”
With regard to the compensation procedure (IDP) and the method of calculating the amount of compensation (e.g., the daily rate for an unjustified arrest or conviction):
-there is no official scale for IDPs. They are assessed on a case-by-case basis, with reference to the case law of the CNRD, which applies relatively consistent amounts but without an official scale.
The case law of the National Commission for the Compensation of Detentions (CNRD) and the Court of Cassation provides some numerical trends:
• Moral damages: between €50 and €100 per day of detention on average (often around €1,500 to €3,000 per month)
• Material damages: compensated on the basis of supporting documents (pay slips, employer certificates, economic losses).
• In certain serious cases (very long detention, major psychological impact), the compensation may be much higher.
In practice, unjustified detention can result in total compensation (moral + material) averaging around €25,000 to €26,000.
Recent decisions illustrate a range from €10,000 for five months to €73,500 (moral + material damages + costs) for 20 months.

Q037 (2023): The figures given in the “excessive length of proceedings” category correspond to liability actions relating to the defective operation of the public justice service (article L. 141-1 of the Code of Judicial Organisation); the figures given in the “wrongful arrest/detention” category correspond to legal actions initiated on the basis of article 149 et seq. of the Code of Criminal Procedure; the figures given in the “Other” category correspond to legal proceedings relating to ‘seals’ and ‘police property damage’ (door breakage).

Q037 (2022): The compensation procedure is the same as the one described for 2020.

Q037 (2021): The sub-directorate for legal affairs of the Ministry of Justice, in conjunction with the State judicial agent, monitors liability actions relating to the defective functioning of the public service of Justice (essentially based on Article L. 141-1 of the Code of Judicial Organisation, with regard to users of this service). The State judicial agent directly follows up actions for compensation for pre-trial detention undergone in the context of criminal proceedings that have ended with a decision to dismiss, discharge or acquit (Articles 149 et seq. of the Code of Criminal Procedure).
1. Regarding liability actions relating to the defective functioning of the public service of Justice: The vast majority of them are based on Article L. 141-1 of the Code of Judicial Organisation. According to this article, the State is obliged to allow a compensation for damage caused by the defective functioning of the Justice service. Except in the case of special provisions, this liability is incurred only in the event of serious fault or a denial of justice. This regime of liability concerns only the user of the public service of Justice, the third party to the legal proceedings being able to engage only the liability without fault of the State for breach of equality before public charges.
During 2021, the number of new liability actions brought against the State in connection with the functioning of the civil and criminal justice is 1 016 (compared with 908 in 2020, and 510 in 2019). Of these 1 016 new cases, 754 relate to the excessive length of proceedings before labour courts. In 2021, 580 decisions condemned the State for malfunctioning of the public Justice service, out of a total of 717 decisions on the merits of the case (compared with 249 convictions out of 398 decisions in 2020, and 352 convictions out of 485 decisions in 2019).
Out of the 717 decisions, 530 decisions involve the State's responsibility for the excessive length of proceedings, of which 31 decisions concern the length of proceedings in criminal matters and 499 in civil matters (compared with 17 convictions for excessive length in criminal matters and 200 in civil matters in 2020).
The amount of the condemnations is of 2 514 646,05 euro for excessive length of proceedings out of a total amount of 5 225 167,81 euros (compared with 1 388 393 euros out of a total of 1 975 018 euros in 2020).
2) With regard to actions based on Article 149 et seq. of the Code of Criminal Procedure: article 149 of the Code of Criminal Procedure gives the right, under certain conditions, to full compensation for the damage suffered as a result of detention in proceedings that have been dismissed, acquitted or discharged. Any person who has been held in pre-trial detention during proceedings which have ended in a decision to dismiss, discharge or acquit that has become final, shall be entitled, subject to the exceptions precisely defined by Article 149 of the CCP, at his or her request, to full compensation for the moral and material damage caused by this detention. The compensation awarded is payable by the State.
It is the First president of the court of appeal within whose jurisdiction the decision to dismiss, discharge or acquit, resulting in the detainee's innocence, has been taken, who decides, after a public and contradictory procedure, by a reasoned decision that can be appealed to the national commission for compensation for detention placed at the Court of Cassation (CNRD).
According to data from the State Judicial Agent (SJA) (Sillage application and dashboards), the key data for 2021 are

as follows: 571 new cases registered; 575 decisions handed down by the First presidents of the courts of appeal; 19 settlements concluded; 53 decisions rendered by the CNRD with an average detention period of almost 140 days; 28 appeals to the CNRD in 2021 (12 at the initiative of the SJA and 16 at the initiative of the applicants). Source - Sub-Directorate for Legal Affairs, SEM, General Secretariat

Q037 (2020): "The sub-directorate for legal affairs of the Ministry of Justice, in conjunction with the State judicial agent, monitors liability actions relating to the defective operation of the public justice service (essentially based on Article L. 141-1 of the Code of Judicial Organization, with regard to users of this service).
The State's judicial agent directly follows up actions for compensation for pre-trial detention undergone in the context of criminal proceedings that have ended with a decision to dismiss, discharge or acquit (Articles 149 et seq. of the Code of Criminal Procedure).
1. With regard to liability actions relating to the defective functioning of the public service of justice:
The vast majority of them are based on article L. 141-1 of the Code of Judicial Organization.
Under the terms of this article, the State is obliged to repair the damage caused by the defective functioning of the judicial service. Except in the case of specific provisions, this liability is only incurred by gross negligence or by a denial of justice. This system of liability concerns only the user of the public service of justice, the third party to the legal proceedings being able to engage only the liability without fault of the State for breach of equality before public charges.
During the year 2020, the number of new liability actions brought against the State for gross negligence or denial of justice is 908 compared to 510 in 2019. During the same year 2020, 249 decisions condemned the State for malfunctioning of the public service of justice against 352 in 2019, out of a total of 398 decisions on the merits rendered in this matter.
Of the 249 condemnation decisions, 217 decisions implicated the responsibility of the State due to the excessive length of the proceedings, of which 17 decisions concerned proceedings in criminal matters and 200 in civil matters.
The amount of the sentences pronounced is 1,388,393 euros for excessive length of proceedings out of a total amount of 1,975,018 euros. 2. Article 149 of the Code of Criminal Procedure gives the right, under certain conditions, to full compensation for the damage suffered as a result of detention in the context of proceedings that have been dismissed, acquitted or discharged.
Any person who has been remanded in custody in the course of proceedings that have ended in a decision to dismiss, discharge or acquit that has become final, is entitled, with the exceptions specifically defined by Article 149 of the Code of Criminal Procedure, at his or her request, to full compensation for the moral and material damage caused by this detention. The compensation awarded is to be paid by the State.
It is the first president of the court of appeal in whose jurisdiction the decision to dismiss the case, acquit or acquit the detainee was handed down, which results in the detainee's innocence, who decides, after a public and contradictory procedure, by a reasoned decision that can be appealed to the national commission for compensation for detentions placed at the Court of Cassation (CNRD).
According to data from the State Judicial Agent (Sillage application and follow-up tables), the key data for the year 2020 are as follows
- 423 new cases registered.
- 436 decisions rendered by the first presidents of the courts of appeal.
- 8 settlements reached.
- 83 decisions rendered by the CNRD with an average length of compensated detention of less than 400 days.
- 37 appeals to the CNRD in 2020 (4 at the initiative of the AJE and 33 at the initiative of the claimants)

Germany

Q037 (General Comment): According to the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings (Gesetz über den Rechtsschutz bei überlangen Gerichtsverfahren und strafrechtlichen Ermittlungsverfahren) a person affected may file a complaint about undue delay (censure of delay) to the court seized of the case if proceedings seem unreasonably long. Subsequently, the person affected may bring a court action claiming compensation. The claim may be brought even before completion of the main proceedings. Adequate compensation is granted for pecuniary and nonpecuniary disadvantages. In criminal proceedings, the passage of time between the offence and the conviction, as well as the length of the proceedings, must also be taken into account and compensated ex officio by the court and the public prosecutor's office in favour of the accused. Depending on the extent of the delay and the disadvantages suffered by the accused as a result, compensation may be provided by a ruling that a quantified part of the sentence imposed is already deemed to have been enforced (this will be stated in the operative part of the judgment). In individual cases, it may suffice – even at the investigation stage by the public prosecutor's office – to discontinue proceedings (e.g. pursuant to Sections 153, 153a or 154 of the German Code of Criminal Procedure [Strafprozessordnung – StPO]), to dispense with imposing a penalty (Section 60 of the German Criminal Code [Strafgesetzbuch – StGB]) or, in the event of minor delays, to establish in the grounds of the judgment that the proceedings have been delayed in breach of the rule of law. In extreme cases, undue delay may constitute a procedural impediment that requires the court to terminate proceedings. If compensation has been provided in the criminal proceeding, except for compensation for material damage, the accused has received sufficient redress and is not further entitled to compensation in accordance with the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings. If parties to a legal dispute suffer damage due to the excessive length of court proceedings, a compensation claim may also ensue under Section 839 of the German Civil Code (Bürgerliches Gesetzbuch – BGB) in conjunction with Article 34 of the German Basic Law (Grundgesetz – GG). A claim under these provisions requires that an official intentionally or negligently breaches the official duty incumbent upon him in relation to a third party. If the official breaches his duties in a judicial decision in a legal matter, then the state is only liable if the breach of duty consists in a criminal offence. This limitation does not apply if the official refuses or delays the exercise of his duty. However, the manner in which a judge conducts the legal proceedings may only be examined for its justifiability due to the constitutional principle of judicial independence. If the official responsible for the execution of the court decision has delayed compulsory enforcement intentionally or negligently and in breach of his official duty, a compensation claim may ensue under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law. A claim may also exist under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law in cases of wrongful arrest if the official responsible intentionally or negligently breaches the official duty. Decisions by the judge responsible for matters of custody, as well as discretionary decisions by the pub

lic prosecution office in criminal investigation proceedings, may, however, only be examined for their justifiability. In the case of a wrongful conviction a state liability claim requires that the judge responsible intentionally or negligently breaches the official duty in such a way that the breach of duty consists in a criminal offence.
Anyone who has suffered damage from a criminal conviction is compensated by the Treasury if the conviction is quashed or reduced in reopened proceedings or otherwise in criminal proceedings after having become final and binding (Section 1(1) of the Act on Compensation for Criminal Prosecution Measures [Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen – StrEG]). The same applies if a measure of correction and prevention or an ancillary measure has been ordered without a conviction (Section 1(2) StrEG). In cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings, Section 2(1) StrEG provides for compensation for the damage suffered inter alia due to the execution of remand detention or temporary arrest. Where the proceedings are discontinued in accordance with a discretional provision, compensation may be granted ex bono (Section 3 StrEG). The subject of the compensation is the property damage caused by the criminal prosecution measure. In cases of deprivation of liberty on the basis of a court ruling, this can also be immaterial damage (Section 7(1) StrEG). The current immaterial compensation is €75 for each day of deprivation of liberty commenced.

Q037 (2020): According to the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings (Gesetz über den Rechtsschutz bei überlangen Gerichtsverfahren und strafrechtlichen Ermittlungsverfahren) a person affected may file a complaint about undue delay (censure of delay) to the court seized of the case if proceedings seem unreasonably long. Subsequently, the person affected may bring a court action claiming compensation. The claim may be brought even before completion of the main proceedings. Adequate compensation is granted for pecuniary and non-pecuniary disadvantages.
In criminal proceedings, the passage of time between the offence and the conviction, as well as the length of the proceedings, must also be taken into account and compensated ex officio by the court and the public prosecutor's office in favour of the accused. Depending on the extent of the delay and the disadvantages suffered by the accused as a result, compensation may be provided by a ruling that a quantified part of the sentence imposed is already deemed to have been enforced (this will be stated in the operative part of the judgment). In individual cases, it may suffice – even at the investigation stage by the public prosecutor's office – to discontinue proceedings (e.g. pursuant to Sections 153, 153a or 154 of the German Code of Criminal Procedure [Strafprozessordnung – StPO]), to dispense with imposing a penalty (Section 60 of the German Criminal Code [Strafgesetzbuch – StGB]) or, in the event of minor delays, to establish in the grounds of the judgment that the proceedings have been delayed in breach of the rule of law. In extreme cases, undue delay may constitute a procedural impediment that requires the court to terminate proceedings. If compensation has been provided in the criminal proceeding, except for compensation for material damage, the accused has received sufficient redress and is not further entitled to compensation in accordance with the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings.
If parties to a legal dispute suffer damage due to the excessive length of court proceedings, a compensation claim may also ensue under Section 839 of the German Civil Code (Bürgerliches Gesetzbuch – BGB) in conjunction with Article 34 of the German Basic Law (Grundgesetz – GG). A claim under these provisions requires that an official intentionally or negligently breaches the official duty incumbent upon him in relation to a third party. If the official breaches his duties in a judicial decision in a legal matter, then the state is only liable if the breach of duty consists in a criminal offence. This limitation does not apply if the official refuses or delays the exercise of his duty. However, the manner in which a judge conducts the legal proceedings may only be examined for its justifiability due to the constitutional principle of judicial independence.
If the official responsible for the execution of the court decision has delayed compulsory enforcement intentionally or negligently and in breach of his official duty, a compensation claim may ensue under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law.
A claim may also exist under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law in cases of wrongful arrest if the official responsible intentionally or negligently breaches the official duty. Decisions by the judge responsible for matters of custody, as well as discretionary decisions by the pu

blic prosecution office in criminal investigation proceedings, may, however, only be examined for their justifiability.
In the case of a wrongful conviction a state liability claim requires that the judge responsible intentionally or negligently breaches the official duty in such a way that the breach of duty consists in a criminal offence.
Anyone who has suffered damage from a criminal conviction is compensated by the Treasury if the conviction is quashed or reduced in reopened proceedings or otherwise in criminal proceedings after having become final and binding (Section 1(1) of the Act on Compensation for Criminal Prosecution Measures [Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen – StrEG]). The same applies if a measure of correction and prevention or an ancillary measure has been ordered without a conviction (Section 1(2) of the Act on Compensation for Criminal Prosecution Measures). In cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings, Section 2(1) of the Act on Compensation for Criminal Prosecution Measures provides for compensation for the damage suffered inter alia due to the execution of remand detention or temporary arrest. Where the proceedings are discontinued in accordance with a discretional provision, compensation may be granted ex bono (Section 3 of the Act on Compensation for Criminal Prosecution Measures).
The subject of the compensation is the property damage caused by the criminal prosecution measure. In cases of deprivation of liberty on the basis of a court ruling, this can also be immaterial damage (section 7(1) of the Act on Compensation for Criminal Prosecution Measures). The current immaterial compensation is €25 75 for each day of deprivation of liberty commenced

Greece

Q037 (2024): The data in the table correspond to requests for compensation before administrative courts of all instances.
It is to be noted that in two cases the request for compliance concerned a decision of another administrative court and for this reason the Council of State referred the request.

Q037 (2023): For 2023, only data concerning the administrative justice are available. Administrative Courts
-Council of State (Supreme Administrative Court)
1. The following data concern the relevant proceedings before the Council of State.
Excessive length of proceedings – just satisfaction: Law 4055/2012 .
Administrative compliance with court decisions: Law 3068/2002. 2. Within 2023, 2 applications for excessive duration of the trial were filed before the Council of State and 4 decisions were issued on applications from previous years, with which the public was imposed a total amount of 15,400 euros as just satisfaction. 3. Within 2023, 42 applications were submitted for non-execution of decisions of the Council of State and 4 decisions were issued on applications from previous years, with which monetary sanctions of 76,000 euros were imposed on the administration.
-first and second instance Administrative Courts
•Excessive length of proceedings: 11 (number of requests for compensation), 6 (number of compensations granted), 10,500 € { total amount of compensation granted (in €)}
•Non -execution of court decisions: 396(number of requests for compensation),38(number of compensations granted),150,800€ so far, as significant percentage of these cases is still pending and it is not possible to estimate the total amount of compensation awarded by Administrative Tribunals during 2023{ total amount of compensation granted (in €)}
[A] Compensation cases before the civil Courts Due to unjustified delay – Excessive length of trial
In accordance with the provisions of article 1 of Law 4239/2014 (Government Gazette A 43) "Just satisfaction due to exceeding the reasonable duration of the trial in the civil and criminal courts and in the Court of Auditors and other provisions" under the title "Entitled to bring an application".
In accordance with the provisions of article 2 of the above Law 4239/2014, under the title "Competence".
In accordance with the provisions of article 3 of the same above Law 4239/2014, under the title "Application".
In accordance with the provisions of article 4 of the same above Law 4239/2014, under the title "Procedure".
In accordance with the provisions of article 5 of the same above Law 4239/2014, under the title "Criteria for the determination of the excess and the adjudication of just satisfaction".
In accordance with the provisions of article 6 of the same above Law 4239/2014, under the title "Execution of the decision".
[B] Compensation cases before the criminal Courts [I] Due to unjustified delay – Excessive length of trial.
In accordance with the provisions of article 7 of Law 4239/2014 under the title "Procedures before criminal courts".
[II] Due to wrongful arrest/detention and wrongful conviction.
In accordance with the provisions of article 535 of the Code of Criminal Procedure under the title "Who is entitled to compensation.".
According to the provisions of article 536 of the Code of Criminal Procedure under the title "When there is no right to compensation.".
According to the provisions of article 537 of the Code of Criminal Procedure under the title "Who else is entitled to compensation.".
According to the provisions of article 538 of the Code of Criminal Procedure under the heading "Submit the application".
According to the provisions of article 540 of the Code of Criminal Procedure under the heading "Determination of for wrongful conviction at least 50,140€.

Q037 (2022): -Articles 538,539,540 of the Code of Criminal Procedure
-According to the Council of the State (1501/2014) and in line with the case law of the CJUE, the State may be held liable for damages to the citizen in case of an erroneous judicial decision if there is a manifest error.
-Law 4239/2014 as amended by Law 4842/2021 provides for fair compensation for excessive length of proceedings

Hungary

Q037 (General Comment): Excessive length: If the court is not able to finish the cases within reasonable time a compensation may be awarded to the parties. The court decides about the compensation in a fast tarck procedure. Non-execution of court decisions: Usually the court orders a 15 day deadline for fulfilling its final decision. If the party that is obliged to do so does not fulfil this obligation he/she also has to pay an interest from that day. Wrongful arrest: The damages occured for wrongful arrest, house arrest or preliminary detention at a psychiatric institution shall be compensated. Wrongful condemnation: If the person was convicted, but later - as a result of an extraordinary review procedure - he/she was not found guilty or received a lenient punishment. Any pecuniary punishment or cost of the procedure that was paid by the accused person should be repaid with interest included. Other: the court awards a compenstaion if the circumstances of the imprisonment of a convicted or arrested person violate his/her fundamental rights.

Q037 (2024): Civil Proceedings

Excessive Length of Proceedings (Civil Proceedings)

In 2022, Act XCIV of 2021 on the enforcement of financial compensation related to the delay of civil litigation entered into force.

According to the Hungarian civil procedural law there is a compensation for breach of the reasonable time requirement and also for not paying the monetary compensation. The consequences of the breach of the reasonable time requirement are regulated in the Act XCIV of 2021 on the enforcement of pecuniary compensation in connection with the protracted civil proceedings.

Financial compensation is only available to the party who participated in the proceedings complained of, regardless of whether he or she was the successful or unsuccessful party. It is granted if the reasonable period of time specified by law is exceeded during the proceedings or a specific stage of the proceedings (according to the Hungarian laws, such stages are the first instance, the second instance and the review proceedings), and no concrete disadvantage needs to be proven.

To determine the amount of pecuniary compensation, the duration of the proceedings or stage of proceedings to be taken into account must first be determined. This can be calculated by deducting from the duration of the proceedings or stage of proceedings calculated in accordance with the law the periods of time that are to be disregarded in accordance with the law. The period calculated in this way is subject to the payment of financial compensation if it exceeds the reasonable period laid down by law. In general, the duration of the entire court proceedings is considered reasonable if it does not exceed sixty months. The duration of the procedural stages is deemed reasonable if the duration of the proceedings at first instance does not exceed thirty months (or thirty-six months if the proceedings are initiated by an order for payment procedure), the duration of the proceedings at second instance eighteen months, and the duration of the review proceedings twelve months.

For some actions (personal status, maintenance of a minor child, press vindication and employment) shorter time limits apply. In these cases, the duration of the entire court proceedings is considered reasonable if it does not exceed thirty-six months. The amount of the pecuniary compensation is the multiplication of the duration of the procedure (procedural stage) to be taken into account by four hundred forints per day.

As of August 19th of 2025 according to Section 147/A of the Act CXXX of 2016 on the Code of Civil Procedure in case the time limit is overrun, the parties are entitled ex officio to monetary compensations, starting from the day after the time limit is overrun. The daily amount of monetary compensation is the 1,5 percent of the minimum wage (valid on the day of delay) and the courts are obligated to pay the monetary compensation for the entire duration of the time limit overrun.

Non-execution of Court Decisions (Civil Proceedings)

First of all, it should be noted that the fulfilment of judgments in civil proceedings is essentially voluntary. Consequently, if the unsuccessful party fails to fulfil the judgment voluntarily within a prescribed period of time, the successful party has the possibility to initiate enforcement proceedings. The costs of the enforcement procedure is borne by the unsuccessful party. According to the Hungarian laws in the case of a payment delay, the debtor is liable to pay interest for late payment from the date of the delay. It is important to note that this is not compensation, i.e. it is

not necessary that the successful party suffers damages as a result of late payment.

Criminal Proceedings

Act XC of 2017 on Criminal Procedure (hereinafter: Be.) arranges in Chapter CVIII of its own right compensation in the case of unjustly limited and abstract leave. Compensation shall be payable for unlawful arrest, prior forced medical treatment and criminal supervision in which the defendant was required not to leave an apartment, other premises, institution or enclosed place without authorisation, and for detention ordered prior to the order of the accused person. In addition, compensation shall be granted to the accused person for imprisonment, imprisonment, education at a juvenile institution or forced treatment carried out on the basis of a final judgment, if he was subsequently acquitted as a result of an extraordinary remedy, the proceedings were terminated or a lesser penalty was imposed on him.

The length of the criminal proceedings does not in itself constitute a ground for compensation, but the court may consider it as an attenuating circumstance when imposing the penalty, and then the Be. In accordance with Paragraph 562(1), the grounds of the court’s decision must state this.

Q037 (2023): Civil Proceedings

Excessive Length of Proceedings (Civil Proceedings)

According to the Hungarian civil procedural law there is a compensation for breach of the reasonable time requirement. Financial compensation is only available to the party who participated in the proceedings complained of, regardless of whether he or she was the successful or unsuccessful party. It is granted if the reasonable period of time specified by law is exceeded during the proceedings or a specific stage of the proceedings (according to the Hungarian laws, such stages are the first instance, the second instance and the review proceedings), and no concrete disadvantage needs to be proven.

To determine the amount of pecuniary compensation, the duration of the proceedings or stage of proceedings to be taken into account must first be determined. This can be calculated by deducting from the duration of the proceedings or stage of proceedings calculated in accordance with the law the periods of time that are to be disregarded in accordance with the law. The period calculated in this way is subject to the payment of financial compensation if it exceeds the reasonable period laid down by law. In general, the duration of the entire court proceedings is considered reasonable if it does not exceed sixty months. The duration of the procedural stages is deemed reasonable if the duration of the proceedings at first instance does not exceed thirty months (or thirty-six months if the proceedings are initiated by an order for payment procedure), the duration of the proceedings at second instance eighteen months, and the duration of the review proceedings twelve months.

For some actions (personal status, maintenance of a minor child, press vindication and employment) shorter time limits apply. In these cases, the duration of the entire court proceedings is considered reasonable if it does not exceed thirty-six months. The amount of the pecuniary compensation is the multiplication of the duration of the procedure (procedural stage) to be taken into account by four hundred forints per day.

Non-execution of Court Decisions (Civil Proceedings)

First of all, it should be noted that the fulfilment of judgments in civil proceedings is essentially voluntary. Consequently, if the unsuccessful party fails to fulfil the judgment voluntarily within a prescribed period of time, the successful party has the possibility to initiate enforcement proceedings. The costs of the enforcement procedure is borne by the unsuccessful party. According to the Hungarian laws in the case of a payment delay, the debtor is liable to pay interest for late payment from the date of the delay. It is important to note that this is not compensation, i.e. it is not necessary that the successful party suffers damages as a result of late payment.

Criminal Proceedings

Act XC of 2017 on Criminal Proceedings (hereinafter: Be.) regulates the recompense in case of unjustly limited and deprived liberty in a separate Chapter (Chapter CVIII – Recompense for unfounded restriction of freedom). Recompense shall be provided for any pre-trial detention, preliminary compulsory psychiatric treatment, criminal supervision during which, as prescribed by the court, the defendant was not allowed to leave a home, other premises, an institute or a fenced area of it without permission, or custody ordered before ordering any of the above. Recompense shall also be provided for any imprisonment, confinement, special education in a juvenile correctional institution, or compulsory psychiatric treatment enforced on the basis of a final and b

inding judgment, provided that a court, as a result of extraordinary legal remedy acquitted the defendant with final and binding effect; imposed a less detrimental penalty on the defendant; terminated the proceeding against the defendant with a final and binding conclusive order. Protraction of the criminal proceedings does not in itself constitute a ground for recompense, but the court may take it into account as a mitigating circumstance when imposing the sentence. In this case, pursuant to Section 562 (1) of Be., a reference to this fact shall be included in the short statement of reasons for the decision.

In 2022, Act XCIV of 2021 on the enforcement of financial compensation related to the delay of civil litigation entered into force. The above data shows the results of the proceedings initiated under the new legislation.

Q037 (2022): As regards private law, we highlight the possibility to enforce claims based on Act XCIV of 2021 on the Enforcement of Property Compensation for Delay in Civil Proceedings.
The act defines the timeframe which may be regarded as reasonable and which is absolutely sufficient for the court to carry out the procedural steps necessary for a well-founded decision in the case.
As a general rule, the duration of court proceedings is considered reasonable if it does not exceed sixty months from the date of commencement of the proceedings at first instance to the date of notification of the final decision closing the proceedings. A claim may also be brought in the event of a delay in the procedure phase. The duration of the procedural phase is considered reasonable if, for example, the duration of procedural phase at first instance does not exceed thirty months, the duration of procedural phase at second instance does not exceed eighteen months, and the duration of the review proceedings does not exceed twelve months. A shorter objective timeframe is set for specific cases that need to be dealt with quickly such as cases related to personal status, child support and employment. However, depending on the circumstances of a given case, the court seised may, at its judicial discretion, set a shorter timeframe as reasonable. A claim for compensation may be brought in relation to both pending and concluded cases if either the duration of the entire proceedings or a procedural phase exceeds the reasonable timeframe defined by law.
If the duration of the court proceedings or procedural phase exceeds the timeframe considered reasonable, the party may claim monetary compensation from the court conducting the delayed proceedings at the rate set by government decree (HUF 400,- per day). The compensation awarded is in proportion to the duration of the court proceedings. [see also the Government Decree 372/2021 (VI. 30.) on the amount of property compensation for delay in civil proceedings and the rules for calculating the amount to be paid.]
Concerning criminal law, we would add that in case of an unlawful arrest, imprisonment, confinement, placement in a juvenile correctional institution or compulsory psychiatric treatment, a recompensation procedure as included in the Criminal Procedural Act, may be initiated. The person entitled to compensation may choose to enter into an agreement with the Ministry of Justice in a simplified procedure, in the framework of which a settlement is reached on the amount of the compensation, or to file a lawsuit and the court will decide on the amount of the compensation.
In case of an agreement in the simplified compensation procedure, the compensation is adjusted to the number of days of unlawful deprivation of liberty, the amount per day is seven thousand forints (in the case of criminal supervision, the amount per day of compensation is three thousand five hundred forints).

Q037 (2020): There is no national level database containing the data for the question.

Italy

Q037 (2021): The number of condemnations is higher than the number of requests because the former refers to condemnations in year 2021 and some of them were initiated in previous years.

Latvia

Q037 (General Comment): In Latvia, there is no compensation in the category “Non-execution of court decisions”. In civil proceedings it is possible for individuals in Latvia to bring an action against the State for damages caused by the malfunctioning, or abnormal functioning, of the justice system (for example in case of excessive length of proceedings). The basis for bringing such an action is Article 92 of the Constitution of Latvia, which states that "Everyone, where his or her rights are violated without basis, has a right to commensurate compensation."

Q037 (2024): Number of requests for compensation - received at the Ministry of Justice (no data about requests received at prosecutor's office and the State Police). Number of compensations granted - the compensation shall be disbursed by the Ministry of Justice accordance also with the decisions of the prosecutor's office and the State Police on the compensation from the State basic budget resources intended for such purpose.
The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037. The Ministry of Justice informs that the total amount of compensation in 2024 consists of non-pecuniary damages 56 392,77 euros, damages 46 390,78 euros, state social insurance contributions 2433,94 euros and personal income tax compensation 983,06 euros. The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2024 was 46 euros ((700 euros : 30 = 23 euros); 23 euro x 2 x 1 day = 46 euros).

Q037 (2023): Number of requests for compensation - received at the Ministry of Justice (no data about requests received at prosecutor's office). Number of compensations granted - the compensation shall be disbursed by the Ministry of Justice accordance also with the decision of the prosecutor's office on the compensation from the State basic budget resources intended for such purpose.
The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2023 consists of non-pecuniary damages 23 738 euros, damages 43 081,76 euros, state social insurance contributions 6032,35 euros and personal income tax compensation 3515,59 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2023 was 40 euros ((620 euros : 30 = 20,66 euros); 20 euro x 2 x 1 day = 40 euros).

Q037 (2022): Number of requests for compensation - received at the Ministry of Justice (no data about requests received at prosecutor's office).
The Ministry of Justice informs that the total amount of compensation in 2022 consists of non-pecuniary damages 62147.40 euros, damages 35 699.71 euros, state social insurance contributions 4 776.49 euros and personal income tax compensation 1 912.68 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2021 was 32 euros ((500 euros : 30 = 16,66 euros); 16 euro x 2 x 1 day = 32 euros).

Q037 (2021): The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2021 consists of non-pecuniary damages 75350 euros, damages 18708,39 euros, state social insurance contributions 2053,21 euros and personal income tax compensation 1100,40 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2021 was 32 euros ((500 euros : 30 = 16,66 euros); 16 euro x 2 x 1 day = 32 euros).

Q037 (2020): The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2020 consists of non-pecuniary damages 69 889,70 euros, damages 31 471,31 euros, state social insurance contributions 1867,12 euros and personal income tax compensation 820,09 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2020 was 28 euros ((430 euros : 30 = 14,33 euros); 14 euro x 2 x 1 day = 28 euros).
In Latvia, there is no compensation in the categories “Non-execution of court decisions” and “Number of condemnations”.

Lithuania

Q037 (2023): We cannot indicate any specific reasons why the number of requests for compensation for damage out of court has significantly decreased. We also observe a consistent decrease in the number of persons applying to court for compensation for damage caused by unlawful actions of the state. We can perhaps attribute such a general trend to the fact that state institutions and officials make fewer mistakes that cause harm to individuals.
From 2022-06-30, the legal regulation was changed, the amounts of damage that we compensate outside the court procedure were increased (property - no more than 10 thousand, non-property - no more than 5 thousand). However, the predictions that the number of requests would increase did not come true. Since the number of cases in courts is not increasing, it can be concluded that the institutions adhere to the human rights standard and try not to perform such actions that would be considered unlawful and cause harm (particularly positive changes are seen in criminal proceedings and in the execution of sentences).

Q037 (2020): Total - compensation for damage caused by public authorities + compensation for damage caused by public prosecutors and courts;
Other - compensation for damage caused by public authorities;

Luxembourg

Q037 (General Comment): The law of 1st September 1988 concerning the civil liability of the State and public authorities permits the State to be held civilly liable before ordinary courts when a litigant alleges harm resulting from the defective functioning of judicial bodies. Examples of such dysfunction include excessive length of proceedings or a conviction stemming from judicial malpractice, which could form the basis of a claim. These complaints are typically brought before courts of first instance.

Additionally, complaints about the excessive length of proceedings may also be pursued before the European Court of Human Rights (for violations of Article 6 of the European Convention on Human Rights) or could result in procedural sanctions during ongoing proceedings. However, the latter do not appear within the scope of our national systems. The involvement of various actors complicates the identification and categorisation of claims and compensation decisions, making it challenging to provide data that accurately reflects the broader situation.

Nevertheless, we have been able to compile data on compensation for wrongful arrest/detention as regulated by the law of 30 December 1981 on compensation for inoperative pre-trial detention. Available figures pertain to requests for compensation and decisions granting such compensation in cases of inoperative preventive detention (IPD)(https://mj.gouvernement.lu/fr/service-citoyens/detention-preventive.html), as well as the total amounts disbursed. It should be noted that, under the provisions of the law of 30 December 1981, the decisions are of administrative nature, rather than convictions.

Q037 (2024): Wrongful convictions: This category includes applications for review submitted to the Court of Cassation. In 2024, two applications for review were filed, one of which was dismissed. In the case where the review was granted, compensation of 5000€ was awarded.

Q037 (2023): Wrongful convictions: This item includes applications for review lodged with the Cour de cassation. In 2023, no requests for compensation were lodged with the Court of Cassation and consequently, there were no compensations granted.

Q037 (2021): The law of 1 September 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person considers that he or she has been victim of a defective functioning of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before first instance courts. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the European Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last procedural steps do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for wrongful arrest, provided for by the law of 30 December 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of 30 December 1981, it is not appropriate to speak of convictions, but of administrative decisions that can be appealed before the administrative courts.

Q037 (2020): The law of September 1, 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person believes that he or she has been the victim of a defective operation of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before the courts of first instance. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last approaches do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for unjustified arrest, provided for by the law of December 30, 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of December 30, 1981, it is not appropriate to speak of convictions, but of administrative decisions.

Malta

Q037 (General Comment): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention.
However no data is available.

Q037 (2024): Anyone who has experienced an injustice can seek redress in the Courts of Justice. The Laws of Malta provide for compensation in cases of wrongful conviction and unlawful detention (Chapter 319 of the Laws of Malta), while S.L. 9.12 of the Criminal Code establishes a compensation system for victims of crime. However, data on these cases is not currently available.

Q037 (2022): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention.
However no data is available.

Q037 (2021): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention. For the purpose of the evaluation, 'unlawful detention' falls under the category 'Wrongful arrest' even if the difference between the two is being acknowledged.
For both categories, no data is available.

Q037 (2020): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention.
However no data is available.

Netherlands

Q037 (General Comment): There are compensation regulations for certain situations (see 4th Book, Title VIa of the Penal Code). If an offender is acquitted, he/she may request compensation for travel- and accommodation costs, the costs of a lawyer, or because of being held in temporary custody.
Numbers cannot be provided for most categories, as compensation may involve people who were held in custody but were either not accused or not found guilty, damages due to an arrest, or possessed goods that have been damaged, sold, destroyed or gone missing.

Q037 (2024): Under Article 533 Sv, a suspect who is not convicted or whose case is dismissed may be compensated for damages suffered as a result of undergoing (pre-trial) detention or clinical observation.

Q037 (2023): Under Article 533 Sv, a suspect who is not convicted or whose case is dismissed may be compensated for damages suffered as a result of undergoing (pre-trial) detention or clinical observation.

Q037 (2022): There are compensation regulations for certain situations (see 4th Book, Title VIa of the Penal Code). If an offender is acquitted, he/she may request compensation for travel- and accommodation costs, the costs of a lawyer, or because of being held in temporary custody.

Poland

Q037 (General Comment): The rules for granting a sum of money in case of finding excessive length of proceedings are specified in the Act of 17 June 2004 on complaints of violation of the right of a party to hear a case in preparatory proceedings conducted or supervised by a prosecutor and court proceedings without unreasonable delay. According to art. 12 para. 4 of this Act, having regard to the complaint on (excessive), the court adjudicates from the Treasury, and in the case of complaints about the length of the proceedings conducted by the bailiff - from the bailiff, a sum of PLN 2,000 to PLN 20,000. The amount of the monetary sum, within the limits specified in the first sentence, is not less than PLN 500 for each year of the current duration of the proceedings, regardless of the number of stages of proceedings related to the excessive length of proceedings. The court may award a sum of money higher than PLN 500 for each year of the current duration of the proceedings, if the case is of particular importance to the applicant, who by his attitude did not contribute in a manner to prolonging the proceedings. This sum includes the amounts already awarded 16 to the applicant as a sum of money in the same case. No monetary sum is granted in the event of a complaint filed by the State Treasury or public sector units of the public finance sector.
The accused, who was acquitted or condemned to a more lenient punishment as a result of the resumption of the proceedings or cassation, serves the State Treasury for damages and compensation for the harm suffered resulting from the execution of all or part of the punishment he was not supposed to incur. This provision shall also apply if the proceedings were discontinued after the convicting decision was abrogated as a result of circumstances which were not taken into account in the earlier proceedings. The right to compensation and redress also arises in connection with the application of a safeguard measure under the conditions laid down in those circumstances. Compensation and redress also apply in the event of undoubtedly unjustified detention or detention (Article 552 of the Code of Criminal Procedure).

Q037 (2024): The data below presents the amounts of compensation paid in 2024 from chapter 75595, which were awarded against the State Treasury, indicating the specific legal acts on the basis of which the compensation was awarded.
Specification of compensation from chapter 75595 amounts paid in 2024:
1. Act of February 23, 1991, on the invalidation of judgments issued against persons repressed for activities in favor of the independent existence of the Polish State 193 733 000 (PLN) 45 339 000(EUR)
2. Article 552 of the Act of June 6, 1997 - Code of Criminal Procedure 21 368 000 (PLN) 5 001 000(EUR)
3. Act of June 17, 2004, on complaints against violations of the right of a party to have their case heard in preparatory proceedings conducted or supervised by a prosecutor and in court proceedings without undue delay 6 581 000(PLN) 1 540 000 (EUR)
4. Other compensation: including compensation pensions, compensation for property damage, unlawful eviction 658 000 (PLN) 154 000 (EUR)
5. Act of July 7, 2005, on state compensation for victims of certain prohibited acts 224 000 PLN 52 000 EUR;
Total compensation from chapter 75595 222 564 000 (PLN) 52 086 000 PLN
The amount of funds spent on compensation payments to eligible persons results directly from the content of judgments of independent courts deciding on the validity of claims and the amount of compensation awarded. The implementation of the expenditure plan in chapter 75595 during the fiscal year is therefore independent of the actions of the financial services of individual courts, as the payment of funds by the court's financial department is based solely on a final court ruling on the payment of compensation to the eligible person.

Q037 (2022): *246 - number of persons
11 - number of persons

Q037 (2021): *272- number of persons; *12 - number of persons
The amounts of compensations from chapter 75595 paid in 2021 ordered from the State Treasury are presented below, together with an indication of the legal acts on the basis of which the compensations were ordered.
Specification of damages from chapter 75595 amounts paid in 2021
1. Act of 23 February 1991 on declaring invalid judgments issued against persons repressed for activities in favour of the independent existence of the Polish state = EUR 21,625
2 Article 552 of the Act of 6 June 1997 - Code of Criminal Procedure = €6,707; 3 Act of 17 June 2004 on Complaint for Infringement of the Right of a Party to Investigate a Case in Pre-trial Proceedings Conducted or Supervised by a Public Prosecutor and in Judicial Proceedings without Undue Delay € 1,188
4 other damages: inter alia, compensatory pensions, compensation for property damage, unlawful eviction € 324
5 Act of 7 July 2005 on State compensation to victims of certain criminal acts 71 euro
Total compensation in chapter 75595 137 590 pln 29 915 euro
The amount of funds spent on the payment of compensation to entitled persons results directly from the content of judgments of independent courts deciding on the legitimacy of claims and the amount of compensation awarded. Course of implementation of the expenditure plan in chapter 75595 in the course of the financial year is therefore independent of the activities of the financial services of individual courts, since the payment of funds by the financial branch of the court occurs only on the basis of a final court ruling on the payment of compensation to the entitled person.

Q037 (2020): *229 - numer of persons
*19 - numer of persons
Regarding the content of question 37, we would like to inform you that the Ministry of Justice , within its jurisdiction has the following data on the amount of compensation payments also from Section 15 of the State Budget, Chapter 75595, adjudged by the State Treasury in 2020
Specification of compensation from Chapter 75595 in 2020 in euro: 1.On the basis of the Act of 23 February 1991 on the recognition of invalid rulings issued against persons repressed for activities for the benefit of the independent state of Poland - EUR 13 123 0002. On the basis of Article 552 of the Act of 6 June 1997 Code of Criminal Procedure (Journal of Laws of 2018, item 1987) 4 552 000 euros3. pursuant to the Act of 17 June 2004 on a complaint for violation of a party's right to examine a case in preparatory proceedings conducted or supervised by a prosecutor and court proceedings without undue delay (Journal of Laws of 2018, item 75) EUR 1 005 0004. other compensations: inter alia, compensatory pensions, compensation in property damage, unlawful eviction 114 000 euro
5. under the Act of 7 July 2005 on State Compensation to victims of certain criminal acts 32 000 euro
Total compensations from chapter 75595 - 18 826 000 euro
The amount of funds spent on compensation payments to entitled persons results directly from the content of judgments of independent courts deciding on the legitimacy of claims and the amount of awarded compensation. The course of implementation of the expenditure plan in chapter 75595 during the budget year is therefore independent of the actions of the financial services of individual courts, because the payment of funds by the financial branch of the court, occurs only on the basis of a final court decision to pay compensation to the entitled person.

Portugal

Q037 (General Comment): There is no data with these levels of disaggregation in Portugal, we can only offer the total amount of the compensation.
The right to compensation in the cases listed is provided for in Law no. 67/2007 of December 31, which establishes the regime of non-contractual civil liability of the State and other Public Entities, specifically providing for an autonomous regime of State liability for damages arising from the exercise of the judicial function (chapter III, arts. 12 to 14).
In particular, with regard to Wrongful arrest/detention, it is important to mention article 225 and 226 of the Criminal Procedure Code, which provide for the right to compensation for illegal or unjustified deprivation of liberty by establishing a special regime. These articles also give effect to Article 27(5) CRP, which states that "Deprivation of liberty contrary to the provisions of the Constitution and the law shall constitute the State's duty to compensate the injured party under the terms established by law".

Q037 (2024): The total amount paid includes compensation in cases of the European Court of Human Rights and compensations set by national courts in cases within the responsibility of the Ministry of Justice .
Compared to previous cycles, this year it was found that the data (Total amount of compensations granted) was available in other entity of the Ministry of Justice (The Secretary General of the Ministry of Justice).

Q037 (2022): The right to compensation in the cases listed is provided for in Law no. 67/2007 of December 31, which establishes the regime of non-contractual civil liability of the State and other Public Entities, specifically providing for an autonomous regime of State liability for damages arising from the exercise of the judicial function (chapter III, arts. 12 to 14).
In particular, with regard to Wrongful arrest/detention, it is important to mention article 225 and 226 of the Criminal Procedure Code, which provide for the right to compensation for illegal or unjustified deprivation of liberty by establishing a special regime. These articles also give effect to Article 27(5) CRP, which states that "Deprivation of liberty contrary to the provisions of the Constitution and the law shall constitute the State's duty to compensate the injured party under the terms established by law".

Romania

Q037 (General Comment): There is no mechanism for calculating the compensation. The courts take into consideration the national case law and the jurisprudence of the European Court of Human Rights in similar cases.
Even if the civil regulations of material and procedural law do not provide special mechanisms for the compensation of individuals in case of excessive duration of procedures and non-enforcement of judgments, there are norms guaranteeing the right to a fair trial and at case settlement within a reasonable time-limit. In such circumstances, there is a possibility to pay certain sums of money as fines or even as a compensation. In criminal matters, the only possibility to obtain damages in case of procedural delays is the civil claim for damages, based on the provisions of the Civil Code. The Civil Procedure Code (the Law 134/2010) provides for a much more efficient mechanism to this effect, respectively the contestation concerning the protraction of the case settlement. Thus, according to Article 522 para. (1) of the CPC, any party, as well as the prosecutor attending the trial may make contestation by which, invoking the infringement of the right to the settlement of the trial within an optimal and reasonable time-limit, he/she solicits the adoption of legal measures remedying to this situation. Please, refer to the regulations of the CPC as concerns the guarantee of the right to a fair trial and a case settlement within a reasonable time-limit.
The non-observance of judgments is incriminated as offence by Art. 287 of the Criminal Code. Within the criminal trial there may be also formulated the civil claim for damages for the non-enforcement of the judgment. The civil action may be also introduced separately, at the civil court. Both actions shall be judged according to the provisions of the Civil Code, regulating the delictual civil responsibility.
Illegal arrest and illegal conviction are situations circumscribed to judicial errors for which the Romanian state is responsible according to Art. 538-539 and the following of the Criminal Procedure Code (the Law 135/2010). For the appreciation in substance of the civil responsibility, common law rules laid down by the Civil Code apply. According to the provisions of the art. 538 of the Criminal Procedure Code, any person who suffered a wrongful condemnation or was, during a criminal trial, illegally deprived of his/her liberty is entitled to receive a compensation. The compensation should cover both the material and moral prejudices caused to that person. The amount of the compensation is to be determined by the court (the tribunal) in whose district the entitled person has its domicile. The entitled person should introduce a civil action against the state (which is represented by the Ministry of Public Finances), action which is exempted of any judicial fees.
Regarding the excessive duration of the criminal procedures, there is a remedy, but it is not compensatory - see art. 488 (index1) and the following of the Criminal Procedure Code. Law no. 201/2023 introduced a new article in the Criminal Procedure Code (the Law 135/2010) art. 359/1, stating the right to compensation for damage in the case of technical surveillance measures or activities specific to the collection of information illegally arranged (1) The person against whom he was ordered, confirmed, extended or illegally enforced a technical surveillance measure is entitled to compensation for the damage caused by this measure.

Q037 (2020): There is no mechanism for calculating the compensation. The courts take into consideration the national case law and the jurisprudence of the European Court of Human Rights in similar cases.
Even if the civil regulations of material and procedural law do not provide special mechanisms for the compensation of individuals in case of excessive duration of procedures and non-enforcement of judgments, there are norms guaranteeing the right to a fair trial and at case settlement within a reasonable time-limit. In such circumstances, there is a possibility to pay certain sums of money as fines or even as a compensation. In criminal matters, the only possibility to obtain damages in case of procedural delays is the civil claim for damages, based on the provisions of the Civil Code. The new Civil Procedure Code (the Law 134/2010) provides for a much more efficient mechanism to this effect, respectively the contestation concerning the protraction of the case settlement. Thus, according to Article 522 para. (1) of the NCPC, any party, as well as the prosecutor attending the trial may make contestation by which, invoking the infringement of the right to the settlement of the trial within an optimal and reasonable time-limit, he/she solicits the adoption of legal measures remedying to this situation. Please, refer to the regulations of the NCPC as concerns the guarantee of the right to a fair trial and a case settlement within a reasonable time-limit.
The non-observance of judgments is incriminated as offence by Art. 287 of the Criminal Code. Within the criminal trial there may be also formulated the civil claim for damages for the non-enforcement of the judgment. The civil action may be also introduced separately, at the civil court. Both actions shall be judged according to the provisions of the Civil Code, regulating the delictual civil responsibility.
Illegal arrest and illegal conviction are situations circumscribed to judicial errors for which the Romanian state is responsible according to Art. 538-539 and the following of the Criminal Procedure Code (the Law 135/2010). For the appreciation in substance of the civil responsibility, common law rules laid down by the Civil Code apply. According to the provisions of the art. 538 of the Criminal Procedure Code, any person who suffered a wrongful condemnation or was, during a criminal trial, illegally deprived of his/her liberty is entitled to receive a compensation. The compensation should cover both the material and moral prejudices caused to that person. The amount of the compensation is to be determined by the court (the tribunal) in whose district the entitled person has its domicile. The entitled person should introduce a civil action against the state (which is represented by the Ministry of Public Finances), action which is exempted of any judicial fees.
Regarding the excessive duration of the criminal procedures, there is a remedy, but it is not compensatory - see art. 488 (index1) and the following of the Criminal Procedure Code.

Slovak Republic

Q037 (General Comment): The compensations for the excessive length of proceedings can be awarded by the Constitutional court in the finding on violation of the right to trial in the reasonable time. The compensation for wrongful arrest or conviction, non-execution of court decisions can be awarded by the court in the civil procedure. The aggrieved person can seek compensation against the state according to the Act on State Liability for Damage in Exercise of the Public Power.

Q037 (2022): The data are not collected in this structure in our judicial system.

Slovenia

Q037 (General Comment): The Protection of Right to Trial without Undue Delay Act gives a party to court proceedings the right to have his rights, duties and any charges brought against him in his case before the court to be decided upon by the court without undue delay, as well as a right to compensation, if the aforementioned right was infringed.
The procedure for compensation in the case of wrongful arrest and wrongful condemnation is regulated by the Criminal Procedure Act.
The compensation, offered by the State Attorney’s Office for wrongful arrest varies from case to case, since circumstances of the individual case (e.g. length of wrongful arrest, effect on the injured person's family life and his closest social circle, effects of media exposure, effect to injured person's health, etc.), as well as court decisions in similar cases, are taken into account.
The State Attorney's Office has its own budget to pay compensation in preliminary procedures. If a case goes to court, it usually becomes a long and complex process. Once the case is in court, compensation based on judgments or settlements is paid by the Ministry of Finance. To reach a court settlement, the State Attorney's Office must first get the Ministry’s approval.

Q037 (2024): The figures above represent cases, opened or closed in 2024, with compensations to be paid in 2024 or later. The figures above represent only cases in courts and court settlements.
Wrongful conviction: Out of 4 court cases, 3 ended in court settlement. Wrongful arrest: Out of 17 court cases, 9 ended in court settlement. The number of court settlements indicates that the State Attorney plays an effective role in resolving disputes peacefully. Even when it isn't possible to agree on the amount of compensation during the preliminary procedure, settlements are often reached later in court—usually after some evidence has already been presented and the facts in the court process are clear enough to justify a settlement.
Data for procedures at the State Attorney for 2024 (mandatory before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 30;
Number of settlements: 14;
Total amount (in €): 32.224,49;
Number of requests decreased significantly in 2024. In its 2024 Annual Report, the State Attorney concluded that the increased number of cases in 2022 and 2023 did not reflect a systemic problem of court backlogs or a violation of the parties' right to a trial without undue delay. 2. Wrongful arrest - Number of requests for compensation: 36;
Number of settlements: 17;
Total amount (in €): 99.309,34
3. Wrongful conviction - Number of requests for compensation: 10;
Number of settlements: 0;
Total amount (in €): 0.
Not all cases where a settlement wasn't reached in the preliminary procedure end up in court, because the State Attorney's Office often rejects compensation claims with strong arguments.

Q037 (2023): The figures above represent cases, opened or closed in 2023, with compensations to be paid in 2023 or later. The figures above represent only cases in courts and court settlements.
Data for procedures at the State Attorney for 2023 (mandatory before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 138;
Number of settlements: 23;
Total amount (in €): 47.546,80;
2. Wrongful arrest - Number of requests for compensation: 49;
Number of settlements: 19;
Total amount (in €): 104.281,60
3. Wrongful conviction - Number of requests for compensation: 6;
Number of settlements: 3;
Total amount (in €): 103.730,00.
The above data demonstrate the effective role of the State Attorney's Office in the peaceful resolution of disputes, as only cases in which the amount of appropriate compensation cannot be determined in the preliminary proceedings at the State Attorney's Office are brought to court.

Q037 (2022): The figures above represent cases, closed in 2022, with compensations to be paid in 2022 or later. The figures above represent cases before courts only.
Data for procedures at the State Attorney for 2022 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 5;
Number of settlements: 1;
Total amount (in €): 6.810;
2. Wrongful arrest - Number of requests for compensation: 35;
Number of settlements: 18;
Total amount (in €): 157.893
3. Wrongful conviction - Number of requests for compensation: 56;
Number of settlements: 23;
Total amount (in €): 42.209.

Q037 (2021): *The figures above represent cases, closed in 2021, with compensations to be paid in 2021 or later. The figures above represent cases before courts only (court decisions and court settlements).
Data for procedures at the State Attorney for 2021 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 33;
Number of settlements: 10;
Total amount (in €): 21.715 EUR;
2. Wrongful arrest - Number of requests for compensation: 32;
Number of settlements: 8;
Total amount (in €): 63.174 EUR;
3. Wrongful conviction - Number of requests for compensation: 5;
Number of settlements: 0;
Total amount (in €): 0.

Q037 (2020): *The figures above represent cases, closed in 2020, with compensations to be paid in 2020 or later. The figures above represent cases before courts only.
Data for procedures at the State Attorney for 2020 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 60;
Number of settlements: 10;
Total amount (in €): 23.222;
2. Wrongful arrest - Number of requests for compensation: 30;
Number of settlements: 8
Total amount (in €): 140.330
3. Wrongful conviction - Number of requests for compensation: 8;
Number of settlements: 1;
Total amount (in €): 1.260.

Spain

Q037 (General Comment): Spanish legislation recognizes the right to compensation from the State in two generic cases, judicial error and abnormal functioning of the Administration of Justice and in a specific case of judicial error relating to pre-trial detention followed by acquittal or dismissal for lack of evidence. Cases of intentional or negligent conduct by the injured party and cases of force majeure are exempted. The request for compensation shall be processed in accordance with the rules regulating state liability. In cases of dolo (wilful misconduct) or gross negligence by judges or magistrates, the injured party may not directly sue them but shall address their request to the Ministry of Justice. The right to claim compensation has one year limitation period (statutory time-limit). The General Administration of the State may demand reimbursement from the responsible party once the injured party has been compensated. This will require that the dolo (wilful misconduct) or gross negligence of the judge or magistrate has been expressly recognized by a judgment or resolution issued by the General Council of the Judiciary. Article 121 Spanish Constitution and articles 292 et seq, Organic Law of the Judiciary, of July 1, 1985.

Q037 (2024): The "Others" category corresponds to abnormal functioning of the Administration of Justice.

Q037 (2023): In the current cycle the data has been provided in disaggregated form (a breakdown for number of requests for compensation for wrongful arrest/detention, wrongful conviction and others) by the National Centre for Court Statistics.
Others category corresponds to abnormal functioning of the Administration of Justice.
The total amount of compensation fluctuates from year to year and corresponds to the amount recognised by the contentious-administrative jurisdiction.
648 cases of patrimonial liability were opened and 410 were resolved, of which 88 were upheld

Q037 (2021): In 2021, 368 files were initiated for abnormal functioning of the Administration of Justice, 205 for preventive detention, 83 for judicial error. € 802.735 were paid for administrative condemnations and € 1.486.968 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater
than the one proposed by the CEPEJ. SOURCE: La Justicia dato a dato, (document issued by the CGPJ)

Q037 (2020): In 2020, 320 files were initiated for abnormal functioning of the Administration of Justice, 62 for preventive detention, 223 for judicial error. € 124.367,5 were paid for administrative condemnations and €445.491,3 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater
than the one proposed by the CEPEJ. The answer tries to group the Spanish categories into those of the CEPEJ.

Indicator 6: The ICT tools of courts and for court users

Comments provided by the national correspondents

organised by country

Question 062-23. If writing assistance tools exist in courts, what are their deployment and usage rates?

Question 062-24. If writing assistance tools exist in courts, please describe their functionalities:

Question 062-25. If a tool to record court hearings exists, what are the deployment and usage rates?

Question 062-26. If a tool to record court hearings exist, please specify its functionalities:

Austria

Q062-23 (2024): Administrative: Numbers above are for the Federal Administrative Court
Regional administrative courts: DR: 95-100 %, UR: 50-75 %
Supreme administrative court: 25-50 % deployment and usage rate
Q062-24 (General Comment): An electronic case file system is used for the administration of investigative and court proceedings at public prosecutor's offices and courts. The case file system enables users to store, organise and structure documents as well as to use templates to create and sign documents electronically. Files can also be uploaded to the electronic case file. These files may also be dictated using speech-to-text applications, such as Dragon.
Templates for LibreOffice are made available to all users. In addition, users can also create their own templates, so-called "structured short orders" for registry instructions and other tasks, using text modules and custom text samples. Automatically generated text is generally created by workflow rules and not by LLM-based artificial intelligence. LLM-based artificial intelligence is used for the anonymisation of documents.

Q062-24 (2024): Regarding the Administrative Courts, not all functions are available in all the courts.

Q062-25 (General Comment): Administrative: Numbers are for the Federal Administrative Court only! The others do not have tools for recording hearings yet.
Q062-26 (General Comment): In recent years, the rate at which recording solutions have been deployed has steadily increased, and these systems are now implemented throughout the entire judicial system. Consequently, there are very few areas remaining where such solutions are not utilised—provided their application is considered appropriate. Notably, in criminal cases, audiovisual recordings of hearings are primarily employed, whereas in civil and administrative proceedings, dictation devices are predominantly used. These devices enable decision-making bodies to summarise and record the session in a concise protocol.

Description for the ordinary courts and the Federal Administrative Court:
Each court is equipped with a video recording system; additionally, decision-making bodies and court clerks may use mobile audio recording devices to document court proceedings. Audio and video files may be electronically entered into the case file and transmitted electronically to the parties. The automatic transcription of audio tracks using AI (including time stamps, speaker identification, etc.) is currently under evaluation. The decision whether to produce a summary protocol or a verbatim transcript lies with the decision-making body.

Belgium

Q062-23 (General Comment): Administrative matters (Council of State): for each type of procedure, there are template judgments containing certain standardised paragraphs. This standardisation particularly concerns the part relating to the conduct of the proceedings. Some documents are now generated automatically on the basis of information contained in internal databases (setting orders and hearing tables, for example).
Strictly speaking, however, there are no ‘"writing assistance tools » for judgments.
However, since 2017 all Council of State judgments have been written in direct style. This generalisation has ensured greater uniformity in the presentation of judgments. Council of State judges also have a number of tools at their disposal:
a. Legal databases are maintained internally and also made available to the public (Juridict www.juridict.be , refLex www.reflex.be , etc.);
b. Access is provided to private, paying legal databases (StradaLex www.stradalex.be , Jurisquare www.jurisquare.be, etc.);
c. an intranet managed by the Council of State also centralises all documents produced by the Council of State (judgments, orders, reports, etc.). It is called Documap.
d. The Council of State's website also offers numerous search options: www.raadvst-consetat.be.

Q062-24 (General Comment): In civil and criminal matters:
- most templates are available for all courts, or all templates are available for most courts - local modification of templates is always possible;
- the options are not all part of the same application (e.g. speech-to-text)
For speech-to-text: this is possible in the WORD application.
Limitation: text generated automatically according to the Case Management Systems (CMS).
Concerning electronic signature: only possible for justices of the peace; these courts are currently working with eSign to digitally sign documents. From 2025, police courts and criminal courts should also be able to sign electronically, followed by other courts.
It is worth mentioning the JustCourt project, officially launched in 2024. This is a new tool that will enable virtual or hybrid hearings to be held in courts. It is currently being rolled out to cover all courts (scheduled for 2025–2026). Like other applications, JustCourt is part of the overall digitisation process undertaken by the FPS Justice to modernise and improve the Belgian judicial system for all its users.

Q062-25 (General Comment): In May 2024, a new JustCourt tool was launched, enabling virtual or hybrid hearings to be held in Belgian courts. This involves installing videoconferencing systems in the courtrooms. This new application is part of the FPS Justice's digitisation initiative, which aims to modernise and improve the judicial system for all litigants. The pilot phase is currently underway. In civil and criminal matters: prior to the deployment of JustCourt: - in criminal matters, use of videoconferencing for research and investigations.
- videoconferencing equipment was not available everywhere and systematically. Where necessary or appropriate, equipment could (also) be rented. Thanks to the new projects in this area, the availability of this equipment for the judiciary will be increased. In administrative matters - Council of State: the possibility exists in exceptional circumstances to hold a hearing by videoconference, but it is not foreseen to record it. It should be recalled that during the coronavirus crisis, a Royal Decree of Special Powers No. 12 (http://www.raadvstconsetat.be/?page=news&lang=fr&newsitem=592) enabled the Council of State to rule in writing and without a hearing, with the agreement of all the parties. In the same context, the Council of State was able to organise a number of remote hearings, virtually (via Skype or Teams), as part of the extreme emergency suspension procedure. This is still used on an ad hoc basis today, but to a very limited extent.

Q062-26 (2024): The possibility of audio or audiovisual recording is enshrined in Article 759/2 of the Judicial Code, which states that "The court before which the public hearing is taking place may decide, on an exceptional basis, to record that public hearing where such audio or audiovisual recording is of interest for the creation of historical archives of the justice system or for educational purposes with a view to imparting knowledge in the field of law or the functioning of the justice system, with the consent of the persons whose voices and images are recorded, each for their own part. This consent may be withdrawn at any time during the hearing. (...)" (provision introduced by a law of April 25, 2024).

Bulgaria

Q062-24 (General Comment): “Speech to text” – By Decision under Protocol No. 25/29.09.2023, the Plenum of the Supreme Judicial Council approved and implemented in all judicial bodies the software created under the project "Development and implementation in the judicial system of software for accelerated creation and reproduction of acts and other documents through dictation and automatic conversion of voice recording into text /voice-to-text/ and accompanying processing systems", according to which the SJC is a beneficiary in a contract financed under the Operational Program "Good Governance" 2014-2020. The "voice-to-text" (V2T) system is a tool for digitization and allows magistrates instead of manually type their acts, to dictate and receive automatically typed text, allowing for quick formatting, searching and bolding words, referencing, annotation and other options for additional text processing and references to all key segments of the acts. The software for accelerated creation and reproduction of acts and other documents through dictation and automatic conversion of voice recording into text /voice-to-text/ is of the "artificial intelligence" type. It was developed using the "deep neural networks" method and of key importance for its effectiveness was training through voice recordings of words, through audio recordings of judicial and prosecutorial acts, that correspond to maximum extent to the real use of terminology in judicial practice. The system supports the following file formats:
WAV (Waveform audio), *.wav;
AIFF (Audio Interchange File Format), *.aif;
FLAC (Free Lossless Audio Codec), *.flac;
MP3 (MPEG Audio-1 Layer 3), *.mp3;
AAC (Advanced Audio Coding), *.m4a, *.m4b, *.m4p, *.m4v, *.m4r, *.3gp, *.mp4, *.aac;
WMA (Windows Media Audio), *.wma;
OGG (Vorbis), *.ogg.
The supported text formats are:
MS Word, *.doc, *.docx);
Rich Text Format, *.rtf;
Plain Text Format, *.txt;
Portable Document Format, *.pdf.
On 05.06.2024, the Operational Program "Good Governance" published information in the Information System for Management and Monitoring of EU Funds in Bulgaria (ISMM) about the successful fulfillment of all SJC obligations and, accordingly, about the project completion.
“Templates” – The Unified Information System of Courts (UISC) contains templates for judicial acts, such as decisions, orders, rulings, etc. As an example of how it works, we provide the steps for the preparation of a decision. After the judge enters the specific hearing and selects the necessary act, a window is generated in the UISC, where only the motivation and dispositive parts of the act are entered. After filling in the necessary fields and sequentially selecting the buttons "record", "prepare an act" and "send for signature", the complete decision is generated. This also applies to other types of acts, i.e. the judge does not write the title part, but only the motivation and dispositive parts.

Q062-24 (2024): It should be noted that the Supreme Court of Cassation indicated "electronic signature". Besides, except those mentioned in the table the Supreme Administrative Court indicated "automatically generated text".

Croatia

Q062-26 (General Comment): The implementation of the Audio Recording and Transcription System for court hearings is currently underway. The contract with the Contractor was signed on March 28, 2025. The deadline for the completion of the procurement is 18 months from the date of contract signing.
At the moment, work is being carried out on establishing a central software solution for the integration of all courts into a unified system for monitoring and managing a shared repository of all recordings, as well as a central software solution for the automated transcription of recordings stored in the central shared repository. After completion implementation will proceed in individual courtrooms (a total of 1,317 courtrooms).

Czech Republic

Q062-24 (General Comment): The use of writing assistance tools in courts depends on the type of agenda and the information system used. Some systems automatically generate documents based on templates, data, and selected procedural actions. Older systems use an external application called APSTR, which helps create documents but is only available for district courts.
Document templates are developed either by the Ministry of Justice or at the national level in cooperation with experts and court staff. These templates can be modified locally by individual courts or even by users, allowing for adjustments to specific court agendas. However, not all types of cases are covered by these templates. Additionally, speech-to-text tools are available for all courts.

Q062-25 (General Comment): Recording of court hearings has been compulsory in all matters in the form of audio or audiovisual recordings since 2009. While the implementation of recording systems progressed gradually in previous years due to hardware, software, and funding limitations, significant progress was made in 2023-2024. Several key digitalisation projects were completed, resulting in a substantial increase in coverage. Currently, approximately 95–100% of court hearings are recorded.

Q062-26 (General Comment): In this cycle, we have selected "Automatically indexed recording" due to the integration of the courtroom recording system with the Beey transcription tool. This integration enables automatic timestamping and structured linking of audio segments to specific parts of the hearing, improving navigation and usability of the recordings.

Q062-26 (2024): Echo-cancellation technology has been implemented in courtrooms to improve the quality of audio recordings. The system identifies and suppresses audio feedback (echo), which is particularly important during videoconferencing. The first devices were deployed in 2024, and as of September 2025, a total of 154 units have been installed, with further expansion planned depending on available funding.

Denmark

Q062-24 (General Comment): Civil: The system has a function that replaces a physical signature through an approval flow, but it is NOT a digital signature.
Q062-24 (2024): The Criminal and Probate Case Administration Program is aiming to support criminal and probate areas within the Danish courts. Within this program we have introduced the fine case system and the new criminal case system, where the judge approves electronically within the solution instead of signing printed paper.

Q062-25 (General Comment): Civil: Currently 287 courtrooms in 26 courts. Only used sporadically. Requires explicit acceptance from the parties involved.
Administrative: Not relevant in practice. Currently 287 courtrooms in 26 courts.
Criminal: Primary usage. Currently 287 courtrooms in 26 courts. Usage rate varies from Court to court and from judge to judge. Each judge decides whether to avail herself of the possibility or not on a hearing-to-hearing basis.
Authorized officially in Danish legislation.

Q062-26 (General Comment): It is possible to request a copy, just not possible for the average citizen. Other special functionality: playback during court proceedings for jurors. Automatic transcript from re-cording is planned in the future when quality i reliable (currently done by court clerks on ad hoc basis).

Estonia

Q062-24 (General Comment): Dictation in Microsoft 365 is being used by some judges, and the option to use it is available to everyone.
Q062-26 (General Comment): If there is a virtual hearing, then it's possible to record video as well.

Finland

Q062-23 (General Comment): Our case management systems HAIPA and AIPA use Word as the writing assistance tool.

Q062-24 (2024): Along with the introduction of the AIPA system in 2024, electronic signature has been possible also in criminal matters.
Q062-25 (General Comment): In criminal and civil matters only the witness testimonial is recorded.
Q062-26 (2024): In 2026, new legislation will enter into force, after which a video and audio recording will be made of evidence taken in district courts instead of the previous audio recording.

France

Q062-24 (2024): In civil matters, the courts have an electronic docket to record decisions signed electronically. In both civil and criminal matters, there is a quick word library: the OARM tool (Writing Assistance Tool for judges) was replaced in 2025 by the Lawrite solution, deployed nationwide by the PPN (available in the software center for all judicial service agents) and allowing the management of quick word libraries in all word processing software.
In both civil and criminal matters:
- The OpenText publishing solution automatically generates decision documents from templates that use data entered into business applications and allows for manual enrichment with the rationale for the decision (within the scope of the OpenText deployment).
- The Lawrite solution allows for the automatic integration of standard phrases or paragraphs (the judge's personal library) to speed up the entry of the decision's reasoning by reusing previous formulations.

Q062-26 (2024):
Whether civil, criminal, economic, or administrative, court hearings can now be recorded or filmed for reasons of public interest, for educational, informational, cultural, or scientific purposes. Article 38 quater of the law of July 29, 1881, on the freedom of the press sets the legal framework for the recording and broadcasting of hearings and was supplemented by Decree No. 2022-462 of March 31, 2022. This legal framework only allows same-day broadcasting of hearings before the Council of State and the Court of Cassation. Within this framework, in 2024, the latter recorded and broadcast seven hearings of its solemn formations (Plenary Assembly and mixed chambers) on the same day, held in both civil and criminal matters.

Germany

Q062-23 (General Comment): The use of information technology in the courts is in the competency of the federal states and therefore not at all homogenous. The answers in this section reflect the answers as provided by of the majority of the federal states, eventhough there my be significant differences in some cases.
Q062-23 (2024): The majority of the respondent federal states reported deployment rates of 95 - 100% (civil, administrative and criminal). A minority of 3 federal states reported deployment rates of 75 - 95%
The majority of the federal states reported a usage rates of 75 - 100% (civil, administrative and criminal). In comparison to the pervious reference year 2023, 3 federal states reportet increased usage rates regarding civil cases, 4 regarding administrative cases and 3 regarding criminal cases. A minority of 4 federal states reported usage rates of 50 - 75 % or NA (1).

Q062-24 (General Comment): The use of information technology in the courts is in the competency of the federal states and therefore not at all homogenous. The answers in this section reflect the answers as provided by of the majority of the federal states, eventhough there my be significant differences in some cases.
Q062-24 (2024): In all 16 federal states writing assistance tools include the functionality "templates". In the majority of the federal states (13 - 15), writing assistance tools include the functionalities automatically generated text speech to text and electronic signature.
Q062-25 (2024): The majority of the federal states reported "NAP" on deployment and usage rate in civil, administrative and criminal cases. With regard to civil and administrative cases 1 federal state and with regard to criminal cases 2 federal states reported existing recording tools.
One federal state reported successful introduction of a pilot project regarding video interrogation of victim witnesses. This system prevents victims and perpetrators from encountering each other in court and allows statements to be transmitted directly to the courtroom and also recorded.
Q062-26 (2024): The majority of the federal states reported "NAP". Functionalities of recording tools were reported by 1 federal state for administrative and civil cases and two federal states for criminal cases.

Greece

Q062-25 (General Comment): There are no witness testimony in administrative cases.

Q062-26 (General Comment): In civil and criminal hearings, the recordings are systematic by default. However, the president of the court and/or the presiding judge has discretionary power to decide not to record a hearing.

Hungary

Q062-24 (General Comment): In 2022, writing assistance tools were made available to all employees working within the entire court system. These were licensed tools that staff members tried and tested. Based on user feedback, it was determined by 2023 that, considering the specific characteristics of the Hungarian language and the legal terminology, these tools did not improve the efficiency of court work. Their language recognition functions were not easily scalable, and therefore, they were phased out. Simultaneously, we sought new solutions and acquired cloud-based tools that, although previously restricted by legal regulations, could now be developed and trained. These tools were fewer in number than in the past.

Q062-26 (General Comment): A ViaVideo system has been implemented nationwide. Every police station has at least one room equipped with it, every penitentiary institution has several rooms, and every court in the country has at least one courtroom — in some cases more — equipped with the system. It transmits both audio and video simultaneously and is also capable of recording hearings. The recorded material is saved in a format suitable for use by the court. The system also allows other participants — for instance, the prosecutor, defence counsel, expert witness, or a party/defendant/witness— to join the hearing via a link sent by e-mail. If the judge uses this system to make a continuous audio and video recording of the hearing, the recording itself constitutes the official record (minutes). In such cases, a written summary must be prepared from the recording. This summary contains only technical information — such as who appears on the recording and during which time interval, and what procedural act took place — but not the substantive content of those acts.

Ireland

Q062-23 (General Comment): Approximately half of our case types and scenarios are supported in practice by templates as an order writing assistance – and where they are available, they are used 100% (roughly) of the time. Close to half of our jurisdictions do not support templates at all (or didn't at the point of filling out the survey).

Q062-23 (2024): Ireland does not have a separate category for Administrative Law cases, as such, we have given the same answers here as provided for civil cases.
Q062-24 (2024): Although there is no separate category for administrative cases in Ireland, we have given the same answers here as provided for civil cases.
Q062-25 (2024): Ireland does not have a separate category for Administrative Law cases, as such, we have given the same answers here as provided for civil cases.
Q062-26 (General Comment): Court hearings are recorded by use of DAR (Digital Audio Recordings). Audio recordings are made for internal court purposes and are under the control of the court. They are not generally available to parties or to the public, unless ordered by the Court although applications can be made to the court for a transcript of the recording, or part thereof for a fee. For example, this might arise if court proceedings are subject to a Judicial Review in a higher court.

Q062-26 (2024): Ireland does not have a separate category for Administrative Law cases, as such, we have given the same answers here as provided for civil cases.

Latvia

Q062-24 (General Comment): In Latvian courts, writing and text processing support tools are used to ensure consistent document quality and to facilitate daily work. The central platform is the Court Information System, which serves as the main environment for preparing, storing, and managing judicial documents. It provides pre-defined templates, allows text formatting in line with regulatory requirements, and enables automated case registration, helping judges and staff maintain consistency in documentation.
An important element is the integration with the e-Case platform, which allows procedural documents to be submitted and received electronically, as well as the use of digital signatures, thereby reducing the circulation of paper documents. Writing support is also ensured by language and terminology tools – text editors with Latvian spell-check functionality and access to legal databases that help secure the accuracy of judgments and other procedural documents.
Since 2024, Latvian courts have been gradually testing speech recognition solutions that automatically convert hearing audio recordings into text. These tools are still in the testing phase, and human verification remains essential, but in the long run, they are expected to reduce manual transcription work and speed up the preparation of protocols. In addition, document generation tools are employed to quickly produce standard rulings, summons, or notifications, reducing repetitive drafting.
Writing assistance also extends to secure electronic communication forms, ensuring that information provided to parties is clear, standardized, and in full compliance with procedural requirements. Together, these tools form a solid foundation for more efficient court operations and improved quality of judicial documentation.

Q062-26 (General Comment): In all cases the audio protocol is mandatory according to the legal acts. There are used also TIX or AVR tool, in which the most important places in the audio protocol are tagged. The audio protocol is developed in pdf format or mp4.
Q062-26 (2024): Transcription tool in development.
All recordings are available in E-Case platform for both parties.

Lithuania

Q062-24 (General Comment): The system contains many prepared Templates, that can be filled out by judges, assistant judges or secretaries (e.g. court summons, order on temporary protection measures and other forms).

Q062-26 (General Comment): In criminal cases, interviews of minors are videotaped.

Q062-26 (2024): see general comment

Luxembourg

Q062-24 (General Comment): The existing tools are not automated and do not use any artificial intelligence assistance. They involve the use of Word templates for certain documents generated by business applications. These documents are automatically generated and pre-filled with metadata.
A POC was conducted to implement a tool to assist in drafting judgments, but it was not successful.
Other avenues are currently under analysis.

Malta

Q062-24 (General Comment): In the current system, DigiCourts, the main writing assistance tools deployed are templates of standard documentation used by the court staff. Most of these templates reflect official court documents that are also annexed to the Code of Civil Procedure, Chp 12 of the Laws of Malta. The proposed new case management system will have enhanced writing assistance tools and will include the use of the electronic signature to facilitate the transition to a fully digitalised system.
Q062-26 (General Comment): In terms of 'automatically indexed recording', the recordings made during the sittings are automatically organised by sitting, which simplifies storage and retrieval in a specific order. The Court Services Agency have also implemented an advanced audio-digital system that will enable the judiciary and court officials to record hearings seamlessly, securely store and organise files, and quickly retrieve and manage recordings. This makes the audio-visual recordings more efficient, reliable and transparent in the handling of the judicial proceedings.

Netherlands

Q062-24 (General Comment): Other functionalities: automatically fill in data from CMS, like names, dates and type of case. The tool ‘Schrijfhulp’ (‘Writing Assistance’) e.g. helps people write a response to a summons. Templates for the courts are approved centrally, so if they are available, they would be available for all courts, but no specific information is available.

Q062-24 (2024): The electronic signature is a small pilot in administrative law for now.

Q062-26 (General Comment): In some courtrooms, sound is recorded to an SD-card. This is solely to assist in reporting, it is not a product in itself. The level of automation/computerization differs between courts and types of courts, which makes it difficult to report on how often and how much voice-recording tools are used. Voice recognition is not used.

Q062-26 (2024): There are no tools, except local recorders. Usage is less than 10%. This is applicable for civil, administrative and criminal cases.

Poland

Q062-24 (General Comment): 1. All courts use document templates to prepare judgments, decisions, and orders. These are most often MS Word templates with macros allowing for the addition of case data, parties data, etc. from the case management system (SRB). Courts can use the centrally developed ZEUS tool (an advanced editor for court justifications). Selected courts also use local applications that enable voice-to-text conversion. In selected proceedings conducted in central systems supporting court proceedings, such as the National Debtors Register KRZ (bankruptcy and restructuring proceedings) and the Electronic Writ of Payment Proceedings EPU, documents related to a given stage of the proceedings are generated based on data collected in the system supporting that procedure.
2. Judges conducting proceedings in the KRZ and EPU systems use qualified electronic signatures to sign their decisions, and orders. Judges using the electronic transcript of a hearing sign it with a non-qualified electronic signature.

Q062-25 (General Comment): In civil proceedings, recording court sessions is generally obligatory and constitutes an electronic protocol. In criminal proceedings, recording court sessions is not obligatory; any recording is only an annex to the traditional protocol. The exceptions are misdemeanour hearings, where the recording is also an electronic protocol, but this is a small percentage of cases.
Q062-26 (General Comment): In criminal proceedings, recording court sessions is not obligatory; any recording is only an annex to the traditional protocol. The exceptions are misdemeanour hearings, where the recording is also an electronic protocol, but this is a small percentage of cases. Automatic transcription of the recording is generated using automatic speech recognition technology. The automatically prepared transcript is then subject to human review.

Portugal

Q062-24 (General Comment): Writing assistance tools are available across civil, administrative and criminal courts, and they provide a set of functionalities designed to support and streamline the drafting of judicial and administrative acts.
The main features include:
•Pre-defined templates: Users have access to a wide library of standardized templates for different procedural acts. The system guides the user to select the appropriate template based on their profile and the type of action to be performed, ensuring consistency across courts. In many cases, the user does not need to add any text and only needs to sign the document; however, they may still edit or adjust the content if desired.
•Automatically generated text: The courts' system provides automatic texts that users can use. These indicate the process, the intended recipient, and the action to be performed, and users may also add observations.
•Electronic signature: All documents drafted through these tools can be finalised and authenticated using a qualified electronic signature, ensuring legal validity.
Additional contextual notes:
•A language simplification initiative was implemented to make certain standard texts clearer and more accessible, particularly when addressing natural and legal persons.
•The system also provides spelling and text correction, as well as automatic text suggestions for routine formulations. Users may add specific remarks or tailor content when necessary, even within automatically generated acts.
Overall, these tools support efficiency, uniformity, and quality in the preparation of documents across all jurisdictions.

Q062-26 (General Comment): In our courts, audio recording is available, providing an official and reliable record of proceedings when applied.
The system also enables the following functionalities:
•Audio streaming of hearings: users may access recordings through their interface, either upon request or by action of the judicial secretariat.
•Real-time streaming: Authorized users can listen to ongoing hearings live, via the case interface.
•Remote participation: Multiple users can join a hearing simultaneously from different locations across the country or abroad, as if physically present in the courtroom.
Access is strictly controlled, and these functionalities are used only by authorized judicial actors, in accordance with applicable procedural rules.

Q062-26 (2024): Audio streaming of recordings of proceedings and hearings for forensic prosecutors, on their interface, upon request and/or by action of the judicial secretariat.

Romania

Q062-24 (2024): (See general comments)

Q062-26 (General Comment): In Romania's judicial system, the integrated solution OPTIMUS has been implemented. Developed in-house, it manages audio recordings and automatic voice-to-text transcription. It is "cloud ready" and uses machine learning algorithms to identify speakers. The solution underwent a successful technological pilot that evaluated its performance in challenging acoustic environments. The project is continuing with integration into the national case management system, ECRIS V, as part of the PNRR investment titled "Development of integrated audio recording systems in courtrooms and automatic transcription components."
1. Technical Clarifications Regarding Automatic Indexing
Automatic indexing of recordings is achieved through speaker change detection and automatic segmentation of the audio stream (diarization). Machine learning algorithms identify transitions between speakers and automatically mark key moments in the recording, generating time markers used for both audio navigation and alignment of sound segments with the transcribed text.
2. General Context Regarding Courtroom Session Recording
Audio recording of courtroom sessions is a standard component of judicial activity. The OPTIMUS solution streamlines the transcription process and helps reduce drafting time. The implementation uses dedicated equipment for audio capture, separate from general sound systems. Nationally, the project aims to acquire the necessary IT infrastructure and equip over 1,000 courtrooms with specific devices, with data processing and integration to be carried out through the centralized infrastructure of ECRIS V.

Slovak Republic

Q062-26 (General Comment): In 2015, courtrooms were equipped with recording technology. These recordings are part of the electronic court file. The application "Audiorecording" is used to process multimedia recordings created during hearings in individual courtrooms. The Audio Recordings Client application (formerly MonoReCourt) is used for processing multimedia recordings produced during hearings in individual courtrooms.

Slovenia

Q062-23 (General Comment): In line with EN, under „Civil“ only cases corresponding to Q91 category: “1. Civil (and commercial) litigious cases” are taken into account (i.e. civil litigious cases, commercial cases, labour cases, social cases, insolvency cases and various civil cases). In all of these cases, the CMS enables some form of write assistance tools, that are widely used in courts; while the possibility to create a new writing or use a different document still exists. Data on actual usage is only an estimation.

Q062-23 (2024): Please note write assistance tools are also available in cases, not included in any of categories above:
- civil enforcement cases (Q91:2.1 General civil (and commercial) non-litigious cases)
Deployment rate: 95-100%/ Usage rate: 95-100%
- family cases (Q91:2.1 General civil (and commercial) non-litigious cases)
Deployment rate: 95-100%/ Usage rate: 95-100%
- land registry cases (Q91:2.2.1 Non-litigious land registry cases)
Deployment rate: 95-100%/ Usage rate: 95-100%
- bussines registry (Q91:2.2.2 Non-litigious business registry cases)
Deployment rate:95-100%/ Usage rate: 95-100%
- civil enforcement cases on base of authentic document (Q91:4.other cases)
Deployment rate: 95-100%/ Usage rate: 95-100%
Please also note that number of (incoming) cases at Q91:”2. Non-litigious cases” is 14x the number of “1.Civil (and commercial) litigious cases” and number of (incoming) cases at Q91:”4.Other cases” is 4x the number of “1.Civil (and commercial) litigious cases”.

Q062-24 (General Comment): Automatically generated text: In civil (and commercial) litigious cases, as well as in non-litigious, administrative and criminal cases, only simple court writings are available as templates (i.e. notifications, summons). Automatically generated text: limited only to case metadata.

Q062-24 (2024): In 2024, speech-to-text system (TIPKO) has been implemented in all Slovenian courts. Administrative cases: electronic signature is possible, but is not used in practice as the Administrative court did not start with entirely electronic business yet. Criminal cases: In severe criminal cases, a possibility of electronic signature has been implemented in CMS in 2024. In misdemenour cases, the possibility of electronic signature is implemented and used regularly.

Q062-25 (2024): Usage rate: the option to record hearings is widely used. However, there is no data collected on actual usage, therefore the above answer is only an estimation.

Q062-26 (General Comment): Systematic recording for all hearings: the decision to record or not is in the hands of an individual judge.
Possibility to request a copy of the recording: a party has a right to acces the recording, as well as to object the authenticity of the transcript.

Q062-26 (2024): Voice recording: available in all courtrooms. A new system for the central collection of recordings (ASOD II), which enables secure remote access to recordings and provides interoperability with the newly implemented speech-to-text system (TIPKO), is currently being implemented. By the end of 2024, 19 of approximately 350 hearing rooms had been equipped to support this functionality.

Spain

Q062-24 (General Comment): The processing of the Case Management System provides hundreds of thousands of models and paragraphs predesigned at each moment of processing to auto complete with the specific information for each procedure, facilitating the preparation of practically 100% of the resolutions and judicial documents.
Likewise, guided processing schemes are provided, which suggest the procedures that can follow the last one carried out, depending on the type of procedure.
Other special functionality: multiple processing (processing similar models of several procedures at the same time), special operations (notes on the deadline agenda at the end of certain documents, phase and status updating, guided processing schemes - processing models for each type of procedure), consultation/copy of texts of previous resolutions made.
It is applicable in every jurisdiction.

Q062-24 (2024): AI tools for transcription to plain language and easy reading

Q062-26 (2024): Textualized recordings allow the user to search the textualized text by keywords or interveners. All recordings are electronically signed by the Judicial Councillor (responsible for the judicial office) and can be visualize through the electronic judicial file

Indicator 6: The ICT tools of courts and for court users

Comments provided by the national correspondents

organised by question no.

Question 062-23. If writing assistance tools exist in courts, what are their deployment and usage rates?

Question 062-24. If writing assistance tools exist in courts, please describe their functionalities:

Question 062-25. If a tool to record court hearings exists, what are the deployment and usage rates?

Question 062-26. If a tool to record court hearings exist, please specify its functionalities:

Question 062-23

Austria

Q062-23 (2024): Administrative: Numbers above are for the Federal Administrative Court
Regional administrative courts: DR: 95-100 %, UR: 50-75 %
Supreme administrative court: 25-50 % deployment and usage rate

Belgium

Q062-23 (General Comment): Administrative matters (Council of State): for each type of procedure, there are template judgments containing certain standardised paragraphs. This standardisation particularly concerns the part relating to the conduct of the proceedings. Some documents are now generated automatically on the basis of information contained in internal databases (setting orders and hearing tables, for example).
Strictly speaking, however, there are no ‘”writing assistance tools » for judgments.
However, since 2017 all Council of State judgments have been written in direct style. This generalisation has ensured greater uniformity in the presentation of judgments. Council of State judges also have a number of tools at their disposal:
a. Legal databases are maintained internally and also made available to the public (Juridict www.juridict.be , refLex www.reflex.be , etc.);
b. Access is provided to private, paying legal databases (StradaLex www.stradalex.be , Jurisquare www.jurisquare.be, etc.);
c. an intranet managed by the Council of State also centralises all documents produced by the Council of State (judgments, orders, reports, etc.). It is called Documap.
d. The Council of State's website also offers numerous search options: www.raadvst-consetat.be.

Finland

Q062-23 (General Comment): Our case management systems HAIPA and AIPA use Word as the writing assistance tool.

Germany

Q062-23 (General Comment): The use of information technology in the courts is in the competency of the federal states and therefore not at all homogenous. The answers in this section reflect the answers as provided by of the majority of the federal states, eventhough there my be significant differences in some cases.

Q062-23 (2024): The majority of the respondent federal states reported deployment rates of 95 - 100% (civil, administrative and criminal). A minority of 3 federal states reported deployment rates of 75 - 95%
The majority of the federal states reported a usage rates of 75 - 100% (civil, administrative and criminal). In comparison to the pervious reference year 2023, 3 federal states reportet increased usage rates regarding civil cases, 4 regarding administrative cases and 3 regarding criminal cases. A minority of 4 federal states reported usage rates of 50 - 75 % or NA (1).

Ireland

Q062-23 (General Comment): Approximately half of our case types and scenarios are supported in practice by templates as an order writing assistance – and where they are available, they are used 100% (roughly) of the time. Close to half of our jurisdictions do not support templates at all (or didn't at the point of filling out the survey).

Q062-23 (2024): Ireland does not have a separate category for Administrative Law cases, as such, we have given the same answers here as provided for civil cases.

Slovenia

Q062-23 (General Comment): In line with EN, under „Civil" only cases corresponding to Q91 category: "1. Civil (and commercial) litigious cases" are taken into account (i.e. civil litigious cases, commercial cases, labour cases, social cases, insolvency cases and various civil cases). In all of these cases, the CMS enables some form of write assistance tools, that are widely used in courts; while the possibility to create a new writing or use a different document still exists. Data on actual usage is only an estimation.

Q062-23 (2024): Please note write assistance tools are also available in cases, not included in any of categories above:
- civil enforcement cases (Q91:2.1 General civil (and commercial) non-litigious cases)
Deployment rate: 95-100%/ Usage rate: 95-100%
- family cases (Q91:2.1 General civil (and commercial) non-litigious cases)
Deployment rate: 95-100%/ Usage rate: 95-100%
- land registry cases (Q91:2.2.1 Non-litigious land registry cases)
Deployment rate: 95-100%/ Usage rate: 95-100%
- bussines registry (Q91:2.2.2 Non-litigious business registry cases)
Deployment rate:95-100%/ Usage rate: 95-100%
- civil enforcement cases on base of authentic document (Q91:4.other cases)
Deployment rate: 95-100%/ Usage rate: 95-100%
Please also note that number of (incoming) cases at Q91:"2. Non-litigious cases" is 14x the number of "1.Civil (and commercial) litigious cases" and number of (incoming) cases at Q91:"4.Other cases" is 4x the number of "1.Civil (and commercial) litigious cases".

Question 062-24

Austria

Q062-24 (General Comment): An electronic case file system is used for the administration of investigative and court proceedings at public prosecutor's offices and courts. The case file system enables users to store, organise and structure documents as well as to use templates to create and sign documents electronically. Files can also be uploaded to the electronic case file. These files may also be dictated using speech-to-text applications, such as Dragon.
Templates for LibreOffice are made available to all users. In addition, users can also create their own templates, so-called "structured short orders" for registry instructions and other tasks, using text modules and custom text samples. Automatically generated text is generally created by workflow rules and not by LLM-based artificial intelligence. LLM-based artificial intelligence is used for the anonymisation of documents.

Q062-24 (2024): Regarding the Administrative Courts, not all functions are available in all the courts.

Belgium

Q062-24 (General Comment): In civil and criminal matters:
- most templates are available for all courts, or all templates are available for most courts - local modification of templates is always possible;
- the options are not all part of the same application (e.g. speech-to-text)
For speech-to-text: this is possible in the WORD application.
Limitation: text generated automatically according to the Case Management Systems (CMS).
Concerning electronic signature: only possible for justices of the peace; these courts are currently working with eSign to digitally sign documents. From 2025, police courts and criminal courts should also be able to sign electronically, followed by other courts.
It is worth mentioning the JustCourt project, officially launched in 2024. This is a new tool that will enable virtual or hybrid hearings to be held in courts. It is currently being rolled out to cover all courts (scheduled for 2025–2026). Like other applications, JustCourt is part of the overall digitisation process undertaken by the FPS Justice to modernise and improve the Belgian judicial system for all its users.

Bulgaria

Q062-24 (General Comment): “Speech to text” – By Decision under Protocol No. 25/29.09.2023, the Plenum of the Supreme Judicial Council approved and implemented in all judicial bodies the software created under the project "Development and implementation in the judicial system of software for accelerated creation and reproduction of acts and other documents through dictation and automatic conversion of voice recording into text /voice-to-text/ and accompanying processing systems", according to which the SJC is a beneficiary in a contract financed under the Operational Program "Good Governance" 2014-2020. The "voice-to-text" (V2T) system is a tool for digitization and allows magistrates instead of manually type their acts, to dictate and receive automatically typed text, allowing for quick formatting, searching and bolding words, referencing, annotation and other options for additional text processing and references to all key segments of the acts. The software for accelerated creation and reproduction of acts and other documents through dictation and automatic conversion of voice recording into text /voice-to-text/ is of the "artificial intelligence" type. It was developed using the "deep neural networks" method and of key importance for its effectiveness was training through voice recordings of words, through audio recordings of judicial and prosecutorial acts, that correspond to maximum extent to the real use of terminology in judicial practice. The system supports the following file formats:
WAV (Waveform audio), *.wav;
AIFF (Audio Interchange File Format), *.aif;
FLAC (Free Lossless Audio Codec), *.flac;
MP3 (MPEG Audio-1 Layer 3), *.mp3;
AAC (Advanced Audio Coding), *.m4a, *.m4b, *.m4p, *.m4v, *.m4r, *.3gp, *.mp4, *.aac;
WMA (Windows Media Audio), *.wma;
OGG (Vorbis), *.ogg.
The supported text formats are:
MS Word, *.doc, *.docx);
Rich Text Format, *.rtf;
Plain Text Format, *.txt;
Portable Document Format, *.pdf.
On 05.06.2024, the Operational Program "Good Governance" published information in the Information System for Management and Monitoring of EU Funds in Bulgaria (ISMM) about the successful fulfillment of all SJC obligations and, accordingly, about the project completion.
“Templates” – The Unified Information System of Courts (UISC) contains templates for judicial acts, such as decisions, orders, rulings, etc. As an example of how it works, we provide the steps for the preparation of a decision. After the judge enters the specific hearing and selects the necessary act, a window is generated in the UISC, where only the motivation and dispositive parts of the act are entered. After filling in the necessary fields and sequentially selecting the buttons "record", "prepare an act" and "send for signature", the complete decision is generated. This also applies to other types of acts, i.e. the judge does not write the title part, but only the motivation and dispositive parts.

Q062-24 (2024): It should be noted that the Supreme Court of Cassation indicated "electronic signature". Besides, except those mentioned in the table the Supreme Administrative Court indicated "automatically generated text".

Czech Republic

Q062-24 (General Comment): The use of writing assistance tools in courts depends on the type of agenda and the information system used. Some systems automatically generate documents based on templates, data, and selected procedural actions. Older systems use an external application called APSTR, which helps create documents but is only available for district courts.
Document templates are developed either by the Ministry of Justice or at the national level in cooperation with experts and court staff. These templates can be modified locally by individual courts or even by users, allowing for adjustments to specific court agendas. However, not all types of cases are covered by these templates. Additionally, speech-to-text tools are available for all courts.

Denmark

Q062-24 (General Comment): Civil: The system has a function that replaces a physical signature through an approval flow, but it is NOT a digital signature.

Q062-24 (2024): The Criminal and Probate Case Administration Program is aiming to support criminal and probate areas within the Danish courts. Within this program we have introduced the fine case system and the new criminal case system, where the judge approves electronically within the solution instead of signing printed paper.

Estonia

Q062-24 (General Comment): Dictation in Microsoft 365 is being used by some judges, and the option to use it is available to everyone.

Finland

Q062-24 (2024): Along with the introduction of the AIPA system in 2024, electronic signature has been possible also in criminal matters.

France

Q062-24 (2024): In civil matters, the courts have an electronic docket to record decisions signed electronically. In both civil and criminal matters, there is a quick word library: the OARM tool (Writing Assistance Tool for judges) was replaced in 2025 by the Lawrite solution, deployed nationwide by the PPN (available in the software center for all judicial service agents) and allowing the management of quick word libraries in all word processing software.
In both civil and criminal matters:
- The OpenText publishing solution automatically generates decision documents from templates that use data entered into business applications and allows for manual enrichment with the rationale for the decision (within the scope of the OpenText deployment).
- The Lawrite solution allows for the automatic integration of standard phrases or paragraphs (the judge's personal library) to speed up the entry of the decision's reasoning by reusing previous formulations.

Germany

Q062-24 (General Comment): The use of information technology in the courts is in the competency of the federal states and therefore not at all homogenous. The answers in this section reflect the answers as provided by of the majority of the federal states, eventhough there my be significant differences in some cases.

Q062-24 (2024): In all 16 federal states writing assistance tools include the functionality "templates". In the majority of the federal states (13 - 15), writing assistance tools include the functionalities automatically generated text speech to text and electronic signature.

Hungary

Q062-24 (General Comment): In 2022, writing assistance tools were made available to all employees working within the entire court system. These were licensed tools that staff members tried and tested. Based on user feedback, it was determined by 2023 that, considering the specific characteristics of the Hungarian language and the legal terminology, these tools did not improve the efficiency of court work. Their language recognition functions were not easily scalable, and therefore, they were phased out. Simultaneously, we sought new solutions and acquired cloud-based tools that, although previously restricted by legal regulations, could now be developed and trained. These tools were fewer in number than in the past.

Ireland

Q062-24 (2024): Although there is no separate category for administrative cases in Ireland, we have given the same answers here as provided for civil cases.

Latvia

Q062-24 (General Comment): In Latvian courts, writing and text processing support tools are used to ensure consistent document quality and to facilitate daily work. The central platform is the Court Information System, which serves as the main environment for preparing, storing, and managing judicial documents. It provides pre-defined templates, allows text formatting in line with regulatory requirements, and enables automated case registration, helping judges and staff maintain consistency in documentation.
An important element is the integration with the e-Case platform, which allows procedural documents to be submitted and received electronically, as well as the use of digital signatures, thereby reducing the circulation of paper documents. Writing support is also ensured by language and terminology tools – text editors with Latvian spell-check functionality and access to legal databases that help secure the accuracy of judgments and other procedural documents.
Since 2024, Latvian courts have been gradually testing speech recognition solutions that automatically convert hearing audio recordings into text. These tools are still in the testing phase, and human verification remains essential, but in the long run, they are expected to reduce manual transcription work and speed up the preparation of protocols. In addition, document generation tools are employed to quickly produce standard rulings, summons, or notifications, reducing repetitive drafting.
Writing assistance also extends to secure electronic communication forms, ensuring that information provided to parties is clear, standardized, and in full compliance with procedural requirements. Together, these tools form a solid foundation for more efficient court operations and improved quality of judicial documentation.

Lithuania

Q062-24 (General Comment): The system contains many prepared Templates, that can be filled out by judges, assistant judges or secretaries (e.g. court summons, order on temporary protection measures and other forms).

Luxembourg

Q062-24 (General Comment): The existing tools are not automated and do not use any artificial intelligence assistance. They involve the use of Word templates for certain documents generated by business applications. These documents are automatically generated and pre-filled with metadata.
A POC was conducted to implement a tool to assist in drafting judgments, but it was not successful.
Other avenues are currently under analysis.

Malta

Q062-24 (General Comment): In the current system, DigiCourts, the main writing assistance tools deployed are templates of standard documentation used by the court staff. Most of these templates reflect official court documents that are also annexed to the Code of Civil Procedure, Chp 12 of the Laws of Malta. The proposed new case management system will have enhanced writing assistance tools and will include the use of the electronic signature to facilitate the transition to a fully digitalised system.

Netherlands

Q062-24 (General Comment): Other functionalities: automatically fill in data from CMS, like names, dates and type of case. The tool 'Schrijfhulp' ('Writing Assistance') e.g. helps people write a response to a summons. Templates for the courts are approved centrally, so if they are available, they would be available for all courts, but no specific information is available.

Q062-24 (2024): The electronic signature is a small pilot in administrative law for now.

Poland

Q062-24 (General Comment): 1. All courts use document templates to prepare judgments, decisions, and orders. These are most often MS Word templates with macros allowing for the addition of case data, parties data, etc. from the case management system (SRB). Courts can use the centrally developed ZEUS tool (an advanced editor for court justifications). Selected courts also use local applications that enable voice-to-text conversion. In selected proceedings conducted in central systems supporting court proceedings, such as the National Debtors Register KRZ (bankruptcy and restructuring proceedings) and the Electronic Writ of Payment Proceedings EPU, documents related to a given stage of the proceedings are generated based on data collected in the system supporting that procedure.
2. Judges conducting proceedings in the KRZ and EPU systems use qualified electronic signatures to sign their decisions, and orders. Judges using the electronic transcript of a hearing sign it with a non-qualified electronic signature.

Portugal

Q062-24 (General Comment): Writing assistance tools are available across civil, administrative and criminal courts, and they provide a set of functionalities designed to support and streamline the drafting of judicial and administrative acts.
The main features include:
•Pre-defined templates: Users have access to a wide library of standardized templates for different procedural acts. The system guides the user to select the appropriate template based on their profile and the type of action to be performed, ensuring consistency across courts. In many cases, the user does not need to add any text and only needs to sign the document; however, they may still edit or adjust the content if desired.
•Automatically generated text: The courts' system provides automatic texts that users can use. These indicate the process, the intended recipient, and the action to be performed, and users may also add observations.
•Electronic signature: All documents drafted through these tools can be finalised and authenticated using a qualified electronic signature, ensuring legal validity.
Additional contextual notes:
•A language simplification initiative was implemented to make certain standard texts clearer and more accessible, particularly when addressing natural and legal persons.
•The system also provides spelling and text correction, as well as automatic text suggestions for routine formulations. Users may add specific remarks or tailor content when necessary, even within automatically generated acts.
Overall, these tools support efficiency, uniformity, and quality in the preparation of documents across all jurisdictions.

Romania

Q062-24 (2024): (See general comments)

Slovenia

Q062-24 (General Comment): Automatically generated text: In civil (and commercial) litigious cases, as well as in non-litigious, administrative and criminal cases, only simple court writings are available as templates (i.e. notifications, summons). Automatically generated text: limited only to case metadata.

Q062-24 (2024): In 2024, speech-to-text system (TIPKO) has been implemented in all Slovenian courts. Administrative cases: electronic signature is possible, but is not used in practice as the Administrative court did not start with entirely electronic business yet. Criminal cases: In severe criminal cases, a possibility of electronic signature has been implemented in CMS in 2024. In misdemenour cases, the possibility of electronic signature is implemented and used regularly.

Spain

Q062-24 (General Comment): The processing of the Case Management System provides hundreds of thousands of models and paragraphs predesigned at each moment of processing to auto complete with the specific information for each procedure, facilitating the preparation of practically 100% of the resolutions and judicial documents.
Likewise, guided processing schemes are provided, which suggest the procedures that can follow the last one carried out, depending on the type of procedure.
Other special functionality: multiple processing (processing similar models of several procedures at the same time), special operations (notes on the deadline agenda at the end of certain documents, phase and status updating, guided processing schemes - processing models for each type of procedure), consultation/copy of texts of previous resolutions made.
It is applicable in every jurisdiction.

Q062-24 (2024): AI tools for transcription to plain language and easy reading

Question 062-25

Austria

Q062-25 (General Comment): Administrative: Numbers are for the Federal Administrative Court only! The others do not have tools for recording hearings yet.

Belgium

Q062-25 (General Comment): In May 2024, a new JustCourt tool was launched, enabling virtual or hybrid hearings to be held in Belgian courts. This involves installing videoconferencing systems in the courtrooms. This new application is part of the FPS Justice's digitisation initiative, which aims to modernise and improve the judicial system for all litigants. The pilot phase is currently underway. In civil and criminal matters: prior to the deployment of JustCourt: - in criminal matters, use of videoconferencing for research and investigations.
- videoconferencing equipment was not available everywhere and systematically. Where necessary or appropriate, equipment could (also) be rented. Thanks to the new projects in this area, the availability of this equipment for the judiciary will be increased. In administrative matters - Council of State: the possibility exists in exceptional circumstances to hold a hearing by videoconference, but it is not foreseen to record it. It should be recalled that during the coronavirus crisis, a Royal Decree of Special Powers No. 12 (http://www.raadvstconsetat.be/?page=news&lang=fr&newsitem=592) enabled the Council of State to rule in writing and without a hearing, with the agreement of all the parties. In the same context, the Council of State was able to organise a number of remote hearings, virtually (via Skype or Teams), as part of the extreme emergency suspension procedure. This is still used on an ad hoc basis today, but to a very limited extent.

Czech Republic

Q062-25 (General Comment): Recording of court hearings has been compulsory in all matters in the form of audio or audiovisual recordings since 2009. While the implementation of recording systems progressed gradually in previous years due to hardware, software, and funding limitations, significant progress was made in 2023-2024. Several key digitalisation projects were completed, resulting in a substantial increase in coverage. Currently, approximately 95–100% of court hearings are recorded.

Denmark

Q062-25 (General Comment): Civil: Currently 287 courtrooms in 26 courts. Only used sporadically. Requires explicit acceptance from the parties involved.
Administrative: Not relevant in practice. Currently 287 courtrooms in 26 courts.
Criminal: Primary usage. Currently 287 courtrooms in 26 courts. Usage rate varies from Court to court and from judge to judge. Each judge decides whether to avail herself of the possibility or not on a hearing-to-hearing basis.
Authorized officially in Danish legislation.

Finland

Q062-25 (General Comment): In criminal and civil matters only the witness testimonial is recorded.

Germany

Q062-25 (2024): The majority of the federal states reported "NAP" on deployment and usage rate in civil, administrative and criminal cases. With regard to civil and administrative cases 1 federal state and with regard to criminal cases 2 federal states reported existing recording tools.
One federal state reported successful introduction of a pilot project regarding video interrogation of victim witnesses. This system prevents victims and perpetrators from encountering each other in court and allows statements to be transmitted directly to the courtroom and also recorded.

Greece

Q062-25 (General Comment): There are no witness testimony in administrative cases.

Ireland

Q062-25 (2024): Ireland does not have a separate category for Administrative Law cases, as such, we have given the same answers here as provided for civil cases.

Poland

Q062-25 (General Comment): In civil proceedings, recording court sessions is generally obligatory and constitutes an electronic protocol. In criminal proceedings, recording court sessions is not obligatory; any recording is only an annex to the traditional protocol. The exceptions are misdemeanour hearings, where the recording is also an electronic protocol, but this is a small percentage of cases.

Slovenia

Q062-25 (2024): Usage rate: the option to record hearings is widely used. However, there is no data collected on actual usage, therefore the above answer is only an estimation.

Question 062-26

Austria

Q062-26 (General Comment): In recent years, the rate at which recording solutions have been deployed has steadily increased, and these systems are now implemented throughout the entire judicial system. Consequently, there are very few areas remaining where such solutions are not utilised—provided their application is considered appropriate. Notably, in criminal cases, audiovisual recordings of hearings are primarily employed, whereas in civil and administrative proceedings, dictation devices are predominantly used. These devices enable decision-making bodies to summarise and record the session in a concise protocol.

Description for the ordinary courts and the Federal Administrative Court:
Each court is equipped with a video recording system; additionally, decision-making bodies and court clerks may use mobile audio recording devices to document court proceedings. Audio and video files may be electronically entered into the case file and transmitted electronically to the parties. The automatic transcription of audio tracks using AI (including time stamps, speaker identification, etc.) is currently under evaluation. The decision whether to produce a summary protocol or a verbatim transcript lies with the decision-making body.

Belgium

Q062-26 (2024): The possibility of audio or audiovisual recording is enshrined in Article 759/2 of the Judicial Code, which states that "The court before which the public hearing is taking place may decide, on an exceptional basis, to record that public hearing where such audio or audiovisual recording is of interest for the creation of historical archives of the justice system or for educational purposes with a view to imparting knowledge in the field of law or the functioning of the justice system, with the consent of the persons whose voices and images are recorded, each for their own part. This consent may be withdrawn at any time during the hearing. (...)" (provision introduced by a law of April 25, 2024).

Croatia

Q062-26 (General Comment): The implementation of the Audio Recording and Transcription System for court hearings is currently underway. The contract with the Contractor was signed on March 28, 2025. The deadline for the completion of the procurement is 18 months from the date of contract signing.
At the moment, work is being carried out on establishing a central software solution for the integration of all courts into a unified system for monitoring and managing a shared repository of all recordings, as well as a central software solution for the automated transcription of recordings stored in the central shared repository. After completion implementation will proceed in individual courtrooms (a total of 1,317 courtrooms).

Czech Republic

Q062-26 (General Comment): In this cycle, we have selected "Automatically indexed recording" due to the integration of the courtroom recording system with the Beey transcription tool. This integration enables automatic timestamping and structured linking of audio segments to specific parts of the hearing, improving navigation and usability of the recordings.

Q062-26 (2024): Echo-cancellation technology has been implemented in courtrooms to improve the quality of audio recordings. The system identifies and suppresses audio feedback (echo), which is particularly important during videoconferencing. The first devices were deployed in 2024, and as of September 2025, a total of 154 units have been installed, with further expansion planned depending on available funding.

Denmark

Q062-26 (General Comment): It is possible to request a copy, just not possible for the average citizen. Other special functionality: playback during court proceedings for jurors. Automatic transcript from re-cording is planned in the future when quality i reliable (currently done by court clerks on ad hoc basis).

Estonia

Q062-26 (General Comment): If there is a virtual hearing, then it's possible to record video as well.

Finland

Q062-26 (2024): In 2026, new legislation will enter into force, after which a video and audio recording will be made of evidence taken in district courts instead of the previous audio recording.

France

Q062-26 (2024):
Whether civil, criminal, economic, or administrative, court hearings can now be recorded or filmed for reasons of public interest, for educational, informational, cultural, or scientific purposes. Article 38 quater of the law of July 29, 1881, on the freedom of the press sets the legal framework for the recording and broadcasting of hearings and was supplemented by Decree No. 2022-462 of March 31, 2022. This legal framework only allows same-day broadcasting of hearings before the Council of State and the Court of Cassation. Within this framework, in 2024, the latter recorded and broadcast seven hearings of its solemn formations (Plenary Assembly and mixed chambers) on the same day, held in both civil and criminal matters.

Germany

Q062-26 (2024): The majority of the federal states reported "NAP". Functionalities of recording tools were reported by 1 federal state for administrative and civil cases and two federal states for criminal cases.

Greece

Q062-26 (General Comment): In civil and criminal hearings, the recordings are systematic by default. However, the president of the court and/or the presiding judge has discretionary power to decide not to record a hearing.

Hungary

Q062-26 (General Comment): A ViaVideo system has been implemented nationwide. Every police station has at least one room equipped with it, every penitentiary institution has several rooms, and every court in the country has at least one courtroom — in some cases more — equipped with the system. It transmits both audio and video simultaneously and is also capable of recording hearings. The recorded material is saved in a format suitable for use by the court. The system also allows other participants — for instance, the prosecutor, defence counsel, expert witness, or a party/defendant/witness— to join the hearing via a link sent by e-mail. If the judge uses this system to make a continuous audio and video recording of the hearing, the recording itself constitutes the official record (minutes). In such cases, a written summary must be prepared from the recording. This summary contains only technical information — such as who appears on the recording and during which time interval, and what procedural act took place — but not the substantive content of those acts.

Ireland

Q062-26 (General Comment): Court hearings are recorded by use of DAR (Digital Audio Recordings). Audio recordings are made for internal court purposes and are under the control of the court. They are not generally available to parties or to the public, unless ordered by the Court although applications can be made to the court for a transcript of the recording, or part thereof for a fee. For example, this might arise if court proceedings are subject to a Judicial Review in a higher court.

Q062-26 (2024): Ireland does not have a separate category for Administrative Law cases, as such, we have given the same answers here as provided for civil cases.

Latvia

Q062-26 (General Comment): In all cases the audio protocol is mandatory according to the legal acts. There are used also TIX or AVR tool, in which the most important places in the audio protocol are tagged. The audio protocol is developed in pdf format or mp4.

Q062-26 (2024): Transcription tool in development.
All recordings are available in E-Case platform for both parties.

Lithuania

Q062-26 (General Comment): In criminal cases, interviews of minors are videotaped.

Q062-26 (2024): see general comment

Malta

Q062-26 (General Comment): In terms of 'automatically indexed recording', the recordings made during the sittings are automatically organised by sitting, which simplifies storage and retrieval in a specific order. The Court Services Agency have also implemented an advanced audio-digital system that will enable the judiciary and court officials to record hearings seamlessly, securely store and organise files, and quickly retrieve and manage recordings. This makes the audio-visual recordings more efficient, reliable and transparent in the handling of the judicial proceedings.

Netherlands

Q062-26 (General Comment): In some courtrooms, sound is recorded to an SD-card. This is solely to assist in reporting, it is not a product in itself. The level of automation/computerization differs between courts and types of courts, which makes it difficult to report on how often and how much voice-recording tools are used. Voice recognition is not used.

Q062-26 (2024): There are no tools, except local recorders. Usage is less than 10%. This is applicable for civil, administrative and criminal cases.

Poland

Q062-26 (General Comment): In criminal proceedings, recording court sessions is not obligatory; any recording is only an annex to the traditional protocol. The exceptions are misdemeanour hearings, where the recording is also an electronic protocol, but this is a small percentage of cases. Automatic transcription of the recording is generated using automatic speech recognition technology. The automatically prepared transcript is then subject to human review.

Portugal

Q062-26 (General Comment): In our courts, audio recording is available, providing an official and reliable record of proceedings when applied.
The system also enables the following functionalities:
•Audio streaming of hearings: users may access recordings through their interface, either upon request or by action of the judicial secretariat.
